HAROLD BARNES

Meifred [Meyfred, Meiffred], **(Jean) Joseph (Pierre) Emile** [Joseph Jean Pierre Emile, Pierre-Joseph Emile, Jérôme] (*b* Colmar, 22 Nov 1791; *d* Paris, 29 Aug 1867). French horn player and designer. He was a pioneer of valve horn playing, pedagogy and design, influencing Halévy, Berlioz and others in Paris, especially in the years between 1830 and 1850. Meifred's first performing speciality was COR BASSE, which required flexibility for wide leaps and refined hand-stopping on the natural horn. He won the *premier prix* at the Conservatoire in 1818, and played in the orchestras of the Théâtre Italien (1819–22) and the Opéra (1822–50). With the introduction of valved instruments to Paris in about 1826, Meifred adopted the valve horn. He collaborated with Labbaye to create a design which included internal crooks, two permanently attached Stölzel valves and the first European use of tuning-slides added to the valve tubes (later labelled 'Meifred' horns). This design was awarded a silver medal at the 1827 Exposition des produits de l'industrie. Meifred also collaborated with Halary, Deshays and Sax.

On 9 March 1828 Meifred gave the first recorded solo performance on the valve horn in France at the inaugural concert of the Société des Concerts du Conservatoire (of which he was a founder-member and for some years secretary). He became the Conservatoire's first professor of valve horn in 1833, charged with producing *cor basse* players, on instruments with or without valves. He published two methods; that of 1840 is the first known comprehensive valve horn tutor. His teaching promoted the whole range of the horn, as opposed to restricting students to *cor alto* and *cor basse*; he preferred horns with two valves rather than three, and developed a sophisticated (and well-received) technique that combined hand-stopping with the use of the valves, encouraging the use of open and stopped notes throughout the instrument's range for balance and for expressive effects.

Meifred was influential in founding the Gymnase Militaire in 1836 and was a bandmaster in the National Guard for 30 years, receiving the cross of the Légion d'Honneur in 1848. Despite general support, the Conservatoire discontinued the valve horn class upon Meifred's retirement in 1864, and this was not resumed until 1903. Meifred wrote a number of satirical pamphlets on music and other subjects.

WORKS

Douze duos pour deux cors, op.1 (Paris, 1824)

Miscellanées pour cornet à pistons en fa sur les motifs favoris de Rossini, Auber, Lararre, Malibrun ... en deux suites (Paris, after 1833)

Melodies en duos faciles et progressives pour deux cors (Paris, n.d.)

Trois melodies pour deux cors, cornet à pistons, lost [listed in *PazdírekH*]

Premier solo, lost [listed in *PazdírekH*]

Conservatoire contest pieces, 1835–63 [listed in Coar and Pierre]

WRITINGS
(*selective list*)

De l'étendu, de l'emploi et des ressources du cor en général, et de ses corps de rechange en particulier, avec quelques considérations sur le cor à piston (Paris, 1829)

JEFFREY L. SNEDEKER

Meignen, Leopold (*b* 1793; *d* Philadelphia, 4 June 1873). American conductor, composer, publisher and teacher of French birth. He was a bandmaster in Napoleon's army before emigrating to the USA, where he settled in Philadelphia (1828). In 1833 he was elected a member of the Musical Fund Society; that same year he founded the Philharmonic Society, an amateur orchestra in Philadelphia. His transcriptions of operatic excerpts and popular songs for the guitar date from as early as 1832. In 1835 he joined the music publisher Augustus Fiot in establishing the firm of Fiot and Meignen. After their partnership was dissolved in 1839, Meignen continued in the music

publishing business until 1842. Meignen succeeded Charles Hupfeld as conductor of the Musical Fund Society Orchestra during the 1844–5 season and held the post until 1857; his *Grand Military Symphony* was originally performed under his direction on 17 April 1845. Furthermore, he conducted the première of William Henry Fry's *Leonora* on 4 June 1845 at the Chestnut Street Theatre in Philadelphia.

In addition to his symphony, Meignen's extant compositions include a string quintet and the opening fragment of a string quartet. His theoretical and pedagogical writings reveal his musical versatility; but perhaps his chief importance was as the teacher of Philadelphia composers Fry, Michael Cross, Charles Jarvis and Septimus Winner.

JOANNE SWENSON-ELDRIDGE

Meigret [Maigret, ? Robert] (*b* Le Mans, 1508; *d* Le Mans, 1568). French composer. Between 1543 and 1557 30 chansons by him were published in Paris by Attaingnant and Du Chemin. Guillaume Morlaye's *Premier livre de tablature de leut* (Paris, 1552[34]) attributes to 'Megret' a piece entitled *Auparavant*; in fact it is an arrangement of the four-voice chanson *Auparavant que j'eusse congnoissance* published five years earlier by Attaingnant (RISM 1547[11]) with ascription to 'Olivier'. The composer may be identical with Robert Maigret who, according to the contemporary bibliographer La Croix du Maine, was regarded as one of the most learned musicians of his day (R. de Juvigny, ed.: *Les bibliotheques francoises de La Croix du Maine et de Du Verdier*, ii, Paris, 1772, p.391).

Most of Meigret's chanson texts are courtly amorous *épigrammes* by Mellin de Saint-Gelais, Gilles d'Aurigny and anonymous contemporary poets; most are set in the suave, generally homophonic manner typical of Parisian chansons of the 1540s such as those of Sandrin, Janequin and Certon. Most employ common modes and mensuration, although a few insert brief passages in triple metre. The only ribald text (*J'ay bonne grace*) has homorhythmic refrains in triple metre interspersed with syllabic polyphony in duple metre.

FRANK DOBBINS

Meijering, Chiel (*b* Amsterdam, 15 June 1954). Dutch composer. He studied composition with Ton de Leeuw at the Amsterdam Conservatory, where he also studied percussion and the piano. He did not complete his studies, leaving to play in a rock band.

One of the most prolific composers in the Netherlands, he is a strong advocate of spontaneous and uninhibited composing. He believes that elaborate thinking in compositional technique alienates the composer from his original ideas and emotions. He is a musical omnivore who uses all musical material as a source, be it pop, folk, non-Western, serial, minimal or classical. Somewhat of an outsider, he is nonetheless appreciated by classical audiences but pop audiences find his music 'freaky'. Well known for his humorous and provocative titles, in his works for larger ensemble or orchestra Meijering tends to be more serious and academic. *Bedouin Caravan in the Desert* for orchestra (1977) is composed by way of a preconceived plan; his multi-layered composition *Electric Blue* for wind and percussion (1977, revised 1980) sounds a little like Xenakis. General characteristics of his music are a virtuoso use of instruments, energetic fast movements and motoric rhythms. A more meditative and quiet character is heard in the three-part series *No Rhyme no Reason* (1987) and *Another Day Dies on a Gull's Cry* (1988) for three guitars, viola and tape.

MICHAEL H.S. VAN EEKEREN

Meiland [Meyland, Mayland], **Jacob** [Jakob] (*b* Senftenberg, Lower Lusatia, 1542; *d* Hechingen, Württemberg, 31 Dec 1577). German composer. About 1550 he became a choirboy at the Dresden Hofkapelle, where he would thus have been a pupil up to 1554 of Johann Walter (i) and then of Matthaeus Le Maistre. In 1558 he entered Leipzig University. He later went to Flanders to improve his musical knowledge, and he may also have visited Italy, but there is no documentary evidence of this. He then

lived briefly at Nuremberg, whence in 1563 he joined the newly formed Kantorei of the Protestant Margrave Georg Friedrich of Brandenburg-Ansbach. Towards the end of 1564 he became its director. Early in 1565 it was decided to establish a Hofkapelle too, and he was also appointed its first director. During his years at Ansbach he travelled widely – for example to Saxony, Württemberg and Bavaria – no doubt in search of singers for his own Kapelle or for the Dresden Hofkapelle but also perhaps to further his own acquaintance with a variety of noted personalities. In 1572 he left Ansbach, probably because of poor health, and moved to Frankfurt, but because of persistent illness he remained without a permanent post and lived in straitened circumstances there until 1576. He then moved to the court at Celle, but it is not certain whether he held an appointment there. On 17 July 1577 he took up his final post, as Kapellmeister to Count Eitel Friedrich von Hohenzollern at Hechingen, but he died within six months.

In spite of a short career hampered by ill-health, Meiland was a relatively prolific and much respected composer, who could obviously also boast a good classical education. His music was widely known, both in his lifetime and after his death, in both printed and manuscript sources. Influenced mainly by Clemens non Papa and to some extent by Lassus too, he mainly cultivated the Latin motet, but he is also of interest in two other spheres, Passion music and secular songs. His three German responsorial Passions, which are in the tradition of Walter, are historically important because he was the first to break with the customary use in the turbae of fauxbourdon deriving from the liturgical Passion tone, and in so doing he increased the dramatic potential of the form. His two collections of German secular songs for four and five voices (1569–75) are among the most important such volumes before Hans Leo Hassler's *Lustgarten* (1601).

WORKS

SACRED VOCAL

Cantiones sacrae cum harmonicis numeris, 5, 6vv (Nuremberg, 1564; enlarged 2/1569, 3/1572, 4/1573)

WALTER BLANKENBURG

Mei Lanfang [Mei Lan-fang] (*b* Beijing, 22 Oct 1894; *d* Beijing, 8 Aug 1961). Chinese opera actor, a specialist in *dan* (female) roles. He came from a well-known theatrical family and was trained at Fuliancheng, the most important school for actors in Beijing. He became famous in 1913 when he visited Shanghai. From then on he was in great demand both inside and outside China. He went to Japan in 1919, 1924 and 1956, to the USA in 1930 and to Europe in 1935, his many trips playing a major role in the spread of BEIJING OPERA around the world. A versatile actor, he mastered *Kunqu* as well as Beijing opera. He was most famous as a *qingyi*, but could perform any of the *dan* roles and was an excellent acrobat. After the Communists came to power he helped them in their drama reform and took part in numerous conferences and committees; he joined the Chinese Communist Party in 1959. He made several films and many gramophone records, dictated his autobiography to an amanuensis, Xu Jichuan, and is regarded as the most famous 20th-century Beijing opera actor.

COLIN MACKERRAS

Meinardus, Ludwig Siegfried (*b* Hooksiel, Oldenburg, 17 Sept 1827; *d* Bielefeld, 10 July 1896). German conductor, writer on music and composer. After initial education at the Jever Gymnasium, he was advised by Schumann to concentrate on composition. He entered the Leipzig Conservatory in 1846 but soon left, preferring private instruction from Riccius. He then conducted small theatre companies in Erfurt and Nordhausen, and in 1850 went to Berlin to study with A.B. Marx and later with Liszt at Weimar. He was conductor of the Glogau Singakademie (1853–65) and was then appointed to the Dresden Conservatory. In 1874 he settled at Hamburg, where he

was critic of the *Hamburger Korrespondent*, and in 1887 he moved to Bielefeld as organist.

Meinardus's most successful work was the oratorio *Luther in Worms* op.36 (Leipzig, 1876); he wrote five further oratorios, two operas (neither performed), two symphonies (*c*1875, 1879) and much choral and chamber music. He is more important, however, for his writings, notably a memoir of Mattheson (Leipzig, 1879), an autobiographical sketch (Gotha, 1874) and his collected criticisms.

J.A. FULLER MAITLAND/R

Meineke [Meinecke, Meincke], **Christopher** [Charles, Christian, Karl] (*b* 1782; *d* Baltimore, 6 Nov 1850). American pianist, organist and composerof German birth. He was probably a son of the organist and composer Karl Meineke of Oldenburg, with whom he is sometimes confused. In 1800 he moved to Baltimore, where he was organist and choirmaster at St Paul's Episcopal Church. He became active in the Handel Society in 1803, the Harmonists in 1820 and later in the Anacreontic Society (founded 1822). He was in Vienna from 1817 to 1819, where he met Beethoven and heard him improvise; Beethoven is said to have praised a concerto by Meineke.

Meineke wrote a great quantity of songs and piano pieces, a few of which were published by 1810, though most date from the 1820s after his return from Vienna. His piano music exhibits imagination and flair, and is often demanding for the performer. His growth in style and virtuosity may be seen in two sets of variations on Mozart's 'Das klinget so herrlich' (from *Die Zauberflöte*), one contained in the medley *Pot pourri* (n.d. [1807–9]) and the other issued, under the title *Away with Melancholy*, in the 1830s. He also wrote church music, including a *Te Deum* (1821), of which a performance at St Paul's was reviewed in *The Euterpeiad* (2 March 1822) as 'appealing to a higher class of musicians than are every where found in our country'. His anthems, such as *Mortals awake*, as well as his hymn tunes, appear in larger compilations by John Cole and others. His *Music for the Church* (1844) was compiled for the St Paul's choir.

WORKS

published in Baltimore, n.d., unless otherwise indicated

VOCAL

Sacred: Te Deum, 4vv ([1821]); Praise to thee great Creator, solo v, chorus ([1830s]); Music for the Church (1844) [62 psalm and hymn tunes]

Songs, lv, pf: The Gentle Maid (E.C. Pinkney) (1826); Love lurks upon my lady's lips (Meineke) (1827); The Trumpet (Mrs Hemans) (1827); I remember, I remember (T. Hood) (1828); Not love thee (Meineke) (1828); My Highland Mary (Lady Norton) (1829); Summers gone (Norton) (1832); The Bird at Sea (Hemans) (1834); I go sweet friends (Hemans) (1836); When the early stars are peeping (F. Wilson) (1843); *c*35 others

PIANO

Variations: Nos galen, or New Year's Night ([1824]); Araby's Daughter [after Kiallmark] (1826); The Hunter's Chorus [after C.M. von Weber: Der Freischütz] (1826); Au clair de la lune ([1827]), ed. in RRAM, ii (1977); Brignal Banks (1827); My Heart and Lute (1827); I left thee where I found thee love [after C.H. Gilfert] (1828); Non più andrai [after Mozart: Le nozze di Figaro] (1828); Le petit tambour (1828); Malbrouk ([1829]); Away with Melancholy [after Mozart: Das klinget so herrlich, from Die Zauberflöte] ([1830s]); The Voice of Grace, or The Coronach (1843); 16 other sets

Waltzes: Antwerp Waltz ([1825–33]); The Emperor Nicholas' Waltz ([1826–31]); The Rose ([1826–31]); The Nightingale ([*c*1828]); The Cambridge Waltz ([1830s]); The Harlem Waltz (1843); 4 others

Marches: Rail Road March (1828); Grand National March . . . General Andrew Jackson (1829); Baltimore City Guard's March ([1830s]); Funeral March . . . Lafayette ([1834]); Grand Turkish March ([?1835]); President Taylor's Inauguration March (1849); *c*10 others

*c*12 others, incl. Pot pourri ([1807–9]); Divertimento (1825), ed. in RRAM, ii (1977)

Meiningen. Town in Thuringia, Germany. Founded around 1000, it became the seat of the Henneberg counts; from 1680 to 1918 it was the residence of the dukes of Saxe-Meiningen, whose palace, Schloss Elisabethenburg, was the centre of the town's musical life. In 1490 the famous scholar Andreas Ornithoparchus was born in the town. The ducal Kapelle flourished in the 16th century under the Kantors Samuel and Christoph Fischer; the composer Johann Steuerlein, secretary to the court and official poet from 1589 to 1613, made a German version of the Passion attributed to Obrecht for use in Meiningen. After 1680 the town, as an independent duchy, was able to import fine artists from the court of Brunswick-Wolfenbüttel through the family connections of Duke Bernhard I. Thus G.C. Schürmann, after working in Brunswick, was transferred to Meiningen on his return from Italy in 1703, with the intention that he should establish an opera tradition; to this end he performed a number of his own works there. On his departure in 1706 Johann Ludwig Bach, the so-called 'Meiningen Bach' and a cousin of Johann Sebastian, became Hofkapellmeister, having assisted Schürmann for a time; he worked there until his death in 1731. J.S. Bach used Johann Ludwig's cantatas in Leipzig, where he was host to the latter's son Samuel Anton; Samuel Anton subsequently returned to Meiningen and became a court official, as did his brother Gottlob Friedrich. After Johann Ludwig's death there was a period without a Kapellmeister. In 1776 a room in the Elisabethenburg was designated for Singspiele and comic opera. There were also chamber music sessions in which Duke Carl played the cello and his consort the harp. The next Duke, Georg I, who also played the cello, maintained an orchestra of 20. Performances of oratorios led to the formation of a choral society in 1822. Eleven years later a Hoftheater was built.

From 1857 to 1865 Jean Josef Bott conducted an enlarged orchestra as well as a choral society of 150. Under Duke Georg II, who invited leading musicians to conduct it, the orchestra began to supplant opera and oratorio as a principal attraction. In 1880 Hans von

Bülow took control, insisting on discipline and adequate rehearsal. Among other musicians associated with the orchestra were Brahms, Wagner and Richard Strauss (Kapellmeister 1885–6). In 1885 the orchestra gave the premières of Brahms's Fourth Symphony and Strauss's Horn Concerto no.1, while Brahms's setting of Goethe's *Gesang der Parzen* was dedicated to the duke (1882). A famous member of the orchestra was Richard Mühlfeld, the clarinettist for whom Brahms composed his clarinet sonatas and the quintet. In 1895 the first Saxe-Meiningen music festival took place, when a choir of more than 300 and an orchestra of 100 performed works by Bach, Beethoven and Brahms, directed by Fritz Steinbach.

Eduard Speyer, a wealthy German businessman (son of the violinist Wilhelm Speyer) who had become a British citizen, was a warm admirer of the Meiningen orchestra and helped finance its tour to London in 1902. He also took an interest in Donald Tovey and Edward Elgar. Tovey's notes on Beethoven for the Meiningen programme were the first of his celebrated *Essays in Musical Analysis*; the orchestra included Elgar's *Enigma* variations in its London programme and later introduced the work to audiences in Eisenach, Berlin and Leipzig as well as Meiningen. From 1911 the orchestra was directed by Max Reger. He moved to Jena in 1914; a school of singing, a civic orchestra and the theatre remained active thereafter. Schloss Elisabethenburg became a museum containing the Max Reger archive and material relating to Brahms and von Bülow.

PERCY M. YOUNG

Meinl [formerly Meinl & Lauber]. German firm of brass instrument makers. It was founded in 1956 when Franz Meinl (*b* Graslitz [now Kraslice, Czech Republic], 20 May 1910; *d* Geretsried, 4 Nov 1992) and his son Ewald (*b* Schönlind, 10 Oct 1937), who had established a bell-making shop the previous year, were joined by Johann Lauber (*b* Plauen, 10 Nov 1919; *d* Geretsried, 4 April 1988). In 1981 Ewald took over on his own, the firm assuming his name. Franz Meinl was trained by Ignaz Hamm in Rothau, and worked for Gebrüder Stowasser and Bohland & Fuchs (Graslitz). After 1947 he worked on his own in Lenggries and from 1951 in Geretsried (both in Bavaria) making brass instrument bells for other firms. Johann Lauber was trained with Gebrüder Stowasser (1934–7); from 1950 to 1957 he was employed by Böhm & [Andreas] Meinl (Geretsried). Ewald Meinl trained from 1951 to 1955 with his great-uncle, Wenzel Meinl. Ewald's son Bernhard (*b* Wolfratshausen, 4 May 1972) trained in his father's shop and was admitted as a journeyman in 1995.

Besides being bell makers, they have gained an international reputation for reproductions of historical brass instruments (from 1967 Baroque trumpets, developed with Edward Tarr, from 1968 trombones with Thomas Cramer, from 1970 horns with Horace Fitzpatrick). Particularly noteworthy was Ewald's development in about 1972 of the now universally-employed Baroque trumpet in a short form, with interchangeable crooks.

There are several other firms with the name of Meinl. The brass instrument-making firm Wenzel Meinl GmbH was founded in 1947 by Wenzel Meinl (*b* Graslitz, 2 Nov 1892; *d* Geretsried, 24 Aug 1958) and his son Anton (*b* Graslitz, 5 Aug 1922). Anton's son Gerhard (*b* Kempfenhausen, 5 Sept 1957) trained with his father and was admitted as a journeyman in 1986. Anton was succeeded in 1991 by Ferdinand Kleinschmidt (*b* Brilon, 16 July 1963). In 1991 Gerhard formed the IMM-Musikinstrumentenmanufaktur GmbH, one of the largest instrument-making companies in Europe, with its head office in Markneukirchen. In 1996 it was renamed TA Musik GmbH (Markneukirchen), a branch of TA Triumph Adler Nuremberg. TA Musik owns the brass instrument-making firms Wenzel Meinl (Geretsried; brand names Melton and Meinl-Weston); Strasser-Marigaux S.A. (Paris); Antoine Courtois S.A. (Amboise); and Vogtländische Musikinstrumentenfabrik GmbH (Markneukirchen; brand names B & S, Meister Hans Hoyer, Meister J. Scherzer and VMI). A woodwind instrument-making firm, Hans Kreul Feine Holzblasinstrumente, with two branch offices (F. Arthur Uebel in Markneukirchen and Hans Kreul in Kirchentellinsfurt) is also located in Markneukirchen.

The woodwind instrument-making firm William Meinl was founded in New York in 1899 by another Wenzel Meinl (*b* Germany, 1864; *d* New York, 29 Dec 1916), who had spent seven years working for Kruspe prior to emigrating to the USA. After his death he was briefly succeeded by his son William jr (*b* New York, *c*1900; *d* 25 Feb 1918) and his widow Margaret (*b* Germany, *c*1870; *d* New York, 8 Jan 1952), who closed down the firm in about 1921. The firm should not be confused with William F. Meinell.

EDWARD H. TARR

Meissen, Heinrich von. *See* FRAUENLOB.

Meissner [Meisner], **(Adolf) Philipp (Ernst)** (*b* Burgpreppach, nr Hofheim, Lower Franconia, 24 Sept 1748; *d* Würzburg, 6 July 1816). German clarinettist, teacher and composer. He showed musical talent at an early age, and took clarinet lessons with the court clarinettist Martin Hessler. When he was barely 16 he played before Prince-Bishop Adam Friedrich of Würzburg; he left school in 1766 and, on the prince-bishop's advice, left Würzburg to further his studies by travelling. At Strasbourg he was taken into the service of Cardinal Prince Constantin of Rohan, with whom he went to Paris. Within three years he was a chamber musician in the employ of the Count of Branca and afterwards was first clarinet in the royal guards' band and in the Opéra orchestra. He often played with great success at the Concert Spirituel and at the Concert des Amateurs, and won no less approval when he appeared at the court at Versailles.

Now a recognized virtuoso, Meissner returned to Würzburg and in 1776 was appointed court and chamber musician in the prince-bishop's Kapelle, a position he held for some 30 years; he later also directed the so-called Turkish Music. He travelled widely in Germany and Switzerland. He founded a clarinet school at Würzburg

where his pupils included such notable figures as F.J. Bähr, C.A. Göpfert and the Würzburg clarinettist Kleinheuss. Siebold praised his 'full, ringing tone' and 'beautiful, tender execution' on the clarinet, while Froehlich, in his discussion on articulation, cited Meissner's students as being particularly successful at playing with the mouthpiece turned to place the reed against the upper lip.

Meister. *See* SPINDLER, FRANZ STANISLAUS.

Meister [Maistre, Maestro], **Johann Friedrich** (bap. ?Ebstorf, nr Uelzen, ?12 Feb 1655; *d* Flensburg, 28 Oct 1697). German composer and organist. The date 'before 1638', usually given as his birth date, was first proposed by Schilling from information in Zimmermann (1904), but cannot be verified in any source. According to Moller he came from the area around Hanover. The only baptismal register from the area, at Ebstorf, records the baptism of one Johann Meister, son of the superintendent Adrianus Meister, on 12 February 1655, but we cannot be certain that this refers to Johann Friedrich. The first definite information we have is that Meister was recruited by the Hanoverian Kapellmeister N.A. Strungk on 20 January 1677 as music director of the court Kapelle of Duke Ferdinand Albrecht I of Brunswick-Lüneburg at Schloss Bevern. Prolonged arguments between the duke and his musicians, mainly about pay, culminated in Meister's imprisonment at the beginning of October 1678. With the help of friends, he succeeded in escaping and, despite being pursued, he secured another post in the service of Bishop August Friedrich of Lübeck at Eutin. On 18 April 1683 he succeeded Caspar Ferkelrath as organist of the Marienkirche, Flensburg, where his duties included the composition of sacred vocal music, as well as playing the organ. He was on friendly terms with the ducal family at nearby Schloss Glücksburg, and his instrumental music may have been composed for performance there. Members of the ducal family were godparents to two of his children.

Many of Meister's church cantatas are in verse form, even when they use biblical prose texts. The individual verses follow various structural models, often strung together in a regular sequence of concerto, aria and chorale. Ritornello form is also much in evidence. The solo cantata *Ach, Herr, straf mich nicht* is notable for the expressive use of musical figures to underline the meaning of the text, but such word-painting is only sparingly employed in the other cantatas. *Il giardino del piacere* consists of 12 suites, each with between three and seven movements, scored for a trio sonata combination.

ANDREAS WACZKAT

Meistergesang. A German tradition of songwriting and performance among the emerging bourgeois classes that flourished particularly in the 16th century. It provided the lower and middle classes in the cities with a religious and secular education: whether as active members or as audience at the concerts, they could become aware of matters which would otherwise have been to them unavailable to them or difficult for them to learn. It thereby contributed to the increasing literacy of the bourgeoisie that characterizes the transition from the Middle Ages to the modern era. Wagner's opera *Die Meistersinger von Nürnberg* (1868) has given many people at least some idea of German Meistergesang; but of course the romantic-poetic picture Wagner presented bears only partial resemblance to the information collected through research by literary scholars and musicologists. The following brief, general description is an attempt to give an account of the present state of research.

1. DEFINITION. Meistergesang is the composition and performance of Meisterlieder by the Meistersinger. Meistersinger were those citizens of German cities, usually south German imperial cities, who from the 14th century to the 17th (with isolated examples still in the 18th and 19th centuries) formed themselves into guilds (*Gesellschaften*) for the composition and performance of Meisterlieder. (Current usage refers to the Meistersinger guilds as *Singschulen* (singing schools), although the Meistersinger themselves applied this term only to the events in which they performed their lieder publicly, in the sense of a concert.) As a rule the Meistersinger were artisans belonging to a town's middle and lower classes, although clergymen, lawyers and teachers were also found among them. They participated in the guilds in addition to their normal occupation. They all composed their lieder in German, basing them on more or less similar subjects, which altered in the course of time, and according to generally accepted artistic rules codified in the *Tabulaturen* of the 16th century and which changed only slightly over the centuries. At both the public *Singschulen* and the private *Zechsingen*, lieder were always performed strictly in accordance with the *Schulordnungen* (regulations). Throughout the country guilds were organized along the same or similar lines (the organizational regulations appeared in the *Schulordnung*); and there was much active exchange among the guilds, doubtless encouraged by the tradition of *Wanderjahre* ('journeyman years'). Finally, all the guilds were under the strict control of the city authorities who oversaw the observance of the *Schulordnung* as well as general moral, religious and political laws. The Meistersinger, moreover, shared a distinct awareness of their art and its significance. They are organically and typologically related, although not identical, to the German 12th to 15th century *Sangspruchdichter*.

2. SOURCES. Numerous sources are available for Meistergesang research, and they are still far from fully investigated. The most important are the approximately 150 manuscripts containing the Meistersinger lieder, whose number is estimated at about 16,000. The earliest of these manuscripts comes from the beginning of the 15th century, the latest from the 18th century. Generally they contain only the texts and not the melodies. Some contain the lieder of one particular Meistersinger, but the majority contain collections by different poets, often from diverse origins and times. There are no general principles governing either the choice or the order of the collections. The manuscripts are dispersed among numerous libraries, the most extensive and significant collections being in Berlin, Dresden, Munich, Nuremberg, Weimar and Zwickau. In 1969 the Nuremberg Stadtbibliothek began to establish a central collection of copies of all Meistersinger manuscripts.

The melodies, which belonged to an almost exclusively oral tradition, are found in only a few sources. The most important and comprehensive of these are the Kolmarer Liederhandschrift, *D-Mbs* Cgm 4997 (*c*1460, presumably from Speyer); the Valentin Voigt manuscript *Ju* El.f.101 (1558, Magdeburg); Adam Puschman's *Singebuch*, formerly in Breslau Stadtbibliothek 356, lost since 1945 (1584–8, Breslau); manuscripts of the Nuremberg Meistersinger Benedict von Watt in *D-Bsb* germ.f.25 (*c*1603) and f.24 (*c*1615), and in *D-Nst* Will 111.784 (*c*1616); and *D-Nst* Will III.792–6 (*c*1670 and after). Relatively few printed Meisterlieder were circulated in the 15th and 16th centuries, for after 1540 it was expressly forbidden to perform printed lieder at the *Singschulen*.

Further important sources of information are the extant *Tabulaturen* and *Schulordnungen*, the earliest of which is the *Schulzettel* (1540) of the Nuremberg Meistersinger. The *Gründtlicher Bericht des deudschen Meistergesangs* of Adam Puschman (1571, 2/1596; ed. B. Taylor, Göppingen, 1984) disseminated the *Tabulatur* and *Schulordnung* in print. Testimony that reveals the Meistersinger's own awareness of their art and tradition is especially significant. To this category belong numerous songs whose subject is the Meistergesang itself, chronicles, and prefaces to manuscripts. One extensive musical and literary history from the viewpoint of the Meistersinger is *Von der edlen und hochberühmbten Kunst der Musica*, written in 1598 by the Strasbourg theologian and Meistersinger Cyriac Spangenberg (1528–1604). Information about the public face of the Meistersinger can be gathered particularly from the records of their meetings, which in Nuremberg and Augsburg were preserved for a long time, as well as from other archive material, especially correspondence with city authorities. Other sources include posters announcing Meistersinger's events, paintings and other art objects. Finally there are informative reports about Meistergesang from contemporaries who were not themselves Meistersinger. The most important of these is the treatise on the Meistersinger of Nuremberg by the scholar Johann Christoph Wagenseil in his book *De civitate noribergensi commentatio* (1697). This account was Wagner's most important source. (For further description of Meistergesang sources *see* SOURCES, MS, §III, 5, and figs.27, 28.)

3. ORIGINS, LOCATIONS, PERSONALITIES. Nothing is known as to why, when or where the first Meistersinger guild was founded. The Meistersinger of the 16th and 17th centuries assumed that it had begun in Mainz. It probably began some time in the 14th century. The Meistersinger themselves honoured a number of famous poets of the 13th and 14th centuries as the founders of their art. The best-known of the so-called *alte Meister* were Walther von der Vogelweide (*d c*1230), Reinmar von Zweter (*d c*1260), der Marner (*c*1230–70), Konrad von Würzburg (*d* 1287), Frauenlob (*d* 1318), Regenbogen (*d* after 1318) and Heinrich von Mügeln (*d* after 1371) (*see* MINNESANG). None of them was a municipal Meistersinger for whom composing and singing was an avocation: they were professional travelling poets, who sang for aristocratic audiences; their verses dealt primarily with religious, moral, chivalric and political topics. Present-day research refers to these poets as 'Sangspruchdichter'. They may be considered the 'founders' of Meistergesang only insofar as the Meistersinger of the 14th and 15th centuries frequently imitated their poems and until the 18th century used a number of their *Töne* (*see* TON (i)) for their own lieder. There are however significant differences between the Meistersinger and the *Sangspruchdichter*.

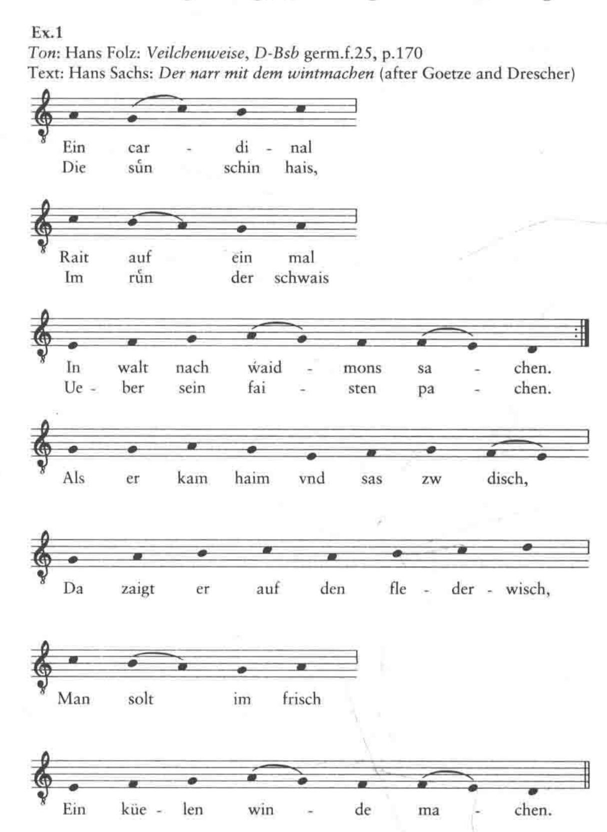
In the 15th and early 16th centuries there appear to have been Meistersinger guilds in Mainz, Nuremberg, Augsburg and Strasbourg, among other places; but specific information survives only about the Nuremberg Meistersinger. The best-known Nuremberg singers in this period were Fritz Kettner (documented 1392–1430), the baker Konrad Nachtigall (*c*1410–1484/5), the nailmaker Fritz

Zorn (*d* 1482) and the weaver Lienhard Nunnenbeck (documented 1514–15), the teacher of Hans Sachs. The most important Nuremberg Meistersinger at this time was the barber and surgeon Hans Folz (*c*1435 or 1440–1513) from Worms, who in addition to many Meisterlieder also wrote carnival plays (*Fastnachtspiele*) and many other poems. After 1520 the guild received new stimulus through the activities of the shoemaker Hans Sachs (1494–1576), who provided an impetus far beyond Nuremberg for both the founding and renewal of Meistersinger guilds. His best-known contemporaries in Nuremberg were Hans Vogel (*d* between 1549 and 1554), Kunz Füllsack (traceable after 1517) and Wolf Buchner (traceable after 1521). Between 1556 and 1560 the Silesian Adam Puschman (1532–1600) also lived in Nuremberg. Between 1590 and 1630 Nuremberg Meistergesang experienced its last flowering. The most significant singers of this period were Georg Hager (1552–1634), Wolf Bauttner (1573–1634), Benedict von Watt (1569–1616), Hans Winter (1591–1627) and Ambrosius Metzger (1573–1632). The Nuremberg guild continued its existence after this time, finally disbanding only in 1774.

The most important Meistersinger guilds of the 16th and 17th centuries, besides that in Nuremberg, were in Augsburg (re-established 1534; the most famous poets of the 16th century being Raphael Duller, Onoferus Schwarzenbach, Sebastian Wild and Johann Spreng), Colmar (founded by Jörg Wickram in 1546), Breslau (founded in 1571; Wolfgang Herold and Adam Puschman), Strasbourg (re-established 1597; Peter Pfort, Cyriac and Wolfhart Spangenberg [Lycosthenes Psellionoros Andropediacus]), Mainz, Freiburg, Nördlingen, Ulm and Memmingen. In addition there were guilds in Austria (Schwaz, Wels, Steyr, Eferding) and Moravia (Iglau, now Jihlava). That in Ulm existed until 1839, and the last Memmingen Meistersinger died in 1922.

4. THE THEMES OF THE POETRY. The majority of lieder surviving from before the Reformation deal with religious subjects, primarily the Virgin Mary, the Trinity, Christmas, the Passion, the Resurrection and the Creation. In addition there are songs in praise of Meistergesang, invitations to song, riddles, poems on the seven liberal arts, and a few narrative poems. Political subjects, so common in the verses of the *Sangspruchdichter*, are absent from Meistergesang, most probably because they were forbidden from the beginning by the censorship that customarily operated in the cities.

Meistergesang came into the service of the Reformation, becoming predominantly Lutheran, through Hans Sachs, who with his contemporaries and followers aimed to incorporate Luther's translation of the Bible into verse, keeping it unchanged in language and content wherever possible. At the same time, secular Meistergesang began to become more important (fables, farces, historical material, narratives of medieval and humanistic origin, and songs about Meistergesang itself). During the late flowering of Nuremberg Meistergesang, around 1600, the development of larger song cycles seems to have been characteristic, above all with Benedict von Watt and Ambrosius Metzger.



5. THE MUSIC. Meisterlieder always consist of an odd number of stanzas, the minimum being three. The Meistersinger actually referred to their lieder as *Bare* (singular *Bar*; *see also* BAR FORM). The most important formal musical feature of the Meisterlieder is that they are not composed and sung in an individual verse form, each with its own melody. The composers almost always made use of existing *Töne* (singular *Ton*, synonymous with *Weise*), many of which had not been written by the Meistersinger themselves. By 1630 the number of different, traditionally accumulated *Töne* stood at about 1400. Some stemmed from the *Sangspruchdichter* of the 13th to 15th centuries; others were in the course of time attributed to the *alte Meister*, although the true originators of the *unechte* (not genuine) *Töne* were obscure Meistersinger. Thus from the 15th century to the 17th, for example, over 30 *Töne* were ascribed to Frauenlob, although only seven of them can actually be traced back to him. Finally, from the 15th century onwards, numerous *Töne* were composed by the Meistersinger whose name they bore.

The Meistersinger's *Töne* normally consist of at least seven, but usually 12 or more, verse lines with an end rhyme. Most *Töne* have about 20 lines, but in the 16th and 17th centuries there were also occasional huge *Töne* with more than 100 lines. The shortest line consisted of one syllable, while the longest must contain no more than 13 syllables, as each line was supposed to be sung in one breath, according to a 16th-century rule (though some *Töne* do have longer lines). The rhyme scheme is both free and varied.

The verse and melody of the *Töne* are always constructed as follows: after the first part (first *Stollen*) follows the second part (second *Stollen*), which corresponds exactly both metrically and musically. The first and second *Stollen* together form the *Aufgesang*. Then follows the third part, the *Abgesang*, which is metrically and musically different. In principle, the length of individual parts is left open. Among the *Sangspruchdichter* in the 13th century this *AAB* structure was strictly adhered to and later taken over by the Meistersinger. In present-day German this verse form is called *Kanzonenform*; musicologists speak of 'bar form'. Compare the ten-line *Veilchenweise* (ex.1) by Hans Folz to which is added the first stanza of a farce composed by Hans Sachs on 20 April 1546. The melody of the last lines of its *Abgesang* is identical with the last two lines of the *Stollen*. Reference at the end of the *Abgesang* to the melody of the *Aufgesang* is characteristic of many *Meistertöne*, and it was not unusual for the whole of the *Stollen* melody to be repeated at the end of the *Abgesang* (a repetition referred to as the 'third *Stollen*').

The Meistersinger melodies are all monophonic, even in the 16th century and after. They were always performed unaccompanied, normally by a solo voice, but occasionally by a chorus. In their musical work the Meistersinger carry through to the 18th century the German monophonic song tradition that can be traced back to the late 12th century, in particular the tradition of the *Sangspruchdichter*. Their historical orientation became more and more of an anachronism and explains why Meistergesang was a peripheral phenomenon in music history, at least from the second half of the 16th century. Indeed, the general development of music bypassed the Meistergesang tradition, for the Meistersinger firmly rejected all its innovations.

Only a few of the more essential characteristics of Meistergesang melody can be described here. The manuscripts normally transmit the music without any indication

Ex.1
Ton: Hans Folz: *Veilchenweise*, *D-Bsb* germ.f.25, p.170
Text: Hans Sachs: *Der narr mit dem wintmachen* (after Goetze and Drescher)

of rhythm: the occasional suggestions of mensural notation in certain 16th-century sources are often contradictory and have little authority. One may assume that the normal rule was 'declamatory' rhythm determined by the text. Modal rhythm, whose application Gennrich extended to include Meistergesang, should be dismissed: the sources give not the slightest indication of it.

In their tonality the melodies are extremely varied and scarcely open to any meaningful generalization, apart from the observation that Meistersinger melodies cannot be explained in terms of church modes (see Schumann, 1972). The stylistic development is more easily discussed because several melodies come from the *Sangspruchdichter* of the 13th and 14th centuries and survive in 14th-century sources as well as in Meistersinger manuscripts of the 15th to 17th centuries (see the example of Klingsor's *Schwarzer Ton* in the articles TON (*1*) and SOURCES, MS, §III, 5). Comparing the versions of a single melody from manuscripts of different centuries can provide important clues to the characteristics of the melodic style. Variants in the melismas stand out (ex.2). Apparently melismas were frequent in the 14th century, extremely rare in the 15th and far more common again in the 16th and 17th. But in their use of these melismas the 16th- and 17th-century manuscripts are closer to the 15th century than to the 14th: they use them primarily to mark the ends of the melodic lines whereas in the 14th century the melismas are much more evenly distributed across the whole line. Particularly long melismas really began to appear only in the 16th century and were used increasingly afterwards.

The vocal range often seems much smaller in the later centuries than in the 14th. Further, there are more large leaps (of a 4th and more) from the 15th century on. This is evidently symptomatic of a changed stylistic ideal: elegance of melody was preferred in the 14th century, as the use of melisma shows, but later the emphasis was more towards clarity of movement from one note to the next.

The transmission of the melodies has both written and oral characteristics. Many Meistersinger were not musically literate: they were advised to learn the melodies by heart and remember them. This led to many unconsciously introduced variants of the original melodic conception. On the other hand the melodies were doubtless also worked over, improved and adapted when they were written down, as is particularly clear from melodies whose written history stretches back to the 14th century. It is difficult to generalize about the agreements and differences in the melodic lines in versions from different centuries. Some melodies remain substantially the same in spite of the changes in melodic preference already described, but for others the original melodic version is scarcely perceptible in later versions. In some cases it is as though the old melodies have been forgotten and new ones have been written to the metrical scheme. Over the centuries the melodies were adapted, consciously as well as unconsciously, to bring them into the most rational and easily perceptible forms with regular repetition of the individual melodic sections. Often structures which had originally been extremely complicated were simplified enormously: for performer and listener alike, simplicity of form was an ideal.

There is still much work to be done on the degree of contact between the style of Meistergesang and other musical forms in the 14th, 15th and 16th centuries, in particular the German Gesellschaftslied and folksong. Some melodic similarities have been established between Meisterlieder melodies and Protestant hymns; but the connection has yet to be defined precisely. Some particularly popular *Meistertöne* were actually used as hymns in the 16th century but in other cases of similarity the connection more probably rests merely on common usage of existing melodic models and has nothing to do with any direct interchange. It also remains to be shown whether the melodies of any of the Meistersinger have particular melodic characteristics or personal styles. There are several indications that this may be so.

6. ORGANIZATION OF THE GUILDS AND PERFORMANCE OF LIEDER AT THE CONCERTS. The extant *Schulordnungen* (school regulations) from the 16th and 17th centuries offer an insight into the organization of the Meistersinger guilds (*Gesellschaften*) as well as into the customary practices of the concerts (*Singschulen*). The following

Ex.2 Frauenlob: *Würgendrüssel* (opening)

A-Wn 2701, *c*1370

D-Mbs Cgm 4997, *c*1470

D-Ju E1.f.100, 1558

D-Bsb germ.f.24, *c*1615

sketch comes from the Nuremberg *Schulordnung* in the 16th and 17th centuries; the other guilds were basically similar. It is not known whether the Nuremberg guild was organized in this way in the 15th century.

The 12 oldest singers formed the nucleus of the Nuremberg guild. The directors were the three chosen *Merker* (markers), of whom the youngest functioned as clerk. Next came the two elected *Büchsenmeister* (treasurers), who presented annual accounts to the guild each year on the Sunday before St Thomas's Day (21 December). On the same day membership fees were paid, elections took place, and new members were received.

A public concert was normally held once a month on a Sunday after the midday service. From the 16th century in Nuremberg the singing took place in various disused churches. (St Katharina, which appears in Wagner's *Meistersinger*, was not available to the Nuremberg Meistersinger until after 1620.) The concerts were advertised by posters in the town (fig.1). The focal point of the concert was the *Hauptsingen* (main performance), at which were allowed only lieder based on the scriptures and whose *Ton* was at least 20 lines long. The performance was always solo. During it the markers sat in a cubicle (*Gemerk*), which was draped in black material. Their task was to judge whether the song being performed conformed both in content and language to the Lutheran Bible. In addition, they noted whether both text and performance conformed to the strict rules of the *Tabulatur* and whether the melody was correctly performed. They listed every error, and the singer with the fewest errors was the winner. If several had the same number of mistakes or if there were none at all, the singers had to compete until there was an obvious winner. As a prize he received a silver chain hung with coins, the largest of which depicted King David, the patron of the Meistersinger (fig.2). The winner was allowed to keep the chain until the next concert. In addition, he was allowed to be one of the *Merker* at the next concert. Besides the public *Hauptsingen*, the Meistersinger usually held their own private *Zechsingen* at an inn, at which secular Meisterlieder were sung. This concert also retained the character of a competition.

Whoever wished to become a member of the guild first of all studied (was a *Schüler*) with one of its members; his main task was to learn a number of *Töne* and the most important rules of the *Tabulatur*. The widely held opinion that one could become a Meistersinger only by composing a *Ton* is not correct: many highly respected Meistersinger never composed a *Ton*. Even the writing of song texts was apparently not mandatory: many Meistersinger seem not to have been poets; they could perfectly well limit themselves to the performance of other people's songs.

7. 'SPRUCHGEDICHTE' AND STAGE PLAYS. The literary activity of the Meistersinger was not solely confined to the composition and performance of Meisterlieder. In addition, some Meistersinger wrote *Spruchgedichte* (or poems in rhymed couplets) and theatrical works. The

1. Poster advertising a concert of the Meistersinger of Nuremberg, 17th century (D-Nst)

2. The shoemaker Phillip Hager taking part in a Singschule, possibly in 1637: stained glass (Kunstsammlungen der Veste Coburg); on the wall hang the chain of medallions (the David) awarded to the winner and the wreath (Kranz) for the runner-up, and in the curtained booth sit the four Merker who adjudicate the song

Spruchgedichte were intended for spoken performance and were often printed. They dealt with a wide range of subjects, religious problems as well as political events, historical narratives and farcical or sentimental occurrences, advice for leading a good life, poems in honour of a city etc. In many places the Meistersinger guilds publicly performed dramatic works. Hans Folz in the 15th century and Hans Sachs in the 16th were by far the most productive artists in these areas, which strictly speaking had nothing to do with Meistergesang itself. From the 15th century until the 17th there were numerous writers of *Spruchgedichte* and plays who were not Meistersinger.

HORST BRUNNER

Meistre, Matthaeus le. *See* LE MAISTRE, MATTHAEUS.

Mejer, Johann David. *See* MAYER, JOHANN DAVID.

Mejía, Adolfo (*b* San Luis de Sincé, Sucre, 6 Feb 1905; *d* Cartagena, 7 July 1973). Colombian composer. He began his musical studies in Cartagena. Finding the academic environment at the Instituto Musical de Cartagena unchallenging, he opted to work as a conductor and composer for the popular Lorduy Orchestra. He travelled

to New York in 1930 to record his compositions and arrangements with the Columbia recording company. Returning to Colombia in 1933 and working as a librarian of the National SO in Bogotá, he studied at the National Conservatory with Jesús Bermúdez Silva, Gustavo Escobar Larrazabal and Andrés Pardo Tovar. One of the most frequently played nationalistic compositions, the *Pequeña suite*, consists of traditional dance movements (including a *cumbia*). It won the Ezequiel Bernal prize (1938) and earned him a scholarship to study in Paris at the Ecole Normale de Musique with Nadia Boulanger, Dukas and Koechlin. On his return to Cartagena he worked as a teacher, conductor and bandleader. In 1970 he won the National Composition Prize from the Instituto Colombiano de Cultura and was awarded an honorary doctorate by the University of Cartagena.

SUSANA FRIEDMANN

Mejía Godoy, Carlos (*b* Somoto, 1943). Nicaraguan composer and singer. Son of a marimba maker and musician, he received childhood music lessons but never any further formal training. He began his career creating radio dramas in León and later Managua, but repression from the Somoza dictatorship forced him to begin public performances. His first songs from the early 1970s established him as the nation's pre-eminent composer of music rooted in various folk styles. His melodies creatively and subtly reinforced his lyrics drawn from local experience and Nicaragua's unique vernacular speech. The compositions with critical social commentary on the album *Canto al flor de pueblo*, released after the 1972 earthquake, marked the beginning of the Nicaraguan New Song movement, which grew to become one of the most vibrant in Latin America. In collaboration with other musicians, he set liberation theology writings by peasants from the famous Solentiname collective of Father Ernesto Cardenal to music as the *Misa campesina nicaragüense*. Since its first attempted celebration in Managua in 1976, and despite its subsequent prohibition in its country of origin until 1979, this work became internationally famous. It has been translated and recorded in Europe and performed throughout the Americas, where it has served as model for the creation of other masses based on local musical material. The mass uses different folk-related styles for separate sections of the service, an innovation that coincided with the orientation of Vatican II but also engendered debate about the appropriateness of certain musical forms within a sacred service.

His international recognition was cemented with the popularity of several of his songs, especially in Spain, and his winning of the 1977 international Organización de la Televisión Iberoamericana song competition with his ironic celebration of street children, *Quincho barrilete*. Together with his younger brother Luis Enrique, he made a singular contribution in 1978 to the success of the military insurrection that eventually toppled the Somoza regime a year later with a collection of didactic songs published as *Guitarra armada*. With the artistic freedom and support for the arts ushered in by the new Sandinista government, he held a post in the nation's first Ministry of Culture, but soon left to resume his performing career.

He collaborated with his brother again on his largest work, the *Canto épico al FSLN*. The definitive recordings, issued in 1985, featured several choruses in conjunction with invited soloists and the principal performing groups Los de Palacagüina and Mancotal led by Carlos and Luis Enrique Mejía Godoy respectively. The work can be characterized as a historical cantata with instrumental accompaniment. It has a segmented structure where each of the sections treats an important event or personage in the liberation movement. The segments' musical styles are drawn from a wide selection of traditional musical forms whose deft interweaving into a single large-scale composition creates the effect of representing the musical totality of the country. In the latter half of the 1980s he began another major cantata that awaits completion, *Esa llama que se llama Carlos*, based on the life of Carlos Fonseca Amador.

Mejía Godoy conducted extensive research into the folk music of Nicaragua, the results of which have yet to be published but have been used in his creative work. He was the first Nicaraguan musician to set lyrics to the mazurca segoviana, the most representative musical form from his native northern region. He re-established the genre of songs with critical socio-political content after decades of successful governmental intimidation of the country's musical community. Through his musical and lyrical synthesis of campesino peasant and popular urban culture he became a leading spokesperson for the popular classes in the 1970s and 1980s and has been Nicaragua's most influential singer–songwriter in the latter half of the century.

T.M. SCRUGGS

Mejorana. A Panamanian dance genre. It consists of the *redondilla*, a quatrain rhymed *abba*, which sets forth a basic textual theme developed subsequently in four *décimas*, each using one line of the quatrain. The characteristically descending melodies are often performed with both falsetto and melisma. A collective dance similar to the *cuadrilla*, the *mejorana* is accompanied by the *mejoranera* (a small five-string guitar) and the larger *bocona*, which together create hemiola rhythms in

combination with the melodies of the violin and the male voice. The *mejoranera* guitar is also called *mejorana*.

WILLIAM GRADANTE

Mejoranera [mejorana]. A small, short-necked five-string guitar of Panama. It is normally made of cedar, with gut or nylon strings tuned either *e′–b–a–a′–d′* ('by 2') or *e′–b–g–g′–d′* ('by 6'). In the 1970s it began to be used in place of the similarly shaped bocona to accompany the MEJORANA, *cumbia* and *punto* (dance and song forms).

JOHN M. SCHECHTER

Mekeel, Joyce (*b* New Haven, CT, 6 July 1931; *d* Watertown, MA, 29 Dec 1997). American harpsichordist, composer and anthropologist. She studied at the Longy School of Music (1952–5), the Paris Conservatoire with Boulanger (1955–7), and Yale University (BM 1959, MM 1960), where her teachers included Gustav Leonhardt (harpsichord) and David Kraehenbuehl (theory). In addition, she studied the harpsichord privately with Ralph Kirkpatrick (1957–9) and composition with Earl Kim (1960–62). She taught at the New England Conservatory (1964–70) and Boston University (from 1970), where she also directed the electronic music studio. Among her awards were fellowships to the MacDowell Colony (1963, 1964, 1974) and Yaddo (1974), an Ingram-Merrill grant (1964) and commissions from Boston Musica Viva, the Fromm Foundation and the Louisville Orchestra, among others.

Mekeel's compositions demonstrate an unusual approach to the voice and instruments, exploring and exploiting a full range of vocal and instrumental sonorities and using theatrical techniques to either enhance or detract from the sound. Early in her career she worked with theatre and dance groups. Her vocal music, rather than illustrating the meaning of the text, interprets the mood that the words, in many cases taken from multilingual sources, invoke.

DIANE O. OTA

Mel. A subjective unit of pitch based on judgments of melodic sequences of notes. The relationship between the mel scale for an average listener and the physical frequency scale is given in SOUND, §4.

MURRAY CAMPBELL

Mel, Gaudio. Possibly an alternative name for CLAUDE GOUDIMEL.

Mel [Melle], **Rinaldo del** [Raynaldus, Renatus, René, Renerus] (*b* Mechlin [now Mechelen], *c*1554; *d c*1598). Flemish composer, mainly active in Italy. He was of a landed family whose fortunes were closely linked to the Duchy of Lorraine. In 1547 his parents were living in Mechlin, where his father was chamberlain to the Duchess of Lorraine with responsibility for the management of nearby ducal holdings. After the conquests of Henri II of France, Christine of Denmark, mother of the ten-year-old Renée of Lorraine, and the Duchess of D'Arschot were in Mechlin in 1554; in the dedication of his *Sacrae cantiones* (1588), Mel mentioned that he was named after Renée. He was probably born in 1554 and was thus eight (the average age of admittance) when in 1562 he entered the choir school of St Rombaut's Cathedral, where he studied under Severin Cornet. After completing his schooling, probaby in 1572, he went to Lisbon, where, according to Baini, he was employed as *maestro di cappella* at court. It is not known whether he actually functioned as such, or, as Doorslaer suggested, was sent there to mature in the protected environment that the Lisbon court (related by marriage to the Lorraine court) would have provided for the young son of a favoured family.

After Spain annexed Portugal in 1580 Mel went to Rome, where his name appears in that year on a subscription list for two new bells for the Flemish church, S Maria in Campo Santo. Whether or not he studied composition with Palestrina as Baini claimed, his first published works indicate that he was well acquainted with Palestrina's style. The title-pages and dedications of his printed books show that in addition to his continued allegiance to Lorraine (and, by Renée's marriage, to the Bavarian court), he enjoyed the friendship and patronage of the Valignani, the Henrici and Cardinal Gabriel Paleotto. He was in Chieti in 1583–4 and travelled north to Venice in January. On 6 July 1584 he accepted the appointment of *maestro di cappella* at Rieti Cathedral, but his absences on personal affairs angered the church authorities and he remained in the post for less than a year.

During the next six years Mel travelled a good deal, spending parts of 1585 in Rome and Aquila, 1586 in Magliano Capo di Sabina, 1587–8 in Liège (stopping in Venice in January 1587, and arriving in Liège in July to assume the post of *maestro di cappella* to Duke Ernst of Bavaria) and 1588–9 in Antwerp. By 1591 he had returned to Italy and entered the service of Paleotto at Magliano. Paleotto had recently been placed in charge of the diocese of Sabina; he was responsible for many improvements in Magliano during his six-year governorship and appointed Mel music director of the cathedral and the newly founded seminary. Mel remained in the

area, apart from short trips to Rome and nearby Calvi, until the end of August 1596, when, according to the dedication of his *Madrigaletti spirituali a tre voci*, he intended to depart for Tortona in order to take title to lands granted him that year by Dorothy of Lorraine. The fact that eight new chansons by him were published in an Antwerp collection (RISM 1597[10]) suggests that he may by that time have returned to the Netherlands.

Mel was well educated and a prolific composer whose aristocratic lineage and connections seem to have ensured him at least a modest fame. His works have not been edited, and have therefore not received the study they deserve. His sacred pieces show him to have been a craftsman, well trained in Dutch counterpoint and a diligent imitator of the Palestrinian style. His secular works illustrate a growing tendency to concentrate melodic interest in the treble part (a contemporary statement that he was responsible for the invention of a new kind of polyphony in which the musical structure was borne by the soprano part while the other voices were directed 'cantare e sostenere la mula', is somewhat obtuse). Like many Roman composers, he was fond of cyclic madrigals, and set in their entirety such famous canzoni as Petrarch's *Standomi un giorno*. His eight four- and five-stanza cycles included in his books of three-part *Madrigaletti* are perhaps of greater historical note – semi-popular material destined for local amateurs and quasi-religious fraternities. They are characterized by textural contrasts of chordal declamation alternating with imitative passages, the latter usually consisting of two voices moving in parallel 3rds or 6ths with the third voice entering in imitation a breve or two later. In *Tre gratiosi amanti*, a typical cycle, sectional repetition plays an important role. His three-part writing is diatonic and uses many progressions based on chords with roots a 5th apart.

PATRICIA ANN MYERS

Melachrino, George (Miltiades) (*b* London, 1 May 1909; *d* London, 18 June 1965). English orchestra leader, composer and arranger. After studies at Trinity College of Music, he played in dance bands, including those of Ambrose and Carroll Gibbons. He formed his own dance orchestra (1939), and then the Melachrino Strings (1945). This 50-piece ensemble became noted in Europe and the USA for its radio broadcasts and recordings of light music, including the *Moods in Music* series, with titles such as *Music for Dining*, *Music for Relaxation* and *Music for Two People Alone*. These became famous for their sweet, sentimental style, and were widely imitated. Along with works for his own orchestra, his own compositions include several film scores, and contributions to the revue, *Starlight Roof* (1947).

□

Melanchthon [Schwarzerd], **Philipp** (*b* Bretten, 16 Feb 1497; *d* Wittenberg, 19 April 1560). German Lutheran theologian. He was a great-nephew of the humanist Reuchlin. After attending the Latin school in Pforzheim, he became a student at Heidelberg University in 1509, transferring in 1512 to Tübingen, where he took the master's degree in 1514. In 1517 he took up a post teaching Greek at Wittenberg University, where he remained for the rest of his life. In the same year he published a lecture, *De artibus liberalibus*, in which he articulated a new understanding of music as an art form akin to literary poetics. Influenced by Luther, he took the degree of Bachelor of Theology in 1520 and later became professor of theology.

He worked closely with Luther in the reforming movement, establishing its theology and practice. His *Loci communes* (Augsburg, 1521) established the parameters for the teaching of Lutheran theology, normative well into the next century, and his primary work on the Augsburg Confession (1530), together with its 'Apology', provided the confessional substance for the emerging Lutheran church. Melanchthon was largely responsible for organising the pedagogical principles of Lutheran schools throughout Germany, for which he earned the sobriquet 'Praeceptor Germaniae'. He gave music a special place in the curriculum and extolled its importance in

various prefaces to published musical works: Rhau's *Selectae harmoniae* (RISM 1538[1]) and *Officiorum ... de nativitate* (RISM 1545[5]), *Zehen deudsche Psalm Davids* (Wittenberg, 1551) by Johannes Reusch and Lossius's Cantional of 1553. Melanchthon's writings on Rhetoric contributed to the development of *musica poetica*, as later practised by both Lutheran and Catholic composers.

Melanchthon believed that music was closely bound to the Word of God, that it strengthened one's faith and conveyed the sense of God's presence. Like Luther, he had a close association with the Wittenberg printer Georg Rhau and the composer Johann Walter (i). Composers such as Caspar Othmayr and Leonhard Paminger composed music honouring him. Among his students were Adrianus Petit Coclico, Sixt Dietrich, Georg Forster and Lucas Lossius.

Melanchthon was noted for his elegant Latin prose and poetry which was set by numerous composers including Martin Agricola, Gallus Dressler, Michael Praetorius and Paul Melissus Schede. Nine Latin poems can be classified as hymnic. Three hymns, *Dicimus grates tibi*, *Aeterne gratias tibi* and *Aeterno gratias Patri*, entered the repertory of the choirs of Latin schools that continued to sing the daily Office by way of Bugenhagen's *Psalterium Davids* (Wittenberg, 1544) and Lossius's *Psalmodia* (Nuremberg, 1553). Hermann translated Melanchthon's prayer *Vespera iam venit* as the first stanza of his *Ach bleib bei uns, Herr Jesu Christ* (1579).

HANS-CHRISTIAN MÜLLER/ROBIN A. LEAVER

Melanesia. Conventional geographic and cultural division of the South Pacific Ocean, comprising a group of islands with a total land area of 966,975 km^2, lying north-east of Australia. With Micronesia and Polynesia they make up the Pacific Islands.

I. Introduction. II. Irian Jaya. III. Papua New Guinea. IV. Solomon Islands. V. Vanuatu. VI. New Caledonia. VII. Fiji.

I. Introduction

1. General. 2. Music and musical instruments. 3. Dance.

1. GENERAL. Melanesia (Gk. *melas*: 'black'; *nēsos*: 'island') is the name given by Europeans in the 1830s to the islands that lie south of the equator and north-east of Australia, between Indonesia to the west and Polynesia to the east (for map, *see* POLYNESIA, fig.1). Geographically the major island aggregates are New Guinea Island; the Bismarck Archipelago (including the Admiralty Islands, New Britain and New Ireland); the Solomon Islands; Vanuatu (formerly the New Hebrides); New Caledonia and the Loyalty Islands; and the Fiji Islands. There are also many small islands and island groups, some being coral atolls.

The ancestors of the peoples who live in Melanesia originated in South-east Asia. There is great diversity among both the peoples and their languages, however, reflecting both the great length of time between the initial human settlement of New Guinea (estimated at 50,000 years ago) and the much later settlements of other islands (mostly within the past 5000 years) and, for some of the peoples, long periods of isolation. Scattered post-settlement contacts with Malay and Chinese sailors preceded European discovery of Melanesia by several centuries. European contacts were also diverse in national origin, purpose and extent of influence. Because of the diversity, most anthropologists eschew generalizations about culture within Melanesia; furthermore, in spite of much significant recent research (especially within Papua New Guinea), the musics of many of the peoples of Melanesia have yet to be studied in depth.

Not all government boundaries of the late 1990s coincided with the main geographic areas: Irian Jaya, the section of New Guinea island west of 141°E, is the easternmost province of Indonesia; Papua New Guinea comprises the section east of that line, together with the Bismarck Archipelago, the northern Solomons and many small islands; the nation of Fiji includes Rotuma, an island almost 400 km to the north that is geographically and culturally part of western Polynesia. There are also some Polynesian outliers (islands settled from western Polynesia) within the countries of Papua New Guinea, the Solomon Islands, Vanuatu and New Caledonia.

Irian Jaya is usually considered the western boundary of Melanesia; however, the peoples of some islands further west (especially those in the eastern islands of the Lesser Sundas) have many characteristics usually considered Melanesian. Irian Jaya has more than 125 officially recognized peoples. Speakers of Papuan languages (thought to be descendants of the earliest arrivals) who inhabit the mountainous interior maintain their indigenous customs in almost complete isolation; speakers of Austronesian languages (descendants of later arrivals, some with admixture of Malay blood) inhabit the foothills and coastal areas and maintain contact with the peoples of Indonesian islands to the west and with the coastal and island peoples of Papua New Guinea to the east.

Papua New Guinea, an independent nation in the British Commonwealth since 1975, has the greatest linguistic and cultural variety of any country in the Pacific. Some Papuan peoples in the mountainous interior were totally isolated from contact with European culture until the 1960s or 1970s; even their contact with peoples of the New Guinea coast was infrequent until after World War II. In contrast, the people of the Trobriand Islands (a group of coral islands about 880 km north of the southeastern tip of New Guinea island) and other islands in the Massim area have traditionally engaged in a far-flung inter-island ceremonial trade (the 'Kula ring'). In much of Papua New Guinea, traditional music and dance is performed in traditional contexts; where Christian influence (both Catholic and Protestant) is strong, hymn tunes are sung. Soon after World War II in cosmopolitan Port Moresby and some coastal towns, the 'cup-tea sing-sing' provided an urban substitute for the social functions of the traditional village sing-sing, and beer halls later

became centres for string-band performance of pan-Pacific performances.

The Solomon Islands, an independent member of the British Commonwealth since 1978, embraces the double chain of Solomon Islands with the exception of Bougainville, Buka and neighbouring small islands and some quite distant small coral atolls. Most of the islands are inhabited by Melanesians, though there are more Polynesian outliers here than in any other Melanesian country. These include Ontong Java (indigenous name: Luangiua) in the north, Tikopia in the southwest and Rennell and Bellona in the south. On the capital island of Guadalcanal there is also a post-World War II settlement of I-Kiribati that maintains its Micronesian heritage. Traditional music and dance are still performed in traditional contexts in some villages, and in modified contexts in others. Hymn tunes and some other musical styles were introduced by Christian missionaries (both Catholic and Protestant). A distinctive innovation, the bamboo band, incorporates some principles of the traditional stamping tubes and panpipes. It consists of tuned sets of bamboo tubes, each set lashed to a frame, the sets stacked on the ground with the tubes lying horizontally. The open end of the tubes is struck with the sole of a rubber-thong sandal. The melody is played on the top (highest pitched) set, the lowest part (comparable to that of a plucked string bass) on the bottom set and other parts on the sets between. The bamboo band that developed in the 1920s and 1930s is popular both at home and abroad, often with the addition of guitar and voice. The repertory consists mainly of love songs (both foreign and locally composed) and 'folk songs'; the performance style is characterized by a vigorous beating of rhythmic patterns adopted from Western popular dance music.

Vanuatu (formerly the New Hebrides), a long, narrow and irregular Y-shaped chain of islands, has been an independent country and member of the Commonwealth since 1980. The more than 100 native languages is evidence of diversity in the origin of the indigenous Melanesian peoples, known as Ni-Vanuatu. While most of the people profess Christianity (Catholic and several Protestant sects), many retain traditional rituals and other activities, some of which include music and dance.

New Caledonia, the southernmost country of Melanesia, is an Overseas Territory of France. It is comprised of one large island, New Caledonia (locally called La Grande Terre), smaller islands north and south of it, and the chain of Loyalty Islands to the east. The indigenous Melanesians are known as Kanaks, and the population also includes French people; significant numbers of Polynesians from Wallis Island and Tahiti, whose music and dance contributes prominently to tourist entertainment; and South-east Asians (mostly descendants of people brought to work the nickel and other mines). Noumea, the capital city and location of the South Pacific Commission, is a major cosmopolitan centre. Christian missionaries and French colonial interests crushed many Kanak traditions in the 19th and early 20th centuries; however, since a social uprising in the mid-1980s, Kanak traditional music and dance has enjoyed a renaissance, and the government has built a large new cultural centre named for the deceased leader of the Kanak movement.

The Fiji Islands, the easternmost islands of Melanesia, lie close to the western Polynesian islands of Tonga. Independent since 1970, the republic includes several large islands of volcanic origin, many small islands and coral atolls, and Rotuma. Within the Fiji group, the island of Rabi was purchased to resettle the Micronesian people of Banaba (formerly Ocean Island) after British phosphate mining operations left their island unable to sustain life. On the large islands of Viti Levu and Vanua Levu, about half of the population are descendants of people brought from India to work on sugar plantations. These people and those of Chinese and European descent maintain their own traditions of music and dance. For citizens of Fijian descent, their adaptations of choral music introduced by Protestant Christian missionaries and band music introduced by British administrators constitute important components of their heritage. The ethnically Fijian performing arts share many characteristics with those of western Polynesian cultures; however, traits such as intensity of tone production, small intervals in multi-part singing and muscular vitality in dance set Fiji's traditions apart.

Principal collections of music of the Pacific Islands, including Melanesia, are the Archive of Maori and Pacific Music, University of Auckland (includes a territorial survey of Oceanic music), and the National Research Institute, Boroko, Papua New Guinea.

2. MUSIC AND MUSICAL INSTRUMENTS. Melanesia, with a vast number of languages, is heterogeneous in its song and chant traits. The music and dance of each tribal group is limited in variety, but in recordings made in different parts of Melanesia, songs have been found with only one or many pitches; with small intervals or large intervals; with stepwise or triadic (including yodelling) melodic progressions; with small or large ranges; with level, arching, undulating and descending contours; with syllabic or melismatic text settings; with isometric or heterometric rhythms; with repeated-motif, responsorial, verse-refrain or progressive forms; and with casual or prescribed polyphony. Vocal music predominates, though instrumental music is more prominent in parts of Melanesia than in the indigenous musics of Polynesia or Micronesia.

In the mid-1990s, the most rapidly expanding new repertory in most of Melanesia was that of popular songs with lyrics in indigenous languages (or the pidgin lingua franca of the country) that express contemporary interests and concerns, and music that blends selective introduced features of style and instrumentation with those of local or regional heritage. Guitars, frequently amplified, and electronic keyboards are used in many of these bands. Since the late 1970s in Papua New Guinea and Fiji, and somewhat later elsewhere in Melanesia, the cassette recording industry has been a major factor in the dissemination of this music. The other major trend is a renaissance in selected indigenous music and dance genres, especially for representating a people in presentations for national and international audiences such as at the Festival of Pacific Arts (*see* PACIFIC ARTS, FESTIVAL OF).

The indigenous musical and other sound-producing instruments in Melanesia were made of natural materials obtained locally or through established trade routes. Though the total inventory of instrument types is quite large (much larger than either Micronesia or Polynesia), each tribal group uses only a small proportion of those. Of the indigenous instrument types reported for Melanesia, most are still in use somewhere.

Idiophones are the most numerous, and many types are widely distributed. Wooden slit-drums (called slit-gongs or hollow log idiophones in some writings) are prominent in much of Melanesia. In the Sepik River area of Papua New Guinea, some slit-drums over 4 m long, with carved alligator head at one end and tail at the other, are kept in spirit houses. In Malekula, Vanuatu, standing slit-drums have been highly prized, some up to 6 m tall, with a stylized human or spirit head carved at the top above the slit, their sounds embodying voices of gods or spirits. In the Solomons, huge horizontal slit-drums are prized for bringing their 'bigman' owner great 'renown'. In these areas and elsewhere, smaller slit-drums (in a few areas made of bamboo as well as of wood) are used for signalling and to accompany dance. Ensembles of slit-drums are highly developed in parts of Melanesia. Rattles, sticks, stamping tubes and jew's harps are among the widely distributed idiophones. In contrast, some types are distinctive to limited regions: pairs of clappers made from tree bark in New Caledonia; a so-called 'water drum' in the Chambri Lakes of Papua New Guinea, with a hollow wooden body, shaped much like those of hourglass membranophones, and a fine carving of a human figure to hold the drum while plunging it into the water's surface; and a friction block that is unique to New Ireland.

Among aerophones, shell trumpets (end-blown and side-blown) were in widespread use for signalling throughout Melanesia except, until after World War II, in the interior of New Guinea island. Also quite widespread are rolled-leaf oboes and end-blown flutes (most being made of bamboo but in a few areas of reed). Nose-blown flutes are known from Fiji and parts of Papua New Guinea. Of the side-blown bamboo flutes, the best known are pairs of spirit flutes in Papua New Guinea, some up to 3 m in length and with attached zoomorphic wood carvings at the closed end or intricately carved stoppers placed in the open end when not in use. Panpipes are rather widely reported, and are especially highly developed in ensembles in the Solomons. Other types of aerophones with limited distributions include wooden trumpets, ocarinas and bullroarers.

A membranophone prominent in western Melanesia is a single-headed hourglass drum, usually played to accompany dance, often by the dancers themselves. There are few indigenous chordophones, but the guitar, often played percussively, has been widely incorporated into modern Melanesian musics.

3. DANCE. Dances among the inhabitants of island Melanesia and New Guinea have some elements in common but differ significantly from island to island and from group to group. Only a few studies have focussed specifically on the movement dimensions of dance.

A common feature throughout much of the area is a basis in rhythm. Often a leader begins by starting a knee-bending-and-straightening movement motif. Others join in, usually in a line or circle, until the whole group moves up and down together in place or in the pre-arranged choreographed pattern. A rhythmic environment, created by musical instruments and singing, is made visual by the massed human bodies as they move together in an elaboration of rhythm. Some costumes are composed primarily of attachments that move and emphasize this visual rhythm. In New Guinea, bird of paradise plumes and other feathers extend from headdresses, back, bustle or arms. Hanging rattles of seeds or shells are attached to legs, costumes or held in the hand. Cuscus skin ripples like vertical waves, and shredded leaves and fibres cascade and bounce. Penis coverings of gourd, shell or bark are curved forward and upward to emphasize the up-down movement of this part of the body. The costume emphasizes rhythm, while at the same time the rhythm shows off the costume; together they create a mass rhythmic statement. In many cases dance is realized as movement after the introduction of a regular rhythm, set by the beating of hourglass drums, slit-drums or rattles. In some areas melodic instruments furnish the aural dimension. Many movement systems, especially those concerned with ritual, are primarily the province of men, although women might move independently or 'participate' as observers. Courting dances, widespread in the Highlands areas of New Guinea, are performed by seated boys and girls; the movements involve turning the head from side to side and bending the torso until heads touch.

Melanesian dance was traditionally an integral part of long ceremonial cycles often lasting ten years or more. These cycles were, and in some instances still are, concerned with warfare, initiation, advancement to higher grades in secret societies, or ceremonies for the dead. Performances are artistic events of spectacular display that combine visual and performing arts to reaffirm the traditional, legendary and social values of the society. The main performers often wear huge, unwieldy costumes and masks to impersonate legendary spirits or ancestors; the dancer becomes a mythical being, and his movements are correspondingly non-human. The important movements are a rhythmic bouncing of the body and legs, while the arms are used to steady the costume and mask. Other less spectacularly clad dancers play rhythmic patterns on hourglass drums while performing the same knee-bending movements. Still others join in, imitating the steps of these dancers and drummers.

Melanesian dance is primarily a group activity. Movements are repetitive and often appear spontaneous rather than minutely choreographed in advance. Often their function is to move a group of people ceremonially from one place to another, for instance from the men's house to the beach. The dancing group is usually a moving one (unlike the more stationary one characteristic of Polynesia and Micronesia) and progresses in circles or in single or multiple lines or columns. Melanesian dances are generally dances of participation rather than presentation for an audience: the costumes and masks are meant to be admired by others, and the presence of individuals or social groups is acknowledged. Dance movements are vehicles for important social and symbolic activities.

In dances of the coastal islands off Malekula in Vanuatu (formerly the New Hebrides), described by Layard (1942), dancers form one part of a six-part rhythmic counterpoint. Vocal music is sung to a second rhythm while four interlocking rhythms are beaten out on wooden slit-drums. The dancers' rhythm is produced by many feet striking the dance ground simultaneously, and certain recurring dance movements have specific rhythms, such as that used for running single file in a serpentine pattern. Dances are a main part of ritual cycles used in connection with the Maki, a graded secret society. On a single occasion lasting all night, some 70 ritual songs and dances have been performed, mostly processional, circular and figure dances performed by groups of men. Processional dances take place along roads leading to a dancing ground

or leading from one part of a dance ground to another. They are characterized by a heavy thudding step produced by bringing down the whole weight of the body on one foot. Circular dances, often connected with the consecration of slit-drums, are performed radially around posts on the dancing ground at night. They produce complex effects, some of the torch-carrying dancers moving clockwise while others move anti-clockwise. Figure dances are performed at dawn after an all-night dance. Groups of men may form a square consisting of ten lines of ten men each and progress through a number of intricate formations. In some figure dances a chorus acts in conjunction with players of individual roles. Dancers wear seed ankle rattles and masks consisting of bamboo frames covered with bark-cloth, and sometimes they carry feathered and painted paddles. Slit-drums are believed to represent ancestral voices that encourage the living to dance into a state of communal ecstasy in order to banish personal preoccupations and bring those dancing into communion with collective forces passed on from the dead to the living and those still to come.

Among the Maring people of the Bismarck Mountains of New Guinea (see Jablonko) dance is part of a ritual cycle called *kaiko*, which last about 12 years and is based on warfare. The *kaiko* is an expression of solidarity between allies and of equivalence between groups that may become antagonists. The dances in it reflect this equivalence and hostility. Usually groups dance simultaneously, synchronizing steps and drumbeats only within each group and moving in curved paths back and forth across the dance ground; rarely, one group becomes the focal point. Some men play accompaniments on drums while others carry bows and arrows, axes or long wooden spears. The groupings resemble those used for fighting. Before entering a battle or a dance ground, a man's legs are rubbed with grey clay to make them strong (in battle) or tireless (in dance). There are four main movements of the legs: a bounce step performed by flexing the legs while the head and trunk remain rigid and the arms hang at the sides or beat a drum; a flat-footed walking step used when a dance group moves in a column across the dance ground; a stoop that brings all the men of a dance group to a motionless position; and a 'display' step, in which the trailing leg is thrust backward or bent up towards the buttocks while leaping. During this 'display' step, the dancer wields an axe or passes a spear from one hand to the other above his head; the step indicates hostility and is used only occasionally and then by only a few men. In vertical linear movements the trunk is used as one unit.

Social dancing has become popular, especially in urban areas, and there are staged performances for local, national and regional events such as independence day celebrations. Some areas have travelling performing groups and national dance troupes. Continual influences from the outside world have expanded indigenous traditions to include rock and disco. At the same time indigenous traditions have been preserved and expanded in contemporary ways for performances at ceremonial events, arts festivals and for tourists.

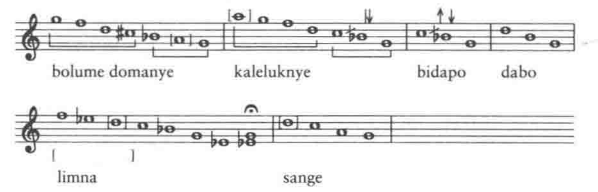
II. Irian Jaya

Irian Jaya become a province of independent Indonesia in 1963. Occupying the western half of New Guinea, it covers some 422,000 km² and had a population of around 1·7 million in 1990. The musical cultures of Irian Jaya are less well documented than those of Papua New Guinea (see §III below), though research has been carried out on the Isirawa of the northern coast (see Oguri; Erickson), the Asmat on the south coast (see Van Arsdale) and other cultures of the central range.

The Isirawa living east of Sarmi speak a Papuan language. According to Oguri their music is anhemitonic pentatonic with descending melodies, as in many cultures of this region. They distinguish 'real songs' (*wiwiye*, *kona*, *fatiya*); dancing songs performed at traditional ceremonies and feasts; and *karame*, individual songs performed at many occasions for entertainment. Many old ceremonies, for example the inauguration of a new men's house, were prohibited by Dutch colonial officers; as a result, many of these ceremonial songs have been forgotten. *Wiwiye* are performed over a whole night until the morning, when the holy notched bamboo flutes (approximately 1 to 1·7 m long) are played. Women and children are not allowed to see these instruments. Other dances are accompanied by the *fatiya*, an hourglass drum, shell trumpets and small bamboo flutes, which are played by everyone. Belief in ghosts and spirit possession are combined with special magic songs.

The Asmat of the southern coastal area are well known for their carvings, but no less important to them are music and dance, which play a major role within the Asmat's myth of creation. The myth tells how wooden figures were carved by the creator, Fumeripits, and set into the first men's house. He started drumming in order to infuse the figures with life. After a while wood changed to flesh and blood, the figures began to move and dance, and the first Asmat were created. Up to the present day this myth is re-enacted in special dance performances. No Asmat feast takes place without drums. The most important occasions are ceremonies that demarcate *emak cem* (stages in the life-cycle and seasons) and placate ancestral spirits, and the *je-ti* feast of the mythical sacral first longhouse. The sounds of *em* (drums) are complemented by end-blown straight trumpets (*fo, fu, fi*), made of bamboo or wood, and *pipa*, bull-roarers whose sounds represent the voices of ancestral spirits. Ritual songs with texts that employ an ancient, secret language with magical significance belong to individuals who control the right of their performances, an effective copyright that is inheritable. Besides their magical powers, songs have a strong psychic and social function.

The peoples of the central range are not homogeneous in culture, language or music (Kunst, p.119, n.43). East of the Kapauku, Simori, Moni and Uhunduni live the Dani (in the Baliem Valley), the Yali, the Mek and the Ok people. The Mek region, especially the Eipomek Valley, was the focus of extensive ethnomusicological research (Royl, 1992; Simon, 1978, 1992, 1993). The Eipo are small people, the males averaging 146 cm in height. The only musical instrument they play for self-entertainment is the jew's harp. In some scattered areas *kundu* hourglass drums of exegenous provenance are played.



Four categories of songs or singing can be distinguished by both typology and function. Each of these four types has a particular melodic and formal structure and is associated with specific occasions, which can be characterized as either self-entertainment during various activities, ritual dancing, death or illness. The Eipo themselves distinguish between *dit*songs (self-entertainment songs) and *mot* songs (ritual dance songs). The third category, *layelayana* (laments), and the fourth, *fungfungana* or

fuana (recitations at curing ceremonies), are not considered music or singing, and therefore these musical activities have no special term.

The *dit* are individual songs, mostly performed by a single person, male or female. Two persons may sing a *dit* together, in which case one begins to sing, and the other starts the song a little bit later; the process is similar to canon or, more accurately, fugato, since the second singer modifies the melody. Every *dit* has a distinct melody, and in many cases both the occasion for its creation and the name of the composer (mostly women) are well known. However, a strict differentiation between the authorship of the lyrics and the melody can rarely be stated. In most cases a love affair resulted in a new song, though the affair itself is not mentioned directly; every song has an underlying story, although the song text may appear to involve only the description of nature or certain places in the gardens, forests and mountains. There is also a kind of love song hinting at sexual intercourse. Some topical songs deal with the arrival of the German research team, the dropping of goods from airplanes and the building of a small airstrip. All these songs are performed sporadically during daily activities such as carving arrows, building a new hut, braiding a net or working in the gardens. Other mythical songs deal with the origin and history of the Eipo and the world (Heeschen).

Mot songs are collective ritual songs and dances performed by men at feasts or, in the past, after victorious raids against hostile neighbours. They maintain the social bonds of the group of men, who dance all night; they also strengthen the friendship between allied villages whose people visit each other at big pig-feasts. The dancers always follow the same choreographic pattern. At the beginning all the men stand in a semicircle. A lead singer starts singing, 'speaking the *mot*', while the others 'tremble' or 'move'. The solo singer sings a small phrase in a kind of syllabic parlando style, stringing together the syllables of the text very quickly. This part is variable and more or less improvised. At the end of the phrase the other men join in, singing meaningless vowels. In some of these *mot* tunes the group singing leads to multiphonic sounds. The men standing side by side turn so that they form a queue and start running in a serpentine path. They utter certain sounds strictly alternately in two groups: inspirative whistling or shoutings on *uuh*, *ha*, *ya*, *yui*, *ye*, *huu*, *ae*, *woo*, *loo*, or gasping sounds uttered expiratively by one group and inspiratively by the other. After coming to a standstill the lead singer starts again; after this the queue unfolds in the opposite direction. In proximity to this dancing a small number of women and girls dance, jumping up and down. Their moving grass aprons provide a steady, rhythmic noise that nevertheless bears no musical relationship to the dancing of the men. About 25 different types of *mot* were found in the Mek area, 15 of them in Eipomek; they all have specific names and different tonal structures. Some of the most common structures are shown in ex.1.

Ex.1 Common structures of *mot* form, transcr. A. Simon

Between 1976 and 1980, *dit*, *mot* and *fungfungana* ceased to be performed within traditional contexts, due to the impact of fundamentalist missionary activities. The Yali, living west of the Mek people, have a different, distinct polyphonic style. There is virtually no lead singer except at the beginning of the songs, whereas in the neighbouring Mek culture the lead singer plays an important role and transmits the text. In the case of the Yali this is done by the whole group.

III. Papua New Guinea

Occupying the eastern half of New Guinea, Papua New Guinea covers some 463,000 km². Independent since 1975, it has a population of approximately four million people. Over 850 languages are spoken, making this one of the most linguistically complex areas on earth. Since colonization, two lingua francas have developed, Tok Pisin and Hiri Motu, while English has become the official language. This tremendous traditional diversity is also apparent in music and dance, and any overview can only highlight general features. While the varied terrain of the nation has undoubtedly contributed to this complexity, geographical features have also assisted in the dissemination of music and dance and the development of certain types of communication.

Papua New Guinea is divided administratively into 19 provinces, which are occasionally grouped into four regions: the Papuan Region (comprising Western, Gulf, Central, Milne Bay and Northern (Oro) Provinces); Highlands Region (Enga, Southern Highlands, Western Highlands, Chimbu (Simbu) and Eastern Highlands); Mamose Region (West Sepik, East Sepik, Madang and Morobe) and the Islands Region (Manus, New Ireland, East New Britain, West New Britain and North Solomons). Although these divisions have only vague cultural significance at best, they are convenient terms in discussing certain widespread features. Although Papua New Guinea is generally considered 'Melanesian', the western islands of Manus show Micronesian traits, and there are Polynesian Outliers in the North Solomons (Moyle, 1995).

1. Performance occasions. 2. Song texts and structure. 3. Instruments: (i) Membranophones (ii) Aerophones (iii) Idiophones (iv) Chordophones (v) Voice-modifiers. 4. Introductions. 5. Research.

1. PERFORMANCE OCCASIONS. Music, often including dance, plays a significant role in highlighting the important occasions of an individual or community. Such occasions may include birth, first haircut, first menstruation, initiation, courting, launching a new canoe, opening a new house, brideprice payment, ceremonial exchange, warfare, harvest, personal amusement, death etc. Performance groups range from solo to those requiring the participation of surrounding communities in mass displays of the political prestige of leaders known as 'bigmen'. Other than for the most informal occasions, performance requires decoration: bird plumes, special dancing skirts, painted skin and masks are all common elements, although their combination varies according to the area concerned and the type of music being performed.

Performance frequently results in interaction between the world of spirits and that of humans. Spirit beings, called in Tok Pisin *tambaran* or *masalai*, are given substance through human sounds: their arrival and departure is heralded by special noise-makers, and their presence is aurally signified by ensembles of instruments, played only by initiated males. Such ensembles commonly

consist of instruments such as bullroarers, trumpets, various types of flutes, or voice-modifiers. The presence or absence of such esoteric instruments is often an aid to distinguishing important regional groupings (Gourlay, 1975).

Even in areas in which this type of performance is absent, music and dance are performed to please spirits by demonstrating the continuation of ancestral traditions, and spirits may join dancers. Besides such interactions, performances are also occasions of display to onlookers, demonstrating group solidarity and attracting the opposite sex. For the latter purpose, special fragrant leaves are frequently worn or attached to instruments.

Choreography of dances varies tremendously between different areas. Slow steps in place with slight bobbing of the head to accentuate the movement of head plumes, which is common in Central Province, contrasts with the intricate movements and ritual preparations of New Ireland dances (Yayii, 1983). In some areas, dances are mimetic, imitating the movements of animals or various village activities. While much dancing involves both sexes, movements differ between men and women. In many parts of the Islands Region there are different dances for each sex, with dancers forming a separate group from instrumentalists. In parts of the Highlands, dances are different for each sex and for young and mature performers.

Another important division contrasts dances performed inside and outside houses. Highlands courting dances, involving head and upper torso movements of seated performers, take place inside a girl's house. In regions with communal longhouses or men's houses, there may be special repertories appropriate for indoor or outdoor performances.

On the boundary between speech and song are special call languages. In mountainous areas these frequently involve attention-getting initial patterns, followed by the text delivered in a heightened manner. In coastal regions, signalling is accomplished through striking slit-drums (Mamose and Islands Regions) and/or blowing conch-shell trumpets. Such signals are not directly based on language but consist of specific rhythms referring to clans, individuals, commands and other subjects. In parts of the Torricelli Mountains a whistle language has also developed based on the same principle.

Since the early days of colonization, new performance contexts appeared for traditional music at government functions, which often resulted in friction with missionaries who were trying to dissuade traditional dance. In the early 1950s, regional shows with a section for traditional dance competition began to develop in most provincial towns, providing rare opportunities to see such performances outside of the village. Groups come from many different culture areas, and monetary prizes are awarded for the best performances.

2. Song text and structure. In some regions of Papua New Guinea, very short song texts are repeated numerous times with varying rhythmic accompaniment, occasionally with minor word changes. In contrast, other song texts are very long, with many verses. These frequently describe the movements of clan ancestors or mythical beings credited with forming geographic landmarks, or explain group migrations (Wassmann, 1991). Such elements may also feature in more personal songs, such as those composed by Manambu men lamenting rejected marriage proposals (Harrison, 1982).

Texts frequently contain, or may wholly consist of, words untranslatable by their performers. Such words may be borrowings from other languages, as songs and dances are frequently traded with neighbouring groups, thereby enhancing the poetic nature of texts. However, these untranslatable words may be from an earlier form of the present-day language or a proto-language. Untranslatable words may also simply be used as vocables. In the Hagen area, for example, the text is sung to a slow drum beat and dance step, after which vocables are sung to the same melody as the speed of the drum beat and dance movement doubles. Whether all words in a particular song are understood or not, songs always have an accompanying explanation, either giving details of the event that inspired the song or providing background on the images evoked. The extent of knowledge of this information varies between individuals and is a crucial difference between initiates and non-initiates. Song texts are commonly loaded with geographical place names: places significant in group migrations, warfare or the hunting grounds frequented by deceased members of the group. Consequently, songs often evoke intense emotional outpourings as these places and their local significance are recalled.

Although much singing is in unison, harmonic intervals may occur through vocal overlap. Singing in parallel 2nds (in Manus) or 5ths (in Gulf) is distinctive of particular groups, while multi-part textures are found in parts of the Sepik, North Solomons and elsewhere, often in conjunction with instrumental counterparts. Falsetto is employed by Chimbu men in courting songs and Fuyuge husbands in duets with women.

In the Yupna and Nankina area of Madang, men and women each have their own short melody, usually sung only with vocables. A person may use these *konggap* melodies to call out to another person or to announce a death; thus they are similar in function to signalling on conch shells or slit-drums. Group performances involve each male singing his own melody simultaneously, accompanied by unison drumming while women dance outside the men's circle but do not sing. Thus a group performance of *konggap* consists of a multi-part mass of asynchronous vocal sound, unified by a common drum rhythm and synchronous dance steps (Niles, 1992).

Asynchronous singing is also an important feature of other groups, such as in Kauwol women's songs or Hamtai songs, for which the singing is neither melodically nor rhythmically in unison. The Kaluli metaphor *dulugu ganalan*, 'lift-up-over sounding', applies to singing as well as to drumming, with melodic movement and texture described in terms of waterfalls, birdsong and weeping (Feld, 1990). For the Waxei, song structure and multipart motion are linked to the various movements of the water in a river (Yamada, 1997). The image of a tree trunk and its leaves or branches also provides a metaphor for song structure or words in contrast to vocables.

3. Instruments. The numerous cultural groups in the country have produced a large number of sound-producing instruments. The greatest variety of instruments, as well as the greatest linguistic complexity, is found along the northern part of the main island in the Mamose Region. Attempts by linguists to map the movements of various language divisions within the country have been

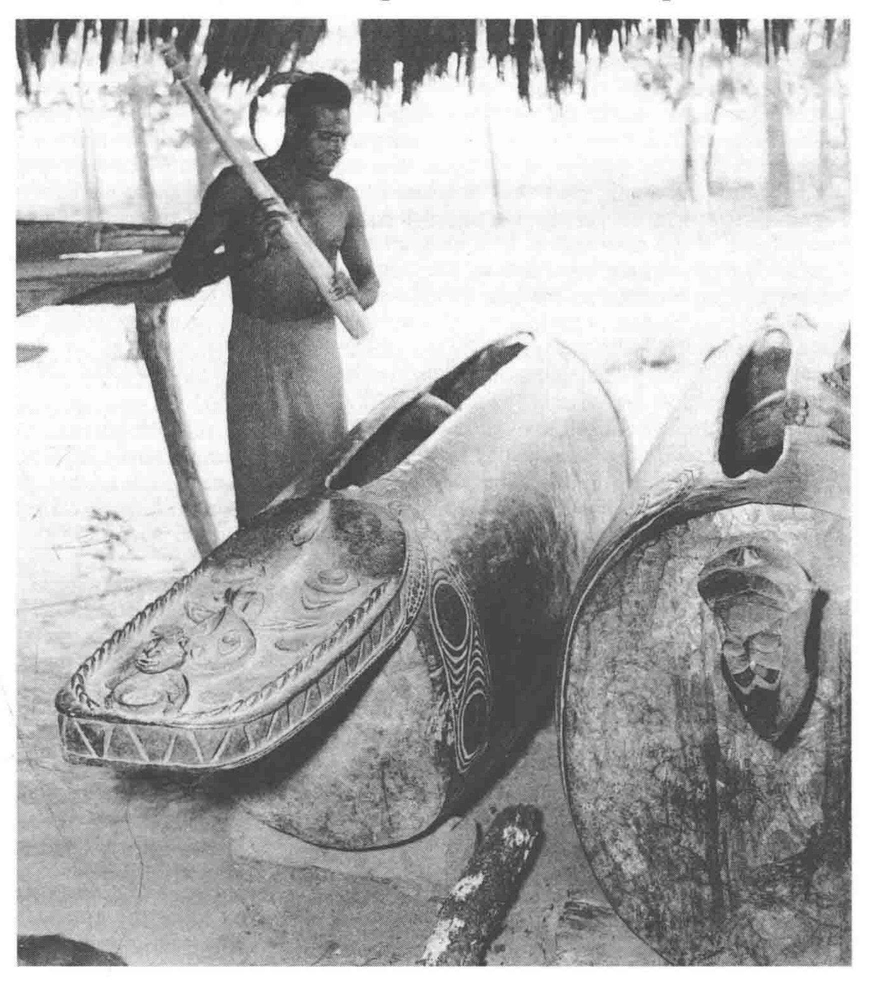
compared to the distribution of instruments (McLean, 1994). The best general overview of the variety of instruments in the country remains Fischer (1986).

(i) Membranophones. One of the most widespread membranophones in Papua New Guinea is the drum (in Tok Pisin *kundu*, in Motu *gaba*) consisting of a skin fastened to one end of a hollow body, the other end being open. Lengths range from 23 to 280 cm. The body is usually made of wood, although bamboo and clay are used in a few areas. Its shape may be hourglass, cylindrical, conical or goblet. While the end for fastening the skin is always cut off straight, the distal end may be carved into two or more 'jaws', especially in western parts of the Papuan Region. Depending on the customs of the area concerned, the body may be undecorated, carved, incised or painted. Although differences have blurred in recent decades, traditional techniques for decorating drums were often highly distinctive.

A variety of skins are used, often related to the geographic distribution of animals. In the lowlands, the most common skin is the *Varanus indicus*, the monitor lizard, although other lizards and snakes are also used. In the Highlands, where large lizards are absent, marsupial skins are used. The skin is secured to the body of the drum with sap and/or wound with string. Tuning of the drum is usually accomplished through a combination of heating the skin over a fire and adjusting the number and placement of beeswax blobs placed on it. In contrast, in the Yupna and Nankina areas, water is applied to the skin and mud smeared on it. While such drums are found in all provinces of the country, in the Islands Region they are significantly absent from most of Manus, the northern part of New Ireland and much of North Solomons. On the mainland, they are mostly absent from Angan groups and have been introduced within recent generations in other parts of the Highlands, where they are played asynchronously, probably in imitation of the rattles which they replaced. Drums are also absent from Rossel Island (Milne Bay), which has distant linguistic ties with the languages of the North Solomons.

Typically, a drummer holds the instrument in one hand, sometimes by a handle, and strikes the skin with the other hand. Although drums are mostly played by men, some dances in the Highlands feature drumming by women. Because of their portability, drums are frequently held by dancers, except in those areas where instrumentalists are a separate group from dancers. Only in scattered parts of Western and Gulf Provinces is knowledge of playing a drum passed on through a male cult. Ok speakers must pass through a certain stage of initiation to be able to play drums and jew's harps. The huge Gogodala *diwaka* drum is played by men inside their communal longhouse during the *aida* ritual.

Depending on the region concerned, drum rhythms may remain the same throughout a song or vary between sections, the latter being particularly distinctive of the Mamose and Islands Regions. Vocal signals are frequently given to indicate a change in drum rhythm and corresponding dance movement. Ensembles of different size drums are found in parts of Oro and Milne Bay Provinces, with small drums played by a leader.



(ii) Aerophones. Wooden or bamboo bullroarers have a wide distribution in Papua New Guinea. Wherever they are found, they create the voice of spirits. A similar function is also found for instruments of more limited distribution, such as blown grass or a bamboo with split sides.

End-blown bamboo flutes are common. The blowing end may be cut off straight, bevelled, notched or with a projection. Where such flutes have finger-holes, they are often secular instruments, played solo, in groups or to accompany singing; only on the Huon Peninsula do they have an esoteric function. End-blown flutes without finger-holes, however, are almost invariably cult instruments played as spirit voices or, at least, to scatter non-initiates from the area, e.g. among Angan groups who relate the blowing of these instruments to ritual homosexuality. These flutes are often paired and played in alternation. On the Vanimo coast, end-blown flutes with projections form part of a larger ensemble associated with men's initiation. Piston flutes are spirit instruments on the Huon Peninsula and are often said to be male, in contrast to female end-blown flutes with finger-holes. Panpipes exist in raft and bundle form. Bundle instruments are quite rare, but are used by the Huli to articulate poetry. Raft instruments are more common, found sporadically on the mainland but particularly associated with the Islands Region, especially North Solomons Province. Ensembles of double-row panpipes (one row closed for blowing, a second row of the same length, open) are played in combination with raft-form bamboo trumpets and wooden trumpets as a distinctive ensemble in northern and central parts of the province. Single-row panpipes are associated with southern Bougainville and show affinities with such ensembles in the Solomon Islands to the south. In Morobe, panpipes used by the Angaataha people are played in three different sizes, tuned an octave apart, in alternation with single pipes. The effect of a drone is created usually as accompaniment to a solo singer.

Side-blown flutes, wherever they appear, are blown by initiated men as the voices of spirits (fig.1). Long paired flutes (up to 3 metres in length) occur along the Middle and Lower Sepik river (Spearitt, 1979) and adjacent areas, as well as near the Morobe and Oro border. Shorter paired flutes are common in the Highlands, from Kainantu to near Mt Hagen, and in pockets along the Rai coast. It is possible that such flutes reached the Highlands along the Ramu river. To the south of the Middle Sepik river, particularly along the Korosameri and Karawari rivers, long paired flutes are found along with larger ensembles of middle-length flutes (Yamada, 1997). Common to all these flutes is overblowing, to create additional pitches,

1. Side-blown sacred flutes of the Siane people, Eastern Highlands Province, Papua New Guinea

2. Garamut (slit-drums) of the Latmul people, Aibom, Sepik Province, Papua New Guinea

and alternation, to create a continuous melody or texture. In the Highlands and Rai coast, where the shorter flutes are used, different pitches are also produced by closing the distal end of the instrument with the hand; thus players utilize the harmonics of both an open and a closed pipe. Flutes are often named after birds, spirits or ancestors.

Ocarinas made of coconut shells are esoteric instruments in parts of East Sepik and Madang. Clay ocarinas are found in parts of the Highlands, whereas in various scattered locations other nuts are used.

End-blown wooden trumpets are used in ensembles in the Amanab and Imonda area of West Sepik Province. Although each instrument produces only one pitch, they are played in alternation to create melodic and harmonic intervals. In the *ida* ritual, five instruments of different pitch are played in an ensemble with optional bass instruments to accompany dancing by elaborately painted male dancers wearing ornate masks. To the east, in the Yangoru and Arapesh areas, end-blown bamboo trumpets are played in ensemble, with one player striking a drum held under his arm. In contrast to the wooden trumpet ensembles, this group's music is associated with male initiation and produces spirit voices (Niles, 1992). On the Bali-Vitu Islands (West New Britain) one short bamboo trumpet is blown in the natural hollow of a special tree; other bamboo trumpets are blown inside larger bamboos, with the distal ends closed. Individual wooden or bamboo trumpets are used in scattered parts of the country for signalling, while conch-shell trumpets are used in coastal areas and many inland areas that have obtained the instruments through trade.

(iii) Idiophones. One of the main idiophones and largest instruments in Papua New Guinea (over 4 m long) is the wooden slit-drum (called *garamut* in Tok Pisin), found along the northern coast of the Mamose Region and through the Islands Region (fig.2). Generally only found inland along the large Sepik and Ramu rivers, because of its limited distribution it seems to have arrived in relatively recent history, a hypothesis also reflected in the number of cognates for the name of the instrument over this wide geographic and linguistically varied area. Two distinctive methods for hitting the instrument are found: using the tip of the stick (jolting) or the side (striking). Jolting one long stick against the slit-drum is most common. However, two short sticks (held by one player) are used along parts of the Sepik river where slit-drums, like many other instruments, are played in pairs, while two long sticks (played by two men) are common in New Ireland. The striking technique, however, is used in Manus Province, where one or two sticks are struck against instruments in the slit-drum ensembles found there. Aside from the use of slit-drums to accompany dance, single instruments are used extensively for signalling. Bamboo slit-drums are also found in a scattered distribution and are used in

similar ways. Bamboo stamping tubes may be struck against the ground, against the leg, or alternately between the palm and the thigh.

Although much smaller than slit-drums, jew's harps (called *susap* in Tok Pisin, *bibo* in Motu) are probably the most widespread instrument in Papua New Guinea (fig.3). Most commonly they are idioglottal bamboo instruments, with rare occurrences of heteroglottal instruments using a leaf and midrib of a coconut. On the bamboo instrument, the lamella is usually activated by jerking a string attached to the base of the jew's harp, thereby striking the base of the lamella against the thumb. For a less common technique, primarily associated with the Ok area, there is no string; instead a hand movement is used, twisting at the wrist to force the lamella base against the upright wrist of the other hand. In all cases, the lamella vibrations are modified by movements of the mouth, tongue and jaw. This technique is shared with musical bows and, in some areas, used to modify the sound of the flapping wings of an insect held to the mouth or a wooden disc inserted into the player's stomach and struck with a stone. While jew's harp sounds are often played in a seemingly random sequence, according to the preference of the player, Baruya men detail a trip through the forest with elaborate sound representations of walking, crossing streams, birds, insects etc. The Huli articulate poetry, as they do on their musical bows.

Rattles are made of a great variety of objects. Often similar objects (especially shells or nuts) are strung together on a string or hung from a handle. The rattle is then carried by dancers or suspended from drums. The dried husks of the *Pangium edule* fruit are widely used as rattles. Less common materials for rattles include split bamboo, coconut leaf midribs, cane, crayfish claws, clay balls, seeds inside an echidna skull and leaves. Amanab and Imonda men wear a special penis gourd which strikes a belt through dance movements. Special rattles have an esoteric function in parts of Madang Province and among the Gogodala of Western Province.

3. Bamboo jew's harp of the Siane people, eastern Highlands Province, Papua New Guinea

An esoteric friction idiophone is found only in northern New Ireland, in the areas associated with the *malanggan* ceremony. Wooden instruments are made in various sizes, with three to five tuned tongues cut out of the body. The player rubs his hands across the tongues, towards his body, to produce different pitches. Compositions with names describing various actions or the singing of birds are performed at a mourning ceremony (Messner, 1983). Drum- or bowl-shaped instruments are plunged into water in pits during male initiation in the Middle Sepik. Men stamping the ground in imitation of an earthquake is associated with spirits in parts of the Rai coast (Reigle, 1995).

(iv) Chordophones. Two types of musical bows must be distinguished: the first is a normal hunting bow carried during dances, when the bow string is snapped; the second is a much smaller, specially made instrument held to the mouth, with the vibrations of its string(s) modified by movements of the mouth. Whereas the first type is fairly widespread, the second is much more restricted, although it is likely that distribution was much greater in the past. It is to the latter type that the term 'musical bow' will be applied here. In many North Solomons languages, the term for musical bow and that for jew's harp are the same, reflecting their similarity in playing technique, although the former is exclusively a woman's instrument commonly played during their stay in menstrual huts, the latter a men's instrument. The single string is pulled away from the player and occasionally stopped with the little finger of the hand holding the instrument. Compositions imitate the melody of songs. Among the Huli, in contrast, players articulate poetry on their instruments, intending to make the absent beloved yearn for the performer. Although played by both sexes, the instruments differ slightly in size, playing position and construction. Both instruments have two strings, tuned a major 3rd apart. The strings are strummed with a plectrum with one hand, while the thumb of the other hand occasionally presses one of the strings, raising the pitch a semitone. Huli regard such performances as the supreme artistic achievement (Pugh-Kitingan, 1981).

(v) Voice-modifiers. Instruments that change the quality of the performer's voice, here called voice-modifiers, are found in Papua New Guinea. Hence, in contrast to jew's harps or musical bows where the vibrations of the instrument itself are modified by movements of the mouth, with voice-modifiers vibrations of the vocal cords are modified by an external instrument. Because they may resemble flutes or trumpets morphologically, voice-modifiers have frequently been misidentified in the literature, yet they contrast significantly with other instruments and make up important ensembles. Wherever they are found, they are used by men to create spirit voices (Niles, 1989). Voice-modifiers are the distinctive instruments used in ensembles along the Rai coast and in many other parts of Madang. Two major ensembles are found: one, called the 'mother', consists of voice-modifiers of gourd, bamboo (the sides of the bamboo being slit between the nodes), drums and slit-drums. In contrast, the 'child' ensemble uses long bamboo voice-modifiers, the sides of which are intact.

Long and short voice-modifiers are also found in parts of East Sepik and West New Britain. The Ilahita Arapesh

place the distal ends of their long voice-modifiers into drums that lack skins to create the voice of the *nggwal* spirit (Tuzin, 1980). Split-bamboo instruments are found in parts of northern New Ireland and West New Britain. On Bali-Vitu men sing into coconut shells held close to their mouths to produce the singing of spirits: the top third of a coconut shell is removed and orchid leaves placed inside.

4. INTRODUCTIONS. Music that originated outside of traditional relations is often referred to as an 'introduction' (see Webb and Niles, 1987). All introduced music considered here dates from the mid-19th century or later, thus roughly coinciding with the advent of colonial history. Missions were successfully established beginning in 1871 with the London Missionary Society; the other main churches arrived shortly thereafter: the Methodists in 1875, the Catholic Church in 1881, the Lutherans in 1886, the Anglican Church in 1891 and the Seventh-Day Adventists in 1908. Particularly after World War II, these 'mainline' churches have been joined by many smaller churches. In the 1990 census, over 96% of the population considered themselves Christian. All early missionaries brought hymn melodies from their own Western traditions and attempted to fit vernacular translations of hymn texts. For many churches, this remains their tradition: choirs singing Western melodies in vernaculars, Tok Pisin, Motu or English. There are, however, a few notable exceptions. Many Polynesian teachers (evangelists) were brought to the Papuan Region by the London Missionary Society, which was particularly severe in its prohibitions on traditional dancing. A Cook Islands style of hymn singing in two or more parts was introduced by Ruatoka (*c*1843–1903) and others, probably at the end of the 19th century, to teach Bible stories and as a substitute for traditional performances. Today, these *peroveta anedia* (prophet songs) are a distinctive style of worship in coastal areas of the Papuan Region.

In order to make the introduced religion as much a part of the community as possible, the Neuendettelsau Lutheran pastor Christian Keysser began using traditional melodies for hymns in the Kâte area in the first decade of the 20th century, a truly revolutionary experiment considering the very low opinion most Europeans had of traditional music. After this became part of mission policy in 1914, vernacular hymnals began to appear, filled with hymns with traditional melodies composed by Papua New Guineans. In the neighbouring Jabêm area, Heinrich Zahn (1880–1944) oversaw the transition from European to Jabêm melodies. A thorough examination of traditional forms enabled him to choose those he considered suitable. A musician himself, Zahn also began a conch-shell band to help his students learn to sing Western hymn melodies properly: one shell was used for each pitch of a diatonic scale (usually just over two octaves), with flattened tones produced by inserting the hand in the open shell. By 1927 Zahn was conducting four-part arrangements of the standard German hymns. Later a separate brass band was formed, and Zahn made cylinder recordings of traditional music and the new hymnody. Today, hymns sung to traditional tunes are a proud symbol of Lutherans, particularly in Morobe Province, and are an essential ingredient of any church function (Zahn, 1996).

Anglicans and Catholics also experimented at an early date with the use of traditional melodies. Such efforts were particularly promoted among Anglicans after 1960 and Catholics after the Second Vatican Council, 1962–5. The most recent churches in Papua New Guinea are Pentecostal and tend to adhere strictly to the usage of melodies from their home base, frequently North America or Australia.

However, while the colonial powers of Papua New Guinea (Germany, England, Australia) provided the interaction necessary for these introductions, not all the music introduced had a European basis. The popular 'Kiwai dance' originated in Rotuma (Fiji) via the Torres Strait Islands, where Rotuman men were brought for pearl-shell diving.

In Papua New Guinea, brass bands are associated with the police force, bagpipe and drum bands with the defence force. Numerous attempts to start brass bands by the government and missions occurred during the early 20th century, but the present-day Royal Papua New Guinea Constabulary Band had its origins in 1937, with the Pacific Islands Regiment Pipes and Drums Band beginning in 1952. Both bands have toured overseas, and a former conductor of the police band, Thomas Shacklady (*b* 1917), composed 'O Arise All You Sons', the national song. In more recent years, brass bands have been started for youth groups, and bagpipes have also been played by prison warders.

While Western instruments were brought by colonizers and labourers from parts of Indonesia, Papua New Guineans particularly embraced guitars and ukuleles after the conclusion of World War II. By the 1950s string bands began to form, consisting entirely of acoustic instruments. During this time they performed imitations or variations of songs heard on the radio or on phonographs, some in local languages. In 1962, Papua New Guineans were allowed to drink alcohol, thus giving bands potential access to important performance venues: hotels and taverns. However, the new audience required electrified equipment, and bands performed cover versions of overseas hits mixed with a few string band compositions. By the late 1960s, Papua New Guinean bands, such as the Kon-Tikis, Fuzzy Wuzzies, Stalemates and Kopykats, often comprised of mixed-race members, became common at these venues. Bamboo bands developed in North Solomons and Madang, featuring string bands accompanied by bamboo instruments tuned to the notes of the tonic, dominant and sub-dominant chords with added 6ths. The bamboos are struck with rubber thongs, frequently to a boogie-woogie rhythm. Acoustic and amplified bands began to be recorded in the early 1970s and records issued. However, it was not until the local radio station began a cassette series in 1977, devoted almost entirely to bands, that the recording industry began to expand greatly. By 1996, about 3000 cassettes of local bands had been released, many from either Port Moresby or Rabaul, both areas being important in contemporary music styles. While many bands remain popular only with people from their own province, a few bands have been consistently successful over the entire nation, e.g. Paramana Strangers, Painim Wok and Barike. The National Arts School (now part of the University of Papua New Guinea) produced a number of bands that conspicuously attempted to meld traditional and Western popular musics, chief among them, Sanguma. However, for most bands the relation of their music to traditional music is less obvious. Songs are frequently in the vernacular and often concern either lost loves or strong

attachments to one's village. Melodic movement, distinctive harmonies and short, repeated texts are also possible relations with traditional music. While cassettes continue to be the most popular format for bands, local video clips began to be made and aired in 1990 on EMTV, the only local television station, and a few CDs began appearing in 1994. Webb (1993; 1995) details the development of popular music in the country.

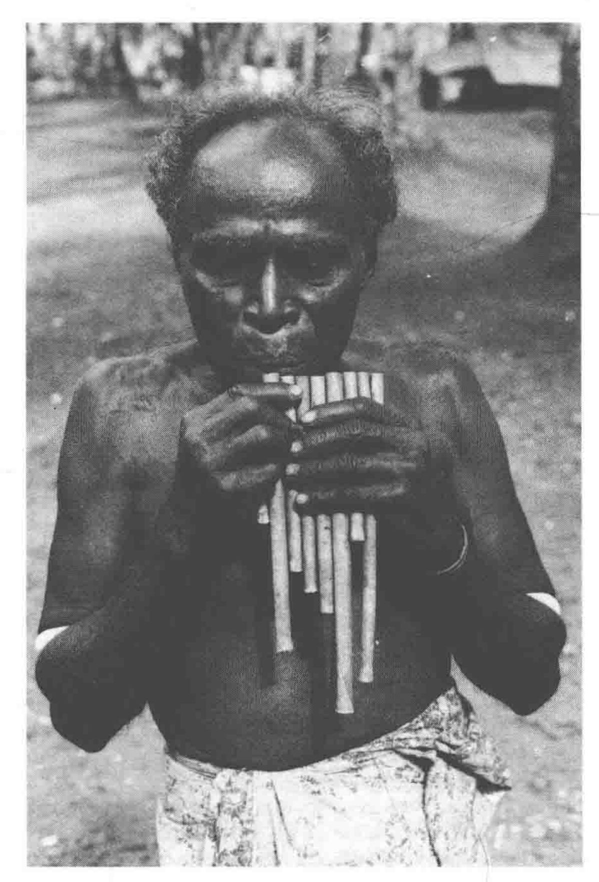
5. RESEARCH. Although the first recordings of Papua New Guinea music were made in 1898 during a visit by an anthropological expedition whose main work was in the Torres Strait, interest in music began before this with instruments brought to museums and the descriptions of visitors. Colonial powers had different attitudes towards research. The Germans were very much concerned with the subject, mounting huge, well-equipped expeditions, whereas the British, and particularly the Australians, were much less interested in such work. Consequently, there are many invaluable early recordings from the Mamose and Islands Regions, formerly German New Guinea, but fewer from other regions. Recordings have been made by a full gamut of the professions: natural scientists, explorers, doctors, missionaries, geographers, adventurers, anthropologists and latterly ethnomusicologists (Niles, 1992). Although numerous writings on music resulted from the recordings made by others, the first dissertation on Papua New Guinea music resulting from the author's own fieldwork was that of Chenoweth (1974), while 1987 saw the first thesis on music by a Papua New Guinean, R.N. Stella. McLean published an essential bibliography of publications in 1995. Government concern for the preservation of and research on music was shown in 1974 with the establishment of the Institute of Papua New Guinea Studies, with its own music department. It houses the largest collection of Papua New Guinea music recordings in the world, conducts research, issues publications on music and liaises with other researchers. The *Papua New Guinea Music Collection*, edited by Niles and Webb in 1987, consists of over 300 recordings from throughout the country.

IV. Solomon Islands

The 'Solomon Islands' is taken here in the political sense of the independent state, part of the former British Solomon Islands Protectorate and therefore excluding the two islands Bougainville and Buka, which, while geographically part of the Solomon Islands archipelago, politically are part of Papua New Guinea (*see* §III above). There are about eighty different languages spoken throughout the islands, belonging to three major linguistic groups: Melanesian, Papuan (non-Austronesian) and Polynesian languages. The great majority of Solomon Islanders speak Melanesian languages, while smaller groups speaking a Polynesian language live on so-called Polynesian outlier islands (*see* §3 below).

1. Malaita. 2. Guadalcanal and Savo. 3. Polynesian outliers: (i) Ontong Java (ii) Bellona and Rennell (iii) Tikopia.

1. MALAITA. The inhabitants of Malaita (about 100,000 people) speak some 11 Melanesian languages, some of which, particularly in the north, are mutually intelligible. Malaita's music may be divided geographically into that of the north and that of the south (the centre shares characteristics of both). Musical terminology is similar in the different languages: the generic term for vocal music is *nguu* (there are also specific terms for each kind of

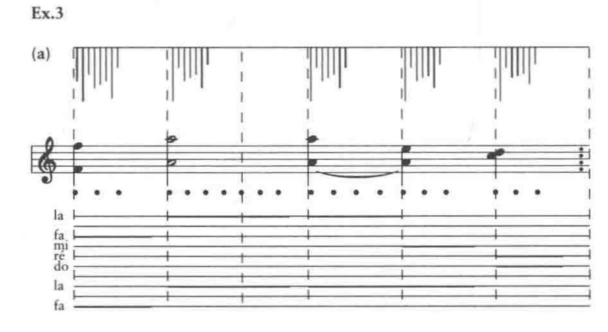


song); instrumental music is called *'au* ('bamboo'), as all instrumental music except that for slit-drums is played on bamboo instruments.

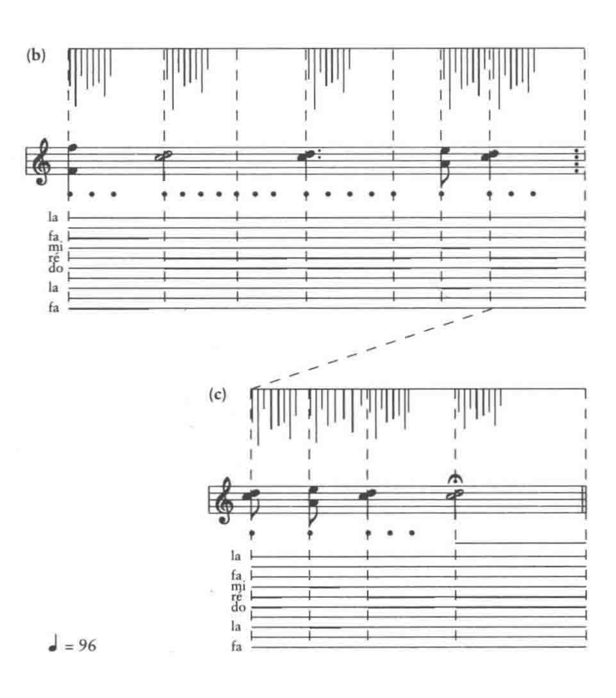
Solo songs, such as lullabies, are known throughout the island. Songs performed by choruses of men sitting in two rows facing each other and singing in two parts are characteristic of the northern half of the island. The words of their songs, which recount historical traditions, are sometimes sung by the entire choir, sometimes by a song-leader. Certain kinds of song are accompanied by sticks struck against each other, others by rattles (nut-seeds tied to sticks). Other songs accompany activities, the cracking of canarium nuts or the pounding of taro for feasts, or paddling in the large plank canoes. In the north, women sing in unison, unlike the men. No choruses are known in the southern half of Malaita, where usually two people sing together, in two parts. This polyphony is characteristic of women's songs (funeral laments (ex.2), enumerative songs and even lullabies) as well as men's (performed during paddling or the pounding of taro). Another type of song is sung by men to the accompaniment of large bamboo tubes, stamped on the ground or struck against the palm of the hand.

In their instrumental music Malaitans distinguish between 'blown bamboos' and 'struck bamboos'. Some instruments are played unaccompanied, others in ensembles. Instruments played solo in the 'blown bamboo' category include three types of flute made from single bamboo tubes: the transverse flute, the end-blown flute, held obliquely, and the notched flute. The transverse flute is stopped at both ends by the nodes in the bamboo; single holes cut on the reed-wall near each end serve as mouthpiece and finger-hole. The oblique flute may be stopped or open at the lower end: if stopped, the instrument requires a finger-hole; if open, the musician stops or reopens the bottom opening of the tube with his index finger. The notched flute exists only in the south, in Small Malaita. Open at the lower end, it requires two finger-holes or none. In all three types of flute, supplementary pitches are obtained by overblowing. The three instruments are played primarily by women for their own amusement.

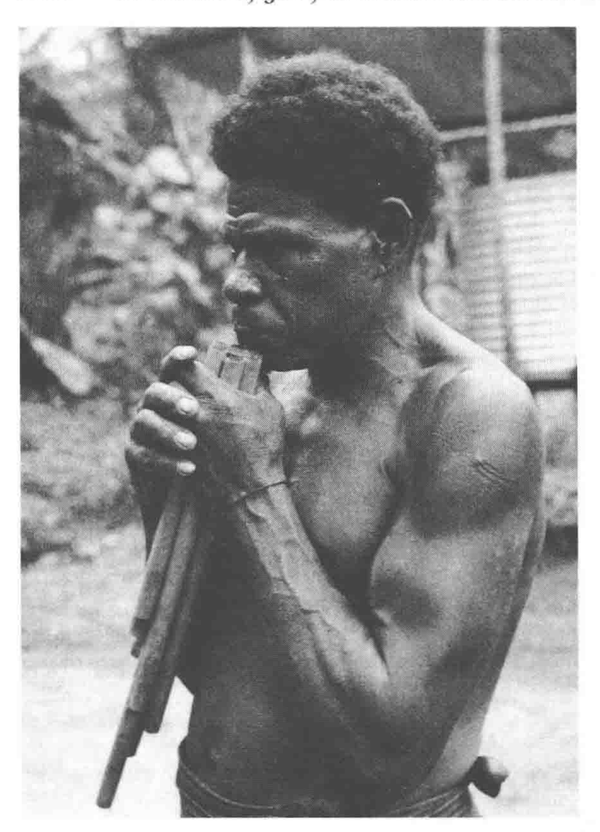
In the southern half of Malaita there is a type of panpipes consisting of a single raft, in which the pipes are not arranged in decreasing sequence (fig.4). This irregular



4. Au ni aau panpipes with irregular order of tubes Are are people Kiu Malaita Solomon Islands 1969



order is explained by the manner of playing: the musician always blows simultaneously into two adjacent tubes, thus obtaining a two-part melody (ex.3). This instrument has 5 to 13 tubes, depending on the region and the type. It is played during the gathering of canarium nuts or to call a woman to a forest tryst. There are in addition two types of bundle panpipes. One type, held vertically, consists of seven to nine open bamboo pipes (fig.5). The musician holds the instrument 1 or 2 cm from his mouth. Keeping his hand nearly motionless, he moves his head to direct the breath into the different tubes. In one variant known among the Kwaio, the bottom ends of the tubes are closed by nodes. The other type of bundle panpipes, held obliquely like the end-blown flute, is composed of three or four thin, open-ended bamboo tubes (fig.6). A small circular hole at the node forms the mouthpiece of each tube. The musician places the tube he wishes to sound obliquely against his mouth; part of the air current also enters the opposite tube. His head remains still, and his hand moves the instrument. Besides the fundamental tones, partials are used, their sonority being very weak and delicate. These panpipes are found in the southern part of Malaita and seem unknown elsewhere in the world. Both types of bundle panpipes are played for the personal enjoyment of the musician, except among the Fataleka in the northern part of Malaita, where the first type is used in a cycle of funeral feasts.



The category of 'struck bamboos' includes two instruments, the musical bow and stamping tubes, which are played unaccompanied. The musical bow consists of a bamboo tube open at both ends, to which are attached two strings (tuned to the same pitch) made from a single plant fibre. If the bamboo is too rigid and does not bend sufficiently, the strings must be raised by bridges, and the instrument then nears the zither family. The bamboo is placed between the lips, thus adding harmonics selected in the mouth to the fundamental sound obtained by plucking the two strings. The stamping tubes consist of ten bamboo rods, between 13 and 50 cm long, each stopped at the bottom end by a node. The musician, sitting, holds four tubes in each hand and one with each foot (between two toes), and beats them on stones placed on the ground. Stamping tubes are known elsewhere in the Pacific, but generally each person plays one or at most two tubes. It seems that only in the southern half of Malaita and nowhere else in the world are the rhythmical, melodic and polyphonic resources of this instrument exploited to such an extent.

Stamping tubes can also be played as an ensemble instrument, in which case the stamping tubes are distributed among two or three players playing ten or twelve tubes in all (fig.7). As in solo performance, this music is played for amusement, by both men and women. But the most important instrumental ensembles are groups of slit-drums and panpipes played at the great ceremonial feasts

Ex.3

5. 'Au waa bundle panpipes (with seven pipes) of the 'Are'are people, Malaita, Solomon Islands

held in connection with the ancestor cult or to enhance the prestige of chiefs. The solo slit-drum is known to all peoples in Malaita and is used to send messages, but slit-drum ensembles are found only in southern Malaita and have an essentially musical function. Depending on the region, the ensemble consists of three to twelve slit-drums of different sizes (fig.8). The instruments are placed horizontally on stands constructed of plant materials, the slit pointed towards the player, who drums on its upper edge with two sticks. Among the 'Are'are, where rhythms are played homorhythmically, many pieces consist of one single rhythmic motif, repeated several times with and without short interruptions but in a definite order, preceded by vocalisations shouted by the drum leader (ex.4). In Small Malaita, the three slit drums of an ensemble are struck in different rhythms. Many prohibitions, dietary and sexual, must be observed during the making of new slit-drums, ending with the inaugural ritual when the ensemble is played in public for the first time.

In Malaita there are seven types of panpipe ensembles, with many variants, each type with its own name. The panpipes played in ensembles all consist of one row of tubes stopped at the lower end and arranged in decreasing order of size. The basic scale used is one in which the octave is divided into seven approximately equal intervals (also found in Cambodia, Thailand, Mozambique and Guinea). This scale appears in two forms, one in which all the instruments of an ensemble have the complete scale (as in the northern *'au sisile*and the southern *'au tahana*), and one in which two instruments share the scale, complementing each other: thus pitches 1, 3, 5, 7 etc belong to one instrument and pitches 2, 4, 6, 8 etc to the other (as in the northern *'au 'ero* and the southern *'au keto* and *'au taka'iori*). Another ensemble in southern Malaita, the *'au paina*, consists of instruments whose tuning is pentatonic. The number of instruments and of the tubes on each instrument, the tessitura of the ensemble as a whole, the number of polyphonic parts, the playing in parallel octaves and the repertory vary according to the type of ensemble. Thus, the *'au tahana* is composed of four instruments of two sizes, each instrument with a tessitura of nearly two octaves. The musicians play in two-part polyphony, each part being doubled at the octave (ex.5). The *'au paina* has eight instruments played in two-part polyphony, each part quadrupled at the octave. The largest instrument may reach 160 cm in length, the others then being 80, 40 and 20 cm long. The tessitura of the ensemble as a whole is five octaves. The *'au sisile* in the north consists of a variable number of instruments (eight to twenty) of the same size, with a tessitura of approximately two octaves. The musicians play in four-part polyphony, and there are no doublings at the octave. Among the Kwaio, at the island's centre, the *'au sisile* always consists of eight instruments: four of one size with a tessitura of two octaves, and four instruments of three tubes each, tuned in 3rds. Some pieces are played in four parts (some parts doubled or trebled at the octave), other pieces in six, seven and even eight parts (ex.6 and fig.9). Some ensembles have no rhythmic accompaniment (e.g. the *'au tahana, 'au keto* and *'au paina*), whereas in others the musicians wear rattles around the ankles (*'au sisile, 'au 'ero*); in still others (e.g. the *'au taka'iori*) the dancers beat on leaf bundles. In the *'au sisile* of the Kwaio, the seated musicians strike their right thighs violently with one hand. New panpipes are made using older instruments as models. The expert craftsman measures the interior length of the tube with a thin rod used as a plummet. To obtain the correct tube length of an instrument to be tuned to the upper octave, the measurements are halved. Conversely, to make an instrument tuned to the lower octave, the measuring rod is bent in half before being inserted in the model instrument; the unbent rod then gives the desired length.

Instrumental music in Malaita mostly consists of 'imitative' or 'descriptive' music. Each piece, composed according to rigorous rules, has a title indicating the theme of the composition, for example the songs of birds, the croaking of frogs, the whirring of insects, the cries of

Ex.4

animals, the patter of drops of water on a leaf, the murmur of streams, the roar of the sea, the crackling of tree branches or other natural sounds. Human sounds also can be the theme of a piece, such as the crying of an infant, the moaning of the sick or wounded, sleepers' snoring, spoken words, and sounds made at work. Some compositions are based on songs or melodies played on other instruments. A piece may translate a visual movement, such as the swaying of a spider or the comings and goings of people. The history of the composition and the name of the composer are passed on to young musicians, but non-musicians are usually ignorant of these aspects, and often do not even know the name of a composition. The title and composer of some pieces believed to be very old are no longer known even among musicians. These pieces are now known as part of the repertory of a celebrated musician or of a village.

2. Guadalcanal and Savo. Guadalcanal is the largest island of the Solomons and includes the capital Honiara. On Savo, a small island only 20 km distant from Guadalcanal, one of the few Papuan (i.e. non-Austronesian) languages of the Solomons is spoken, but the music is closely related to that of Melanesian-speaking Guadalcanal people, with the exception that on Savo there are no panpipe ensembles.

Singing on Guadalcanal and Savo is characterized by three-part polyphony, with two independent solo voices against a background of a drone sung by a choir. Many songs feature the two solo voices covering a wide range of notes, with rapid changes to chest and head voice to produce yodelling.

Panpipe ensembles on Guadalcanal are also characterized by drone pipes with closed tubes blown as flutes and open tubes blown as trumpets. In contrast to the panpipes of Malaita, the instruments on Guadalcanal have two rows of pipes, the second row with open pipes producing an upper octave that effectively enriches the timbres. Compared to the panpipe playing on Malaita, with its soft, pulsating sounds, the aesthetic of the Guadalcanal panpipe ensemble prefers a harsher sound. High-pitched overblowing is used to signal a stop or to cue the move into the closing formula of the piece. In both panpipe ensembles and vocal music, the melodic parts join the pitch of the drone at the end of the stanza or the piece, so that all the parts end in unison or on the octave. On the south-eastern point of Guadalcanal, some villages populated by 'Are'are people from Malaita have kept their language and music while also borrowing from their neighbours the characteristic 'Guadalcanal sound' of panpipe ensembles.

The Aeolian organ is a spectacular instrument used in former times during the funeral ritual to recall the spirit of the dead back to the village from the sea where the body was committed. The organ consists of four long bamboo canes, approximately 5 m in length, with holes of different sizes and form cut in each internode (fig.10). An enormous amount of air is needed to make a loud sound, simultaneously producing a multitude of partials

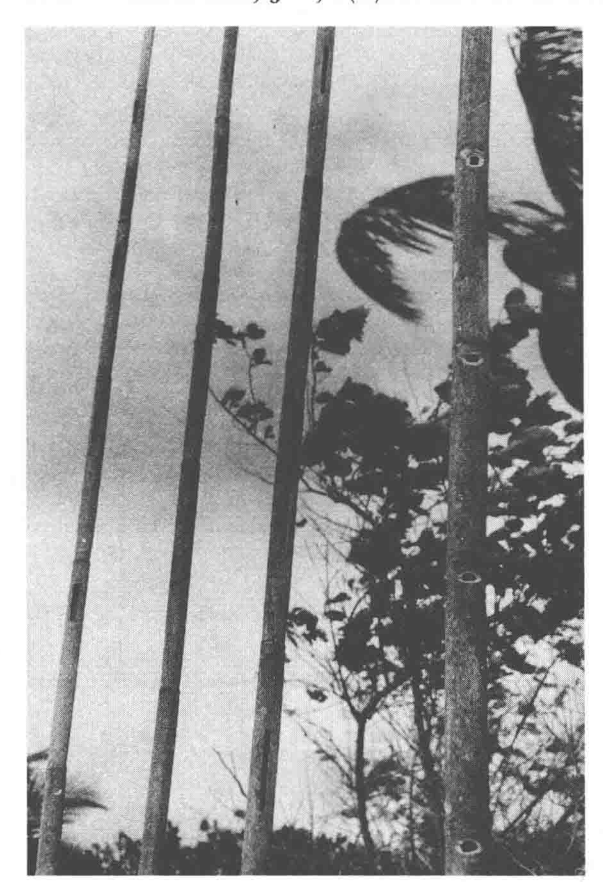
(harmonics). This occurs because the internodal segments become shorter and thinner from the bottom to the top, creating cavities with different volumes; thus different pitches can be obtained when blowing.



3. Polynesian outliers.

(i) Ontong Java. The traditional music of the Ontong Java atoll, like that of all Polynesia, is essentially vocal. Instruments are used exclusively for the rhythmical accompaniment of song: small slit-drums, sometimes replaced or complemented by pieces of wood or bamboo struck with two sticks; bamboo stamping tubes (each singer plays only one tube); fans struck on the palm of the hand. Some types of song are danced. The musical beach games of young girls consist for the most part of sitting dances. Most standing dances have a slow first part, in which the dancers, men or women, stay in place; then there is a great acceleration of tempo, at which point the dancers advance with rapid motions towards the choir sitting on the ground. Formerly many types of song were performed only once a year, in the course of an important ritual dedicated to the ancestral gods. Other songs were associated with the birth of the first child, with funerals, or were sung for amusement. The songs are performed by male, female or mixed choirs, with the exception of prayers, which are chanted by the ritual leader. Two archaic vocal styles are characteristic of Ontong Java (as of all Polynesia): one-note recitative and speech-song. Passages of both styles also appear in songs that otherwise use several pitches. Songs in two- or three-part polyphony have a drone.

(ii) Bellona and Rennell. Located at the southernmost tip of the Solomon Islands archipelago, Bellona and Rennell are tiny raised coral islands whose inhabitants

9. 'Au sisile panpipe ensemble, with women beating leaf parcels, Kwaio people, Ngarinasulu, Malaita, Solomon Islands, 1970

10. Ghau kilori aeolian organ, Ghaombata people, Makile, Guadalcanal, Solomon Islands, 1970

share the same Polynesian language and culture. Bellona is 7 km long and 2 km wide, whereas Rennell is somewhat larger. In 1986 the combined population of both was approximately 2500. A colony of people from both islands live in a suburb of Honiara, the capital city of the Solomon Islands.

Traditional to the Polynesian culture of Bellona (Mungiki) and Rennell (Mungaba) is heterophonic vocal music sung by leader and group, often with rhythm accompaniment and/or dancing. The poet-singer tradition is strong, the poet often leading his song. In this society, ability in singing, dancing and composing poetry are factors in winning status. Poets are the scholars, mastering old songs in the classical poetic language. Lineage elders teach the young men to sing and dance correctly. The numerous song types are types of poetic compositions, each having certain melodic tropes.

According to oral traditions, West Polynesians populated Bellona and Rennell over 24 generations ago from a homeland called 'Ubea, probably Uvea (Wallis) Island, west of Samoa. They brought several song-dance suites with them in the archaic language of their ancestors. In one of these, the *suahongi*, two different song-dances are performed simultaneously and coordinated in an organized manner (Rossen, 1987; *Polynesian Dances of Bellona*, 1978). It includes a song called *te pese a Kaitu'u* composed by Kaitu'u, one of the first immigrants (Rossen, 1978 and 1987).

Song titles contain the name of the poet and that of the song type. A men's double chorus sings *pese* songs, clapping in accompaniment. *Tangi* laments are strophic songs composed primarily by women, but men join the singing; all beat their hands on available objects, creating a polyrhythm with the song (Rossen, 1987). Many of the 26 song genres are suites that have a set sequence of up to six song types, including introductions, main songs and special endings. There are dirges, praise songs, songs for rituals and for hauling, singing games and many others.

Christianization by the Seventh Day Adventist Church in 1939 resulted in prohibition of traditional songs and dances. Nevertheless, some people perform despite church sanctions, and older Bellonese remember the traditional repertory. Performances are in demand for official occasions such as the visits of dignitaries, for tourists in Honiara and for festivals further abroad.

Songs and dances are unaccompanied or accompanied by clapping; the only instrument, a wooden soundboard (*papa*: 'flat'), The *papa* is beaten for some dances. It is flat, crescent-shaped, about one metre long, and beaten with two batons. A stake in the ground holds the convex edge; the beater props the concave edge up on his feet, forming a resonance chamber below. It produces a low and a higher tone. The person beating the rhythm also leads the singing. Most of the 17 song-dance suites and nine song genres are performed by men only, with women participating in five song genres and two dances. A leader and approximately 25 singers dance in unison, in circle or line formation (fig.11).

The local vocabulary has terms for several qualities of vocalization. An intermittent bass bourdon, *tuku ki songongo*, is typical for traditional songs but rarely sung today. Young people emphasize a high male voice in their songs. These are sometimes in English in the introduced pan-Pacific pop style using ukuleles and guitars.

Singing and dancing were originally performed during rituals: food distributions, tattooing and group visiting. Food distribution feasts still occasion singing today, although the islanders now sing Christian hymns.

Children use a musical bow and a ribbon reed as toys. Notched and fipple flutes were introduced between 1930 and 1940, in addition to a musical bow. Children still play the bow today; the flutes, made of green papaya stalks, have almost disappeared from use. Still popular are the song-dances *mako tu'u* and *ngongole*, introduced to both islands in the 1900s by castaways from Tikopia (see §(iii) below).

(iii) Tikopia. Located in the eastern Solomon Islands, Tikopia is a Western Polynesian outlier situated 120 km south-west of the nearest other outlier, Anuta. This article discusses traditional Tikopian music and takes no account of modern songs in European musical idiom, called *pese* (singing) or *pese fuere* (just singing).

Drums and chordophones are absent. Idiophones include the *tā* or sounding board, *lopu* or stamping tubes, and *ū sēru*, a bundle of dried leaf pinnules beaten on the hand as a sacred object. Aerophones are limited to the *pū* or shell trumpet and *fakatangitangi* or *pū kofe*, a flute said to have been blown either with the mouth or the nose.

Group rather than solo singing is usual. Texture is either unison or at the octave. Voice quality is moderately tense, with some nasality. There are two broad classes of songs, called *mako* and *fuatanga*. *Mako* are dance-songs,

11. Ending shout 'Ooho!' of the mako ngangi (dance of heaven), with Haman Songo'ungi beating the sounding board, Bellona, Solomon Islands, 1974

of which the commonest form is the *matāvaka*. It is accompanied by a song and by drumming with two sticks on the sounding board. Also common is the *ngore*, which is sung by a seated chorus and accompanied by hand-clapping. Differences between the two dance-songs are wholly temporal. Scales are anhemitonic pentatonic or tetratonic. *Matāvaka* are in duple time, either 2/8 or 2/4, and are typically accompanied by a tap from the sounding board on each beat. Tempos are either steady or accelerate. *Ngore* are 3/8 songs with a hand-clap marking the beat. Syncopations occur across bar lines, and word rhythms may run counter to the metre established by the hand-claps. Tempos are steady and about 60% slower than those of *matāvaka*. Because the differences between *matāvaka* and *ngore* are rhythmic rather than melodic, a *matāvaka* melody can transform easily to *ngore* and vice versa.

Fuatanga are highly serious compositions performed either as elegies eulogistic of living persons or, most often, as laments or dirges at funerals. *Fuatanga* differ from *mako* both melodically and rhythmically. The scales are frequently hemitonic (with semitones), and a conspicuous characteristic is extremely slow tempo with many long-held notes. Metres are often additive, with 5/4 patterns of either 2 + 3 or 3 + 2 the most common. In contrast with *mako*, there is no audible accompaniment. The songs are characteristically pitched extremely low with switches of octave up and down as male singers reach their limits of range.

V. Vanuatu

The archipelago of Vanuatu (formerly the New Hebrides), composed of 80 inhabited islands, lies about 800 km west of Fiji and 400 km north-east of New Caledonia; the main islands are Espíritu Santo, Malekula, Pentecost, Aoba, Maewo, Ambrim, Tana and Efate. The climate is tropical and subject to hurricanes, and the islands experience occasional earthquakes. The Austronesian (Melanesian) population arrived about 4000 years ago, probably in two major migrations. The people were pioneers of exploratory ocean navigation, and their large double-hulled canoes covered vast distances, feats not equalled with comparable accuracy and skill until the chronometer was invented. At the end of the 20th century the twin symbols of canoe and rooted tree, standing interrelatedly for both movement and place, continued to play an integral part in the traditional cosmology of the ni-Vanuatu (the people of the islands). The name Vanuatu, adopted in 1980, embraces the meaning 'permanent land'. Owing to a history of sporadic settlement, the population of 170,000 speak over 100 indigenous languages. Many people are polyglot in various vernaculars, but Bislama (Bichelamar) is the lingua franca. Europeans first visited in 1606, with the French arriving in 1768 and the British in 1774. The islands' traditions were affected by the various Christian denominations that tried to evangelize, suppressing traditional rites and customary practices in some areas. Independence from the dual colonization of Great Britain and France, which began in 1906, was not

gained until 1980. The history of an independent Vanuatu has been marked by much political turmoil, in which traditional song and dance has often been used to invoke national identity. In recent decades a conscious revival of *kastom* (custom) has attracted political support. Support from UNESCO and other sources enabled the establishment of an Oral Traditions Programme, which had over 50 local fieldworkers in the 1970s and 80s.

1. Genre and musical occasion. 2. Instruments. 3. Popular music.

1. GENRE AND MUSICAL OCCASION. In Vanuatu, traditional music is performed at public and ceremonial occasions and in private. Ceremonies such as marriage involve music, but the most notable ritual is *na huqe* ('grade-taking'), involving song, dance and integral music played on slit-drums. This is part of the process in becoming a *huqe*, 'great person', through the sacrifice of valuable tusked boars. Days of 'settlement' and further debt creation are also public rituals involving music-making. While there are many possible structures for such rituals, one typical ceremony includes the announcement of the appointed day and precautionary rituals; on the day itself, the presentation of the pigs, speeches, the wearing of special finery and use of special mats; the sacrifice; the drinking of kava; and night-time celebratory dancing. Certain music is performed only for higher 'grade' ceremonies. One such documented occasion involved the 'calling' of pigs; 'signal cries' for the pigs being brought; and a celebratory welcome on slit-drums for the donor and his pigs, while look-out men performed a song of welcome until they were drowned out by drumming as the pigs were brought on to the *na sara* (arena).

At another such ceremony in eastern Ambae that involved a group called a *dingidingi*, the player of the *ratahigi*, the 'largest drum', directed the starts, changes and endings according to the progress of the ritual. He gave cues for changes from section to section both by musical means (pauses and changes in pace), by verbal command and by hissing (as the players had their backs to each other); sections were extended for as long as was necessary. Other drums involved were the *simbegi*('middle-sized'), responsible for rhythmic coordination with the dance and other movements, while the small drum, *valagi*, provided 'decoration'. Towards the end of such an event the men perform an antiphonal *ahi tigo* or 'jump song', at some points *a cappella*, at others with slit-drum accompaniment.

In some areas these rituals were discontinued in about 1930, due to the combined pressure of evangelizing missions and the shortage of land for pig-raising, caused when cash cropping for copra became important. In certain areas where the ritual is no longer practised, slit-drum ensembles, including that of the Nduindui district, have brought renewed life to the repertory, almost making it a concert music. In the eastern part of Ambae, where dominant religious missions were more tolerant towards *kastom* and there was no shortage of land for both pig-raising and coconut plantations, *na huqe* continues to flourish both as a spectacular ritual and as a dynamic local political factor in a period of change and adaptation.

On south Pentecost Island a unique practice called *gol*, which involves jumping from a specially constructed tower with vines tied to the legs, always includes music. In many areas traditional dances are now performed at church festivals and for government events such as the opening of a new council building. There is rarely public music except in such contexts.

Most types of solo music are performed privately. Some islands have solo songs specially composed for a particular ceremony, in honour of the person involved or even, as in the case of grade-taking in Ambrim, insulting songs. Magic songs intended to procure personal benefits such as a good yam harvest or the attendance of pig-owners with their pigs at the singer's grade-taking ceremony, are still in use in some areas and are performed in great secrecy. Story-tellers often include songs in the narration of traditional stories. At Lombaha on the island of Aoba, songs of a solo genre called *tanumwe*have complex texts that deal with their subject in highly allusive language. The songs associated with certain dances (for example *sawagoro* and *bolo*in the northern islands) are also performed as private solo songs. Other songs include lullabies, songs sung in children's games, counting songs etc.

While most traditional music performed is now of unknown authorship, composers in the islands where traditional music survives are still commissioned to compose new songs for special occasions or in honour of particular persons. Song is taught orally to performers; in the language of the Banks Islands, the composer is said to 'measure' the song while the performer 'sews' it, the singer as it were drawing out his song stitch by stitch.

Within Maewo tradition it is considered that melodies were first invented by women, but that mere tunes were 'something-nothing' until men gave them significance by adding poetry. The maleness of a given song is thought to reside in its text (even when that text may be composed by a woman), while its femaleness resides in its melody (even when composed by a man). In the case of a song with a text that is no longer understood, its female profile may indicate its place of origin. There are a number of auxiliary song languages within which imagery through metaphor, among other poetic devices, is prized and refined. Composing songs is in principle open to anyone, but some individuals are recognised as songsmiths, i.e. makers and menders of songs. They may be commissioned with payment in mats, pigs, kava, food and other valuables in return for ownership, effectively a form of copyright. Songs and dances may thus become exchange objects or gifts.

Many Vanuatu musical practices are based on anti-clockwise directional movement. For example, dances that involve participants circling always go this way. Slit-drums are normally played by striking the right hand lip, which in the case of horizontal instruments depends on which side of the player the root end of the tree is placed – if to the right, then the upper lip will be the right-hand side. While this is in principle considered correct for drumming, it is not always respected. Broadly speaking, the left hand side is considered wild and untamed and the right civilized. Dances are to a certain extent borrowed from other islands, which involves singing in another islands' languages, sometimes in a language no longer understood by any participant. In the Banks Islands each island has, in addition to its own language, its own corresponding song language, distinct from the everyday language of other islands. Many dances begin with vocables that serve to identify the type of song or dance to be performed.

The form of many dance-songs is responsorial and repetitive, as in the *lenga*, for example, a dance common to the northern and central islands. The chorus of dancers is arranged in lines, the leader carrying a bamboo slit-drum and acting as soloist. The soloist usually sings a short rhythmic phrase that is answered by the chorus. This exchange is repeated several times while the dance movement continues. At the end of a particular section of the dance the soloist introduces a new phrase, which receives a new answer from the chorus. The whole section (old phrases plus new phrases) is then repeated, this repetition continuing until the dance is completed. As the soloist takes up his phrase at the end of the chorus's response, the two parts often overlap, introducing an element of polyphony. The *sawagoro*, a dance extremely popular in the northern islands and the Banks Islands, is often performed in an impromptu fashion on festive occasions, danced on the spot in a close circle by as many as wish to join in. One documented example, taking the form of a narrative song, shows the careful design of the poet-composer, who uses thematic metaphor as a structural device: events unfurl like leaves one after the other, then the bud appears, and in the penultimate verse a flower bursts open, with the hero(ine) or anti-hero(ine) named, only in the final verses unveiling of the floral metaphor. The structure creates a sense of tension, often paralleled by crescendo and accelerating tempo (when danced) as the dénouement approaches. The song is responsorial and includes hand-clapping on the off-beats or (in the Banks Islands) sticks pounded on a board laid above a hole in the ground.

Another dance found on Aoba, called *ahi bue* (bamboo song), takes its name from the *bue*, a bundle of dried bamboo placed on forked sticks and used as an idiophone. At the repetition that marks the final section of each movement, the bamboo players break into a 6/8 metre, while onlookers may run in anticlockwise circles around the line of dancers. Similar public participation occurs in many dance forms. Physical stamina and a knowledge of a large repertory of songs are essential for participants. For males, a dance may be athletic, an opportunity to exhibit vigour and a hope for sexual favours, coupled with a display of intellectual prowess (i.e. memory, the ability to manipulate optional repeats through vocal cues). Women's dancing and singing is valued through distinctive gesture, decoration and vocal quality. Women's repertories tend to be reserved for the company of other women. Umulonko one such session involving a *gogona* song, for female rituals, included much use of asymmetrical rhythms with paired voices using percussive timbres. Umulonko women also sing during the preparation of pandanus for the weaving of mats. Learning such songs socializes girls into the work involved in the creation of what is regarded as a woman's wealth, her mat weaving.

Except in one area, musical vocal parts are monophonic. In north Malekula, however, voices are frequently in a polyphony, of which one part is a drone. The melodies are most commonly anhemitonic pentatonic (ex.7), but

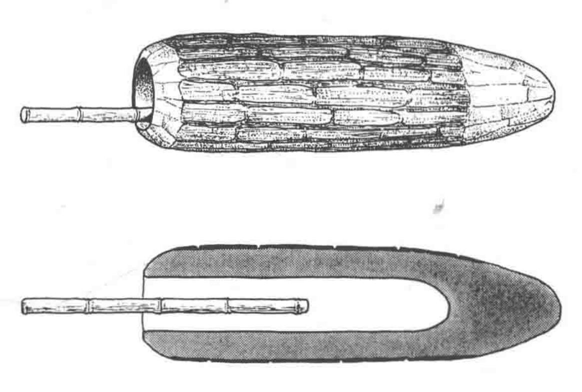
Ex.7 Magic song used to 'pull' pigs, east Aoba; rec. and transcr. P. Crowe

Ex.8 From weeping song, *talang lang ana* genre similar to *tanamwe*, north Pentecost; rec. and transcr. P. Crowe

many songs are either fanfares or are made up of three or four alternate major and minor 3rds (ex.8). Sometimes the highest of the series appears an octave lower. Passages of such 3rds sometimes occur in otherwise pentatonic songs. Occasionally a passing note is added to the series of 3rds.

2. Instruments. *Kastom* instruments played in Vanuatu consist of sound makers of wood, bamboo, shells and stones, leaves and roots. Instrument making tools are made of stone and shell (adzes), bamboo (knives) and fire and grinding paste (drills). By far the most important instrument, the slit-drum, is made of logs or of lengths of bamboo. Making drums involves as much labour and skill as was exercised in the carving of giant double canoes for which the islands are famous. Indeed, canoe hulls can substitute as slit-drums, but the wood used is normally lighter. Slit-drums made from logs occur throughout the islands. In the islands north of Malekula and Ambrim, they are left undecorated (although they do sometimes have carrying handles) and are placed horizontally on the ground; in Malekula and Ambrim themselves, and in islands to the south, they are normally carved on the upper part with representations of the human face and are buried upright in the ground (fig.12). In areas that use upright slit-drums, portable horizontal ones also occur. The upright carved slit-drums, seen in many ethnographic museums, are giant instruments, which when planted stand 6–7 metres above the ground and have a restricted distribution.

The best horizontal drums are cut from hard wood (*boga*), which has powerful resonance properties and durability. They act as 'Helmholtz resonators', in that pitch for a given interior capacity (the cavity) rises if the slit is widened. In south Pentecost and possibly elsewhere, slit-drums resting on a forked stick are sometimes placed at an angle. Both vertical and horizontal slit-drums vary in size, from the length of a single node of bamboo to up to 7 metres for wooden drums. In some places they are used singly and in others in groups of varying sizes. In groups they are normally used to play rhythms in counterpoint. Used singly, as in the Small Nambas mortuary rite on Malekula, they play a complicated series of rhythms accompanying ritual chants. In some places they are still used to send messages: on Aoba there is now a particular rhythm played on a small slit-drum to call



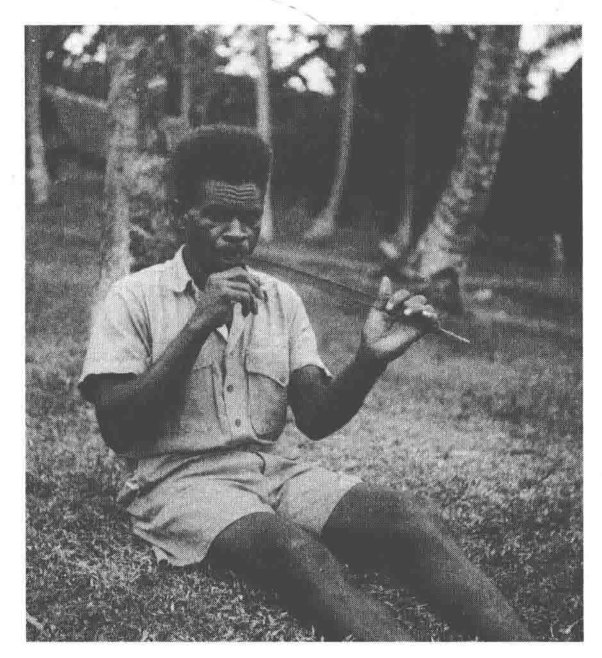
12. Upright and horizontal slit-drums at Iapktas, south-central Malekula, Vanuatu, 1974

people to church. Bamboo slit-drums are used for certain kinds of dances. They are held in one hand and beaten with a stick held in the other hand (as by the soloist in the *lenga*), or held by one performer and beaten by another (as in some Banks Islands dances) or laid on the ground in groups (as in the Torres Islands), in which case all the performers play the same rhythm.

Other idiophones include the *bue* (bamboo bundles) of Aoba, which accompany the *ahi bue* dance; a ground-resonated percussion beam made from the buttress root of a tree and beaten with sticks, still used in the Banks Islands, Maewo, Paama and Espíritu Santo and formerly used on Ambrim; and shell rattles attached to the dancers' legs. Bullroarers and certain leaves, formerly used to simulate the voices of spirits, are now rarely used as instruments. On Motalava, in the Banks Islands, singing in certain dances is accompanied by the scraping of the butt of a leaf-stalk against a stone, producing a loud rasping sound. Although this is not now recognized as the voice of *natmat woywoy*, a spirit, the performers nevertheless remain inside a leaf enclosure, and only men are allowed to see the instrument. On Ambrim the voices of spirits were simulated by holding another type of leaf between the palms and blowing on to it.

The most common aerophone is the conch-shell trumpet, used as a signalling instrument both for calling people together and to mark significant moments in ceremonies. The pitch can be slightly varied by putting the fist into the shell's opening. Bamboo endblown flutes are commonly made but largely for the tourist trade, since they are played rarely and never in a public context. The distances between the holes are calculated by finger sizes: ineffective notches may be cut off and another begun, changing pitch relationships. Panpipes were once common: in remote parts of Espiritu Santo *bue balabala hangavulu*, instruments with ten pipes, are still used in polyphonic ensembles.

An instrument known as *temes naainggol* on Malekula and *tematne are* on Ambrim, and reputedly still in current use (in the 1970s there was still at least one player of the musical bow in north Ambrim), is a wooden vessel rather like a deep mortar, into which the performer blows through a reed tube (fig.13), producing a booming note. The performer uses several of these vessels, each of a different pitch, and dexterously withdraws the reed pipe



13. Temes naainggol (wooden vessel with reed tube); general view and section

from one and inserts it into another while accompanying singing. One end of the bow is held in the teeth while the string is plucked with a piece of coconut-leaf rib (fig.14).

3. POPULAR MUSIC. Types of popular music that have come to Vanuatu include 'cowboy' songs, accompanied by ukulele or guitar, and gospel hymn tunes, especially of the Moody and Sankey variety (*see* GOSPEL MUSIC, §I, 1(iii)). New music is being composed in these styles, and popular musics from other parts of the world are often adapted in performance by changing aspects of melody and harmony, by the insertion of extra beats and by the shortening of long notes, often creating irregular rhythms. In certain islands, traditional music has almost completely disappeared, and only these new popular styles are known. This has occurred mainly where people have been told that traditional music was unfit for Christians. Often where this has happened the islanders have been amazed to learn that people in other islands still perform their traditional songs and dances without any sense of impropriety. The disappearance from Hiw of certain customary music and rites that survive in the other Torres islands is attributed to the fact that those who knew them died without passing them on to the next generation. The learning of music and rites is often connected with initiation into status grades of society: where this initiation is neglected, associated traditions may disappear. However, there are large enough areas in Vanuatu where traditional music is still composed and performed to ensure its continuance as a cultural expression.

Recordings of Vanuatu traditional music are held in the Archive of Maori and Pacific Music (Crowe Collection), Department of Anthropology, University of Auckland; Crowe Collection, University of New South Wales; Music Department of Monash University (MacIntyre Collection); Pitt Rivers Museum (Layard Collection), Oxford. The New Hebrides Cultural Centre, Port Vila, began a systematic collection of oral traditions, including music and dance, in 1976.

VI. New Caledonia

The New Caledonian archipelago, which covers over 19,000 km², consists of the main island of New Caledonia and the surrounding Isle of Pines, Loyalty Islands and Belep Islands. The archipelago has been inhabited for 3500 years by a Melanesian people who today call themselves Kanaks. Several Polynesian migrations (the most recent reached Uvea in the 18th century) contributed to the process of linguistic diversification: over 30 separate languages were being spoken when the first European explorers came to New Caledonia at the end of the 18th century. The territory officially became a French colony in 1853. Colonization brought violent upheavals into Kanak life, as well as various waves of immigrants. In 1989, out of the 164,000 inhabitants of New Caledonia, 74,000 were Kanaks. Only Kanak music will be described here, since the music of the other ethnic groups resembles that of their countries of origin.

In spite of the linguistic diversity of the Kanaks, their cultural practices are relatively homogeneous, the greatest difference being between the main island and the Loyalty Islands. Kanak music can therefore be described as consisting of a number of distinct musical types. Private music linked to domestic life includes lullabies, children's games, flute tunes and curative and religious invocations. Forms of community music, performed in the village square on the occasion of major public ceremonies, include rhythmic speech, group dances and men's songs. To this body of music should be added choruses modelled on Protestant hymns, whose four-part harmony is entirely European. Finally, groups of young musicians are now composing works that try to synthesize elements of Western popular music and the old Kanak tradition.

The 'private' musical genres are disappearing faster than the public genres. Lullabies can still be heard almost everywhere; some are sung in two-part counterpoint. The words of these songs often contain a wealth of place names and historical facts, and thus consititute a disguised political commentary. The children's games make use of a variety of small instruments quickly made from various kinds of plants: a jew's harp made from a coconut leaflet, a whirring disc, a coconut-leaf whizzer, three kinds of small double-reed pipes, a bamboo panpipe and a piston flute. Young people used to play other aerophones that have now almost disappeared: a water flute and an oblique flute made from a papaw petiole in the Loyalty Islands; a transverse flute on the main island; a duct flute and a transverse trumpet, both made of papaw petioles, in the Isle of Pines. The conch is still a symbol of chieftainship and is blown to summon people together or is fixed to the carving on the roof ridge of the chief's house.

The most important ceremony is the one that concludes the period of mourning for a chief, held a year after his death. On the main island, an appointed orator chants a rhythmic speech on this occasion, recalling the history of local alliances. The orator is raised above his audience and recites *recto tono* in a very rapid tempo, with as few interruptions as possible. The men of his community surround him and back him up with rhythmic silibance and whistles, coded cries and exclamations.

A group dance tells a story through a succession of figurative, stylized movements, synchronously performed by all the dancers. Their movements follow the rhythm of a percussion ensemble, which on the main island consists of bamboo stamping tubes and a bamboo slit-drum. In

the Loyalty Islands and the Isle of Pines, these dances are led by a chorus of men and women simultaneously striking rhythmic instruments (pads of leaves, bamboo stamping tubes). On the main island there is no chorus to accompany these dances, and in the central region of New Caledonia the only sound-producing instruments are the ornaments worn by the dancers.

The principal form of music on the main island is the male voice duet (fig.15). The two singers are surrounded by a dozen musicians stamping bamboos, striking beaters made of bark (an instrument apparently unique in Oceania) against each other or scraping palm spathes. Finally, all present at the festivities dance in a circle around this orchestra and participate in the music-making with exclamations and whistles. In such a song the rhythm, which must be played in two parts, is constant, and only the tempo may vary from one song to another. The song is a counterpoint between the two men, its aesthetic aim being to maintain great melodic tension. In many of the Kanak languages the words are called 'the tuber of the song'. These texts can be up to 40 lines long. They may narrate historical events, describe interaction with the natural world or sometimes tell love stories.

The musical tradition of New Caledonia has been formally banned by Christian priests, weakened by the spread of the international music industry, and to some extent decontextualized by social change. Despite this it remains alive, latterly given new value by the younger generation's musical creativity and awareness of its past.

VII. Fiji

The Fiji archipelago comprises well over 800 islands in the south-western Pacific Ocean, of which approximately 100 are inhabited. The group covers 18,278 km², with the total area of the two largest islands, Viti Levu and Vanua Levu, making up almost 90% of the total land mass. Fiji represents the confluence of two Pacific areas, the Melanesian and the Polynesian. Geographically, the islands form part of the Melanesian group, but the indigenous people are of Melanesian stock with an admixture of Polynesian blood. The relative influence of Polynesian and Melanesian elements found in indigenous language and culture varies enormously. Generally, Polynesian features dominate in the east and Melanesian in the west, with many combinations in between. A substantial part of Fiji's population is comprised of non-indigenous peoples, most significantly Indians. Other communities include Chinese, European and other Pacific Islanders (*see* MICRONESIA, §I, 1). There appears to be general respect for each of the many distinct cultural traditions, though actual interaction and exchange tends to be limited.

Although the music of Fiji embraces several disparate musical cultures, studies have focussed solely on the many musical systems of indigenous Fijians and, principally, on the musical genre of *meke*. Such research has varied in approach, quality and scope, but the various impacts of the church, school education, urbanization, radio and other mass media, developmental strategies and European

15. Two singers of Gööpä with bamboo stamping tubes, New Caledonia, 1986

popular song have rarely been fully considered. The diverse range of musical cultures and the essentially dynamic nature of music-making in Fiji mean that generalizations about musical life there are of limited value.

1. Instruments. 2. Vocal music. 3. The social environment.

1. INSTRUMENTS. Most instrumental music in Fiji functions as a signalling device. Purely instrumental music, common in former times, is now obsolete, and introduced instruments used for this purpose (e.g. those common in police and military bands) tend to be confined to urban areas. There does not appear to be a comprehensive term that identifies sound-producing instruments as an entity. According to the means of sound production, the inventory of traditional instruments is confined to idiophones and aerophones. Introduced chordophones include the *qitā* (guitar), *ukalele* (ukulele) and mandolin; all are used exclusively to accompany casual group singing.

There are two principal types of wooden drum common throughout Fiji. *Lali* (large wooden slit-drums) are used to signal a variety of religious and secular activities of social significance, the precise rhythmic pattern varying according to the nature of the event. Constructed from a canoe-shaped single block of wood, hollowed out and left with a large open slot, *lali* are usually beaten in pairs of unequal size, one person to each drum (fig.16). Each drummer uses a specially crafted pair of *iuaua* (drumsticks). Due to the essentially functional nature of the instruments, the active repertory of *qiriqirinilali* (the rhythmic patterns of *lali* drums) varies in size and content according to the needs of a given community. The most common beat heard is the *lali ni lotu*, which signals church-related activities. The instruments were more frequently used in former times, and the discontinuation of certain *qiriqirinilali* seems directly attributable to the decline in former performance contexts (e.g. local warfare). A much smaller drum, the *lali ni meke* – slender, canoe-shaped, with a small rectangular cavity on its flat bottom – usually accompanies dancing and some forms of group singing. Struck on the curved side, usually directly over the cavity that acts as a resonating chamber, pitch variation is produced by varying the points of contact of the *iuaua*. To enhance the sound further, the chamber may be held against an adult's chest or blocked by the player's thigh and calf or upturned foot. The different rhythmic patterns belonging to the *lali ni meke* are named in some areas of Fiji. On both types of drum, *daunilali* (a skilled *lali* player) may demonstrate talent and expertise by improvising on the prescribed rhythmic pattern.

Several idiophones commonly form part of the rhythmic accompaniment to group singing and dance. Body percussion in the form of *cobo* or *obo* (clapping with the hands at right angles and cupped), *sau* (clapping with the hands held parallel and flat) or thigh-slapping is used both formally and spontaneously in the performance of many genres. *Derua* (stamping tubes), constructed from bamboo tubes of varying lengths, which have been hollowed out leaving a single node closing the tube at one end, may mark the pulse of the music (fig.17). The tubes are held vertically with the stopped end closest to the ground and

16. A pair of lali (slit-drums) at Ben Tailevu, Fiji, 1959

17. Lali ni meke (slit-drum) and derua (stamping tubes) at Rewa, Fiji, 1958

are struck on the ground, emitting a dull thudding sound similar in quality to that produced by *cobo*. The striking of pairs of half coconut shells together and ground-flicking or slapping may punctuate or reinforce the musical pulse. Occasionally, dancers' costumes include rattles constructed from *icibi* (the shells of a fruit), which are fastened to the body and produce a sound as dancers perform.

Several aerophones were once common, though only one appears still to be used today. The *davui* or *tavui* (the conch-shell trumpet) continues to be used for a variety of ceremonial and signalling purposes such as to signal the catch of a turtle, and it forms an essential part of ceremonial grieving for the death of a high chief. In the traditional religion, the *davui* was used as a means of communication with the supernatural world. Nose-flutes (*dulali* or *duvu vātagi*; fig.18) appear to have become obsolete relatively recently. The flutes varied in form, ranging in length from approximately 35 to 70 cm and in width from 5 to 12 cm, and having between four and eight holes. It is thought that traditional musical structures are based on the notes produced by nose flutes. Early writings include references to panpipes (*bitu sonisoni*, *duvu soro* or *bitu sanisani*) and two types of whistle (*sici* and *va-kakalu*).

2. Vocal music. Fijian music is principally vocal, and it is presumed that most individuals possess the ability to participate in various genres of song. Categorizing vocal genres is troublesome, as the designative terms that describe broad categories of music may change in meaning or specificity according to local dialect, syntax and social context. For the purposes of the following discussion, vocal music has been divided into *meke* and all other forms. *Meke* is broadly defined here as a group form of sung, metrical, rhymed poetry performed with or without rhythmically dependent, choreographed actions and usually accompanied by *lali ni meke*, *derua* and body percussion.

Meke is the most complex and valued group musical genre in terms of musical structure, performing practice, composition and adherence to what is perceived as

Ex.9 *A Vakawelegone*, performed by Roiva Wavu, Nagonedau village, rec. and transcr. K. Glamuzina, April 1991

['One, two, Lady Siguta, Three, four, Lady Vā, Five, six, Lady Nairogo, Seven, eight, Lady Naivalu, Nine, ten, Lady Giāvidi, It costs one shilling.']
Performance note: the first line is slightly slower than the tempo marking as the singer takes several seconds to attain a stable tempo; the quaver rest indicates where the singer takes a breath; the approximate range is an octave.

tradition. It is multi-functional according to social context: it is a high-art form as well as popular entertainment, it is poetry as well as a means of recording history, and it is a way of generating group identity. *Meke* are performed at a wide variety of public occasions, the type of *meke* being determined by the social requirements of the event. Different types include *meke iwau* (a men's club dance), *meke wesi* or *meke moto* (a spear dance for men) and *vakara*, all kinds of *meke ni valu* (war dance); *vakamalolo* (a sitting dance); *seasea* (a standing dance for women); *meke iri* (a fan dance); *ruasa* (a standing dance for men) and *meke ni yaqona* (a dance performed as part of ceremonial kava drinking). Casual festive occasions may include performances of *meke vāgalu* (a dance with rhythmic accompaniment only) and *meke vālasalasa* (a comic dance), two forms to which little enduring value is attributed. *Meke* performed without the accompanying actions or, indeed, those that do not have any choreographed movements, may be termed *vucu*, *vucuvanua* or *vāvunigasau*.

The most frequently rehearsed and performed group forms today are those associated with Christianity. These include genres that are wholly imported, such as *serenilotu* (hymns) and *serenilotu qiriqiri* (song of praise accompanied by guitar(s) and associated with fundamentalism) as well as *same* (religious songs) and *taro* (rhythmically recited or sung section of the catechism), two forms performed exclusively by women using sonic structures and performing practices that resemble *meke*, though without instrumental accompaniment. It is generally acknowledged that incantations used in traditional religion remain extant, though these are hidden and it is impossible to determine their form or content.

A variety of casual group songs are performed for amusement, including wholly imported popular Western songs, songs that borrow texts or purely musical elements from the same, and some forms that incorporate features of SATB choral structures while maintaining certain characteristics of *meke*. The nomenclature employed for casual songs appears to consist of several terms applied inconsistently. The term *serenicumu* (casual or occasional songs) may denote various types of popular song performed by small groups accompanied by guitars and ukeleles. They may be accompanied by informal dance types termed *taralala*, *tauratale* or *danisi* (the latter coming from the English 'dance'). They also accompany songs performed by larger groups using body percussion during kava-drinking parties (sometimes called *sigidrigi*, from the English 'sing-drink', or *vālutuivoce*) or locally composed anthems performed unaccompanied by choirs. *Serevoli* are performed during New Year celebrations and occasionally in other celebratory contexts, such as on the return of a particularly successful fishing expedition.

Most extant solo and unison songs are associated with children. *Vakamocegone* (lullabies) are recited or sung and usually performed by women of all ages. *Vakawelegone* (infant's amusements) are short, usually rhythmically recited verses with or without rhythmically dependent prescribed movements, which are directed towards, or performed with, infants. Often *vakawelegone* function as an elementary educational aid to teach children such things as counting, place names or the names of high-ranking individuals (ex.9). *Oitonigone* (children's games) are short recited games usually played in groups, with prescribed movements that may be rhythmically dependent. Legends called *itukuni* are told for the amusement of everybody and may incorporate short sung or recited texts, which are performed at critical points in the narrative.

Few musical forms associated with work appear to have survived. There is evidence that *vakalutuivoce* (paddling duets) are now rarely performed to assist transport, though with the addition of other voice parts the songs may be performed in other contexts (e.g. as *serevoli*). *Gi* (group songs performed on completion of land preparation for the cultivation of yams), *serenisiwa* (line-fishing songs) and group work coordinating *kacikaci* (calls) seem to be used with decreasing frequency. Ritual calls associated with ceremonies of exchange and other social interaction include *isevusevu* (kava presented to hosts), *qaloqalovi* (presentations of whales' teeth) and *tama* (greeting calls). These forms appear to be the least dynamic musical genre, with change considered unacceptable.

Stylistically, Fijian song types may be divided into two broad categories: solo and unison songs and group songs. Most categories of solo and unison songs are associated with children and tend to be rhythmically recited rather than sung, with evidence of widespread use of stereotyped pitch variation. By contrast, those *vakamocegone* that are sung may use personalized stereotypes. Vocal range tends to be limited, with the highest and lowest pitches often found only in the cadential phrase. The final syllable of text may be assigned a note of short or extended duration;

in the latter case, a terminal fall on that note is common (ex.10). Solo songs characteristically have a sense of simple duple or simple triple metre and do not contain complex rhythms or a wide variety of note durations. Textual organization varies enormously: textual lines may vary in length, and though most texts include some use of rhyme, no particular scheme appears to be characteristic.

Stylistically, types of group song are distinguishable largely by the extent to which musical structures adhere to tradition or incorporate introduced elements. Traditional group musical structures are characterized by two inner solo voices termed *laga* (or *lagalaga*) and *tagica* (or *tarava*) and a number of group and subsidiary voices collectively termed the *vakatara* (accompanying group). The *vakatara* may include at least one each of *druku* (or *gudru*) and *gerea* (bass and highest voice part respectively), *vaqiqivatu* (an intermittent bass part) and *vakassalovoavoa* (or *domo rua*, a descant voice). Typically, the *laga* leads the performance and may complete from one word to a whole line of text before any other voice enters. The *tagica* voice may enter several seconds before group voice parts or at the same time. The most common range of the two solo voices is a 5th, and the parts characteristically cross, an interaction termed *vīdolei* (ex.11). Group voices, however, tend to be stereotyped and are often confined to maintaining pedals. Harmonic structures are typically clustered, with frequent use of major and minor 2nds as harmonic intervals. Cadential formulae often incorporate

Ex.10 *A Vakamocegone*, sung by Arieta Latabua Domo, Levuka village, Kadavu Island, June 1991, rec. and transcr. K. Glamuzina

['O, Lōlō drove me away. I went to catch a fiddler crab for me to eat. Low tide, high tide. They two go up to Xoronitabua. Where they go to catch mud crabs. What mud crab? A pointed mud crab, the mud crab that killed its grandmother, e!']

Ex.11 A section of a *meke* showing *vīdolei* interaction between the *laga* and *tagica* solo voices; performed by villagers, Levuka village, Kadaru Island, 1991; rec. and transcr. K. Glamuzina

the suspension of the harmonic interval of major 2nd, and notes of extended duration may be assigned to the final two syllables of text. Sometimes, the final note features a terminal fall in all voices. On other occasions, the penultimate syllable of text is assigned a note of extended duration, following which all voices fall to a low final pitch characterized by an almost spoken unison delivery. Such structures are characteristic of older style *meke*, *same* and *vakalutuivoce*; in the latter case only the *laga* and *tagica* parts are present. Although *taro* are rhythmically recited, with a leader speaking the question to which a group response is returned, cadential formulae follow those common for all group forms.

Clearly, the SATB structures and chordal harmony that gained widespread use during the Fijians' conversion to Christianity and the introduction of associated musical forms is in great contrast to traditional structures. The nomenclature applied to voice parts in SATB structures tends to derive directly from English terms, *soprano*, *alto*, *tena* and *besi*, and the term *matasere* equates with the English term 'choir'. The incorporation of some wholly introduced features is now common in traditional forms, particularly those performed within educational contexts and urban and tourist areas. For example, though traditional nomenclature and most performing practices may remain, the harmonic structures of some *meke* are triadically based. Likewise, for some acculturated forms such as *sigidrigi* and *serevoli*, the use of traditional nomenclature and other musical features is standard, though the songs are commonly homophonic, in major keys and contain simple harmonic movement.

3. The social environment. The impact of the rapidly changing social and economic environment on musical

performance varies widely throughout Fiji. Perceptions of tradition and innovation as applied to musical genres, styles, performing practices and processes of evaluation are similarly diverse. Composition methods vary among genres. Most solo and unison forms are known over a wide geographical area, incorporating elements of improvisation that reflect the performer's immediate environment, although usually the composer is not remembered. For traditional group forms, most villages have a *dauni-vucu* (composer), who is responsible for providing comprehensive compositions. Earlier the term exclusively denoted magico-religious specialists who composed through spirit possession or with the assistance of supernatural entities, and while this may still be the process employed, the term now appears to be more generally applied to any composer of *meke* and sometimes other group forms. An alternative term, *daubuli*, may be used for composers of acculturated and introduced genres. Formal education, travel and broadening musical experiences have resulted in the emergence of composition methods comparable to those in Western societies, including the use of staff or tonic sol-fa notation. With increasing frequency, payment for compositions may supplement or replace items of traditional wealth with cash.

Overt notions of ownership appear to be applied exclusively to *meke*, the rights to which are vested in the commissioning group. There is deep resentment if a group performs a *meke* not intended for them, and traditionally the offending party should approach and appease the owners. For some other group forms, specific textual references to local landmarks, events or people mean that performance by non-local groups would be nonsensical. Casual group songs tend to be performed over wide geographical areas. The performers often imitate songs heard on the radio or while visiting other parts of Fiji, and the composers are rarely known.

Evaluation of the quality of group music performance tends to focus on the communal rather than individual effect. Ideally, a group of dancers should execute their movements as if comprising a single entity. Likewise, in all group singing, voices should combine to produce a solid, balanced sound without any one part dominating another. Traditionally, within the striving for group excellence there are ways in which individual identity and superior skill are expressed. For example, dance formations and costuming can reflect the relative rank, and sometimes skill, of individuals. Superior executant musical ability is recognized and is considered an acquired, rather than inherited, skill. It is thought that through observing, participating and practising one may become a proficient musician. The attributes of a good musician vary among performance roles. For example, a competent *laga* should have a clear, strong voice, be able to sing in close harmonic intervals, establish an appropriate pitch and provide melodic and textual cues for the remaining singers.

Usually no participatory restrictions are associated with formal group performance, though there are exceptions. For example, for ritual *meke ni yaqona* only male members of the chiefly social group may participate. Certain informal group genres tend to be sung by young men, although this is largely due to their personal musical preferences. Some solo songs are routinely performed by men (for example, ceremonial calls) and others by women (songs associated with children). The dance movements of *meke* tend to be performed by single sex groups. Most commonly during musical performances, the *vakatara* are seated in an inward-facing circle with leading performers in the centre; for *meke*, the group is behind the dancers. *Matasere* tend to stand with each voice part clustered together facing their audience. For most casual group songs and solo and unison songs the positioning of performers is flexible, although some have prescribed physical arrangements.

The contexts in which group musical performance occurs directly reflect the diverse nature of current social environments. Traditionally, performance tends to be part of ceremonies of exchange and other social interaction between groups; for example, ceremonies connected with marriage, pregnancy and birth or the installation of a chief. While many such occasions are still commonly observed, other occasions for performance are many and varied, including cultural festivals such as the Festival of Pacific Arts (*see* PACIFIC ARTS, FESTIVAL OF), church-based events, events associated with schools, sports teams, government activities and political events, developmental projects and economic events, including those which are cash-paying. The adherence to traditional performing practices is similarly varied, reflecting the nature and inclinations of performing groups and the age, relative musical knowledge, knowledge of tradition and life experiences of the group.

While changes in musical life are generally accepted as inevitable, innovation appears least tolerated in the performance of *meke*. Many performances, particularly within urban areas and the tourist industry, display few of the complex practices usually associated with the genre and are disparaged by those who value tradition. Fear of radical change and heavy loss of traditional musical knowledge has produced some attempts to preserve and maintain musical genres, values and performance standards, and highly regarded performances in these contexts tend to be those that adhere most closely to tradition (for example, performances by the Dance Theatre of Fiji). Radio broadcasting, once focussed on Western popular music, has since developed programmes dedicated to oral traditions. Despite such developments, it is clear that many younger and, in particular, urban Fijians have little knowledge or interest in traditional music and listen primarily to popular acculturated or imported forms.

Important collections of recordings and video material are held by the Archive of Maori and Pacific Music, Auckland; and the Fiji Museum, the Fijian Broadcasting Corporation, the Ministry of Information, the Pacific Music Archives and Tabana Ni Vosa Kei Na Itovo Vakaviti (Institute of Fijian Languages and Culture), Suva, Fiji.

Melani. Italian family of musicians. At least three related families of this name from Pistoia produced musicians during the 17th century. The most prominent were the seven sons of Domenico di Sante Melani, bellringer of Pistoia Cathedral from 1624 to 1650. Of these the most

important were the two oldest, Jacopo and Atto, and the youngest, Alessandro, who are discussed separately below. The others were: Francesco Maria (Padre Filippo) (*b* Pistoia, 3 Dec 1628; *d* ?Florence, *c*1703), a Servite monk allowed to leave the order while remaining a priest, who was a soprano in the service of Archduke Sigismund of Austria in 1657–63, sang a leading role in Cavalli's *Xerse* in Paris in 1660 and served the Grand Duke of Tuscany as a singer from 1672 to 1700; Jacinto (*b* Pistoia, 1631; *d* Pistoia, 1705), bellringer in succession to his father; Bartolomeo (*b* Pistoia, 6 March 1634; *d* Pistoia, 1703), an alto at Pistoia Cathedral from 1654 to 1656, in the chapel of the Duke of Bavaria in Munich from 1657 to 1660 (though he sang at the Pergola and Cocomero theatres, Florence, in 1661), *maestro di cappella* of Pistoia Cathedral from 1668 to 1677 and from then on organist there until his death; and Vincentio Paolo (*b* Pistoia, 15 Jan 1637; *d* before 1667), known to have been a soprano at Pistoia Cathedral between 1650 and 1659 and to have sung at the Teatro della Pergola, Florence, in 1661. Three further musicians belonging to other branches of the Melani family deserve mention: Antonio (*b* ?Pistoia; *d* ?Austria), Kapellmeister to Archduke Ferdinand Karl of Austria at Innsbruck in 1659 and composer of *Scherzi musicali, ossia capricci, e balletti* for one or two violins and optional viola (Innsbruck, 1659); Domenico (*b* Pistoia, 7 March 1629; *d* Florence, 12 July 1693), a soprano in the service of Queen Christina of Sweden from 1652 to 1654 and in Dresden from then until 1680, when he retired to Florence; and Nicola (*b* Pistoia, before 1632), a soprano who accompanied Domenico to Dresden.

(1) Jacopo Melani (*b* Pistoia, 6 July 1623; *d* Pistoia, 18 Aug 1676). Composer and organist. In 1644 he accompanied his brother (2) Atto Melani to Paris. He was elected organist of Pistoia Cathedral on 24 November 1645 and in 1657 became *maestro di cappella*. He also served Prince Mattias de' Medici by composing music (none of which has survived) for his birthday and for Easter celebrations. He moved to Rome in 1667. On 7 October 1673 his name reappears in records as organist of Pistoia Cathedral and continues to do so until his death, although as payments were to someone else he may not actually have assumed the office.

Jacopo Melani was the leading 17th-century composer of comic operas. Only two of them survive. He may have begun to compose opera as early as 1652, for he was engaged at that date in some capacity by Grimani in Venice; during that season an anonymous opera, *Helena rapita da Theseo* (erroneously attributed to Cavalli), was performed at Grimani's theatre, SS Giovanni e Paolo. Melani was a member (with the duty of composing) of the Florentine Accademia dei Sorgenti, for which he composed *intermedi* to *La donna più costante* in 1655 and probably also *Scipione in Cartagine*, an opera with a text probably by G.A. Moniglia, in 1657. He composed the music for five of the seven operas mounted by the Immobili, a Florentine dramaturgical academy, in their theatre, the Pergola: *Il potestà di Colognole* (1657), more commonly, though incorrectly, known as *La Tancia*; *Il pazzo per forza* (1658); *Il vecchio balordo* (1659); *Ercole in Tebe* (1661); and *La vedova* (composed in 1662 but not performed until 1680, under the sub-title *Amor vuol inganno*). All the librettos are by G.A. Moniglia. *Ercole in Tebe*, a *festa teatrale* composed for the wedding of Cosimo de' Medici and Marguerite d'Orléans, set the style for the operas composed for the coronations of Louis XIV (Cavalli's *Ercole amante*, 1662) and Leopold I of Austria (Cesti's *Il pomo d'oro*, 1668).

For Rome he is known to have composed only one opera, *Il Girello* (Palazzo Colonna, 1668), with libretto by Filippo Acciaiuoli and a prologue composed by Stradella. *Il Girello*, a satirical work containing pointed criticism of absolutism, inaugurated a second period of Roman comic opera, which affords a direct link between 17th- and 18th-century comic opera. One of the most frequently performed operas of the century, it was staged throughout Italy between 1669 and 1676 by a touring troupe of *comici*, with whom Melani may have been associated. His remaining three operas were again to librettos by Moniglia. He composed *Il ritorno d'Ulisse* (1669) and *Enea in Italia* (1670) for performance in Pisa during the annual winter sojourn of the Medici court, and *Tacere et amare* for an academy of Florentine gentlemen in 1674.

Melani's music, which is tuneful, graceful and, especially in the lovers' parts, tinged with sweet melancholy, established melodic prototypes which, through the revival of his comic operas early in the 18th century, informed the styles of Ferdinando Rutini, Moneta and Neri Bondi. By the third quarter of the century that style had merged harmoniously with the Florentine taste for farces 'in the French manner'.

WORKS

Intermedi with La donna più costante, Florence, Cocomero, wint. 1655–6

Il potestà di Colognole [La Tancia] (dramma civile rusticale, 3, G.A. Moniglia), Florence, Pergola, 5 Feb 1657, *D-Bsb*, *I-Fc*, *Rvat*, excerpts in Goldschmidt

Scipione in Cartagine (dramma musicale, 3, Moniglia), Florence, Cocomero, 25 Nov 1657, lib *Bc*

Il pazzo per forza (dramma civile rusticale, 3, Moniglia), Florence, Pergola, 20 Feb 1658, lib *Fn*

Il vecchio balordo [burlato] (dramma civile, 3), Florence, Pergola, carn. 1659, lib *Fn*

Ercole in Tebe (festa teatrale, 3, Moniglia), Florence, Pergola, 8 July 1661, *B-Bc*, *F-Pn*, *I-PSrospigliosi*, *Rvat* (facs. in IOB, iv, 1978), *US-Wc*

Amor vuol inganno (dramma civile, 3, Moniglia), for carn. 1663 but unperf.; as La vedova, ovvero Amor vuol inganno, Florence, garden of Marchese Bartolomeo Corsini, 1650, lib in Moniglia: Poesie dramatiche, iii (Florence, 1689)

Il Girello (dramma musicale burlesco, prol., 3, F. Acciaiuoli), Rome, Palazzo Colonna, 4 Feb 1668, *GB-Lbl*, *I-MOe*, *Nc*, *Rvat*, *STborromeo* [prol by A. Stradella]

Il ritorno d'Ulisse (dramma musicale, 3, Moniglia), Pisa, Palazzo dei Medici, Feb 1669, lib in Moniglia: Poesie dramatiche, i (Florence, 1689)

Enea in Italia (dramma musicale, 3, Moniglia), Pisa, Palazzo dei Medici, Feb 1670, *Fn* (lacking ballet music)

Tacere et amare (dramma civile musicale, 3, Moniglia), Florence, Cocomero, 7 Jan 1674, lib *Bc* and *Mb*

(2) Atto Melani (*b* Pistoia, 31 March 1626; *d* Paris, 1714). Alto castrato and composer, brother of (1) Jacopo Melani. At about the age of 15 he entered the service of Prince Mattias de' Medici, who sent him to Rome in March 1644 to study with Luigi Rossi and Marc'Antonio Pasqualini. He was then sent to Paris, where he quickly won the favour of Mazarin and Queen Anne. During further visits to Paris he performed in such operas as Rossi's *Orfeo* (1647) and Cavalli's *Xerse* (1660). Mazarin and Mattias also used Atto, ostensibly only a singer, as a secret diplomatic courier. Thus he travelled continually from one court to another, gathering favours for himself as he did so from an astonishing number of European

princes; he was rewarded by being made a gentleman of the chamber to Louis XIV and a naturalized French citizen. But the death of Mazarin in 1661 undermined his secure position and when implicated in the embezzlement perpetrated by the minister of finance, Fouquet, he was exiled from France.

He attached himself to Cardinal Giulio Rospigliosi in Rome; his last recorded appearance as a singer took place at the Casa Rospigliosi in 1668. Otherwise his occupation was ecclesiastical politics. He even claimed to be chiefly responsible for the election of Rospigliosi to the papacy as Clement IX in 1667. His connections with Rospigliosi doubtless led to the move to Rome in 1667 of his brothers Jacopo and Alessandro, the latter's appointments to S Maria Maggiore and S Luigi dei Francesi and Atto's own restoration to the good graces of Louis XIV. He returned to France in 1679 and remained there, involved in politics and diplomacy, for the rest of his life. Since he was awarded certain benefices he is sometimes referred to as 'Abbate Melani'.

His extant compositions include 15 solo cantatas (3 facs. in ICSC, xi, 1986) and one duet. One cantata, *Io voglio esser infelice*, was published in M. Silvani's *Canzonette per camera* (Bologna, 1670), and several must have become very popular judging by the number of manuscripts in which they appear (*A-Wn*; *D-MÜs*, *Kl*; *F-Pc*, *Pn*, *Pthibault*; *GB-Cfm*, *Ckc*, *Lbl*; *I-Bc*, *Fc*, *Fn*, *MOe*, *Nc*, *Rc*, *Rvat*; *US-CHH*, *LAuc*). However, his importance lies primarily in the historical record of musical events between 1644 and 1661 found in his numerous letters to various patrons.

(3) **Alessandro Melani** (*b* Pistoia, 4 Feb 1639; *d* Rome, 3 Oct 1703). Composer, brother of (1) Jacopo Melani. He sang at Pistoia Cathedral between 1650 and 1660 and then became *maestro di cappella* in Orvieto and Ferrara. He returned to Pistoia in December 1666 to become *maestro di cappella* of the cathedral in June 1667, replacing his brother Jacopo. Four months later he was elected *maestro di cappella* of S Maria Maggiore, Rome; he assumed a similar position at S Luigi dei Francesi no later than July 1672 and remained there until his death. In Rome he enjoyed the favourable conditions of the Rospigliosi papacy, who paid for an opera at the 1668 carnival, and the patronage of Ferdinando de' Medici, his name appearing among 'celebrated professors of music protected by the Prince of Tuscany' in 1695, and of Francesco II d'Este, who in 1690 commissioned an oratorio from him, probably *Lo scisma nel sacerdozio* (which is lost). The justification for the admission of Alessandro's nephews to the minor nobility of Tuscany speaks of unspecified services to the King of Poland; the fact that he composed an oratorio, *Golia abbatuto*, in 1685 (to celebrate the Holy League against the Turks negotiated by Pope Innocent XI and including the King of Poland) strongly suggests that these services combined politics and music.

As a composer of liturgical music for Rome, Melani was an important precursor of Alessandro Scarlatti. In addition to his three published collections and isolated motets in other published volumes many other works survive in manuscript; the majority are for eight, nine or ten voices and they constitute a surprisingly large corpus of polychoral music which has yet to be studied. Of eight oratorios ascribed to him the most frequently performed was *Il fratricidio di Caino*. *Santa Dimna* (Rome, 1683) is a pasticcio that brought together the three dominant composers in Rome in the second half of the century: Melani, Pasquini and Scarlatti. Alessandro, his brother Jacopo and later Pasquini, Stradella, Antonio Olivieri, Cosimo Bani and above all Alessandro Scarlatti constitute a second school of Roman opera. As noted above under (1), the revival of opera in Rome began with Jacopo Melani's *Il Girello* in 1668. In the following year, also with Filippo Acciaiuoli as the impresario, Alessandro's first datable opera, *L'empio punito*, was performed in the Palazzo Colonna; it is chiefly interesting as the first opera on the subject of Don Juan. These two operas, which were written for Maria Mancini Colonna, together established a bridge between the lyrical, comic style of mid-century Tuscan opera and the second flowering of Roman opera. But it should be noted that neither composer ever wrote another opera for Rome. Nor are any revivals of their operas recorded in Rome, though Alessandro continued to be a leading composer of oratorio and liturgical music there. Instead his operas were more in demand in Florence and Bologna.

WORKS

OPERAS

L'Europa (introduttione), Vienna, Cortina, *c*1667, *A-Wn*
Ergenia [?Eugenia], ? Rome, carn. 1668
L'empio punito (dramma musicale, 3, F. Acciaiuoli and G.F. Apolloni, after Tirso de Molina: *El burlador di Sevilla y confidado de piedra*), Rome, Palazzo Colonna, 17 Feb 1669, *I-Rvat*
Le reciproche gelosie (operetta in musica, 3, F.B. Nencini), Siena, 27 Feb 1677, *Rvat* (entitled Scherzo pastorale a 5); as Il sospetto senza fondamento (dramma pastorale), Florence, 9 Aug 1691; as Il sospetto non ha fondamento, o vero La costanza negli amori, Florence, sum. 1699
Il trionfo della continenza considerato in Scipione Affricano (dramma per musica, 3), Fano, Fortuna, 26 May 1677, arias *D-MÜp*
Il Corindo (favola boschereccia, 2, Giacomini), Villa di Pratolino, nr Florence, aut. 1680, lib *I-Fc* and *US-Wc* [reworking with addns by L. Cattani]
Il carceriere di se medesimo (dramma per musica, 3, L. Adimari, after T. Corneille: *Geôlier de soi-mesme*), Florence, Cocomero, 24 Jan 1681, *I-Bc*; as La calma fra le tempeste, overo Il prencipe Roberto fra le sciagure felice, Reggio nell'Emilia, Comunità, 28 April 1684; as Roberto, overo Il carceriere di sé medesimo, Bologna, Malvezzi, 28 Jan 1697
Ama chi t'ama (dramma per musica, 3, Nencini), Siena, carn. 1682; as Gli amori di Lidia e Clori, Bologna, 1688 and 1691, *Bc* (entitled Chi geloso non è amar non sa), *STborromeo*
L'innocenza vendicata, overo La Santa Eugenia (dramma per musica, 3, G. Bussi), Viterbo, ? Nobili, 6 March 1686, *F-LYm* (classified as orat)
Il finto chimico (dramma per musica, 3, G.C. Villifranchi), Villa di Pratolino, nr Florence, 10 Sept 1686, lib *Fc* and *US-Wc*
Santa Dimna [Dinna], figlia del re [Principessa] d'Irlanda [Act 1] (commedia per musica or tragedia per musica, 3, B. Pamphili), Rome, Palazzo Pamphili, carn. 1687 [Act 2 by B. Pasquini, Act 3 by A. Scarlatti]
Arsinda (dramma), Act 1 only, lost, formerly *I-MOe*
L'Idaspe (pastoral, 3), *Rvat*
Il conte d'Altamura, ovvero Il vecchio geloso (dramma musicale, 3), Florence, Casino di S Marco, lib *Bc*, doubtful

Capriccio a 3, bacchettone, soldato e giocatore (int), *A-Wn*
Rinaldo, a 5 (int), *GB-Lbl*, *I-MOe*

ORATORIOS

La morte di Oloferne [La Giuditta] (Nencini), Rome, S Giovanni de' Fiorentini, 1675, lost
Il fratricidio di Caino [Abel; Il sacrificio di Abel] (B. Pamphili), Rome, Palazzo Pamphili, 1677, *I-MOe* (facs. in IO, iii, 1986)
S Francesca Romana, Palermo, 1682, lost
Golia abbatuto, Rome, 1685, *GB-Cfm*
Il giudizio di Salomone, Bologna, 1686, lost
Lo scisma del sacerdozio, ?Modena, 1691, lost
Giuditta, Florence, 1693, lost

S Rosa di Viterbo, Florence, 1693, *F-Pc*
S Eugenia (G. Bussi), 1686, *LYm*
S Filippo Neri, lost, lib pubd (Lucca, 1715)

SACRED

Mottetti sacri, 2–5vv, op.1 (Rome, 1670)
Delectus sacrorum concentuum, 2–5vv, bc, op.2 (Rome, 1673)
Concerti spirituali, 2–3, 5vv, op.3 (Rome, 1682)
?Motetti, 1–3, 5vv, bc, op.4 (Rome, 1698), lost
6 masses, mass sections, 3 requiems, over 100 lits, canticles (incl. 10 Mag settings), hymns and motets in MSS: *A-Wn*; *D-Bs*, *MÜs*; *F-Pc*, *Pn*; *GB-Lbl*, *Och*; *I-Bc*, *Nc*, *Nf*, *PS*, *Rsc*, *Rvat*; *S-Uu*

CHAMBER

34 cants, notably A bella gloria in seno, cantate in onore di Luigi XIV, ?Rome, 1678, *I-Rvat* (anon), *Vqs*; Oratio Coclite, S, 2 vn, bc, *Fc*; Dialogo di Lilla e Lidio, 2 S, 2 vn, bc, *D-MÜs*; All'armi pensieri, S, tpt, bc, *GB-Lbl*, *I-Rc* (facs. ROBERT LAMAR WEAVER

Melanippides (*fl* 5th century BCE). Greek dithyrambic poet and composer. Born on Melos, he died at the court of King Perdiccas II of Macedonia (*c*450–413 BCE), whom he had served as a musician. Xenophon and Plutarch rank Melanippides with the greatest artists of earlier times, among them Homer, Simonides and Euripides (Xenophon, *Memorabilia*, i.4.3; Plutarch, *That Epicurus Actually Makes a Pleasurable Life Impossible*, 1095d). In the *Suda* he is credited with extensive innovations in dithyrambic composition. The critical tone of this reference probably reflects the estimate given in a fragment from the *Cheiron*, a comedy ascribed to PHERECRATES and preserved in Pseudo-Plutarch's *On Music* (1141d–1142a). In this passage, Music (*mousikē*), personified as a woman, has suffered various outrages at the hands of modern composers, the worst of whom is Timotheus. Justice asks how this came to pass, and Music replies: 'My woes began with Melanippides. He was the first who took and lowered me, making me looser [*chalarōteran*] with his dozen strings [*chordais dōdeka*]. Yet after all I found him passable compared with the woes I suffer now'. The passage continues with numerous plays on words, the precise meaning of which is not always certain, but the general imagery of the rape of Music by modern musicians and the expansion of the kithara to as many as 12 strings is unmistakable.

The controversy surrounding Melanippides' style is also discernible in Aristotle's explanation (*Rhetoric*, iii.9, 1409b24–32) of an attack by a minor poet on Melanippides' use of the extended *anabolē*: he states that it had been substituted for metrical correspondence in the antistrophic portions of the dithyramb. From the time of Homer onwards, the *anabolē* had been an instrumental prelude; Melanippides pressed it into service as an interlude of some sort. The author of the Pseudo-Plutarch *On Music* associates him with the new importance accorded to the aulos and an increase in the number of *chordai*; in rapid succession he is categorized as a *melopoios*, that is, a lyric poet, and again as a dithyrambic poet (1141c–d, 1136c). The first of these descriptions does not imply a lack of poetic content, as has been supposed. From a very early period Melanippides was regarded as one who made the text secondary to displays of virtuosity on the aulos. The term *anabolē*, which properly describes instrumental music, could therefore be applied to his interludes.

Melanippides was thought to have been the forerunner of such controversial dithyrambic poets as Philoxenus and Timotheus; the *Cheiron* passage strongly supports this conclusion. Surviving fragments of his works, not clearly identifiable as dithyrambs, have stilted diction and a mild degree of metrical slackness. They include lines from a *Marsyas* (Athenaeus, xiv, 616e–f; Edmonds, frag.2), which portray Athena casting the double aulos from her: she calls the twin pipes 'an affront to my body', adding, 'I do not give myself to ugliness [*kakotati*]'. This term regularly denotes moral rather than physical shortcomings. Here it stands in curious conjunction with the tradition (*see* MARSYAS) that Athena's disgust was provoked by an awareness of the facial distortion resulting from playing upon the pipes. Athenaeus suggests that Melanippides meant to attack aulos playing when he made Athena speak thus, but the evidence indicates that he championed the aulos and the astrophic metrics that were a necessary consequence of its growing predominance in the dithyramb.

WARREN ANDERSON/THOMAS J. MATHIESEN

Melartin, Erkki (Erik Gustaf) (*b* Käkisalmi, Finland [now Priozersk, Russia], 7 Feb 1875; *d* Pukinmäki, nr Helsinki, 14 Feb 1937). Finnish composer. He studied at the Helsinki Music School with Wegelius (1892–9) and in Vienna with Robert Fuchs (1899–1901). Despite uncertain health he worked unstintingly at the Helsinki Music School, first as assistant teacher (1895–8), then as teacher (1901–7) and finally as director (1911–36). Between 1908 and 1911 he worked as a conductor in Viipuri where he founded an orchestra school; his rendition of the Andante from Mahler's Second Symphony was the first performance of Mahler in the Nordic countries (1909). Melartin conducted primarily his own work in Finland and also in Scandinavia, Russia and Germany. His extensive trips abroad took him also to North Africa, India and Egypt. He was given an honorary professorship in 1919.

He raised an entire generation of composers as a teacher, and supported young modernists. He approved of atonality as a working method, but not as a systematic style. His large output can be divided into two distinct groups: serious music that is stylistically radical and artistically ambitious, and salon music. Despite his essentially lyrical talent, Melartin's focal concern remained the symphony; he wrote six at about the same time as Sibelius but remained distinctly free of his influence. Hints of Impressionism and Expressionism are present in his symphonies, as is the imprint of Mahler. The Fifth Symphony by Melartin is perhaps his most masterly, the last movement combining all the work's main themes in a four-part fugue in a summary of the composer's polyphonic skills. His theosophical outlook is reflected in the opera *Aino*, which is built on post-Wagnerian leitmotifs.

WORKS
(*selective list*)

Stage: Aino (op, 1, J. Finne, after the *Kalevala*), 1907; Sininen helmi [The Blue Bead] (ballet), 1930; incid music for *c*20 plays, incl. Prinsessa Ruusunen [The Sleeping Beauty] (Z. Topelius, after J.L.C. and W.C. Grimm), 1904

ERKKI SALMENHAARA

Melba, Dame **Nellie** [Mitchell, Helen Porter] (*b* Richmond, Melbourne, 19 May 1861; *d* Sydney, 23 Feb 1931). Australian soprano of Scottish descent. She had already had some training and concert experience before 1886, the year she left Australia for further study in Europe. She studied in Paris with Mathilde Marchesi, and made her operatic début on 13 October 1887 at the Théâtre de la Monnaie, Brussels, as Gilda; in the following year she appeared at Covent Garden as Lucia and at the Paris Opéra as Ophelia. Her rare beauty of tone and finish of technique created an instant stir, and these virtues soon began to be matched by equivalent qualities of taste and musicianship, notably as the Gounod heroines, Juliette and Marguerite. She had studied both parts with the composer, and often sang them with Jean de Reszke, who became a decisive influence on her musical development.

Melba's Lucia in 1893 began an association with the Metropolitan Opera that lasted irregularly until 1910; she also sang for Hammerstein's Manhattan Opera Company and in Chicago, and organized occasional operatic seasons in Australia. But Covent Garden always remained, as she said, her 'artistic home'; she sang there almost every year until World War I, and occasionally thereafter, making her farewell appearance in a mixed programme on 8 June 1926 – when direct recordings were

Nellie Melba as Juliet in Gounod's 'Roméo et Juliette'

made of the occasion, including the diva's emotional speech. After the brilliant French and Italian roles of her early career, Melba had come to concentrate increasingly on the role of Puccini's Mimì; from 1899 until her retirement it became the most famous of all her parts. Although her timbre was often called silvery, it also possessed in her prime what the American critic W.J. Henderson described as 'a clarion quality', adding that 'from B flat below the clef to the high F ... the scale was beautifully equalized throughout and there was not the smallest change in the quality from bottom to top'. These virtues are well exemplified in the best of the 150 recordings she made between 1904 and 1926 (most transferred to LP and CD). Her name became commercially valuable, and both peach melba and melba toast were named after her. She was created DBE in 1918 and after her retirement from the stage became president of the Melba Memorial Conservatorium in Melbourne.

DESMOND SHAWE-TAYLOR/R

Melbourne. City in Australia, capital of Victoria. Founded in 1834 as a port, Melbourne expanded rapidly into the largest and most active city in Australia when gold was discovered in Victoria in the 1850s. An evolving moneyed class encouraged the development of musical life, and the city became the major Australian centre for concert parties and opera troupes travelling the Empire circuit.

1. Choirs and opera. 2. Other activities.

1. Choirs and opera. In 1853 John Russell founded the still extant Melbourne (later Royal Melbourne) Philharmonic Society, the first permanent choral society in Australia and the best known of many local groups that together formed the large 19th-century festival choirs. In 1868 the Melbourne Liedertafel was established by German-speaking migrants, followed two years later by the Metropolitan Liedertafel and thereafter by similar groups in outlying areas of Victoria. All abandoned German as their club language when English colonists joined in numbers, attracted by the social life and business contacts available. The two Melbourne groups amalgamated in 1903 as the Royal Victorian Liedertafel, disbanding only in the 1980s. Other choirs include the professional bodies associated with the ABC and various opera companies, as well as numerous amateur groups. The leading choir of the late 1990s was the Melbourne Chorale.

Opera troupes of the gold-rush era included Black's English Opera Company (1856), a venture by George Coppin and Anna Bishop (1857) and the Bianchi Royal Italian and English Opera Company (1860). In 1861 William Saurin Lyster began his association with the city as impresario, fostering a period of feverish operatic activity: Melbourne was – and is – opera mad. Lyster died in 1880, and his crown passed to James Cassius Williamson, though not without challengers: the companies of Montague-Turner and the Simonsens, and the Cagli and Paoli troupes and their derivatives. Williamson fell out with his partners Garner and Musgrove in the 1890s, but their attempts to oust him as the dominant Melbourne entrepreneur were not successful. In 1911 he brought Melba home for her first opera season since she had achieved international stature, beginning in the city from which she derived her name and where she lived, taught, retired and was buried. Williamson died in 1913, but his firm lived on to present the huge 1924 Melba-Williamson seasons and the 1928 co-productions in which Melba did not appear. (Other Melbourne singers to have achieved international recognition include Florence Austral, John Brownlee, Ronald Dowd, Joan Hammond, Sylvia Fisher, Elsie Morrison and Marie Collier.)

In 1913 the Thomas Quinlan company presented the first *Ring* cycle in Australia. World War I prevented this troupe's return and it was left to the Gonzalez and Rigo companies to challenge the Williamson organization, now known as the Firm and run by the Tait brothers, who presented smaller seasons during the economic depression of the 1930s. In 1934–5 Sir Benjamin Fuller presented the Melbourne centenary season centred on Austral. World War II saw a contraction to radio opera, but with public interest also kept alive through the Sun Aria Competition, the Mobil Quest and the Australian Broadcasting Commission's vocal competitions. The era of imported stars supported by local choruses and orchestras did not fade completely until after the 1965 Williamson season with Joan Sutherland. In the immediate postwar period Gertrude Johnson's National Theatre Movement (founded in 1935) gradually built up standards and gave rare opportunities to local artists.

The Victorian Opera Company, at one time the country's second largest, was founded in 1962 and renamed the Victoria State Opera in 1974; Richard Divall was its musical director from 1972 to 1995. Its main home was the Princess Theatre until it moved into the Victorian Arts Centre's State Theatre, which opened in 1984. Though the stage of the State Theatre is vast and technically comprehensive, its pit is small. In 1996 it effectively ceased operations as a separate organization and has since been absorbed into Opera Australia. Opera is also presented by Chamber Made, whose unconventional productions of works outside the standard repertory have provided new insights and an outlet for local composers. Oz Opera, the research and development arm of Opera Australia, is based in Melbourne.

2. Other activities. Orchestral music was the province of pit players in the many theatres and of regimental bands. Town bands had existed in the city and suburbs since 1839, when George Tickell, a plasterer, assembled 12 players to parade on Christmas Eve. Professional dance bands, with Wilkie, Greggs and the Hore family bands among the earliest, arrived in the 1840s, but the most conspicuous bands were those of the total abstinence societies. The brass-band movement was to take hold in Melbourne and almost every rural centre.

Megson, Reed, Clarke, Buddee and Gautrot organized the earliest concerts. After the sudden increase in population caused by the goldrush, entrepreneurs followed the lead of Charles Winterbottom and began offering promenade concerts, often employing theatre musicians, the amateurs of the Philharmonic Society's oratorio performances and the town's many professional teachers to create ad hoc orchestras. In the 1860s orchestral standards rose under the influence of the composer-conductor Charles Horsley. By the 1880s acclaimed orchestras were being employed for major festivals, notably that of the 1888

Centennial International Exhibition, which presented 244 concerts during its six-month run. The orchestra was briefly retained by government grant as the Victorian Orchestra, but failed in the 1890s economic depression. It was revived and augmented under the name of the composer-conductor G.W.L. Marshall-Hall, who went about a systematic education of public taste in a series of Town Hall concerts running from 1892 to 1912. Then the Melbourne SO, founded in 1906, attempted to fill the gap, becoming the major orchestra under Alberto Zelman jr and his successor, the composer-conductor Fritz Hart. In 1936 it was amalgamated with the university orchestra under Bernard Heinze and passed into the control of the ABC. Between 1949 and 1964 it was known as the Victorian State Orchestra, but then returned to its original name. Resident conductors have included Alceo Galliera, Juan Jose Castre, Walter Susskind, Kurt Wöss, Georges Tzipine, Willem van Otterloo, Fritz Rieger, Hiroyuki Iwaki and Marcus Stenz. In the 1970s the Proms were popularized by the conductor John Hopkins; open-air concerts have been a regular feature at the Myer Music Bowl. The newer State Orchestra of Victoria plays mainly with the opera companies and the Australian Ballet; the Australian Pops Orchestra is also based in the city.

The Musical Society of Victoria, founded in 1861 by Horsley, has continuously promoted recitals, joined in 1945 by Sydney-based Musica Viva. The Melbourne branch of the ISCM was particularly lively in the 1960s and 70s under the influence of the composers Keith Humble and George Dreyfus, when it presented Australian and other new music, as did the Astra Chamber Orchestra and Choir under George Logie Smith. The latter organization continued as the Astra Chamber Music Society. Other chamber groups include the Australian Chamber Soloists, the Academy of Melbourne, Australia Pro Arte, the Australian Art Orchestra and the Ensemble Gombert. Elison was based in Melbourne until its move to Queensland in 1997.

The Melbourne University Conservatorium opened in 1894 under the direction of Marshall-Hall, who the next year founded the Melba Memorial Conservatorium, at which Melba conducted her singing school. Music departments were subsequently established at Monash University, the Victorian College of the Arts and La Trobe University.

Music patronage, originally the province of individuals – William Clarke, Francis Ormond, George Tallis, Herbert and Ivy Brookes, Sidney Myer and James and Louise Dyer among them – has largely passed to the state. Arts Victoria is the major provider of funding, together with the Australia Council. Australia's oldest music-publishing house, Allan and Co., founded in 1850, is based in Melbourne.

In the late 20th century Melbourne's music making proliferated. Rock music is played in hundreds of venues; recording companies appear and disappear as the technology becomes easier and cheaper; radio is still a major source of access to both popular and classical forms. With the largest immigrant population in Australia, the city has also absorbed the music of other cultures. There is reason to anticipate hybrids evolving out of this dynamic mix. Jazz is in a state of reappraisal and development, notably through such activities as the Montsalvat Jazz Festival and, more recently, the Melbourne Jazz Festival. In a very different vein, there is a long-standing annual Melbourne International Organ and Harpsichord Festival, and choral festivals are seeing a revival of older traditions and the appearance of new forms.

THÉRÈSE RADIC

Melcarne, Gervasio. *See* MONTESARDO, GIROLAMO.

Melcarne, Girolamo. *See* MONTESARDO, GIROLAMO.

Melcelius [Meltzelius, Mältzel, Möltzel, Melcl], **Jiří** (*b* Horšovský Týn, 1624; *d* Prague, 31 March 1693). Bohemian composer. Melcelius was a member of the Premonstratensian order. His life was passed in a succession of ecclesiastical musical appointments, the most notable of which was at St Benedikta, Prague, between 1663 and 1669. There he was organist and choirmaster and was apparently responsible for modernizing the repertory and building up an archive. In his old age he retired to the Strahov monastery in Prague.

The surviving music of Melcelius is all sacred (manuscripts in *CZ-K*, *KRa* and *Pnm*). A ten-part instrumental sonata is listed in the inventory of Tovačov Castle, but has not been found. Melcelius's musical style resembles that of Michna and shows a similar skill in manipulating large choral forces with solid string accompaniments and frequent use of obbligato trombones and clarinos. His works include seven masses, two vesper settings, two motets, one requiem and one *Te Deum*.

ADRIENNE SIMPSON

Melcer-Szczawiński, Henryk (*b* Marcelin, nr Warsaw, 25 July 1869; *d* Warsaw, 18 April 1928). Polish composer, pianist, teacher and conductor. Son of Karol Melcer, violinist and director of the Kalisz Music Society, Henryk made his début as a pianist in Kalisz in 1878, and in Warsaw in 1882. From 1887 he studied mathematics at the University of Warsaw, continuing from 1892 in Vienna. He graduated from the Music Institute in Warsaw after studying with R. Strobl (piano diploma, 1891) and Z. Noskowski (composition); he was probably also a student of A. Michałowski (piano). From 1892 to 1894 he refined his pianistic technique with Leschetizky in Vienna. In 1895 he was awarded first prize in the composition category of the second Anton Rubinstein competition in Berlin (for his Piano Concerto in E minor, his Piano Trio in G minor, and two of his three *Morceaux charactéristiques* later published as his op.5), and third prize in the category for piano performance. In 1895–6 he was professor of piano at the Helsinki Conservatory,

and from 1896 to 1899 at the Lemberg Conservatory. In 1898 he won the first prize at the Paderewski composers' competition in Leipzig for his Second Piano Concerto. From 1899 to 1902 he was director of the Music Society in Łódź and continued his extensive concert schedule: in 1895 in Berlin, Kiev, Kraków, Lemberg and Paris; and after 1901 in St Petersburg, Berlin, Leipzig, Dresden, Vienna and Budapest. In October 1902 he made his début as a conductor with the Lemberg PO, and from 1903 to 1906 he taught the advanced piano class at the Vienna Conservatory, where he also gave many concerts, for example, playing with Max Reger in his Variations and Fugue for two pianos op.86 (15 December 1905), and playing Brahms sonatas with F. Ondříček (1 December 1906). He also travelled to Prague (12 February 1906), Kraków (1906), Geneva (23 February 1907), and probably to England for ten concerts (1906–7). From the autumn of 1907 he settled in Warsaw. In 1908–9 he was artistic director of the Warsaw PO, and later also their conductor and choir director. From 1912 to 1916 his greatest successes were as pianist, and he impressed his audiences with his extended Chopin recitals. He was director of the Warsaw Opera (1915–16), and also director of the Warsaw Conservatory (1922–7). A gifted teacher and organizer, he raised the educational and artistic standards of the conservatory. A disagreement with the ministry of education caused his resignation from the directorship. In 1927 he was a member of the jury for the first international Chopin Piano Competition in Warsaw. He died suddenly while in the middle of a lecture at the Conservatory.

Melcer-Szczawiński was an exceptional pianist and a man of great culture, knowledge and authority. His playing was characterized by an immaculate technique, excellent musicality, a superb memory and great discipline. His repertory included J.S. Bach, Beethoven, Chopin, works by Wagner (in transcription), Franck, Reger, Debussy, Honegger and Prokofiev. His pianism was highly regarded by Busoni, Egon Petri and Ignacy Friedman (a noted performer of Melcer-Szczawiński's first Piano Concerto). He often played Polish music, giving the Warsaw première of Paderewski's Polish Fantasy; he also promoted the symphonic pieces of Karłowicz, and many times performed Szymanowski's Second Piano Sonata op.21. In chamber ensembles he performed with B. Huberman (Lemberg, 1903), S. Barcewicz, Wacław and Paweł Kochański and Piatigorsky (Warsaw, 1921). Many well-known pianists were trained by him, including the six-year-old Mieczysław Horszowski (in Lemberg), Michał Kondracki and Aleksandre Tansman (for composition).

Melcer-Szczawiński's compositions grew from a romantic aesthetic, but he was then drawn closer to modernism. His symphonic and theatre works reveal expressionist traits through the dramatic dimension, and his songs and piano pieces demonstrate his impressionistic feel for colour. His fascination for the music of Wagner, Liszt, Tchaikovsky and Brahms was equalled by his well-refined compositional technique, of which the most significant elements were clear instrumentation, well-designed forms (piano trio, violin sonata, paraphrases on songs of Moniuszko), and a rich polyphonic dimension, especially in the opera *Maria*. In his songs to poems by Dehmel and Polish poets he maintained the tradition of Karłowicz and early Szymanowski, as well as Wolf and Reger, creating a through-composed declamatory style. Melcer-Szczawiński came closest to Wagner in his works for the theatre, especially his opera *Maria*, which in addition to *Manru* by Paderewski is the most Wagnerian Polish opera of the end of the century. It is characterized by extended tonality, chromatic harmony, dramatic monologues for the leading parts, pre-eminent roles for the orchestra and choir, and the omnipresent theme of death. Unfortunately the opera did not achieve great success, which may be attributed to shortcomings of the libretto.

WORKS

Stage: Protesilas i Laodamia (op, S. Wyspiański), 1902, Paris, 1925, fragms.; Maria (op, 3, Szczawiński, after A. Malczewski), 1903–4, Warsaw, 16 Feb 1904

BARBARA CHMARA-ŻACZKIEWICZ

Melchioni, Nicolò. *See* AMATI, NICOLÒ.

Melchior, Lauritz (Lebrecht Hommel) (*b* Copenhagen, 20 March 1890; *d* Santa Monica, CA, 18 March 1973). Danish tenor, later naturalized American. He studied at the Royal Opera School, Copenhagen, and made his début at the Royal Opera in 1913 as Silvio in *Pagliacci*, going on to sing various other baritone roles. The advice of Mme Charles Cahier and subsequent studies with Vilhelm Herold revealed the true nature of Melchior's voice, and he made a second début at the same theatre in 1918 in the title role of *Tannhäuser*. After intensive study with Anna Bahr-Mildenburg and others he made a third, or 'international', début at Covent Garden in 1924 as Siegmund. Later that year he sang Siegmund and Parsifal at Bayreuth, where he returned regularly until 1931. From 1926 to 1939 he appeared every year at Covent Garden, where he quickly became a mainstay of the Wagner repertory; Otello was his only non-Wagnerian London role. He was a regular singer in Berlin, 1925–39, and in Hamburg, 1927–30.

Melchior's Metropolitan début in 1926, as Tannhäuser, and subsequent appearances in the 1926–7 season, were not wholly successful; his great New York period began only with his return, after a year's absence and further study, to sing Siegfried and Tristan in 1929. He remained at the house until disagreements with the Bing regime caused him to take his leave, as Lohengrin, in 1950. During those years he made frequent guest appearances in Europe and in Buenos Aires, and latterly in shows and films; Melchior also made occasional concert and radio

appearances in his old repertory, even singing Siegmund with the Danish RSO to celebrate his 70th birthday.

In his later years Melchior sang little but Wagner, and concentrated on the heaviest roles, in each of which he appeared over 100 times (as Tristan, over 200). These figures suggest the stamina and endurance that enabled him to sound fresh in the last acts of *Tristan* and *Götterdämmerung*. A certain baritonal warmth remained a welcome characteristic, but there was no corresponding constriction in his top notes; Siegfried's lusty high C always rang thrillingly. These virtues, coupled with vivid and expressive enunciation, induced his admirers to overlook his dramatic limitations and even some musical defects – especially vagueness in rhythm and note values. The heroic scale of his singing, even as experienced through recordings, marks him as the foremost Heldentenor of the century.

From 1913 Melchior recorded extensively. His best pre-war years are documented by his Siegmund (with Lotte Lehmann and Bruno Walter) and by a composite but almost complete account of the young Siegfried's music, supplemented by extracts from *Götterdämmerung*, *Tristan*, *Lohengrin* and *Parsifal*, with Frida Leider or Kirsten Flagstad (1939–40). There are also many off-the-air recordings, mainly from Metropolitan broadcasts.

Mele [Melle], **Giovanni Battista** [Juan Bautista] (*b* Naples, ?1693/4 or 1701; *d* ?Naples, after 1752). Italian composer, active in Spain. In an affidavit of September 1750 he declared himself to be 56 years old, which would place his date of birth in 1693/4. However, most modern sources state that he was born in 1701. On 25 November 1710 he entered the Neapolitan Conservatorio dei Poveri di Gesù Cristo, where he studied with Gaetano Greco and remained for about 10 to 12 years, a fellow student being Leonardo Vinci. By 1735 Mele was in Madrid, where he joined Francesco Corradini and Francesco Corselli as a composer of operas in the Italian style for local theatres. His first work for Madrid was *Por amor y por lealtad*, a Spanish translation and adaptation of Metastasio's *Demetrio*, performed at the Teatro de la Cruz. He also became associated with the court of Philip V and in 1744 composed two Italian serenatas for court events. After the ascent of Ferdinand VI to the Spanish throne in 1746, Mele was engaged by Farinelli to serve with Corselli and Corradini as a composer of Italian operas and conductor of the orchestra at the Nuovo Real Teatro in the palace of Buen Retiro. For Carnival 1747 the three composers collaborated on a setting of Metastasio's *La clemenza di Tito*, to a Spanish adaptation by Luzàn y Suelves.

Mele's first independent work for Buen Retiro was *Angélica y Medoro*, written for the birthday celebrations of the music-loving Queen Maria Bárbara on 4 December 1747. His last known opera, *Armida placata*, was performed at Buen Retiro in 1750 and revived there the next year. Performed during the festivities surrounding the wedding of the Infanta Maria Antonia, it was one of the most elaborate, spectacular and successful productions ever to be staged by Farinelli at Buen Retiro. In an unusually detailed description of the performance, the *Gazeta de Madrid* on 21 April even honoured the composer by mentioning his name. In 1752 Mele asked the king for permission to return to Naples, possibly because despite the success of his *Armida* he had not been charged with writing operas for the 1751 and 1752 seasons (the commissions went instead to the younger Conforto and Jommelli). The petition was granted together with a gratuity of 400 doblones. His fate thereafter is unknown.

Mele's music has an affinity to the style of Feo and that of the much younger Terradellas, but also shows notable individual characteristics. His surviving works are characterized by brilliant vocal writing, rhythmic vitality, strong harmonic direction and sensitive colouring, and display notable pre-Classical tendencies: the instrumental *introduzione* of his 1744 serenata (in *F-Pc*), for the wedding of the Infanta Maria Theresa to the dauphin of France, features a viola part in Alberti-bass style.

WORKS

music lost unless otherwise stated

OPERAS

performed at the Coliseo del Buen Retiro, Madrid, unless otherwise stated

Por amor y por lealtad recobrar la majestad (os, 2, D.V. de Camacho, after P. Metastasio: *Demetrio*), Madrid, Cruz, 31 Jan 1736
Amor constancia y mujer (os, 2, after Metastasio: *Siface*), Madrid, Caños del Peral, carn. 1737

HANNS-BERTOLD DIETZ

Melfiche, Cola. *See* FALCO, MICHELE.

Melfio, Bastiano (*b* Torsi [now Tursi] nr Pisticca; *fl* 1564–87). Italian composer. According to the title-page of his earliest known publication, *Il primo libro de madrigali a quatro voci* (Rome, 1564), he was at that time the holder of a canonry at Torsi, in the Basilicata. The book contains a number of extended cycles including a five-section setting of Ariosto's *Di persona era*, a text often set as wedding music. More than 20 years later he published another collection, *Il primo libro de madrigali a cinque voci* (Venice, 1587), which is also dedicated from Torsi and mostly consists of settings of amorous texts. The final madrigal in the book, *Non havete a temer*, incorporates a strict canon which runs throughout, a retrospective stylistic feature characteristic of Melfio's music.

IAIN FENLON

Melfio, Giovanni Battista (*b* Bisignano, Calabria; *fl* 1555–6). Italian composer. He was a priest. His only known publication, *Il primo libro de gli madrigali a quattro voci* (Venice, 1556), is, according to its dedication, also his first. It is dated 30 September 1555 from Naples and contains settings of Petrarch's verse including *Padre del ciel*, a text which continued to be popular until the end of the century, and of *Dunque baciar* from Ariosto's *Orlando furioso*.

IAIN FENLON

Melgaz [Melgás], **Diogo Dias** (*b* Cuba, Portugal, 11 April 1638; *d* Évora, 10 March 1700). Portuguese composer and teacher. On 10 May 1647 he was admitted as a choirboy at Évora Cathedral, where his teacher was Bento Nunes Pegado. He was elected master of the boys on 14 March 1662, *mestre da crasta* in 1663 and *mestre de capela* in about 1678. In 1697 his former pupil Pedro Vaz Rêgo began to substitute for him because he had become blind. However, the cathedral chapter continued to pay his three stipends until July 1699, indicating the esteem in which he was held.

Melgaz's extant compositions in cathedral archives at Évora and Lisbon, some of them duplicates, are all Latin liturgical works. Of the four incomplete vilhancicos in Évora Public Library, two have Spanish texts, one a Galician text and one a Portuguese text. Melgaz also edited a plainchant hymnal containing 152 melodies, all barred in either binary or ternary metre. He was the first Évora composer to use bar-lines in his polyphonic works, to write functional harmony and to provide independent instrumental parts for harp, organ and unfigured bass (Évora Cathedral employed a harpist from as early as 1643). Usually sober in his motets, he expands into elaborate *fioriture* in his double-choir accompanied Pentecost sequence.

WORKS

Edition: *Diogo Dias Melgás (1638–1700), opera omnia*, ed. J.A. Alegria, PM, ser.A, xxxii (1978)

2 ferial masses, 16 motets, 3 Passion settings, *P-EVc*; 3 motets ed. J.E. dos Santos, *A polifonia clássica portuguesa* (Lisbon, 1937); 1 ed. in Alegria: *Historía*

Salve regina, 4vv, *Lf*

4 vilhancicos, Évora Public Library CL1/1–2; vilhancicos for Christmas, Our Lady and saints' feasts, according to Barbosa Machado

ROBERT STEVENSON

Meli [Melij], **Pietro Paolo.** *See* MELLI, PIETRO PAOLO.

Melikov, Arif (Jangirovich) (*b* Baku, 13 Sept 1933). Azerbaijani composer. He studied the *tār* at the Baku Music College (1946–54) and composition with Karayev at the Azerbaijan State Conservatory (1955–8). While at the conservatory he composed his first serious works, including his graduation piece, the First Symphony. In 1958 he was appointed to teach at the conservatory, and in 1971 he was made assistant professor. He became a board member of the Azerbaijani Composers' Union in 1959, and in 1965 he received the title Honoured Artist of the Azerbaijani SSR.

Melikov completed his finest work, the ballet *Legenda o lyubvi* ('Legend of Love'), in 1961. It is a work concerned with one of the eternal subjects of Eastern poetry: pure and tragic love. The ballet's number form does not impede a continuous intensive development, for Melikov's inclination towards contrast, an inherent feature of his style, is conditioned by the drama of Nazïm Khikmet. Moments of extreme action alternate with portrait scenes of a psychological character. In many ways *Legenda o lyubvi* continues the tradition of Karayev's ballets, but at the same time it contains many original features, among them a novel interpretation of *mugam* methods of development. The work's direct melody and skilful stagecraft have won it lasting popularity. Melikov's next major composition was the symphonic poem *Metamorfozï*, which is built on a logical transformation of three themes. This piece and, more particularly, the Second Symphony mark important stages in the composer's creative evolution, his expressive means becoming more complex and his link with folk music more distant.

WORKS
(*selective list*)

Stage: Legenda o lyubvi [Legend of Love] (ballet, N. Khikmet), 1961, Leningrad, Kirov, March 23 1961; Volnï [Waves] (operetta), 1967, Baku, 1967; Dvoye [Two] (ballet), 1969, Leningrad, Kirov, 1969; Alibaba i sorok razboynikov [Alibaba and the 40 thieves] (ballet), 1973

Orch: Concertino, fl, orch, 1955; Skazka [Tale], sym. poem, 1957; Sym. no.1, 1958; Pamyati Fizuli [To the Memory of Fizuli], sym. poem, 1959; Metamorfozï, sym. poem, 1964; Sym. no.2, 1970; Sym. no.3, 1973; Sym. no.4, 1977; Sym. no.5, 1979–82; Sym. no.6, 1985; 3 other sym. poems, 6 suites, 3 suites for folk orch

Vocal: Rodina [Homeland] (cant.), 1v, orch, 1964; Golos zemli [Voice of the Earth] (cant., Vagif), 1972; 2 song cycles (Khikmet); choruses, songs

Incid music, 10 film scores, chbr and solo inst music

YURY GABAY

Melik-Pashayev, Aleksandr Shamil'yevich (*b* Tbilisi, 10/23 Oct 1905; *d* Moscow, 18 June 1964). Georgian conductor and composer. He studied with Nikolay Tcherepnin at the Tbilisi Conservatory and then became pianist and leader of the orchestra at the Tbilisi Opera from 1921, and conductor from 1924. He studied conducting with Aleksandr Gauk at Leningrad Conservatory (1928–30) and returned to Tbilisi in 1930 as chief conductor. From 1931 he was conductor, and from 1953 chief conductor, at the Bol'shoy Theatre in Moscow, where he remained until 1962. An outstanding operatic conductor, he was much admired for his control and shaping of large-scale Romantic works with careful attention to detail and balance of musical and dramatic character. As well as conducting memorable productions of operas by Verdi, Meyerbeer, Tchaikovsky and Rimsky-Korsakov, he introduced new operas by Chishko, Dzerzhinsky, Kabalevsky, Shaporin and others to the Bol'shoy Theatre repertory. He also conducted concerts and occasionally appeared abroad, making his British début in a revival of Tchaikovsky's *The Queen of Spades* at Covent Garden in 1961.
He composed a number of works, including a symphony.

I.M. YAMPOL'SKY

Melik'ian, Romanos Hovakimi (*b* Kiziyar, northern Caucasus, 1 Oct 1883; *d* Tbilisi, 30 March 1935). Armenian composer and teacher. He graduated from the Rostov music college in 1905, and then studied in Moscow with Ippolitov-Ivanov, Taneyev and Yavorsky (1905–7) and at the St Petersburg Conservatory with Kalafati and Steinberg (1910–15). In 1908 he organized in Tbilisi the Music League, an Armenian society which did important work in education. Melik'ian was appointed director of music at the House of Armenian Culture in Moscow (1918), and in 1921 he founded a music workshop (from 1923 the conservatory) in Yerevan. He was founder-director of the Yerevan Theatre of Opera and Ballet (1933); he also established a choral association there. As a composer he made a brilliant contribution to Armenian song, both in original pieces and folksong arrangements. The national quality in his music, established through modal harmony, had an influence on later Armenian composers, such as Step'anian. In the cycle *Ashnan togher* ('Autumn Lines') the delicate use of tone-colour reveals a link with Impressionism; *Zmrukhti* ('Emeralds') are decorative pieces, subtle in their treatment of the texts and varied in their piano textures. He continued the investigations Komitas had initiated into harmonies based on fourths. These features are developed in *Zar-var* ('Sparklets'), a cycle aimed at schoolchildren.

WORKS
(*selective list*)

Song cycles: Ashnan togher [Autumn Lines], 1907–10; Eskizner [Sketches], folksong arrs., 1912; Zmrukhti [Emeralds] (Hov. T'umanian, D. Demirdjian, A. Isahakian, A. Khnkoian, trad.), 1920; Zar-var [Sparklets], 1922; Nor kyank'i yerger [Songs of the New Life], n.d.; Karmir lanaki yerger [Red Army Songs], n.d.; Dprotsakan yerger [School Songs], n.d.; Pionerakan yerger [Pioneer Songs], n.d.

SVETLANA SARKISIAN

Melis, Carmen (*b* Cagliari, 16 Aug 1885; *d* Longone al Segino, nr Como, 19 Dec 1967). Italian soprano. Her teachers included Antonio Cotogni and Jean de Reszke. She made her début as Thaïs at Novara in 1905 and had a great success at Naples the following year in Mascagni's *Iris*; she also sang in Rome and toured Russia and Poland in 1907. From 1909 to 1913 she was with Hammerstein's company at the Manhattan, New York, where she was admired for her Latin temperament as well as for her voice. In Boston her roles included Desdemona and Helen of Troy, with the Puccini heroines at the centre of her repertory. She sang at Covent Garden in 1913, appearing in *Pagliacci* and *La bohème* with Caruso, and giving her part in *I gioielli della Madonna* 'all its romance and savagery' (*The Times*). On her return in 1929 the voice had faded, and she contributed an overplayed Musetta and an undersung Tosca. She remained a favourite for many years at La Scala, where in 1924 she sang in the première of Giordano's *La cena delle beffe*, and in Buenos Aires, where she undertook more unexpected roles such as the Marschallin and Sieglinde. She later taught, numbering Renata Tebaldi among her pupils. Her recordings, which include a complete *Tosca* (1929), show a voice of beautiful quality in the middle register, used with warmth and imagination. (*GV*, R. Celletti)

J.B. STEANE

Meliš [Zminský], **Emanuel (Antonín)** (*b* Zminný, nr Pardubice, 15 Oct 1831; *d* Vršovice, Prague, 27 June 1916). Czech writer on music. Abandoning his law studies in Prague, he turned to journalism and soon to music journalism with his essay 'Stav nynější hudby u nás' ('The present state of music in Bohemia') in *Lumír* (1857). He founded and edited the first regular Czech music journal, *Dalibor* (1858–64; 1869), to which he contributed valuable historical articles and the first biographies of Smetana (1863) and the Slovak Ján Levoslav Bella (1869). Through his bibliographical research he became an important Czech musical lexicographer and contributed entries on Czech musicians to contemporary encyclopedias. He was also on many committees concerned with church music, military music, opera and choirs. In the 1870s he turned his attention to economic questions: he established an experimental farm and an agricultural journal and ran an inn.

JOHN TYRRELL

Melisma (Gk.: 'song'). A group of more than five or six notes sung to a single syllable. The term may be applied universally, but has been most used in reference to medieval European music, particularly chant. 'Melismatic' indicates one end of a spectrum; the other is 'syllabic', or one note to each syllable. An intermediate category, with several notes to a syllable, is sometimes termed 'neumatic'.

1. Terminology. 2. Melismatic chant. 3. Melisma in early polyphony.

1. TERMINOLOGY. The word 'melisma' existed in ancient Greek but was not much used; it meant, vaguely, 'song', and conveyed none of the sense given above. (Liddell and Scott's *Greek–English Lexicon* cites one instance in which it meant 'lyric poetry'.) The current technical meaning seems to have been superimposed upon the word by German scholars in an effort to create a term for what was a puzzling feature of Gregorian chant. In the latter context the term has been used in two ways that are distinct but closely related through a characteristic train of thought. The meaning that is logically first is abstract and generic, easier to grasp in German than in English: *das Melisma* – 'a manner of singing', eventually 'an ethos of singing'. An analogous usage in English would be 'melody', as in 'melody is a basic element of music'. A desire to be more empirical, positivistic, seems to have led directly to the second usage, in which 'a melisma' meant a specific instance; the analogy would be 'a melody'. The process of reification involved the search for origins, archetypes, prototypes, pure forms – an *Ur-melisma*. Since very few of the latter are documented, even in chant repertories (to say nothing of earlier times and styles), the search led to hypotheses about things very old (ancient Hebrew) or far away (the Near East), and also to magic and other obscurities.

The first meaning – melisma as 'a manner of singing' – is more fruitful: evidence of melisma in the works of composers such as Leoninus (*c*1170), Ockeghem (*c*1470) and Handel (*c*1740), to name but three, provides ample support for the use of the term in this particular sense. Although there is almost no instance of melisma among the few surviving fragments of music from Mediterranean antiquity, it cannot necessarily be assumed that melisma was not used then; careful stock needs to be taken of the kinds of pieces that are preserved, for these may reflect the interests of the preservers rather than musical practice. For example, the literary critic or literary historian – in modern times as in antiquity – is traditionally interested in the words, and in the melody only in so far as it has words; that in itself possibly explains why virtually none of the extant fragments shows a developed melismatic style. And since music in general was not written down, there is plenty of room for assuming that at least some of what was not written down could have been melismatic.

2. MELISMATIC CHANT. St Augustine, in a famous passage written about 400, commented on the expressive essence of the melisma ('jubilus' or 'jubilatio' in his terminology): he felt that singing without words expressed a joy too deep for words. His references to jubilus have been studied by Moneta Caglio, who reported that in no instance did Augustine associate the jubilus with the alleluia; he ventured the hypothesis that Augustine was connecting the gradual responsory of the Mass to a secular melismatic manner of singing called 'jubilus'. (Wiora explored the same phenomenon.) This supposed connection to the gradual responsory was disputed by McKinnon, who regarded the reference to the secular jubilus to be one purely of exegesis. For present purposes, however, it is enough to see that there was some such secular practice, and that it could well have been a purely Latin one – although other melismatic practices further east (or for that matter anywhere) are not excluded.

The earliest recorded repertory of melismatic chant is the Gregorian, whose musical documentation exists in the first fully notated chant books (*c*900). The dates at which this repertory was developed are at issue, now more than ever. Only some Gregorian genres are melismatic, and the order in which the genres, or the individual chants, were developed cannot be determined. It is conceivable that melisma was one phase in a multi-phase development; or, on the other hand, that the various genres approached a melismatic phase at different rates and in different degrees; or yet again, that melismatic style was in no way correlated with the development of repertory. Progressive elaboration from one pitch per syllable through several pitches per syllable to true melismas of 'more than a few' (five to ten, or more) per syllable is a developmental model commonly assumed; but while it can be observed to operate in certain limited cases (the motet from about 1220 to 1350 for example), it cannot be relied on over longer stretches, or applied to more than one specific genre at a time. And on the other hand, the traditional assumption (made by Peter Wagner and others) that melisma – hence specific melismas – was 'archaic' is untenable; melisma, as melisma, can be newer just as well as older.

Much has been made of a presumed coordination of melismatic style and liturgical function. The melismatic chants at Mass, the gradual-responsory and alleluia, are classed as responsorial chant and sung as independent items between Epistle and Gospel, while the introit and communion, classed as antiphonal chant and sung as accompaniment to liturgical movement, are not classed as melismatic. Some genres, however, are anomalous: tracts, sung after graduals, are not usually classed as responsorial, and those in mode 8 do not have many long melismas; offertories, long regarded as antiphonal, are now rather considered responsorial, but show big melismas only occasionally, thus more often resembling introits – as do responsories from the night Office, which are certainly responsorial in form and function. Even the gradual, the archetypal melismatic form, sometimes shows few larger melismas in the respond. If the simple definition of melisma ('more than a few pitches per syllable') is taken, the difference between responds and introits seems to involve merely the more frequent use of groups of ten rather than five pitches per syllable; but this is simply a location on a numerical continuum – in itself a poor basis for a categorical distinction. (There may, however, be a more significant difference in style between the groups in introits as opposed to those in graduals.)

The most distinctive aspect of melismatic style in graduals is the careful avoidance of clearly repetitive

pattern (with one kind of exception to be discussed), or, indeed, of any melodic design that would make the melisma seem regular or predictable. The ascents and descents, number of pitches in successive groups, and – in manuscripts that indicate lengthening – the placement of longer values all bring an avoidance of pattern so persistent as to suggest intention. This avoidance of pattern has often been taken to be the product of a way of singing in which the kind of pre-arrangement associated with written records – 'musical composition' – is lacking; instead it is regarded as the product of something variously called 'improvisation' or, more carefully, 'oral composition'. The pre-history and very nature of melisma has sometimes been characterized as without pre-arrangement, and attempts have been made to describe its creative process in greater or lesser detail. Without documentation of the musical result, however, all such characterization and description is only imaginative; and when documentation is available, about 900, it tends to show something quite different. When a standard melisma is to be used in a certain gradual, for instance, it is often not written out in full in the earliest sources, but instead only cued; however, its use is confirmed by other manuscripts, so there can be no question but that the melisma was known by heart and reproduced exactly. All the details of melismatic composition that have been pointed out by advocates of 'oral composition' can just as well be explained as the products of pre-arrangement, and no essential difference between composition with or without written records need be assumed.

Persistent variety and avoidance of repetition in Gregorian melisma has one curious consequence of great importance. Often the repetition of a motif (a few pitches) is initiated, but then immediately modified (*aa′*) to such an extent that the repetition is not apparent (and sometimes detectable only by close study of the 10th-century notation). Occasionally, however, such a repetition is exact enough to be obvious; examples can easily be found in the verses of the Christmas gradual *Viderunt* and the Easter gradual *Haec dies*. In such obvious instances the variety – still present, as in all Gregorian – is provided by the different way in which the repetition continues, making the motivic plan *aab* rather than *aa′*. This became a distinct manner of melismatic composition in several subsequent genres.

The Byzantinists have made it clear that for them melismatic composition is a later phase in the development of Byzantine chant, to be placed in the 12th century and after. Even granting our ignorance of the development of Gregorian chant before 900, the history of Latin chant can in this case be read parallel to that of Greek chant. The Gregorian alleluia, whose development can be traced directly in the documents starting in 900, shows a steady progression from modest beginnings to highly melismatic style, and this progression can be assigned to the period between the 8th and the 12th centuries. Such a burgeoning of melisma can also be found in the Mozarabic repertory, in the genres of *laude*, *sacrificium* and *sono* in the León Antiphoner; and while the roots of that repertory have been shown to date from before 700, the extreme melisma found in León may represent 9th- and 10th-century development, and could in principle be coordinate with the Gregorian. In the same period Frankish sources provide instances of an expanded melisma after the verse, called a *sequentia*, which follows the verse of the alleluia at Mass. At Milan these expanded melismas, called there *melodiae secundae*, assumed giant proportions (with excessive use of the *aab* plan for motivic detail). Moneta Caglio has placed some of this development as early as the 10th century, but Hucke argued for a later date. All of this melismatic development can be imagined as analogous and roughly synchronous.

In early medieval chant melismas tended to acquire stereotyped melodic characteristics; as a corollary, they were often detachable entities and could be inserted into or removed from a chant, or transferred to another chant. The most famous instance is provided by Amalarius of Metz (*c*830) who referred to a melisma sung at Rome in the responsory *In medio* but transferred by Frankish singers to the Christmas responsory *Descendit*. This melisma has a melodic shape popular at that period: a dramatic rise by leap immediately repeated and followed by a longer stepwise descent often in three-note sequences (e.g. *c–b–a*, *b–a–g* etc.). The 8th-century Gregorian alleluia also shows these melodic characteristics. A special set of melismas accompanied the enēchēmata (*see* ĒCHĒMA). (Huglo has shown that the corresponding Byzantine models again lacked the melismas.) These and other melismas were often called '(p)neumae' in the Middle Ages.

The *Descendit* melisma and other similar ones were sometimes provided with texts set in syllabic style. Some scholars have concluded that such a verbalization of the melisma is a basic step in the development of European music. Examples exist, however, to show that within post-Gregorian and medieval chant melismas were cultivated even more intensely than before.

Frankish Kyries and sequences of the 9th and 10th centuries need to be considered in this same syndrome of musical activity, but carefully. The melodies of Kyrie and sequence (as they appear in Frankish sources from the mid-10th century on) are both notated in two forms: one form has the melody in syllabic notation with Latin words underneath; the other has the melody in melismatic notation with just 'Kyrie eleison' or, for the sequence, 'Alleluia' as an incipit. It is a difficult and controversial question as to whether the melismatic notation in either case was sung as a melismatic piece with only the words 'Kyrie eleison' or 'Alleluia'. But in terms of melodic style, Kyrie melodies as well as sequence melodies are to be analysed in terms of the kinds of purely musical considerations that prevail in melismatic chant. From an analytic point of view the Latin words of sequence and of Kyrie verses can be understood as articulative, both for the rhythmic detail as well as for the larger phrasing. The couplet phrasing of the sequence can, if desired, be seen as the systematic use on a large scale of the *aa′* repetition of melodic motifs observed in the melismas of gradual and alleluia; but the scale is so much larger that the comparison is perhaps not credible, and in any case it may be better to treat the repetition in sequences as a function of abstract musical design. The sequence melodies as well as the Kyrie melodies have the effect of a new and different style on the Carolingian scene.

Newer forms of medieval chant, such as the Aquitanian *versus*, also contain melismas which often appear in well-defined functions at the beginning or end of sections in otherwise basically syllabic or neumatic settings. A remarkable and characteristic melisma occurs at the

beginning of the famous *Alma Redemptoris mater* (dating apparently from the 12th century).

3. MELISMA IN EARLY POLYPHONY. While the earliest documentation of polyphony is confusing because of the several diverse styles and structures appearing synchronously, it is nonetheless clear that the documents do not allow the simplistic idea that polyphony developed by logical steps in a straight line from note-against-note counterpoint over a syllabic chant to complex forms with florid counterpoint to a melismatic chant. (It is, of course, necessary to dissociate the idea of note-against-note singing from syllabic style; the latter is a function of one voice, the former a function of two voices.) Early instances of syllabic chant set in two voices note-against-note are mostly found in the examples of singing in parallels given by theorists from the *Musica enchiriadis* (*c*900) on; those examples, which are rightly taken as witness of long-existing practices, are not part of the repertory of composed polyphony. This repertory begins with the Winchester Troper, which provides a variety of chants, including melismatic genres, with note-against-note counterpoint. The Aquitanian repertory, whose early layer consists of monophonic *versus*, occasionally florid, goes on to develop other *versus* in florid two-part discant; in these are found, among other possibilities, a syllabic or melismatic lower voice combined with a florid (therefore melismatic) upper voice; but there are also passages in which both voices are melismatic (with the same words) in note-against-note counterpoint; and occasionally both voices are melismatic (with the same words) in note-against-note counterpoint. The prevailing arrangement is florid, with persistent use of melisma of modest length (five to ten pitches for one syllable). This arrangement seems in some way essential to the style of the Aquitanian repertory.

The Notre-Dame repertory brings extreme use of melisma, in two clearly differentiated styles – organum purum and discant. Melismas are most prominent in the organal style, where the organal voice can have 30, 40 or more notes against one in the tenor; but that one was often syllabic, not melismatic, so the melisma in the organal voice was a function of a contrapuntal relationship, not a relationship with the words – which was the original definition of 'melisma' in chant. On the other hand, in discant style the melismas in the tenor were set in note-against-note relation with the discant voice, and make an entirely different effect. A final paradox was presented when these discant melismas were underlaid in the discant voice with syllables to produce Latin-texted discant and the French motet. Meanwhile in the conductus, melismas and syllabic passages co-existed in more ordinary combinations.

So while it is not possible to trace simple parameters of construction and development in melismatic monophony and polyphony, it can nevertheless be seen that in the intense development of European musical style from the 8th century to the 13th and beyond, melisma played a consistently leading role. It is clear that in European music after the Middle Ages 'melisma' is simply a stylistic option located on a complex network of intersecting continua. Applying the concept in that same way to medieval music would avoid the fruitless mythologies that were once evoked by the term 'melisma'.

Melismatic style. In plainchant, the setting of text characterized by florid groups of notes called melismas, each of which is sung to one syllable, as for example in most Kyries and alleluias. It is contrasted with neumatic or group style (mainly two to four notes per syllable) and syllabic style (mainly one note per syllable).

See also TEXT-SETTING.

□

Melk. Town in Lower Austria. The strategic location of the fortress Medelica (Melk) on a slope overlooking the Danube led the Babenbergs, Austria's medieval rulers, to establish their court there in 976. Monks from the Benedictine abbey of Lambach were invited to join the court in 1089; shortly after 1110, when the Babenbergs moved to Klosterneuburg, the Benedictines became the owners of Melk and a large area of land. This link with the Austrian monarchal line made the wealthy abbey one of the Empire's most powerful institutions.

Soon after their arrival the Benedictines founded a boys' choir; *pueri* are mentioned as early as 1140 and a cloister school, training boys for singing in processions and daily church services, is described in a manuscript dating from 1160. The scriptorium was most productive in the first half of the 13th century. A great fire (1297) destroyed most of the manuscripts recording this formative musical period. 133 codices survived intact, about half of which originated at Melk, including the *Melker Marienlied* (*c*1125), bearing added marginal neumes notating the 14th-century polyphonic ballade 'Fujez de moi'.

In the 15th century the abbey was the centre of the 'Melk Reform' movement, influential throughout Austria and southern Germany. Its ideal was the 'total renunciation of polyphony, organ playing and the participation of choirboys and lay vocalists in the divine service' (Angerer, 1974), although some of these practices were already well established in Melk. They were resumed with ardour during the late Renaissance when a group of musicians of many nationalities was active at the abbey, including the

Slav Jacob Handl and the Netherlander Lambert de Sayve. The first organist was recorded in 1565, and a cornett player is found among the salaried musicians after 1598. Melk choirboys were sent to join chapels in Prague and Vienna at the request of the Hapsburg emperors. A number of Melk-trained musicians became Kapellmeister at Stephansdom in Vienna: Johann Windtsauer (1634–63), Augustin Kürzinger (1667–78) and J.G. Albrechtsberger (1793–1809).

The elimination of the Turkish threat to Austria in 1683 and the election of Berthold Dietmayr as abbot (1700–39) marked a new era of creative activity. Dietmayr commissioned Jakob Prandtauer to refashion the abbey in Baroque style, and a costly organ, built by the Viennese Gottfried Sonnholz, was installed in the abbey church in 1731. A theatre was erected early in Dietmayr's rule, but dramatic productions, recorded as early as 1686, continued to be given in temporary quarters. The repertory in the first half of the 18th century consisted of *ludi caesarei* (Latin dramas with incidental music), German *intermedi* (including Viennese popular comedy) and Singspiele. Under the direction of a *regens chori*, the abbey maintained a group of 15 choirboys and up to 12 professional musicians, supplemented by monks and servants. A calendar rich with musical events and feast days, in addition to extravagant entertainments for frequent visitors, kept the musicians busy.

Music in the second half of the 18th century was provided by the 'Melk Circle' of composers: Kimmerling (a pupil of Haydn in 1760–61), Albrechtsberger, Franz Schneider, Paradeiser and Maximilian Stadler. By mid-century the Baroque *ludi caesarei* had disappeared and new categories such as *applausus musici* (semi-dramatic Latin cantatas) and Viennese-type Singspiele took their place. This productive period came to an abrupt end in the 1780s as a result of the monastic reforms of Joseph II: virtually the entire musical apparatus, including the boys' choir, was dissolved.

With the support of abbots Anton Reyberger and Marian Zwinger (1810–37), music was revived in the post-Napoleonic period. Oratorios and masses by Haydn, Beethoven, Winter, Naumann and others were performed. A valuable thematic catalogue of the abbey's music collection was begun in 1821 by Adam Krieg, *regens chori* from 1812 to 1825, and was continued into the 20th century. During the rule of Abbot Alexander Karl (1875–1909) productions of plays with incidental music took place during Carnival in the boarding-school theatre.

The task of revitalizing the abbey's musical institutions after World War II fell to Adolf Trittinger (*d* 1971), a pupil of Guido Adler. His regime discarded 19th-century liturgical traditions and in 1950 initiated the 'Melker Oratorium', an annual series of large-scale musical productions. The series continued until 1960; in the same year, the annual Melk Summer Festivals reactivated musical theatre with productions employing professional personnel. The main repertory of these open-air performances has been Viennese popular theatre (Nestroy and Raimund), given with the original music by Adolf Müller, Drechsler and others. In the 1960s, major cataloguing projects were undertaken for the library and the music archive. A new organ was designed by Hans Haselböck and built by Gregor Hradetsky in Krems. With 3280 pipes and 45 stops it was, when installed in 1970, the largest tracker-action organ in Austria. A concert series, the Organ Summers (later known as the Organ and Soloists Concerts), was established in 1972 by Haselböck and Bruno Brandstetter and continued until 1998.

After the election of Burkhard Ellegast as abbot in 1975 it was decided to undertake the complete restoration of the abbey. In 1979 Helmut Pilss initiated the annual Pentecostal Concert Series, with four to six concerts over three or four days. Such musicians as Walter Berry and Peter Schreier, as well as the Vienna SO, members of the Vienna PO and State Opera Chorus, and the Österreichischer Rundfunk (ÖRF) Symphony Orchestra and Chorus have participated. The series was expanded into the Internationale Barocktage in 1992.

1850 codices dating from as early as the 9th century survive in the abbey's manuscript chamber; the library holds over 100,000 volumes from the 17th to the 20th centuries and the music archive holds some 14,000 manuscripts and printed editions, primarily of the 18th and 19th centuries. A catalogue of the collection is in Vienna (*A-Wn*).

ROBERT N. FREEMAN

Melkikh, Dmitry Mikheyevich (*b* Moscow, 31 Jan/12 Feb 1885; *d* Moscow, 22 Feb 1943). Russian composer. The son of an official of the Moscow Office of Weights and Measures, he was taught to read music by his mother and composed from the age of 13. He studied at the law faculty of Moscow University (1904–8), and attended the newly-opened People's Conservatory when he could, studying theory and composition with Boleslav Yavorsky (1906–13). After a year of military service with the 13th sapper battalion, he returned to his studies, but from 1914–18 he served as an officer in the Sixth Siberian Corps of the radio-telegraph section; he was awarded the Order of St Stanislav (3rd degree). Yet, while both at the front and on leave in Moscow, he continued to compose; the *Epitaph* is dated 'on active service, the northern front, 1916'. After a brief spell in the Red Army as a radio operator, he was evacuated to Moscow after contracting typhus. In April 1921 he was finally discharged from

military service and posted with Narkompros, the governmental arts and education department.

Melkikh's composing life began propitiously. As early as 1907 his romance *Tri klyucha* ('Three Springs') was performed at musical exhibitions of M.A. Deisha-Sionitskaya and received an encouraging review from Yury Engel'. The conductors Konstantin Saradzhev and Boris Khaykin and the pianists Heinrich Neuhaus and Yavorsky performed Melkikh's works. Melkikh taught a course of 'Listening to Music' at the Moscow Conservatory (1921–?5); he later worked at various musical institutions. In 1924 he joined the Association of Contemporary Music and later served on the editorial board of its in-house journal *Sovremennaya muzïka* ('Contemporary music'). Up to the end of his life he was a close friend of Myaskovsky and Pavel Lamm, at whose dacha at Nikolinaya Gora he spent several summers with his wife L.K. Aralova, an actress. During World War II Melkikh remained in Moscow and was crippled by a paralysis of his left side, eventually dying of an apoplectic stroke. Viktor Belyayev (1926) justifiably considered Melkikh a lyricist 'with an exceptional gift for melodies of a Wagnerian, endless type, with a taste for good, interesting orchestration and noble, finished outlines of form'. Yavorsky's theories, with their particular modal tensions and rhythmic structures, exerted a decisive influence on Melkikh's chamber works, imparting to them subtlety and astringency, especially in the lulling adagios, which are similar to those by Myaskovsky. Belyayev astutely noticed 'moods characteristic only of Melkikh, ... cautious, but insistent, like spying on an unknown region'. In his compositions of the 1930s the composer was forced to touch upon social subject matter – e.g. the symphonic placard *Karusel'* ('Merry-Go-Round') – but did not always conceal his scepticism.

WORKS
(*selective list*)

Op: Podzhigatel' [The Instigator] (interlude, 1, A. Irkutov), op.25, 1932

Vocal-orch: Povest' o lyubvi [A Tale of Love] (R. Tagore), op.15, perf., 1927; Samotsvetï [Gems], sym. fragments, op.20, 1930, unpubd; Bïl' [A True Story] (I. Utkih), 2 stories, op.22, 1v, small orch: Pis'mo [The Letter], Da, takiye bïvayut napasti [Yes, Disasters do Happen] (V. Alexandrovsky), 1930–40, unpubd; Ulitsa gladkaya [The Smooth Street] (D. Bednïy) sym. poem, op.26, chorus, orch, 1932, unpubd

Orch: U morya [By the Sea], op.1, 1911; Alladina i Palomid, op.2, perf, 1913 [after M. Maeterlinck]; Scherzo, op.6, unpubd; Ėpitafiya, op.7, 1916; Suite no.1, op.23, unpubd; Sym. no.1, perf, 1932, unpubd; Karusel' [Merry-Go-Round], op.27, 1933, unpubd; Sym. no.2, op.28, 1933, unpubd; Po vladimirke [Along the Vladimirka], prelude, op.29, 1934; Monolog, op.30, 1934, unpubd; Sym. no.3, op.35, unpubd; Monolog II, op.39, perf, 1938; Vn Conc., op.40, 1942; Notturno, vn, small orch

Chbr: Str Qt no.1, op.13, 1925; Trio, op.17, ob, cl, bn, 1926; Str Qt no.2, op.18, 1928; Ww Qt, op.19, 1929; Malen'kaya syuita [Little Suite], op.24, fl, ob, cl, pf, unpubd; Legenda, op.31, str ens, 1936; Str Qt no.3, op.34, 1937; Str Qt no.4, op.36, 1939

Pf: 5 Preludes, op.5, 1912–17; Khoral i fuga, op.9, c♯, perf, 1914; Paroles dansés, 3 pieces, op.9a, 1915–24; Sonata-noktyurn, op.10, 1922; Sonata no.2 'Di sollevazione', op.11, 1923; Sonata no.3, op.12, 1924; Mimicheskaya stsena [Mimic Scene], op.14, unpubd; Samotsvetï [Gems], suite of 5 pieces, op.20 (1928); Sonata no.4, op.21, 1931

Vocal (for 1v, pf): 4 stikhotvoreniya [4 Poems] (H. Heine), op.3, 1905–7; 5 detskikh pesen [5 Children's Songs], op.3a; 6 romansov, op.4, 1906–9 (1922); 3 nabroska [3 Sketches], op.4a, 1910; 5 stikhotvoreniy [5 Poems] (A. Fet), op.6a, 1908–9, unpubd; 7 liricheskikh stikhotvoreniy [7 Lyrical Poems], op.8, 1919–23; 14 mordovskikh pesen [14 Mordvinian Songs], op.32, (1932); 6 stikhotvoreniy [6 Poems] (A.S. Pushkin), op.33, 1936–8; 7 assiriyskikh pesen [7 Assyrian Songs], op.37, 1938; 4 bayki [4 Fairytales], op.38, 1937, unpubd; Iz al'boma S.N. Karamzinoy [From the Album of S.N. Karamzin] (M. Yu. Lermontov), perf. 1941; Tsvetï posledniye miley [The Last Flowers are Lovelier] (1950)

Melkus, Eduard (*b* Baden, nr Vienna, 1 Sept 1928). Austrian violinist. He was educated in Vienna, studying the violin under Ernst Moravec (1943–53) and musicology at Vienna University under Erich Schenk (1951–3); he continued his violin studies under Firmin Touche, Peter Rybar and Alexander Schaichet. In 1958 he was appointed professor of violin and viola at the Vienna Hochschule für Musik, and he has given many lectures, masterclasses and interpretation courses elsewhere, including several German universities, Amsterdam and Cambridge as well as Chicago and elsewhere in the USA. Melkus specializes in music of the Baroque and Classical periods and has done much to encourage the revival of both original performing styles and neglected early repertory. In 1965 he founded the Vienna Capella Academica, an ensemble that aimed to use instruments in original 18th-century condition, though that objective was not rigorously pursued. His recordings include sonatas by Biber, Corelli, Handel, Bach and Mozart, dance music of the 17th, 18th and early 19th centuries, and concertos by Bach, Vivaldi and Tartini; they are distinguished by his sweet tone, his fluent and gentle phrasing, his lively rhythms, and the effervescent brilliance of his ornamentation. Outside his own specialist field, Melkus gave the first performance of Wellesz's Violin Concerto, dedicated to him, in 1962.

STANLEY SADIE

Mell, Davis [David, Davy] (*b* Wilton, nr Salisbury, 15 Nov 1604; *d* London, 27 April 1662). English violinist and

composer. He was the son of Leonard Mell, a servant of the Earl of Pembroke who joined the court violin band in 1620. Davis was given his own place in the group by a warrant dated 9 December 1626, though he was already listed as a member for the funeral of James I on 5 May 1625. He served in the violin band until the Civil War, marrying Alice, the daughter of his colleague Anthony Comey, on 30 April 1635. He played a prominent part in the production of Shirley's masque *The Triumph of Peace* (February 1634), writing music for the antimasque dances and accompanying the masquers' rehearsals.

Mell seems to have remained in London during the interregnum, and was listed by John Playford in *A Musicall Banquet* (London, 1651) as one of the 'excellent and able Masters' available for teaching in the capital. Lodewijk Huygens visited his house on 25 March 1652 and heard him playing with Christopher Gibbons, Benjamin Rogers, John Rogers and others. He was presumably the 'rare Musitian cald *Mell*' who met Evelyn on 1 August 1652, and in 1653 Nicholas Hookes of Trinity College, Cambridge, mentioned him approvingly in a poem. He was one of the musicians in Cromwell's household from, probably, 1656 to 1658, and was among those who petitioned the 'Council for the Advancement of Musick' on 19 February 1657 for the establishment of a music college. He visited Oxford in March 1658, which enabled Anthony Wood to compare him with the German violinist Thomas Baltzar. Wood thought that Mell was 'a well bred gentleman and not given to excessive drinking as Baltzar was' and 'had a sweet stroke', though 'Baltsar's hand was more quick and could run it insensibly to the end of the finger-board'.

Mell also made clocks and watches during the 1650s, presumably to supplement his income; three clocks by him are known. However, he soon relinquished his second career when he resumed his court place at the Restoration. He succeeded John Woodington as a violinist in the 'Broken Consort', the ensemble that played consort music in the Privy Chamber. He was the senior member of the Twenty-Four Violins, and seems briefly to have shared its direction with George Hudson. An inventory taken after his death on 27 April 1662 includes four clocks, three watches, three violins and a bass viol.

The main sources of Mell's music are the autograph *GB-Och* Mus.433 (12 suites for solo violin), and Playford's *Courtly Masquing Ayres* (RISM 1662[8]; ǐ 13 suites for violin and bass). Many of the dances occur in both, and it is not clear whether Mell added their basses for publication, or whether the autograph once had a companion bass book. Furthermore, ten of them once existed in four-part versions in an Oxford source, though the inner parts are lost. Some of his solo pieces require considerable virtuosity, though they are mostly feeble as music. One of the suites (in *GB-Och* Mus.433) uses scordatura, and probably records his rivalry with Thomas Baltzar, who wrote a similar work. Similarly, John Playford printed divisions on 'John come kiss me now' by both composers side by side in *The Division Violin.*

Mellers, Wilfrid (Howard) (*b* Leamington, 26 April 1914). English composer, musicologist and educationist. He was educated at Leamington College and Cambridge University, where he read both English and music (BA 1936, MA 1939), and studied composition at the same time with Wellesz and Rubbra in Oxford. He held appointments at Dartington Hall (1938–40) and Downing College, Cambridge (1945–8), where he was supervisor in English and lecturer in music, before becoming staff tutor in music to the extra-mural department of Birmingham University (1948–64). From 1960 to 1963 he was Visiting Andrew Mellon Professor of Music in the University of Pittsburgh, and from 1964 to 1981 he was professor of music at the University of York. Birmingham University awarded him the DMus in 1960 and he received the honorary DPhil from City University, London, in 1982. In the same year he was made an OBE and in 1984 was named professor emeritus at the University of York.

From his earliest publications in 1936, Mellers has in all his work united literature and music. As a regular contributor and later member of the editorial board of *Scrutiny*, he wrote on a vast range of subjects, both musical and literary. The editorial outlook of F.R. Leavis left its imprint upon Mellers's own method and perspective, for example his interest in civilization and its discontents, the importance of language and literature in the study of musical culture and a critical but not doctrinaire approach.

A non-specialist, Mellers has felt free to address any subject with his writing and composing, drawing upon cosmological philosophy, Jungian thought, history, musicology and theory, as well as personal aesthetic responses. His scholarly method begins with the assumption that 'music matters'. He has developed two approaches, found in his early books *Music and Society* and *François Couperin and the French Classical Tradition*. The first

considers the place of music in, its derivations from and effects upon the surrounding milieux. The second uses a specific figure for purposes of analysis. Throughout his career he has written freely on popular music, at first with some intellectual disdain but later with the recognition of intrinsic merit, which led to the study *Twilight of the Gods: the Beatles in Retrospect*. In his books on Bach, Beethoven and Vaughan Williams, Mellers proceeds from social and philosophical bases, which are combined with a detailed (though sometimes carefree) analysis of the music itself, towards a synthesis of detail and broad vision, with the goal of discovering afresh each composer's ideal. He is a philosphically minded, culturally aware musician who refuses to ignore music for ideal speculation and equally refuses to study music in a quasi-rabbinical textual exegesis, ignoring its significance beyond the printed page.

Mellers has been an ardent proponent of educational reforms. In 1964 at the University of York, he was given the opportunity of helping to inaugurate a degree course in music. The result was a unique system of projects, rather than set lectures, where staff and students together explored fields of study around specific topics (e.g. the Second Viennese School, the post-war avant garde and Baroque vocal and keyboard techniques). He believed that the exploration of music in depth in this way was a process of self-exploration from which education would spring.

As a composer Mellers has never achieved wide recognition, although early analysis rated him highly among his generation. Self-criticism led him to withdraw most of his early compositions, including his opera *The Tragicall Historie of Christopher Marlowe*, and while many of his works have been performed and published, the recordings are few. Among the available works it is easy to discern two basic styles, one evident before and the other after his American sojourn in the early 1960s. His early compositions are influenced by Tudor and Baroque forms. They are chromatically inflected and often polyphonic, and the vocal music is set with careful attention to declamation. With his visit to America and research for *Music in a New Found Land*, Mellers discovered America beyond the confines of high culture and reacted to the anarchic freedom of the American scene. His choice of texts widened, to include the homespun wisdom of Carl Sandburg and the precision of Emily Dickinson, and elements of indeterminacy entered, as did the consideration of music beyond merely the subject of aesthetic contemplation. The impact of popular music as a ritual led him to reconsider the integration of compositional elements and widen his scope to include the music of other cultures. In *Life Cycle*, Inuit and Khoisan music coalesce into an observance of the sacraments of human existence, while in *Yeibichai* (commissioned for the Proms in 1969) a coloratura soprano vies with a scat singer and jazz trio in a symphonic amalgam. The large-scale *Natalis Invicti Solis* for piano incorporates Amerindian music, while Jungian alchemical studies provide a model for the transformation of musical substance in the equally extended *Opus Alchymicum* for organ. After the 1970s Mellers's compositional activities declined as he spent his energy elsewhere.

Mellers has been active as critic and reviewer for leading newspapers, journals and magazines, such as the *New Statesman*, *The Listener*, the *New Republic*, the *Times Literary Supplement* and the *Musical Times*. In all his writings, he adds wit and insight to his gift for an effective turn of phrase and has established for himself a unique position as a major and penetrating, if never quite central, figure in British academic and intellectual life.

WORKS

STAGE

Prometheus (incid music, Aeschylus), S, T, Bar, chorus, chbr orch, 1947; Lysistrata (play in music, Aristophanes), S, Bar, speaking chorus, fl, ob, cl, bn, tpt, perc, db, 1948; The Tragicall Historie of Christopher Marlowe (op, 4, 2 interludes, R.J. White), 1950–52; The Trial of the Jewelled Peacock (masque for puppets, G. Moor), S, T, Bar, chbr orch, 1952 [withdrawn]; The Shepherd's Daughter (chbr op, Moor), 1954; Mary Easter (ballad op, D. Holbrook), 1957; The Borderline (op, D. Holbrook), 1958; The Ancient Wound (monodrama, P. Garvie), singing actress, 2 spkrs, 9 vv, 12 insts, tape, 1970; Dream of the Green Man (D. Holbrook after R. Johnston), masque soloist, semi-chorus, small orch, 1980

ACCOMPANIED CHORAL

2 Motets (Bible: *Isaiah*), vv, brass, 1945 (1948); 4 Carols, boys' vv, cel, 1946 (1946); The Song of Ruth (R.J. White, after Bible), S, Mez, Bar, female vv, orch, 1948 (1948); News from Greece (R.F. Willetts), Mez, vv, 3 tpt, 2 pf, perc, 1949; The White Island (R. Herrick), S, female vv, str, 1951; The Hedge of Flowers (masque, D.J. Holbrook), girls' vv, small orch, 1960; 3 Resurrection Hymns of Emily Dickinson, vv, org, 1960 (1960); Chants and Litanies of Carl Sandburg, male vv, pf, perc, 1961 (1966)

Missa brevis, vv, chbr org, 1967 (1963); Rootabaga Story (C. Sandburg), nar, girls' vv, boys' vv, pf, perc, 1962; A Ballad of Anyone (e.e. cummings), vv, pf, perc, 1962 (1964); The Happy Meadow (cant., R. Duncan and Y. Winters), spkr, children's vv, insts, 1963–4 (1964); Te Deum Laudamus, SATB, org (1966); Runes and Carolunes (Pygmy and Inuit dance-songs, C. Mellers), children's vv, insts, 1964 (1967); Life Cycle (cant., Inuit and Khoisan trad., trans. M. Bowra), 2 choruses (orch/ad hoc insts), 1967 (1969);

Yeibichai (G. Snyder), coloratura S, scat singer, vv, jazz trio, orch, tapes, 1968; The Word Unborn (Duncan), double chorus, fl, cl, trbn, 2 perc, vc, 1970; Sun-flower: the Divine Tetrad of William Blake, solo vv, vv, orch, 1972–3; The Pentagle Song (Holbrook), mixed chorus, pf, perc, 1981

UNACCOMPANIED CHORAL

4 Shakespeare Songs, SSA, 1944 (1945); 2 Motets in diem lamentationis (Apocrypha), 1950; Primavera, 6 canzonets, SSA, 1954 (1965); Pax Dei (Epistle of St. James and Jeremiah), vv, brass, 1956; Canticum incarnationis (K. Raine), SSATTB, 1960 (1966); Ex nihilo and Lauds (Raine, W.H. Auden), SATB, 1960; To Mistress Isabel Pennell (J. Skelton), SATB, 1961; Early Light (D. Holbrook), 2 partsongs, SATB, 1966 (1966); Christmas Eve (Speirischere Gesangbuch, 1617, trans. E. Hankey), SATB, 1966 (1967); Resurrection Canticle (G.M. Hopkins), 16 solo vv, 1968 (1972); Cloud Canticle (R. Johnson), double chorus, 1969 (1972)

SOLO VOCAL

4 Latin Hymns, S, fl, 1944 [withdrawn]; The Forgotten Garden (H Vaughan), cant., T, str qt, 1945; 2 17th-Century Poems, Bar, pf, 1947 [withdrawn]; Conversion in the Garden (cant., St Augustine), Bar, str, 1947; 3 Latin Canticles, S, org, 1948 [withdrawn]; 5 Songs of Night (after Gk.), C, eng hn, str qt, 1947, rev. 1949; Aristophanic Extravaganza (cant., R.F. Willetts, after Aristophanes), Ct, speakers, pf, hpd, cel, gui, perc, 1949; 3 16th-Century Poems, Ct, fl, gui, 1949; Yggdrasil (cant., C. Hassall), S, C, T, B, chbr orch, 1951; Nausicaa's Welcome (cant., Willetts), S, Bar, str qt, 1951

Some of Gravity, Some of Mirth (medieval and Elizabethan), S, pf, 1949; 3 Invocations (after Gk., trans. Willets), C, pf, 1951; Carmina felium, S, cl, bn, pf qt, 1952; Merry Margaret (J. Skelton), T, 1952; Eclogue (C. Marlowe), S, T, pf, 1953 [withdrawn]; Fool's Paradise: Six Shakespeare Songs, Bar, pf, 1953; Indra and the Lark (George Moor), cant., ATBBB soloists, pf, perc, 1955; Peacock Pie (Walter da la Mere), girls' voices, pf, 1957; Spells (K. Raine), S, fl + a fl, ob + eng hn, perc, va, 1960; Journey to Love (song cycle, W.C. Williams), S, pf, 1960; Threnodies from the Waters (T.L. Beddoes), S, pf, 1962; Songs of Sleep, T, va, pf, 1962; Voices and Creatures (T. Roethke), spkr, fl,

perc, 1962, rev. 1969; Three Lullabies, T, va, pf, 1962; Lacrimae amoris (W. Raleigh, anon.), Ct, 3 male vv, 1960
Rose of May: a Threnody for Ophelia (W. Shakespeare), spkr, S, fl, cl, str qt, 1964; A May Magnificat (Hopkins), Mez, chbr orch, 1966; The Ship of Death (cant., D.H. Lawrence), S, T, cl, b cl, str qt, 1966; Love Story, S, Ct, vc, hpd, 1967, rev. as The Listening Light (Roethke), S, Bar, Baroque ob, Baroque tpt, hpd, str qt, 1974 [withdrawn]; De Vegetabilibus et Animalibus (R. Johnson), S, cl, hp, vn, vc, 1970; Venery for 6 Plus, 1v, fl, cl, tpt, perc, db, tape, 1971
The Gates of the Dream (W. Blake), 6 inst/vocal trios, 1974; The Key of the Kingdom, dancing S, improvising fls and hp/pf, 1975; White Bird Blues (P. Holden), (dancing S, accdn)/(S, fl, hp, va, db), 1975; The Echoing Green (Blake), S, cl, 1974, rev. S, 2 cl, va, vc, 1996; Orisons and Oracles (P. Holden), S, vn, cl, pf, 1976; Rosae Hermeticae, 2S, 2 vn, vc, 2 cl, gui, org, 1978; A Maze of Nothing (Helen Adams), S, fl, va, vc, gui, 1979; Shaman Songs, fl/sax, kbd, b, perc, 1980; Three Shakespear Songs, S, fl, 1980; A Desart, with Girl and Lyons (Blake), S, pf, 1981; Three Songs of Growing (from Mary Easter 1957), S, pf, 1981; Two Blake Songs, S, rec, 1997

INSTRUMENTAL

Orch: Sinfonia ricercata, 1947 [withdrawn]; Festival Galliard, 1951; Sym., 1953 [withdrawn]; Alba in 9 Metamorphoses, fl, orch, 1962; Noctambule and Sun-dance, w, 1966 (1967); The Wellspring of Loves, concertino, vn, str orch, 1981
Chbr: Str Trio, 1945; Sonata, va, pf, 1946; Serenade, ob, cl, bn, 1946 [withdrawn]; Galliard, trbn, pf (1952); Sonatina, tr rec, pf, 1956; Eclogue, tr rec, vn, vc, hpd, opt. perc, 1960; Trio, fl, vc, pf, 1963; Laus amoris, 5 movts, str, 1963 [withdrawn]; Ghost-Dance, fl, va, harpsichord, 1972; Threnody, 11 str, 1975; An Aubade for India, cl, st qt, 1981
Solo inst: Epithalamium, pf, 1944 [withdrawn]; Preludio e canzona, pf, 1945 [withdrawn]; Mr Whyte's Battel, 4 pieces for children, 1961 [withdrawn]; Sonata, vc, 1961; Cantilena e ciacona, vn, 1962; Cat Charms, 9 pieces, pf (1965); Natalis invicti solis, pf, 1968 (1969); Opus alchymicum, org, 1969, rev. 1972, 1995 (1977); A Blue Epiphany for J.B. Smith, gui, 1973; Dwight's How Long, pf, 1975; A Fount of Fair Dances, pf [withdrawn]

LESLIE EAST/GORDON RUMSON

Melli [Megli], **Domenico Maria** (*b* Reggio nell'Emilia; *fl* early 17th century). Italian composer and lawyer. He was a relative, possibly a cousin, of Pietro Paolo Melli, who in his third *Intavolatura* (1616) calls him his 'parente carissimo'. In 1600 he was a singer at Reggio nell'Emilia Cathedral. On the title-page of his first publication he is called a doctor of law, and in the same year he signed the dedication of his second book from Padua, where he was presumably living at the time. As a composer he possibly regarded himself as an amateur; if he was it is probably no accident that all his known music survives in books devoted primarily to monodies, which were specially popular with amateur composers in early 17th-century Italy. He was indeed the only composer besides Caccini (whose *Le nuove musiche* is generally held to have inaugurated the tremendous fashion for monody) to publish monodies during the first years of the century. Melli was a lesser composer than Caccini, though there are similarities between their music, especially in the predominantly bland diatonic harmony and in the relationship of vocal line and bass (which with Melli is almost entirely unfigured): in the music of both composers the polarization of voice and bass presents one of the essential features of monody, especially in madrigals.

As in the books of other early monodists, madrigals predominate in Melli's output of 59 solo songs and seven duets and dialogues: the first book consists wholly of them (*pace* the title-page of the reprints), and in the other two books there are more of them than of strophic pieces. Like known amateur composers of the time, but unlike Caccini, Melli occasionally wrote striking chromatic progressions to underline appropriate words: examples occur in *Rapii bacio gradito* in the first book and at the opening of *Languisco e moro* in the second. His melodic invention is rarely very noteworthy, though the tunes and rhythms of some of his light strophic songs are lively. A disadvantage of some of his madrigals is the frequency of perfect cadences, which can generally not be concealed by polyphony in the monodic medium. Compared with Caccini's, his madrigals are also remarkably free of ornamentation, perhaps because he was writing with amateur singers in mind. The third book shows little development of form or style over the earlier ones, and it is perhaps not surprising that he appears to have published no more music after it.

WORKS

Musiche composte sopra alcuni madrigali di diversi, 1v, bc (Venice, 1602, 2/1603 and 3/1609 as Le prime musiche ... madrigali et arie a una e due voci [there are no arias, or music for 2vv]); 1 ed. in Fortune (1954), appx iv, 4
Le seconde musiche ... madrigali, canzonette, arie, & dialoghi, 1–2vv, bc (Venice, 1602, 2/1609; 1 of these in 1610[20], ed. P. Stroud, London, 1968); 1 solo song ed. in Ambros, 788–9; 1 dialogue ed. in Whenham; 1 solo song ed. in Leopold
Le terze musiche ... madrigali, arie, scherzi, sonetti, dialoghi, & altre, 1–2vv, bc (Venice, 1609/*R*1986 in ISS, v); 2 solo songs ed. in Leopold

NIGEL FORTUNE

Melli [Meli, Melij, Mely], **Pietro Paolo** (*b* Reggio nell'Emilia, 15 July 1579; *d* after 1623). Italian lutenist and composer, active in Austria. He was related to Domenico Maria Melli. Little is known of his early training; he remained in Reggio until his appointment as lutenist at the imperial court of the Emperor Matthias in December 1612. He returned briefly to Italy in 1614, probably to oversee the publication of his second book of lute intabulations. Melli was one of the small group of musicians who were retained when Ferdinand II succeeded Matthias as emperor; a list of the imperial chapel from the beginning of Ferdinand's reign shows that he was among the highest paid of the imperial musicians. His favoured status at court is also confirmed by the title-page of his fifth book of intabulations (1620), which calls him not only lutenist and chamber musician but also 'gentilhuomo di corte'. According to Vander Straeten, Melli was in Ferrara in 1620. He had left the imperial court for good by 1623, apparently to return to Reggio to assume the post of Captain of the Porta S Croce. He was married twice, in 1621 and again in 1623.

Melli's four surviving publications consist primarily of brief binary dances for archlute (*liuto attiorbato*), nearly all of which bear programmatic titles. A number of his works use novel tuning schemes. His most ambitious compositions are the dances for a ballet performed for the Emperor Matthias on 2 March 1615, preserved in his fourth book. The score provides rare notated examples of the type of continuo practice described in Agazzari's *Del sonare sopra'l basso con tutti li stromenti* (Siena, 1607), for, in addition to melodic lines for violin and 'flauto', the score includes parts for harpsichord, bass viol, double harp and no fewer than four different lutes.

WORKS

Intavolatura di liuto attiorbato, libro secondo, nel quale si contiene corrente, volte, gagliarde, preludi et 1 tastata, 1 capriccio, 1 corrente, et 1 volta cromatiche, 1 aria di Firenze passeggiata dall'autore (Venice, 1614/*R*)
Intavolatura di liuto attiorbato, libro terzo, nel quale si contiene varie sonate in una cordatura differente dall'ordinaria & differente

ancora da quella che già 4 anni io mandai alle stampe nel fine del mio primo libro (Venice, 1616/R)
Intavolatura di liuto attiorbato, libro IV (Venice, 1616/R)
Intavolatura di liuto attiorbato e di tiorba, libro V (Venice, 1620/R)
1 galliard, lute, 1617[26]

THEOPHIL ANTONICEK/STEVEN SAUNDERS

Mellnäs, Arne (*b* Stockholm, 30 Aug 1933). Swedish composer and teacher. He studied at the Stockholm Musikhögskolan (1953–63), where Larsson and Blomdahl were among his composition teachers. In 1959 he took lessons with Blacher at the Berlin Hochschule für Musik and privately with Deutsch in Paris and with Ligeti in Vienna; he studied electronic music with Koenig at the Gaudeamus Foundation in 1962–3. Mellnäs returned to the Stockholm Musikhögskolan to teach theory (1963–72) and then lecture in orchestration (1972–86). A board member of the Society of Swedish Composers from 1979, he became chairman of the Swedish section of the ISCM in 1983 and president of the ISCM council in 1997.

He first became internationally known as a composer in 1963, when the Ligeti-influenced orchestral piece *Collage* won first prize in the Gaudeamus competition. In subsequent works he has used the newest compositional developments, which he has studied during the course of frequent travels. He was one of the first Swedes to introduce aleatory and deliberately theatrical elements into instrumental music. He is one of the most noteworthy Swedish composers of choral music, to which he has introduced many new techniques and notations. The 1980s have seen a new synthesis in his refined art, relaxation as well as a finely drawn concentration, as is exemplified in *Nocturnes*, *L'Infinito*, *Ikaros* and, especially, the opera *Doktor Glas*.

ROLF HAGLUND

Mellon, Agnès (*b* Epinay-sur-Seine, 17 Jan 1958). French soprano. She studied with Nicole Fallien and Jacqueline Bonnardot in Paris, and with Lilian Loran in San Francisco. Later she became a member of the Paris Opéra; she has also appeared at the Opéra-Comique. She has established an international reputation in Renaissance and Baroque music, her roles including Tibrino and Love in Cesti's *Orontea* (1986, Innsbruck), Eryxene in Hasse's *Cleofide* (1987) and Telaira in Rameau's *Castor et Pollux* (1991, Aix-en-Provence). Mellon's natural-sounding declamation, carefully controlled vibrato and purity of tone make for a rewarding partnership with period instruments. Her recordings include Baroque choral works and many Baroque operas, among them Cavalli's *Xerse* and *Giasone*, Lully's *Atys*, Charpentier's *Actéon*, *Les arts florissants*, *Medée* and *David et Jonathas*, Rameau's *Anacréon*, *Zoroastre*, *Castor et Pollux* and *Pigmalion*, Leclair's *Scylla et Glaucus*, Purcell's *Dido and Aeneas*, Hasse's *Cleofide* and Rossi's *Orfeo*.

NICHOLAS ANDERSON

Mellon, Alfred (*b* London, 7 April 1820; *d* London, 27 March 1867). English conductor. He was a violinist in Birmingham before moving to London, where he became leader of the Covent Garden orchestra. He wrote piano and instrumental pieces and songs for plays and farces, and directed orchestras. In 1857 he became music director for the new Pyne-Harrison Opera Company (later the Royal English Opera Company), with which he conducted premières of more than a dozen operas by Balfe, Benedict, Macfarren, Wallace and others, and his own three-act *Victorine* (1859). The company closed in 1866. Mellon formed and conducted the Musical Society of London (1858–67), which gave works by Benedict, Macfarren and other prominent musicians, and engaged distinguished soloists including Clara Schumann. During the period 1860–66 he also conducted a series of promenade concerts presented under his name and given in the Floral Hall at Covent Garden. He was appointed conductor for the Liverpool Philharmonic Society (1865–7), where a later chronicler described him as a 'very personable and promising conductor' (W.I. Argent: *Philharmonic Jubilee*, Liverpool, 1889).

NÖEL GOODWIN

Mellon Chansonnier (*US–NHub* 91). *See* SOURCES, MS, §IX, 8.

Mellophone [mellophonium, tenor cor] (Fr. *cor alto*; Ger. *Altkorno*, *Alt-Corno*; It. *genis corno*). A valved brass instrument of intermediate bore profile with a large bell pitched in F or E♭ (below the cornet), common in the USA. Various forms of the instrument have been made, most resembling the french horn in appearance but with the valves operated by the right hand. In the past, bell-up (cavalry) and bell-forward models were also used; a bell-forward model known as the mellophonium was developed in the 1950s by C.G. Conn Ltd in collaboration with Stan Kenton for performance in his band. The mellophone mouthpiece is usually of the same pattern as that for the saxhorn of the same pitch, but some models have a narrower mouthpiece receiver taper or are provided with an adaptor so that a french horn mouthpiece can be used. Instruments pitched in F are often provided with an alternative tuning-slide for E♭.

The mellophone is most commonly used in marching bands to play french horn or similar parts: its shorter tube length makes it easier for students and its larger mouthpiece cup diameter more suitable for playing while marching than the french horn. The mellophone has occasionally been used to play orchestral horn parts, and brass band tenor horn parts; it has also been used in dance bands.

One of the earliest instruments of this kind was the tenor member of the 'Koenig horn' family made by Antoine Courtois, Paris, in the 1850s. This had a smaller bell than that of the french horn, but otherwise resembled it in appearance and manner of holding (albeit in mirror-image). The tenor cors of Besson (Paris, *c*1860) and Distin (London) were similar. Later models had larger bells approaching the french horn in diameter.

ARNOLD MYERS

Tenor cor from a Rudall, Carte & Co. catalogue of 1931

Mellotron. An electromechanical keyboard instrument developed by Leslie, Norman and Frank Bradley in Streetly, Birmingham, during 1962–3 and manufactured by Mellotron Manufacturing (later Streetly Electronics) from 1964 to 1986. After its worldwide distributor went bankrupt in 1977 the manufacturer was obliged to rename it the 'Novatron', though the original name continues to be used widely. Mellotron USA only marketed a handful of unrelated digital instruments before going out of business in the early 1990s. The Mellotron has been employed chiefly in pop and rock music, including the Beatles' *Strawberry Fields Forever* (1967) and *Days of Future Passed* (1967) by the Moody Blues, one of whose members originally worked for the company.

The Mellotron was the first successful instrument based on pre-recorded sounds, and may be described as an analogue sampler. Several models were produced, the earlier versions having two 35-note manuals placed side by side, in which the right-hand one was used conventionally, with the left-hand one activating rhythms and chords. The Mellotron's sounds are produced from a series of parallel lengths of pre-recorded magnetic tape that are individually controlled by keys on the keyboard. When a key is depressed the associated tape is drawn past a replay head; when it is released a spring returns the tape to its starting point. The maximum duration is between seven and ten seconds (for different models). The tape is divided into three tracks; in the two earliest models each track was subdivided into six sections, individually accessible by means of a forward and rewind control. The most popular version of the Mellotron/Novatron, the single-manual Model 400, has a smaller selection of recordings in a single section; a pitch control can vary the tape speed. A large library of pre-recorded sounds was available on replaceable tape frames; blank frames could also be obtained for the user's own recordings. Many film and

broadcasting companies used the Mellotron for sound effects.

HUGH DAVIES

Melngailis, Emilis (*b* Igate, 15 Feb 1874; *d* Riga, 20 Dec 1954). Latvian ethnomusicologist and composer. He studied at the Dresden Conservatory (1896–7) and under Rimsky-Korsakov at the St Petersburg Conservatory, graduating in 1901. From 1901 to 1906 he was music critic of the *St Petersburger Zeitung*. After ten years spent as a teacher in Tashkent he returned to Latvia in 1920 and became active as a folk music collector, choral conductor and composer; between 1926 and 1938 he was one of the leading conductors at the Latvian national song festivals. He was also the first to orchestrate Musorgsky's original music to *Boris Godunov* which was previously presumed lost; at the time of its first performance in Latvia (1924) audiences worldwide were used to hearing Rimsky-Korsakov's edited version of the work. From 1944 until his death he was a professor at the Latvian State Conservatory.

Melngailis's principal achievement was his collection of folk music, amounting to more than 5000 items of mainly Latvian material but including some Lithuanian, Kirghiz and Jewish music; folksong transcriptions for chorus also form the most notable part of his compositional output. Through his use of modality and other elements of ancient folklore he succeeded in creating a unique national musical expression. *Rakstí*, a selection of his writings, was published in Riga, 1974.

JOACHIM BRAUN/ARNOLDS KLOTIŅŠ

Mel'nikov, Ivan Aleksandrovich (*b* St Petersburg, 21 Feb/4 March 1832; *d* St Petersburg, 25 June/8 July 1906). Russian baritone. He received his early musical training as a choirboy. After working for some years in trade, he began to study singing with Gavriil Lomakin in 1861 and in 1862–6 participated, either as chorister or soloist, in the Free Music School concerts conducted by Lomakin. After further study in Milan with E. Repetto, a master of bel canto, Mel'nikov made his St Petersburg début in 1867, as Riccardo in Bellini's *I puritani*, and was immediately acclaimed as an artist of the highest order. He appeared regularly at the Mariinsky Theatre in 1890, in both foreign and Russian roles, and he was the first interpreter of more than a dozen characters from 19th-century Russian opera. Among his best-known roles were Ruslan in Glinka's *Ruslan and Lyudmila* (in 1871 Stasov described him as the greatest of the Ruslans), the Miller in Dargomïzhsky's *Rusalka*, the title role in Musorgsky's *Boris Godunov* (which he created in 1874), Amonasro in *Aida*, Wolfram in *Tannhäuser*, and the title role in Borodin's *Prince Igor* (which he created in the year of his retirement). With the exception of *Iolanta*, he sang in every opera by Tchaikovsky, who greatly admired his gifts, but he was unsuccessful as Onegin, a part he sang when his voice was past its best. He remained, however, a great favourite with St Petersburg audiences until he retired after a farewell performance in *Prince Igor* in 1890. Although Mel'nikov came to the Russian stage at a time when standards were generally low, his voice was said to be exact in all registers, with a mild timbre capable of projecting both lyric tenderness and dramatic force. Modest Tchaikovsky remarked that he excelled in both declamatory passages and cantilena. After his retirement Mel'nikov became a director at the Mariinsky Theatre (1890–92) and also founded an amateur choir, which was noted for its fine performances. He published three collections of choral pieces, the first in 1890, for women's voices, and two others in 1894, for men's and mixed voices.

M. MONTAGU-NATHAN/JENNIFER SPENCER

Melodeon (i). A term extensively used in the USA during the first half of the 19th century to designate a small reed organ with a single keyboard and one or two sets of reeds. The 'rocking melodeon' (also known as the lap or elbow organ) is an instrument of this type played on the lap or on a table; its bellows are activated by a rocking motion of the elbow or the heel of the hand. *See* REED ORGAN, §1.

GRAEME SMITH

Melodeon (ii). A button accordion: a rectangular, bellows-operated, free-reed instrument with buttons on the right-hand end of the bellows and buttons or keys on the left-hand side. The instrument is single action in that different notes are produced by each button by the press and draw of the bellows. The right-hand buttons are

arranged in one or more rows of ten or eleven, each row producing the pitches of two-and-a-half octaves of a major scale. The left-hand buttons can provide tonic and dominant chords to the keys of the rows, and some additional chords (their use is limited by the bellows direction with which each is associated).

An instrument of this type was first patented by Cyril Demian of Vienna in 1829. Melodeons have been mass-produced and widely exported, largely by German or Italian firms, since the mid-19th century, and have been widely used in both Western and non-Western societies.

See ACCORDION, §2 (i).

GRAEME SMITH

Melodia. *See under* ORGAN STOP.

Melodica. A keyboard harmonica (*see* HARMONICA (i)) manufactured by HOHNER from 1958. It is rectangular and has a beak-like mouthpiece at the upper end. The keys admit air to the free-reed chamber when depressed by the fingers of the right hand. Thus it can produce many chords and clusters that are impossible on the harmonica, but unlike the latter instrument, Melodica reeds sound only when blown (i.e. not on the inbreath). The Melodica is inexpensive and easy to play, and is popular in schools as an alternative to the recorder. The alto Melodica has been used in compositions by David Bedford, Alison Bauld, Anthony Braxton, Rudolf Komorous, Krauze, Peixinho, Bark and others. The instrument has also been played in jazz, reggae and dub. Jean Tinguely incorporated a Melodica in one of his Méta-harmonie sound sculptures.

There are two types of Melodica: the simpler one, made in soprano and alto models, has a keyboard (of two octaves) comprising short rectangular buttons; the 'Piano Melodica' has a conventional keyboard of up to three octaves and can be played on a flat surface, with the mouthpiece at the end of an extension tube. In the mid-1960s Hohner produced a three-octave monophonic Electra-Melodica (transposable within nine octaves) in which the pressure of the air blown through a tube mouthpiece is used to control the loudness of an electronic oscillator.

An earlier keyboard harmonica shaped like a saxophone, the 'cuesnophone' from the 1920s, was briefly popular in jazz (known as 'goofus'). Other instruments based on the Melodica include the Yamaha Pianica. For further information see F. Jöde: *Die Melodica: drei Aufsätze und ein Vortrag* (Trossingen, 1965).

HUGH DAVIES

Mélodie (Fr.: 'melody'). The term usually applied to 19th- and early 20th-century romantic French song, particularly in its later stages. Its link to an earlier form, the *romance* (*see* ROMANCE, §3(i)), is so close that the two cannot be considered in isolation. Both terms were sometimes applied to the same song, and the songs of Schubert, partly responsible for the transformation of the *romance* into the more sophisticated *mélodie*, were sometimes called German romances by French critics. At the end of the 19th century the term 'romance' was still in currency, in the songs of no less than Chabrier. As this interchange of terminology implies, there are no firm boundaries; common to both, and deriving from the simple *romance*, is the quality of graceful, tender lyricism.

Just as the lied owed much of its inspiration to romantic German lyric poetry, so the 19th-century *mélodie* was indebted to the rising school of French romantic poetry headed by Lamartine, Victor Hugo, Alfred de Musset and others. The texts set ranged from poetry of passionate utterance to that of domestic sentimentality, while the French literary fascination with orientalism and the exotic also found an outlet in song. Yet if romantic poetry was the inspiration for composers for some three-quarters of a century, that of the 'symbolists' Baudelaire, Verlaine and Mallarmé was the inspiration for many later composers, particularly Debussy. The *mélodie* reached its finest and most original expression in the songs of Fauré, Duparc and Debussy. While the earlier repertory contains many ephemera destined for the salons, it also includes a sizable number of fine but now neglected works. They established those characteristics of French art-song that are still evident in the more familiar songs of the later repertory and to a certain extent even in some of those of the 20th century.

1. ORIGINS. The seeds of the *mélodie* lie in the *romance*, a form characterized by simplicity, symmetrical phrasing, bland harmonies and simple keyboard accompaniment, often an Alberti bass. It was essentially strophic in form and its chief interest lay in the vocal line. Unlike the operatic aria, the *romance* avoided bravura and ornamentation, depending instead upon lyrical charm and sensitive performance. While its champions were fond of tracing the origins of the *romance* as far back as medieval times, in reality its style belonged to the late 18th-century Classical period.

The re-establishment of the Parisian salons after the Revolution and First Empire gave an impetus to the composition and performance of *romances*, which were ideally suited to these intimate surroundings, and especially to those salons of the rising bourgeoisie where taste and wealth were not necessarily in the same proportions. From the 1820s onwards, hundreds of sentimental *romances* were written year after year until well into the second half of the century. The best-known composers were Auber (who incorporated his later *romances* into his operas), Garat, Blangini, Plantade, Amadée de Beauplan, Sophie Gail, Loïsa Puget, Auguste Panseron, Frédéric Bérat, Auguste Morel, Pauline Duchambge and Henri Romagnesi. Among their works, particularly those of Morel, Duchambge and Romagnesi, may be found some quite charming pieces. A number of *romance* composers were also singers, and indeed Fétis claimed that success in the genre depended not only upon prolific output, but also upon the composer's ability to perform his latest creation in the salons.

Henri Romagnesi (1781–1850), singer, *romance* composer and teacher, listed various categories of *romance* in his *L'art de chanter les romances, les chansonettes et les nocturnes et généralement toute la musique de salon* (1846). His most important category was the *romance sentimentale*, followed by the *chant héroïque*, *romance passionnée et dramatique*, *chansonette* and the two-voice nocturne. Those that he said recalled German lieder were the *mélodies rêveuses et graves*, which called for stronger harmony and more complex accompaniments.

The first composers to inject greater originality into the *romance* were Berlioz and Hippolyte Monpou. It may well have been Berlioz's settings of nine texts (in translation) by Thomas Moore, the *Neuf mélodies* (later called *Irlande*) published in 1830, that gave rise to the French term 'mélodie'. The settings, some for solo voice

and some for ensemble, mostly retain the strophic form and simple lyricism of the *romance*. In the declamatory, through-composed *Elégie en prose* (no.9), however, some of the characteristics of Berlioz's personal style are evident, and this song, so remarkable for the period, looks ahead to his most important *mélodies*, in *Les nuits d'été* (1841). These songs, based on poems from Gautier's *La comédie de la mort*, are notable for their daring phrase structure and often declamatory style. The vocal part and accompaniment are linked by the shared use of germinal motifs, and original harmonic combinations and strong dissonances evoke the deep emotions of the text. Monpou's first *romances* appeared at the same time as those of Berlioz. Although they are harmonically very simple, some, such as *L'Andalouse* (1830) and *Gastibelza, le fou de Tolède* (1840), broke away from the symmetry and rhythmic regularity of the sentimental *romance* and display a vivacity and verve new to the genre. Monpou was also the first to set the poetry of Musset and Hugo, whose verses were to be set more frequently than any others during the 19th century.

More influential than the innovations of Berlioz and Monpou, however, were the French songs of Louis Niedermeyer and the songs of Schubert (published in translation), which created a wide recognition among serious French composers that song-writing could offer artistic possibilities beyond those of the conventional *romance*. Niedermeyer's setting of Lamartine's elegiac *Le lac*, composed in Geneva and published in Paris shortly after his arrival there, inspired many French composers to write songs of a more expansive and artistic nature than the traditional *romance*. Saint-Saëns believed that it marked out the path for Gounod and later composers (see Saint-Saëns's introduction to Niedermeyer, 1892). The influence of Niedermeyer's operatic writing is clear in this song: the first half is declamatory in style, rather like measured recitative, while the second is purely lyrical. The strophic lyrical section, however, is in the *romance* rather than the aria tradition, its accompaniment simple and flowing, its melody gentle and touching, its harmony unforced yet warm. The expansiveness that comes from bringing together declamatory and lyrical elements is also found in some of Niedermeyer's later songs, such as *L'isolement*, *L'automne* and *La voix humaine*. Yet in a number of his songs the declamatory element is absent; these, with their strophic form and emphasis on graceful melody, remain firmly in the *romance* tradition, now enriched with Romantic harmony.

This increased emphasis on harmonic warmth and more interesting accompaniments also sprang from the vogue for Schubert's songs in Paris from the 1830s onwards. By 1840 the publisher Richault had issued separately some 270 songs by Schubert, all in translation, before embarking upon a new 'complete' edition; other Parisian publishers also produced editions of his most popular lieder. Many of Schubert's songs were first performed in Paris by the operatic tenor Adolphe Nourrit, followed by others including François Wartel and Pauline Viardot. Among other composers active during this period was Giacomo Meyerbeer, who drew on his skills as a virtuoso pianist and an opera composer to impart a greater degree of vocal and pianistic brilliance to the *mélodie*. His 52 songs, composed during the 1830s and 40s deserve to be better known.

2. 1840–1870. With the establishment of the *mélodie* as a genre to be taken seriously (although in opera-dominated Paris it was always regarded as a minor form) there developed a published repertory to which almost all leading composers contributed. Some were dubbed 'French Schuberts', merely because their songs were more demanding and original than the salon-destined *romance*. One such composer was Henri Reber, some of whose songs (such as *Au bord du ruisseau*, *Stances* and *Mignon*) show the marked influence of Schubert and illustrate very clearly the transformation of *romance* into *mélodie*. Another was Félicien David, although here the influence of the German lied is less obvious than with Reber. David's reputation, in fact, largely rested upon his symphonic-ode *Le désert* (1844), which included in one of its movements an Arabian melody which he also published separately as a solo song with piano accompaniment. A number of his other songs were also influenced by his time in the Middle East, such as *Le bedouin*, *Le tchibouk* and *Sultan Mahmoud*, but the absence of orchestral colour lessens the oriental or exotic flavour that was such a feature of *Le désert*. Most of his songs are merely pleasantly lyrical in the 'European' style, although he also achieved a powerful utterance in the dramatically tragic song *Le jour des morts* to words by Lamartine.

Other *mélodie* composers of this period include Victor Massé, among whose songs is a collection of settings of Renaissance texts, *Chants d'autrefois* (1849). Texts by Auguste Brizeux inspired by Breton culture were the basis of a delightful collection, *Chants bretons* (1853), composed in a simple folk-song like manner. However, it was in his later songs that the promise of his early years was amply fulfilled, particularly in his setting of Alfred de Musset's *Adieux à Suzon*. Ernest Reyer, like Félicien David, was drawn to musical exoticism, and this is reflected in some of his 31 *mélodies*. Nevertheless, his most effective ones are those in a more conservative style, such as *Pourquoi ne m'aimez-vous* and *Les gouttes de pluie*. The early songs of Edouard Lalo were indistinguishable from the typical *romances* of the 1830s. Even his settings of six poems by Béranger, whose chansons were the voice of social conscience and might have provoked a powerful musical response, give no hint of the imaginative writing that was to come with his settings of Hugo. Songs from this set, such as *L'aube naît*, are among the finest of the Romantic repertory. Influenced by Schubert and Schumann, Lalo's *mélodies* were the first to be performed in Germany. They are notable for their elaborate piano accompaniments and their success in conveying the atmosphere of a lyrical text and covering a wide range of human emotions, although they reject the opportunity offered by certain texts to exploit local colour. Lalo's technical procedures include ingenious rhythmic and harmonic inventions, and declamatory melodic writing close to arioso or recitative. He foreshadowed Chabrier in his introduction of humour and cheerfulness into the *mélodie*. Liszt and Wagner also contributed to the genre. Liszt's dozen or so *mélodies* remained virtually ignored until the end of the century, probably because of the demands they make on performer and public. His best examples show the influence of the German lied. *Oh! quand je dors*, one of his best French songs, has a profound unity, matching the rich imagery of Hugo's poems and penetrating its subtlety of thought. His last *mélodie*,

Tristesse, composed in 1872 to Alfred de Musset's poem, is more a declamatory lied, almost a recitative, following the delicate nuances of the words and with some passages left unaccompanied. Wagner wrote six French songs in Paris in winter 1839–40, to poems by Hugo, Ronsard, Béranger and Heine; *Mignonne* in particular shows a French flavour and leans towards the traditional *romance* style.

The dominant figures in French music at this time were three composers whose prolific output included *mélodies*: Gounod, Massenet and Saint-Saëns. Gounod's songs include some of the loveliest and freshest of the 19th-century repertory, such as the well-known *Sérénade*,but he was also the victim of his extraordinary facility, which often led to superficiality and sentimentality (as well as religiosity). In his youthful career he frequently sang his own songs in the salons, which doubtless contributed to their notable feeling for vocal line. Some of Saint-Saëns's finest songs were written early in his career, and some (*La cloche*, *La mort d'Orphélie*, *L'attente*) reveal a fascination with the beauty of sound and harmonic effects that were to be features of later developments in the *mélodie*. These early songs show a poetic sensitivity not generally credited to him, and the wide intervals in the melodic line and the lyrical atmosphere pervaded with feelings of intimate warmth, nostalgia and deep emotion (as in *Rêverie*) reveal the influence of Schubert and Schumann. Saint-Saëns's talent for the humorous and picturesque is displayed in such works as *Le pas d'armes du Roi Jean* (1852), and the collection of *Mélodies persanes* (1870) reflects the vogue for orientalism, although the archaic modal harmonies, monotonous rhythms and extended melismas used to convey it are not original. Among the varied songs written after 1885 the contemplative *mélodies* are the strongest, but they lack the sensitivity of his youthful works. Like most French composers in the middle of the 19th century, Massenet was deeply influenced by Gounod and shared his desire to please the public. His was a prolific output of songs that ranged from the suave and delightful, such as *A Mignonne*, which perfectly unites *romance* and *mélodie*, to deeply felt works such as the song cycle – he was the first in France to write true song cycles – *Poème du souvenir* (to texts by one of his favourite poets, Armande Silvestre). Massenet must be credited with freeing the *mélodie* from the square phrase, introducing a sort of musical prose that is analogous to the free verse written by contemporary poets. In his songs, voice and piano become interdependent: often one completes a phrase begun by the other, the piano sometimes connects two unaccompanied vocal phrases, or the principal melody appears in the piano while the voice 'declaims'. Massenet in turn influenced younger composers, including Debussy. A virtuoso pianist who contributed some fine *mélodies* was Louis Lacombe; described by their composer as 'lieder', they were regarded by contemporary critics as serious, indeed 'severe', examples of the new trends. The 22 *mélodies* of César Franck are uneven in quality, particularly in their rhythmic setting of the text, but show interesting or even daring harmonies. Franck's importance to this history of the *mélodie* lies, rather, in his role as a teacher, notably of Henri Duparc (see §3 below), whose compositions helped make the *mélodie* one of the important genres in French music.

The period of what might be called 'romantic' French songs, as distinct from the final stage of *mélodie* in the hands of Fauré, Duparc, Debussy and others, also saw a considerable outpouring of songs from Georges Bizet. These reveal a lyrical style in which each phrase is finely placed to make its effect both structurally and vocally, while harmonically some catch the exotic flavour associated with his most famous opera. Délibes published only 29 songs, yet they include some of the best-known of the repertory, such as *Bonjour Suzon* and *Chanson espagnole* (sometimes called *Les filles de Cadix*). Like Gounod and Bizet, he used folk elements in rhythm, melody and harmony to depict exotic settings. His melodic lines are simple and graceful and his structures clear and often schematic (using, for example, rondo or ternary form). Like Délibes, Théodore Weckerlin and Ernest Chausson contributed some fine songs to the repertory without changing the course of its development. Chausson's *Quatre mélodies* op.8 (1882–8), for instance, display hints of impressionist harmony, while his last song, *Chanson perpétuelle* (1898) for voice and orchestra or piano quintet, is a masterpiece, expressing a *fin de siècle* spirit. On the other hand, while Alexis Castillon wrote only six songs his settings of poems by Armande Silvestre anticipate something of the sense of mystery and regret that was to be such a feature of the final phase of romantic *mélodie*.

3. After 1870. French *mélodie* in the closing decades of the century is best known by the songs of Fauré, Duparc and Debussy. All three began by composing in the *romance* style of Gounod and Massenet, but in their mature songs imparted a new and distinctive character to French song, partly by harmonic innovations (especially in Debussy's songs) and partly by a suppleness of melodic line that caught the nuances of the text with extraordinary sensitivity. The transformation of the *romance* into the *mélodie* is most easily traced in the 105 songs of Gabriel Fauré, who by the 1880s was producing songs of great originality and passionate beauty, such as *L'automne*, *Fleur jetée*, *Notre amour* and *Clair de lune*. Some of his later songs are of a more austere but no less beautiful nature, his song cycle *La bonne chanson* (1894) being noted for its use of recurrent themes and for the narrative arrangement of its texts (by Verlaine). Despite the diversity of textual choices, Fauré's style remained constant, characterized by a balanced melodic line, correct but not pedantic declamation, a preference for the middle voices (mezzo-soprano and baritone), moderate harmonic tension involving mediant relationships, and flexible structure. During his last 20 years Fauré wrote four song cycles (*La chanson d'Eve*, *Le jardin clos*, *Mirages* and *L'horizon chimérique*) in which his restrained lyricism is expressed with extreme refinement. Both the vocal line, with its limited range and small intervals, and the harmonic subtleties of the piano part sustain the intimacy of these late works. The approximately 100 songs Fauré contributed to the repertory may be the most quintessentially French ever written; his influence on the younger generation, including Ravel, was considerable. The 13 published songs by Duparc were composed between 1868 and 1884, and although they catch much of the mood and colour of the later *mélodie*, their style lies closer to the central European tradition, some, like *Le manoir de Rosemonde*, being in the tradition of the ballad. Duparc's *Cinq mélodies* op.2 (1869) show the influence of Gounod in

the arpeggios and subtle syncopations, of Liszt in the juxtaposition of distant chords, and of the young Wagner in the appoggiaturas and chromaticisms. These features reappear in Duparc's later songs, many of which express profound melancholy. His vocal lines are intensely expressive, often using augmented intervals, but it is in the piano part, full of dissonant non-harmonic notes and rhythmic complications, that the essence of Duparc's style lies; harmonically he went far beyond the clear triadic arpeggios of his predecessors. The use of sequences of unrelated chords is carried to an extreme in his last *mélodie*, *La vie antérieure* (1884), for voice and orchestra, a setting of a text by Baudelaire.

It was in his settings of Verlaine in the 1880s that Debussy began producing songs of a highly individual kind. The six songs in *Ariettes, paysage belges et aquarelles* (1888, republished in 1903 as *Ariettes oubliées*) contain many of the elements of his characteristic style, including chains of parallel chords enriched with clusters of 7ths and 9ths and harmonic relationships that defied traditional practice and created new worlds of sound and sensation. Thus, unhampered by considerations of previous tonal procedures such as sequence and harmonic rhythm, Debussy's melodies move with a freedom that catches the subtlety of the text in a new way. The *Cinq poèmes de Baudelaire* (1890) are his most complex songs, influenced by his early interest in Wagner. His later songs, such as the two sets of *Fêtes galantes* (1891, 1904), are in a simpler yet powerfully evocative style. Despite the originality of the mature songs of Fauré, Duparc and Debussy and their extraordinary sensitivity to the nuances of the poetry they set, sometimes giving the impression of measured recitative, they are linked to the French Romantic song tradition through their shapely vocal lines and Gallic genius for suggesting so much in a single stroke.

The songs of Emmanuel Chabrier, even his late ones such as *Villanelle des petits canards*, *Ballade des gros dindons* and *Pastorale des cochons roses* from his *Six mélodies* (1890), also reveal their French lineage. Through their humour and satire they look ahead to the 'anti-Romantic' style of the next century; in their strophic form and simple style, however, they bear the hallmarks of the early *romance*. While Ravel wrote relatively few songs (some of which were in song cycles with orchestral or ensemble accompaniment), all reflect the closest affinity between text and music, achieved through the composer's wide musical resources and his sensitivity to literature. Nowhere is this better illustrated than in his *Histoires naturelles* (1906), settings of 'free verses' by Jules Renard in which traditional lyricism gives way (particularly through the influence of Musorgsky and Debussy) to a quasi-recitative or declamatory style, which in performance, the composer claimed, should give the impression that one is almost not singing. No matter what influences were at work in his songs (including atonality in the last of the *Trois poèmes de Stéphane Mallarmé* (1913)), Ravel's style is unmistakeably personal and French. Among other early 20th-century French songwriters, Jean Rivier, in settings ranging from 16th-century poems (1945) to Apollinaire (1925–6, 1934–5), showed fine craftsmanship, an approachable style and beautifully singable vocal lines. Albert Roussel combined many different influences – Impressionism, neo-classicism, d'Indy, German composers, oriental music – in a wide range of highly individual songs. Florent Schmitt's songs achieve a distinctive synthesis of German and French sympathies. Georges Migot, in his 'vocal chamber music', sometimes to his own texts, used original polyphonic textures with decorative and striking effect. At the time of her early death in 1918, Lili Boulanger was already following her own lyrical path; her cycle *Clairières dans le ciel* is an important achievement in French song.

Poulenc's style, in contrast to Ravel's, was purely lyrical. From his settings of six poems from Apollinaire's *Le bestiaire* (1918–19), which catch something of the simplicity of the early *romance*, to some of his more demanding later songs, his love of the pure line marks Poulenc as heir to French *mélodie*. Nevertheless, his propensity to remind us of the salon and café when it suits him also marks him as a man of his time. Humour, satire and derision of Romantic ideals is, of course, to be expected from a number of the songs of Poulenc's colleagues in Les Six. The superficial gaiety, however, often masked deeper feelings, as in many of the songs of Poulenc and Milhaud. Poulenc's style was a surrealistic mixture of contradictory elements, for he drew inspiration as easily from 16th-century polyphony as from contemporary popular song and the music hall, and the influence of Chabrier, Ravel and Stravinsky contrasts in his *mélodies*with passages of Schumann-like dreaminess or classical detachment. Milhaud also brought together the most diverse elements – jazz, polytonality, folksong, harmonic and contrapuntal freedom – in his predominantly lyrical songs. There is genuine poignancy in *Alissa* (1913), a beautifully flexible and expressive vocal style in *Quatre chansons de Ronsard* (1940), and an intimate and passionate assertion of personal religious feeling in the justly admired *Poèmes juifs* (1916). Of the other composers of Les Six, Auric, like Satie, found inspiration in popular music; much is trivial, but his *Six poèmes de Paul Eluard* (1941) and *Quatre chants de la France malheureuse* (1943) show a composer of intelligence and real depth of feeling.

The satire and anti-Romantic, anti-Impressionist ideals of Les Six are absent from the songs of the composer who towers over 20th-century French music, Olivier Messiaen. His song cycles *Poèmes pour Mi* (1936, also with orchestra, 1937), *Chants de terre et de ciel* (1938) and *Harawi* (1945), employing all the techniques that contributed to his highly individual style, led French song into a contemplation of the spiritual values that influenced so much of his work. Technically demanding for both singer and pianist, Messiaen's highly complex songs nevertheless convey through the flowing beauty of their lines the lyricism that seems to lie at the heart of French song. Among other 20th-century composers, Henri Sauguet's song cycle *Cirque* (1925) shows the direct influence of Satie, and Henry Barraud's settings of Hugo (1935) explore neo-classical style; Jean Françaix, with his lightness and polish, seems to personify the Gallic spirit in *Adolescence Clémentine* (1941), while his Charles d'Orleans songs (1946) evoke 17th-century courtly music. Of the three composers who, with Messiaen, founded the group 'La Jeune France' in the mid-1930s to counter the neo-classicism prevailing in Paris, the songs of Daniel-Lesur and Yves Baudrier developed a more spontaneous lyrical quality, while those of André Jolivet display a magical incantatory style. Later 20th-century French

songs became ever more eclectic, and 12-note techniques were extended to athematic serialism.

DAVID TUNLEY (with FRITS NOSKE)

Melodik (Ger.). The approach to or study of MELODY and melodic construction; the melodic resources of a composer or school, piece or set of pieces etc.

Mélodion. A friction idiophone with a keyboard in the shape of a square piano, in which curved metal bars sounded by contact with a rotating metal cylinder, designed in 1805 by JOHANN CHRISTIAN DIETZ (i). The mechanism of the mélodion resembled that of E.F. Chladni's KLAVIZYLINDER.

Melodiya. Soviet record company. It was founded in 1964 and took over all recordings made in the USSR before that date. The first Russian record company was Metropol, founded in the first decade of the 20th century and nationalized after the Russian Revolution; in 1925 it was renamed Muztrest. From 1928 all recordings were electrical. In 1933 Grammplasttrest was founded under the auspices of the Heavy Industry People's Commissariat. The first recordings using magnetic tape were made in the USSR in 1945–6, and this process was adopted regularly after 1950. The first Soviet LPs were issued in 1953, the first stereo LPs in 1961 and the first digital LPs in 1983. Until 1990, Melodiya was the largest recording company in the world, being the only one in the USSR and monopolizing all kinds of music, literature and political propaganda; its political LPs were sold below cost price. Melodiya had its main studio in Moscow and smaller ones in Leningrad, Riga, Tallinn, Vilnius, Tashkent, Tbilisi and Alma-Ata. All its export operations were realized through Mezhdunarodnaya Kniga. The company's most impressive achievements were virtually complete recordings of the works of Tchaikovsky, Prokofiev and Shostakovich, and recordings of performers including David Oistrakh, Richter, Gilels, Mravinsky and Svetlanov. Melodiya was the first company in the world to issue many German wartime recordings featuring artists such as Furtwängler, Knappertsbusch, Krauss and Gieseking. Melodiya also made agreements with Western companies, so that many of their recordings were available in the West. After the collapse of the Soviet Union in 1990 the company ceased recording activities. In 1994 BMG made a long-term licensing agreement to issue the Melodiya back catalogue in digital remasterings on compact disc.

JURIS GRIŅEVIČS

Melodrama (from Gk. *melos*, *drama*; Fr. *mélodrame*, It. *melologo*; Ger. *Melodram*). A kind of drama, or a part of a drama, in which the action is carried forward by the protagonist speaking in the pauses of, and later commonly during, a musical accompaniment. (It is distinct from the Italian *melodramma*, meaning simply 'musical drama', or opera.) The brief orchestral passages that separate the dialogues are clearly related to, and presumably in a sense derived from, those in accompanied operatic recitative (just as the pantomimic movement and gesture of a scene like Beckmesser's discovery of the song manuscript in *Die Meistersinger von Nürnberg*, Act 3, has its antecedents in the ballet-pantomime). The term 'melodrama' is also used in a less specifically musical sense to denote a kind of play, particularly popular in the 19th century (more commonly without a musical accompaniment) in which romantic and frequently sensational happenings that follow certain conventions are carried through until at the end Good triumphs and Evil is frustrated. This article is concerned almost entirely with the first of these definitions.

Although there is good reason for dating the invention of melodrama to J.-J. Rousseau's *Pygmalion*, probably written in 1762, J.E. Eberlin used the speaking voice against a musical accompaniment in his Latin drama *Sigismund* (Salzburg, 1753), and indeed the use of music as an adjunct to dramatic action is probably almost as old

as drama itself. It is more fruitful to consider melodrama as a technique that seeks a particular kind of balance between words and music than to look upon it as an independent dramatic genre, since many of the best-known examples – the dungeon scene in *Fidelio*, the scene at the Wolf's Glen in *Der Freischütz*, or the part of the Majordomo in the revised version of Strauss's *Ariadne auf Naxos* – are effective by reason of the contrast they provide with the rest of the work.

Problems of nomenclature existed from the beginning. Rousseau subtitled *Pygmalion* a 'scène lyrique'; he often used the term 'mélodrame', but always as a synonym for opera, like the Italian *melodramma*. Although Rousseau's text of *Pygmalion* probably dates from 1762, it was Easter 1770 before, at Lyons, he asked Coignet to set it to music. The work was given at Lyons in November of that year, the overture and an Andante probably composed by Rousseau himself, the rest by Coignet. The text was published in January 1771 in the *Mercure de France* and the *Nouveau journal helvétique*, and at about the same time as a slender separate publication at Geneva and Lyons; other editions and translations were not long in following. The work was probably staged in Paris (at the Opéra) in March 1772, and was frequently given by the Comédiens Français between 30 October 1775 and the early 19th century. Grimm wrote (*Correspondances littéraires*) of the 'effet surprenant' that the work made, and Rousseau (who refused to acknowledge the work in the 1775 production) summed up his achievement in the piece when he wrote (*Fragments d'observations sur l'Alceste italien de M. le Chevalier Gluck*) that in his conception 'la phrase parlée est de quelque sort annoncée et préparée par la phrase musicale'. This clause indeed may further be taken as indicating the principal difference between the French and the German melodrama: the former is divided into a number of generally short, independent musical numbers, to be played between the passages of spoken text, whereas the preferred German form tended towards continuity of musical thought, even where the spoken text interrupted, rather than was accompanied by, the flow of the music.

Despite the popularity in France of the Coignet-Rousseau setting, the influence of *Pygmalion* must be seen as largely theoretical and textual. Asplmayr set Rousseau's text to music in 1772; the wording of the title-page of the libretto makes it clear that the work was intended for performance at the Vienna court opera (*Pygmalion de J.-J. Rousseau, scène lyrique exécutée sur le Théâtre Imperial de Vienna avec la musique du Sieur Aspelmayer*); it was performed there in January 1772. The libretto contains timings of the musical numbers, as well as pantomimic directions, indicating that the work would have lasted some nine or ten minutes. The score does not seem to have survived. Another setting of the Rousseau text, by Anton Schweitzer, was given at Weimar in 1772; Goethe wrote admiringly of it in *Dichtung und Wahrheit* (iii, 2). Rousseau's text was known in Italy by 1771; it enjoyed considerable success there and also, from 1788, in Spain, where Iriarte's *Guzman el bueno* (Cadiz, 1790) began a Spanish vogue for melodrama. The most famous *Pygmalion*, the setting of Georg Benda (Gotha, 20 September 1779), used an almost literal translation of the French original, with just one sizable cut, and a few minor alterations and misunderstandings.

In spite of the priority of Asplmayr's and Schweitzer's *Pygmalion* settings, the perfecter of the melodrama in Germany was Georg Benda. If chance dictated that he should set J.C. Brandes's version of Gerstenberg's *Ariadne auf Naxos* in place of Schweitzer (who abandoned work on the project in favour of Wieland's opera libretto *Alceste*), he succeeded brilliantly in his task. His melodrama scores show remarkable flexibility and sustained musical invention. *Ariadne* was first given at Gotha (where the Seyler company had moved after the Weimar theatre had burnt down in May 1774) on 27 January 1775 (see illustration), two months after the same company had given Schweitzer's *Pygmalion*. Benda's *Ariadne* was immediately successful with public and professional musicians alike (it reached Paris in 1781, translated by Dubois and subtitled *mélodrame*); it was followed by *Medea* (text by Gotter) on 1 May of the same year, and his *Pygmalion* four years later. *Theone* also dates from 1779 (it was later revised as *Almansor und Nadine*); in it Benda used the singing voice (solo and chorus) as well as the speaking voice. Although he never again achieved quite the mastery or the success of *Ariadne*, and indeed wrote more operas and Singspiele than melodramas, the genre he had perfected was eagerly taken up by a host of contemporary and later composers, including Neefe, Reichardt, Zumsteeg, and many of the Mannheim musicians. Goethe's *Proserpina* (1775), set by

Charlotte Brandes as Ariadne in Georg Benda's 'Ariadne auf Naxos': engraving from the Gotha 'Theater-Kalender' (1776)

Seckendorff and later (1814) by Eberwein, is a well-known literary example. Some such works were called 'monodramas' (with one speaking part) or 'duodramas' (with two).

The first great composer to take up the melodrama was Mozart, whose enthusiastic comments on the Benda 'duodramas' he had heard (*Ariadne* and *Medea*) are to be found in his letters to his father from Mannheim of 12 and 24 November and 3 December 1778, and from Kaisheim on 18 December. Nothing survives of the full-length melodrama *Semiramis* that Mozart was to write in collaboration with Gemmingen (the repeated inclusion of it in the Gotha *Theater-Kalender* – in 1779 and 1780 as a work in progress, in 1781 and 1782 as a completed work – is almost certainly just one of the many mistakes contained in that publication). Despite his comment of 3 December 1778 that he was at work on it, he may not have progressed very far, once the chance of a specific performance had passed. Mozart did however write two fine and expressive examples of melodrama in the incomplete Singspiel *Zaide* of 1779–80, and included one in the contemporaneous music to *Thamos, König in Ägypten* (no.4). The two *Zaide* examples are among the most striking and extensive numbers in the score; the second leads into an aria.

Most 18th-century melodramas were serious in tone and classical in subject; by the early 19th century the range of subject matter was widening to include biblical and more general dramatic subjects, and comic melodramas began to be popular. In Vienna Kotzebue parodied Benda's *Ariadne*, and Wenzel Müller included comic melodramas, as well as more traditional serious examples, in some of his stage scores. Pugnani's *Werther* (*c*1790), predominantly a series of monologues for the eponymous hero, is an interesting example from Italy.

Beethoven's interest in the melodrama extended beyond the familiar example of the dungeon scene in *Fidelio*. There are melodramas in the incidental music to *Die Ruinen von Athen* and *König Stephan*, and it is the form he chose for Egmont's farewell to life, the penultimate number of the *Egmont* incidental music (which also includes pantomimic passages). Weber used melodrama in *Der erste Ton* of 1808 and in *Preciosa* as well as in *Der Freischütz*, and Schubert's *Die Zauberharfe* (D644, begun 1820) is an interesting large-scale venture which includes half-a-dozen melodramatic scenes, seven choruses and a romance that exists in two tenor versions and one for orchestra alone. Schubert also used melodrama in *Des Teufels Lustschloss* and in a sequence of three numbers near the close of Act 2 of *Fierrabras*; and he also wrote a lied-like melodrama for piano and speaking voice, *Abschied von der Erde* (D829, 1826). The genre was indeed particularly popular in Vienna, where examples from the works of Starzer, Paradis, Eberl and Winter may be adduced in addition to those already mentioned.

More generally, Berlioz's *Lélio* is an ambitious, if diffuse, example; Marschner included a particularly striking example in Act 2 of *Hans Heiling* (1833) in Gertrude's spinning-song, which progresses from melodrama, via wordless humming, to the song proper ('Des Nachts wohl auf der Heide', no.12). Mendelssohn, Schumann, Liszt, Wagner and Humperdinck all tried their hand. Indeed, there can hardly be a 19th-century opera composer who did not. It had been a feature of much French *opéra comique* of the Revolution period, used in works by Méhul, Isouard, Boieldieu and others, and notably Cherubini (*Les deux journées*, 1800). Rossini introduced a striking passage of melodrama in *La gazza ladra*, and there were other instances in Auber's *La muette de Portici*, Massenet's *Manon* and *Werther*, as well as in *Cavalleria rusticana*, *Pagliacci* and *La bohème*. Verdi found it convenient for the letter scenes in Act 1 of *Macbeth* and Act 2 of *La traviata*, as did Smetana similarly in Act 2 of *The Two Widows*.

The genre thrived in the 19th century in what is now the Czech Republic. Fibich was perhaps the most important and ambitious of all composers of melodrama, his *Hippodamia* of 1889–91 being a trilogy of full-length works; he had earlier written smaller examples for voice and orchestra or piano. For the use of leitmotifs as an aid to dramatic and stylistic cohesion he needed to look back no further than Wagner, though it is interesting to note that the very first important composer of melodramas, Fibich's compatriot Benda, had used an elementary form of leitmotif in his works. Čelansky, better remembered as the founder of the Czech PO, wrote several melodramas.

There has perhaps been an increase in the use of melodrama in the 20th century. Schoenberg used melodrama in a wide range of styles and works: *Gurrelieder* (1910–11) employs notated speech, *Pierrot lunaire* (1912) strictly notated, pitched speech that is nevertheless not to be sung, *Die Jakobsleiter* choral recitation in Sprechgesang. *Die glückliche Hand* (1910–13) employs relative pitches and precise rhythms, *Moses und Aron* (1930–32) has partly spoken choruses, and Moses' Sprechstimme is notated. There are other forms in *Kol nidre* (1938), *Ode to Napoleon* (1942), *A Survivor from Warsaw* (1947) and *Modern Psalm* (1950). Walton famously set Edith Sitwell's *Façade* for speaker and chamber ensemble, Busoni used unpitched rhythmic speech in *Arlecchino*, and Berg made various use of melodrama in *Wozzeck* and covered the entire gamut of styles of vocal delivery in *Lulu*. Richard Strauss used melodramatic passages in several operas and in *Enoch Arden* (1897). Composers of the inter-war years who exploited melodrama include Weill in *Happy End*, Stravinsky in *Perséphone*, Claudel and Milhaud in *Le livre de Christophe Colomb*, and Claudel and Honegger in *Jeanne d'Arc au bûcher*. More recent examples may be found in works by Britten and Henze, among others. A large selection of melodramas was readily available, published for domestic performance mainly with piano accompaniment, but some also with orchestra or chamber ensemble. The desire for experiment is constantly producing fresh ways (or the return to old ways) of combining the spoken voice with music (*see also* SPRECHGESANG).

PETER BRANSCOMBE

Melodramma (It.). A standard 19th-century term for opera with reference to text rather than music. It has no connection with the popular Victorian dramatic entertainment called 'melodrama', nor with MELODRAMA in the sense of words spoken over music, for which the Italian term is *melologo*.

JULIAN BUDDEN

Melody.

1. DEFINITION AND ORIGINS. Melody, defined as pitched sounds arranged in musical time in accordance with given cultural conventions and constraints, represents a universal human phenomenon traceable to prehistoric times; in some cultures, however, rhythmic considerations may always have taken precedence over melodic expression, as in parts of Africa where percussive sounds of undetermined pitch are employed in lieu of semantic communication, or as pacemakers for systematic forms of physical effort (whether in daily work or ritual dance), or both. Primary concerns with melody appear to have been related more specifically to verbal, in some instances pre-verbal, modes of social intercourse.

While the exact causal relationships between melody and language remain to be established, the broad cultural bases of 'logogenic melody' are no longer in question. Nor are some of its widely shared characteristics. Certain universal manifestations of the melodic impulse, for example, appear to be centred intervallically on the descending minor 3rd. Children's singsongs are a case in point, as are the calls and responses of Alpine shepherds. The most universal instance of pitch modification is, needless to say, the infant's first cry; and research in infant behaviour has shown to what extent pitch-differentiated pre-verbal utterances are employed systematically and effectively by infants to communicate physiological needs as well as affective states. If natural phenomena, such as birdsong and other forms of animal communication, are any indication at all, it should be possible in time to arrive at meaningful concepts concerning an evolutionary continuum from pathogenic to logogenic forms of pitched vocal behaviour.

2. EARLY HISTORY. The early history of melody, however, though of unquestioned scientific interest, in no way affects the phenomenology of melody as it emerges from the annals of recorded history, both written and oral. Historically, the early development of melody may well have proceeded, as Szabolcsi suggested, from simple one-step voice inflections via conjunct trichordal patterns to intervallic combinations of minor 3rds and major 2nds. The superimposition of two such patterns would account for the countless pentatonic melodies found geographically from China to Appalachia and historically from Gregorian chant to Debussy. In all probability, the combination of the simplest one-step inflection with the basic singsong interval owes its broad appeal not only to the fundamental qualities of its pitch components but also, and more decisively, to its potential for variation through configurational rotation of its pitch content. The 3rd-cum-2nd, after all, lends itself to retrograde and mirror inversion without sacrifice of its quartal contour. When two such quartal patterns are joined disjunctively or conjunctively, i.e. either separated by a 2nd or in such a way that the highest note of the lower and the lowest note of the upper trichord overlap, the motivic possibilities are maximized to the point where pure pentatonicism can provide an adequate scalar framework for some rather sophisticated melodic structures. Indeed, if a motif is defined as a minimum of melodic substance susceptible to creative manipulation in a given aesthetic context, then pentatonicism would seem to offer matchless opportunities for motivic elaborations of the 4th, the acoustically 'perfect' interval that determines the tuning of so many instruments as well as the structural division of the octave. Empirically speaking, it is clear that pentatonicism satisfies a broad range of musical needs from basic logogenic progressions to the most varied treatments of motivic nuclei in sacred monophony, in Renaissance polyphony and beyond, wherever and whenever purely melodic forces have prevailed. The underlying pentatonicism of such music is admittedly not always easily recognized, if only because it often affects the melodic infrastructure more directly than the surface design. It nevertheless remains true that, in the absence of Western tonal harmony, quartal melodic patterning, with or without subdivisions of the 3rd-cum-2nd variety, has spawned the bulk of melodic activity from the dawn of history and the four corners of the earth.

Ever since Hornbostel, Sharp, Kodály and Bartók suggested early in the 20th century that quartal, if not always outright pentatonic, thinking may be a worldwide phenomenon, pertinent data have been collected among the most 'primitive' of tribes as well as in the most complex of musical cultures and sub-cultures. Wiora, who has attempted to document music in the late palaeolithic hunting civilizations, pointed to melodies based on disjunct 4ths with an occasional passing or

auxiliary note among ethnic groups as disparate as Bushmen, Lapps and Menominee Indians. The descending trichord bounded by the interval of a 4th appears in the musical recitations of the ancient Hebrew community of Djerba between Passover and the Feast of Weeks (Pentecost) and, almost identically, in the Kyrie of the Roman Easter Vigil, one of the oldest of plainchant melodies. In Hungary, even relatively extended folksongs belonging to the 'oldest layer' favour the descending pentatonic 4th. The Hungarian case, which has been particularly well researched thanks to the work of Kodály and Bartók, also illustrates the effective interaction of linguistic and purely 'musical' considerations in the formation of characteristic melodies. The declining pitch lines, both sudden and gradual, so typical of the spoken language, are reflected in the motivic and structural tendencies of Hungarian melody from ancient times to the present.

Melodic descent, to be sure, is among the most 'natural' of musical procedures because it requires no 'artificial' generation of melodic energies. Its pathogenic archetype, as Sachs has shown, is the 'tumbling strain' where an initial high pitch provides a melodic diving-board, as it were, permitting melodic gravity to take charge. Given the law of melodic gravity, extensions of the 'tumbling strain' into relatively complicated anticlimactic melodies are understandably rare. By the same token, it may well have been an awareness of 'natural' melody that caused the ancients to think of musical systems as descending rather than rising. Whatever the case, melodic descent permeates much of the oldest known music irrespective of geographic origin. It would almost seem that, wherever music became an intrinsic condition of life, certain common melodic procedures were necessarily adopted, because they satisfied basic physiological and biological requirements, if not the aesthetic imagination *per se*.

3. General concepts. Etymologically, melody combines the ancient Greek terms for poetic order and song (*melos*, *ōtē*). That *melos* had early physiological associations, before it entered the realm of aesthetics, is quite in line with the characteristically Greek conception of music and poetry as organic mirrors of human, indeed cosmic existence. It was during the European Middle Ages that the Latin adaptation *melodia* assumed the specifically musical connotations that it retains in modern vernacular usage. Tinctoris, in the mid-15th century, no longer hesitated to identify *melus* with *cantus*, and most subsequent definitions similarly associated melody with song, though inevitably from varying stylistic perspectives. Rameau, in the 18th century, regarded melody as a product of harmony; but Rousseau claimed priority for autonomous melody. Hegel, in the early 19th century, thought of harmony and melody 'as one compact whole, and a change in the one necessarily involves a change in the other'. For the acoustician Helmholtz, melody was the incarnation of motion in music, expressed 'in such a manner that the hearer may easily, clearly, and certainly appreciate the character of that motion by immediate perception'. Perception was also the principal concern of Hanslick, who saw in melody the 'archetypal configuration of beauty' ('Grundgestalt der Schönheit'). Hanslick's Apollonian viewpoint was, of course, diametrically opposed to the Dionysiac ideal of 'unending melody', expounded by Wagner, who postulated 'an ordered series of quasi-intellectual, unfulfilled speech-sounds – indirectly representative, concentrated as image but not yet as immediate, inevitably true expression ... directly addressed to feeling, unerringly vindicated and fulfilled'. When, in the mid-1920s, Watt applied Helmholtzian physics to a comparative study of the intervallic properties of selected Schubert songs and Amerindian melodies, he reached the post-Wagnerian conclusion that there was

> no reason why a melody should ever stop. Every interval carries its motion farther along, so that another group of conditions must exist which modify and arrest its motion. One very natural condition of arrest is the ordinary limit of memory. No doubt the lengths of primitive melodies, if not of all melodies, are largely determined by this. But this is a condition of ending, not of arrest of motion in the musical sense.

A few years earlier Thurstone, another student of non-Western music searching for universal answers, had defined 'the essence of melody' as 'unity in the perception of pitch variation'. Consonance and dissonance, those perennial bones of theoretical contention, were ruled out as criteria for 'melodic unity'. The same could be said up to a point for harmonic considerations generally. For even in the essentially triadic melodies associated with functionally tonal music, harmony provides at most 'an inner skeleton on which varying contours may be draped' (Watt). Anyone attempting to appreciate the monorhythmic oboe melody in the Andantino of Tchaikovsky's Fourth Symphony in terms of its harmonic infrastructure would not only miss the point of its finely chiselled phrasing; seduced by its seeming simplicity he might well misunderstand the composer's rather complex harmonic intent. 'Melodic unity' is configurationally speaking an intrinsic psycho-acoustical function of melodic generation in a given historic-cultural context and must in the end be experienced as such.

4. Structure and design. The character of a given melody is determined by its range or relative position within the total pitch continuum, its ambitus or pitch spread, its contour or linear design, and its syntactic structure with respect to elements of contrast and repetition, variation and development. The smallest melodic-rhythmic unit, the motif, requires a minimum of two distinct pitch levels. Syntactically, motivic materials are arranged in phrases, the general characteristics of which are determined by the specific melodic idiom. Thus, in contrast to the larger, songlike melodic entities, which as a rule eschew a great deal of motivic differentiation, instrumental themes of the type associated with Western music from the middle of the 18th century onwards favour sharply profiled, contrasting motifs arranged in an open-ended fashion to allow for their subsequent structural development. As Schoenberg once put it, 'a melody can be compared to an "aperçu", an "aphorism", in its rapid advance from problem to solution ... a theme resembles rather a scientific hypothesis which does not convince without a number of tests, without presentation of proof'. A properly conceived melody is thus by and large self-sufficient, whereas a good theme generates energies needed for the formation of larger entities that exceed structurally and expressively the apparent potential of its motivic substance. But self-sufficiency is not necessarily bound to sectional repetition, as has often been asserted. None would wish to deny that note-for-note repeats of structural sub-units have been characteristic of Western song at least since medieval times. Such perennial patterns as *AAB* and *ABA* furnish ample evidence to this effect. By the same token, there is nothing

to justify sectional repetition as an absolute criterion of melodic design. Schoenberg's work alone offers ample proof to the contrary, while demonstrating at the same time the structural importance of transposed or varied recurrences, or both, of motivic materials of the kind that animate so much of plainchant or, for that matter, any number of non-Western repertories. In Western composition, sectional repetition became virtually identified with melody conceived in harmonic tonal terms. It is, therefore, a hallmark of the Classical and Romantic eras. But already Berlioz, not to speak of Wagner, avoided untransposed sectional repetition in some of his most haunting melodies, perhaps because he, more than any of his contemporaries, had begun to think of melody more as a reflection of a psychological 'stream of consciousness' than of man's rational perception of 'reality'.

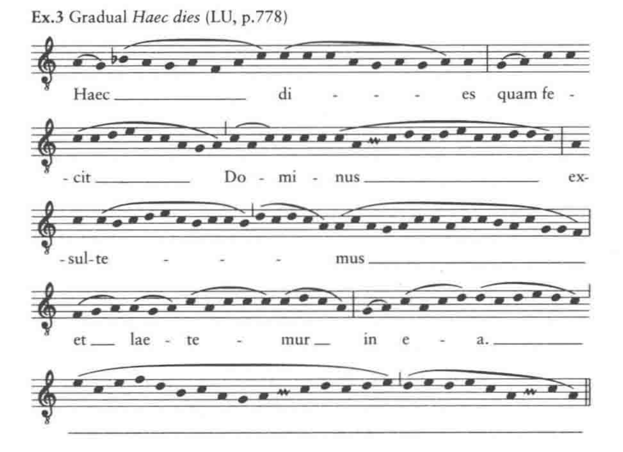
As for thematic matter, the multi-motivic designs of Haydn, Mozart and Beethoven, geared to dramatic conflict, superseded more than a century of mono-motivic incipits ('developmental themes' in Kurth's terminology) that provided the decisive initial spark for considerable amounts of Baroque instrumental music. But if the early 18th century had thus managed to imbue even the most innocuous melodic-rhythmic stuff with a salutary dose of kinetic energy, the Romantic reaction to the dialecticism of the Classical masters offered entirely new mono-motivic opportunities. The cello melody in the Intermezzo movement of Schumann's Piano Concerto, not to speak of the closely related opening subject of Brahms's Fourth Symphony, reveals the previously unsuspected affective and structural potential of a single iambic two-note motif at the behest of lyrical genius. Such uniquely 'stripped' tunes notwithstanding, the harmonic age generally practised the art of melodic 'drapery' with a gusto exceeded only by that which inspired certain 17th-century keyboard works or that with which South Asian musicians go about their ever surprising raga improvisations. Meanwhile, monophonic chant and modal polyphony, the largest and most influential Western reservoirs of pure melody, were waiting in the wings of history, ready to burst on to a musical scene that sought melodic salvation increasingly from 'exotic' sources, including the quartal and modal folktunes of Russia.

5. Sacred monophony. Theoretically at least, the dogged adherence of plainchant to its ancient roots must have been the motivating force behind the plagal modes centred on a *finalis* a 4th above the lowest pitch in the scalar order. Similarly, the prevalence of recitation tones (tenors) a 3rd above the *finalis* suggests the genetic significance of the descending 3rd in the melodic practices of early European Christendom. Where, as in the case of the 4th, or Hypophrygian, mode, the tenor occurs instead a 4th above the *finalis*, the mode may have been generated by two conjunctive pentatonal 4ths. The 'authentic' recitation pitch, on the other hand, generally a 5th above the *finalis* (except for the 3rd mode, where practical considerations dictated a minor 6th), points to disjunct quartal origins. Quartal movement as a fundamental melodic resource is illustrated by the antiphonal rendition of Psalm cxlvii, where the recitation pitch is brought into focus by lower and upper auxiliary notes, then confirmed configurationally by a rapid descent to the *finalis* a 4th below (ex.1).

Ex.1 Psalm cxlvii (LU, p.202)

Careful analysis is likely to dispel any lingering doubts concerning the pentatonal foundations of plainchant. The Easter sequence *Victimae paschali laudes*, based on a metrical text from the first half of the 11th century, supplies a perfect model for the sophisticated manipulation of the 3rd-cum-2nd motif (ex.2). Its opening phrase

Ex.2 Sequence *Victimae paschali laudes* (LU, p.780)



features in typical chant fashion the minor 3rd flanked by upper and lower auxiliary notes. The penultimate E, which poses at first as a mere passing note, assumes structural functions in the second phrase, where it anchors the trichord A–G–E. The transposition of the original pattern to the upper 5th is followed by a move in the opposite direction to the 4th below, in conformity with a prominent melodic procedure that recalls the gradual descent of a glider released in mid-air: taking full advantage of air currents it manages to rise above the point of release; only then, lacking propulsive power, it descends gently but inevitably to the take-off level or lower altitudes.

The third section, starting at the lowest pitch level, telescopes two occurrences of the rising 3rd-cum-2nd motif, and in so doing regenerates a goodly amount of melodic energy. This ingenious, intensely dynamic procedure receives further impetus from a device that is common to a wide variety of melodic styles, because it effectively restores pitch balance in the wake of a more or less drastic drop: once the downward leap has 'hit bottom', an immediate directional reversal propels the melodic line up and well beyond the original jump-off point, much as a skilful trampoline gymnast is projected ever higher. In the realm of melody even the law of gravity bows to aesthetic priorities. As the trampoline effect shows, any sudden change in direction must be quickly redressed if melodic unity is not to suffer.

By the end of the first millennium, plainchant melody had evidently recognized the structural weight of the melodic *finalis* in a manner comparable only to the magnetic force of the harmonic tonic centuries later. Tentatively at first, but soon inescapably, Western goal-orientation led to directional diatonicism. In the Easter sequence, the final complete section summarizes, as it were, all the basic melodic forces at work in this seemingly simple yet compositionally intricate tune. After an initial repeat of the second verse, the melody ascends once more to the high C in dramatic preparation for the trampoline jump from low C to the recitation pitch A just before the

Ex.3 Gradual *Haec dies* (LU, p.778)

final decline. A last allusion to the initial motif reconfirms the *finalis* in the 'Amen Alleluia' coda.

With respect to total structure, the gradual rise of the first verse is properly balanced by the anti-climactic design of the second section with its elaborate descent from the highest point of the melody, which in turn prepares the subsequent trampoline effect. In these and many other ways the Easter sequence is the acme of melodic efficiency and effectiveness, as is plainchant at large, perhaps because it feeds on melodic energy unadulterated by strong rhythmic intervention and unencumbered by harmonic commitments. Though necessarily emphasizing conjunct motion in keeping with its contemplative aesthetic, plainchant's basic melodic principles remain as valid as they were at a time when the church controlled virtually all learned European music. The principle of melodic compensation by contrary conjunct motion, for one, has never ceased to affect melodic phraseology at all levels. The contingent primacy of the structural arch, on the other hand, is in no way obviated by the many melodic elaborations of the 'tumbling strain' or, for that matter, a number of climactic melodies with *finales* well above the initial pitch. In liturgical practice, such relatively infrequent types will on occasion form subdivisions of larger melodic complexes which, as cumulative entities, display features that clearly comply, at least in general terms, with the law of directional compensation.

Unlike the syllabic Easter sequence, the melismatic gradual *Haec dies* gives full rein to pathogenic melodic energies, though inevitably within the confines of sacred aesthetic convention (ex.3). Structurally unfettered by definition, such compositions sacrifice motivic tightness at the altar of vocal virtuosity, thriving instead on ornamental devices, including scalar and sequential passages, that tend to obscure any pentatonal remnants. But if the virtuosity of solo singers was a contributing factor in the promotion of medieval diatonicism, its principal source of encouragement was no doubt secular practice, especially in dance music, where choreographic considerations dictated rhythmic regularity from the start and with such marked consequences for all aspects of melodic articulation.

6. Metre and tonality. Nowhere is this more evident than in the monophonic secular dance music of the outgoing Middle Ages, as represented by the well-known *estampie Kalenda maya* or a typical dance-song like Moniot d'Arras's *Ce fut en mai*. Both are clearly in the major mode, the *modus lascivius* of medieval theory; both favour the tonic major triad and generally betray harmonic tendencies that are strengthened by rhythmic periodization which in turn is mandated by the underlying dance figures. Periodization of one sort or another was also a feature of the dance-determined polyphony of the same period, specifically the 12th-century clausula and the 13th-century French motet. And if melismatic organum can be said to reflect, like melismatic chant, the pathogenic 'outpouring of the soul' that characterizes, for example, the freely unfolding *taqāsīm* of Middle Eastern music, then the measured or discant style may well have been suggested by the strictly metric portions which follow the *taqāsīm* and provide often long delayed, and hence welcome, kinetic relief. The celebrated rhythmic modes, in turn, may have been the outcome of classicistic rationalization on the part of Christian apologists embarrassed by the veritable dance mania that swept through Europe in the later Middle Ages. From then on, at any rate, rhythmic forces, whether metrical or not, left their lasting imprint on any number of melodic types, and there can be no doubt that the seesaw relationship of rhythmic-harmonic and rhythmic-melodic factors vying for priority was a crucial factor at every stage of eight centuries of stylistic transformation. After all, the late medieval predilection for metrical organization, though seemingly superseded by the overriding melodic concerns of modal polyphony, remained alive in the Italian frottola as well as the French chanson and other dance-conditioned vocal and instrumental forms.

The prolonged struggle between these two basically antagonistic melodic-rhythmic orientations was stalemated throughout much of the 17th century. But before long, rationalistic criteria began to affect aspects of melodic organization no less than the continuing debate about melody in the hierarchy of musical values. Viewed in this light, Rousseau's promotion of popular melody, especially of the Italian variety, and Rameau's discovery of the 'natural' laws of functional harmony appear anything but incompatible. On the contrary, together they provided the intellectual underpinning for the harmonically conceived, periodically structured melodies of the so-called Classical era. The polyphonic heritage of the Renaissance, as codified in Zarlino's rules for composition based on melody, characteristically assumed a central position in the systematic teachings of 18th-century theorists from Fux and Martini to Albrechtsberger, the tutor of Beethoven; and Beethoven could say of himself that, unlike his predecessors, he had been born with the obbligato accompaniment. Significantly, it was Beethoven who, in his last quartets, unleashed once again the full force of pure melody as the prime carrier of musical structure and in a manner that conveys the spirit, if not always the letter, of the principles of motivic manipulation in plainchant and modal polyphony. Beethoven's ever-expanding musical universe, to be sure, reflected more directly a lasting preoccupation with J.S. Bach. Whatever his principal inspiration, the later Beethoven refined earlier methods of motivic recycling in ways that were to revolutionize the ecology of music, if only because the melodic materials saved served to generate ever new melodic energies. In this respect Wagner approached the ideals of the later Beethoven more closely than Brahms, who responded rather readily to the homophonic 'middle period' Beethoven. By the same

token, it was because he could not and would not abandon the basically triadic-metric traditions of Italian folk music that Verdi emerged as Wagner's natural opponent.

7. Harmonic melody: instrumental-vocal. The harmonic era, which gave birth to musical drama and to instrumental music as a functionally autonomous art, unwittingly came to rely heavily on melodic figuration, Watt's 'drapery', i.e. the melodic tissue that connects and covers the intermittent supports furnished by the harmonic substructure. Figuration had been a favourite device of early organists who developed the idiomatic 'coloration' techniques that typify the 15th-century Faenza Codex, Conrad Paumann's *Fundamentum organisandi* and many 16th-century keyboard tablatures. The history of vocal music, too, is replete with characteristic instances of melodic coloration, from the more florid types of plainchant and early polyphonic genres, especially those of the Italian Trecento, to the sacred polyphony of the late 16th century – which was often rendered with improvised figurations as a concession to contemporaneous monodic practices involving diminution, whether in the melodic enhancement of an extended pitch or elaborate melodic fillers bridging the outer limits of large intervals. With the development of 'florid song' in Italian opera, improvised figuration became the special province of the virtuoso singers who thus adorned the da capo portions of late 17th- and early 18th-century solo arias.

The essentially decorative function of so much vocal music inspired by the Italian Baroque inevitably required outright logogenic complementation, at least in opera, if any plot continuity was to be maintained. Bel canto melody, therefore, had its logogenic counterpart in the form of recitative, both simple and accompanied. Simple (*semplice*; or 'dry', *secco*) recitative reduced the pitch substance by and large to what was needed to render musically the most typical of speech inflections. Accompanied (or obbligato) recitative, on the other hand, assumed increasingly dramatic stances, as attempts were made to compensate for the largely lyrical nature of the vocal display pieces. In so doing, accompanied recitative developed an often highly expressive melodic idiom that was to have considerable influence on both instrumental music and musical drama, culminating in the work of Wagner. In accordance with its dramatic function, accompanied Italian recitative was characterized by intervallic leaps and generally unpredictable melodic behaviour. Structurally, it remained open-ended, like most of the action it related, in contrast to the closed, for the most part ternary, forms of the intervening arias. Moods and reflections that were not easily rendered in either recitative or aria style, were relegated to an intermediary style, the arioso, which combined features of the logogenic and pathogenic or decorative types of melody. At the same time, the growing desire for 'natural' musical expression, which caused the 18th-century enthusiasm for comic opera, also produced song types that eschewed the decorative element altogether in favour of an often folksy tunefulness. By the time Mozart achieved his unique operatic synthesis, he was able to draw not only on various Italian conventions but also on *tragédie lyrique* as transformed by Gluck with due regard to its deeply ingrained logogenic traditions – a rich melodic palette indeed, embracing the 'driest' of recitatives as well as the most florid of figurated song (as in the Queen of Night's aria in *Die Zauberflöte*).

Instrumental figuration has been a perennial favourite of composers of variation sets, particularly for keyboard, since the 16th century. The melodies underlying such variation sets are often referred to as 'themes'. But if Schoenberg was correct in his proposition that 'a theme is not at all independent and self-determined ... it is strictly bound to consequences which have to be drawn, and without which it may appear insignificant', such careless usage can hardly be said to benefit conceptual clarity. Variation themes, after all, must be perfectly balanced, self-sufficient melodies tending almost by definition 'toward regularity, simple repetition and even symmetry' (Schoenberg). In fact, composers of variations could indulge their taste for figuration and coloration only as long as they were able to rely on a firm melodic frame of reference. Generally speaking, the 'theme and variation' issue is typical of the terminological confusion that has always surrounded melodic matters. During the Middle Ages such Latin terms as *harmonia*, *cantus* and *melodia*, even *modulatio*, were used interchangeably; the same holds for motif, phrase and theme in more recent times. Mozart was no longer alive when Galeazzi in his otherwise important description of the sonata form could declare with impunity that 'the motif is nothing but the principal idea of melody, the subject, the theme, one might say, of the musical discourse, and the whole composition must revolve upon it'.

A subject, to be sure, is not necessarily a theme, even though an entire composition may indeed revolve upon it. About the middle of the 16th century Zarlino could say with good cause that 'in every musical composition, what we call the subject is that part from which the composer derives the invention to make the other parts of the work, however many they may be'. He went on to explain that such a subject may be the composer's own or somebody else's invention 'that it may be a tenor or some other part of any composition you please, whether of plainsong or of figured music', and that it may be taken over in its original form or in a novel adaptation. But a polyphonic subject, treated in accordance with the rules of modal counterpoint, by necessity had qualities that were incompatible with the requirements of an 18th-century theme designed not only to raise compositional problems but to ensure their resolution. If the head-motif of a late 15th- or early 16th-century motet can be said to behave at all thematically, it does so at most in the sense of an instrumental incipit, like the rising triad in long note values which sparks off the first movement of Bach's E major Violin Concerto.

In the absence of intrinsic motivic dialectics of the dramatic type, thematic development of the Classical variety was precluded in either case. That is not to say, of course, that the nature of motivic relationships, let alone of motivic substances, has remained unaffected by the stylistic vicissitudes of a world dedicated to 'progress'. The opening bars of Mahler's Second Symphony syncretize the incipit and dramatic types in a manner that echoes the 'Sturm und Drang' rhetoric of some of the keyboard works of C.P.E. Bach, composed nearly a century and a half earlier. After 1900 rhetorical gestures became identified not only with the melodic idiom of 'expressionism' but, in association with neo-Baroque motoric energies, also with the 'neo-classicism' of the early 1920s.

8. Melody and scale. The systematic investigation and discussion of melodic phenomena has inevitably been

affected over the centuries by sundry historical perspectives and changing stylistic contexts. Still, surprisingly little has been done to sort out a host of conceptual ambiguities and vague definitions in the 40 years since an alarmed Hindemith decried the longstanding systematic neglect of melody, the element through which, in his view, the Western composer had always revealed himself most meaningfully. Already Parry, at the beginning of the 20th century, had warned 'against the familiar misconception that scales are made first and music afterwards'. A few years later Hornbostel published his brilliant article on 'Melodie und Skala'. But the myth of scalar priority has continued to distort the theoretical treatment of melody. None would wish to deny, to be sure, that certain types of musical instruments, whether of the Indonesian gamelan or the Western keyboard variety, have had prescriptive effects on pitch selection. Leaving aside the admittedly important issue of fixed tuning, however, scalar considerations can hardly be said to place more than very general constraints on melodic activity, if only because the scales themselves are derived from existing melodic practices. The image of the scalar tail wagging the melodic dog would seem grotesque, were it not for the implied reminder of the extent to which musical notation, with all its blessings, has narrowed Western man's understanding of a cultural phenomenon that is always aural in essence and rarely if ever graphic.

9. STYLE AND FUNCTION. Broadly speaking, melodic styles are identifiable, like spoken languages, by their vocabulary, grammar and syntax, as well as by idioms related to function and social class. Structurally, melody may be akin to freely evolving prose or the measured balance of poetry. It may comply with harmonic requirements or obviate them. It may suggest certain forms of physical behaviour or, for that matter, rational thought; then again, it may reflect the affective complexities of the subconscious. Above all, as a social product, melody is part and parcel of the culture or sub-culture to which it owes its existence. Melodic styles, therefore, share not only specific national characteristics; they also respond to a variety of social and functional needs, as Johannes de Grocheo observed some 700 years ago when he divided 13th-century French practice into *musica vulgaris*, the popular monophonic music of his time, *musica mensurabilis*, the measured learned music of the intelligentsia, and *musica ecclesiastica*, the music of the church, which drew upon elements of both the popular and learned genres. More recently, Mozart (in the ballroom scene of *Don Giovanni*) and Berg (in the tavern scene of *Wozzeck*) have dealt with different social classes in characteristic melodic-rhythmic terms.

Melodic expression, in the sense of melodic associations with non-musical subject matter, whether purely emotional, physical or 'natural', has been an intrinsic (though by no means uncontroversial) feature of Western music at least since the early Renaissance, when so many ancient concepts, the Platonic notion of ethos included, re-entered the secular consciousness of Europe. Textual allusions of a directional nature thus found literal melodic representation both in Renaissance polyphony and the monodic art that took its place precisely for the sake of ever greater melodic expressiveness. Programmatic symbolism accounts for triadic lines in the battle and hunting chansons of Janequin and for chromatic alterations in late 16th-century Italian madrigals, for the siciliana movements in 18th-century Christmas concertos and for fanfare patterns in the symphonies of Beethoven. In the 19th century some historical references to older melodic styles were allowed to shape the 'contemporary' idiom. The late 17th-century passion for affective-rhetorical minutiae produced a whole array of appropriate melodic formulae as well as a complex set of rules for their 'correct' application, codified most successfully by Mattheson and known in Germany as the 'doctrine of the Affections'. By the same token, if Monteverdi defended his *stile concitato* with the words of Plato, calling for melodies worthy of 'the utterances and the accents of a brave man who is engaged in battle', Mendelssohn thought of his celebrated Songs without Words as fit only for ladies.

But political movements, too, have left their imprints on specific types of melody. The tunes of the Geneva Psalter and the chorales of Martin Luther and his followers did not merely have religious connotations; their measured rhythms and sharp melodic profiles also mirror the sense of dignity with which the 16th-century reformers pursued political goals of well-nigh universal significance. Similarly, the songs of the French Revolution, exemplified by the *Marseillaise*, with their dotted rhythms and rising triadic patterns, not only sparked the enthusiasm of the thousands who placed their trust in the new republicanism; they also became cherished models for the fighting-songs of international socialism which produced a repertory recognized as such all over the world. And in the USA the hymn tunes of the pioneers who settled the West generations later inspired the hopeful songs of the Civil Rights movement. In other words, melodic styles have rarely been mere figments of the abstract aesthetic imagination. In Western civilization, no less than in Africa and elsewhere, melodic idioms have often been functionally determined and associated with clearly defined ideas and concrete activities. Surely, when Beethoven decided to open his violin concerto with a march tune supported by military drum rhythms, he did so with the knowledge that such an obvious reference to the Napoleonic war machine and the mental anguish it caused would be clearly understood, if only because the general procedure had by then become familiar through the violin concertos of some of his immediate French predecessors.

Similar considerations pertain, needless to say, in the folk realm as well, where songs of mourning, spinning-songs, and others associated with typical activities or social functions may actually be members of distinctive tune families. At the very least, their functional intent is reflected in identifiable melodic terms, if not always common structural characteristics. The outside observer, however, is bound to think of folksong by and large in geographic-cultural terms. Thus he will recognize that central Europe and parts of France and Italy represent triadic strongholds, while Russia is attached to quartal melodic patterns. In southern Europe, including Spain and Sicily as well as Albania and parts of Greece and the former Yugoslavia, he will sense a common Mediterranean heritage in the prevailing taste for augmented 2nds, not to speak of the general predilection for descending melodic patterns or, for that matter, intonational idiosyncracies that would be considered intolerable in the triadic north.

10. MELODIC TEXTURE. A given melodic style, let alone the texture of a specific tune, necessarily involves every aspect of musical order, not merely single pitch arrange-

ments. Thus periodic structure, or melodic patterning in terms of properly balanced sub-units, was conditioned as much by textual requirements as by kinetically determined dance rhythms and the rise of functional harmony. Typically the melodic root interval, the 4th, was forced to surrender to the harmonically derived 5th, once melodic tension *per se* had begun to yield to harmonic concepts of consonance and dissonance. Neither was the 3rd-cum-2nd motif capable, under the circumstances, of withstanding the frontal assault of thirdal chains. To compensate for the resulting decline in pure melodic energy, rhythmic devices assumed unprecedented powers of motivic definition. The beginning of Beethoven's Fifth Symphony is often cited in this connection, and there can be no question but that during his 'middle period' Beethoven pushed the rhythmic potential of functionally harmonic melody to unsuspected extremes, indeed beyond the point of no return, considering the pre-eminence of melodic-polyphonic textures in his last quartets. Historically, however, the Beethovenian phenomenon, though unique within the specific context of early 19th-century music, was but one of many recurring manifestations of the fundamental dichotomy of melody and harmony – a traumatic issue in Western music that has elicited the very best from superior musicians ready to meet the challenge as a unique opportunity to achieve the well-nigh impossible yet, by the same token, has played perpetual havoc among those who have brought mere talent to their tasks. The history of music is staked out by the stylistic landmarks left behind by the few who thus survived the long trek from medieval monophony to 20th-century serialism.

Among the exceedingly limited number of modern scholars devoted to the historical or the cross-cultural study of melody, or both, Lach, in a pioneering dissertation published in the early 20th century, relied heavily on visual, especially architectural, analogies. Mindful of the age-old technique of melodic-rhythmic diminution or coloration, he distinguished between major structural (architectonic) components and ornamental 'melic' forces, corresponding to the weight-carrying structural skeleton of a building as opposed to its readily accessible surface characteristics. Lach also believed that certain types of 'primitive' melodic patterning reflected mental processes akin to those which may, in the visual domain, account for the more elementary combinations of such primary elements as dots, dashes and circles. The complex musical structures identified with at least 1000 years of Western composition, on the other hand, reminded him of the great mosques of Persia and Turkey as well as the Gothic and Baroque churches of Europe, where intricate design and sophisticated engineering went so happily hand in hand.

Whatever the merits of some of his more eccentric points, at least by implication Lach focussed long-overdue attention on the crucial analytical problems of melody as form in relation to structure as process. That he should have conceived his theory of melodic infra- and super-structures at a moment in history when non-Western, particularly Asian music in all its splendid variety, had begun to penetrate the aesthetic consciousness of the European vanguard (*Der blaue Reiter* appeared in 1912), was anything but accidental. By 1913 closed forms had become vestiges of the past, melodically, rhythmically, even harmonically. Gregorian chant, as restored by the monks of Solesmes, was not only the subject of a papal *motu proprio*, it had long since been recognized as the ultimate source of pure melody by an entire generation of French composers identified with the Paris Schola Cantorum. Debussy, for his part, had jettisoned the harmonic strictures of the musical academic world in favour of a freely evolving melodic flow inspired by the literary orientalism of symbolist poetry no less than the musical exoticism of Balakirev and Rimsky-Korsakov and the Javanese and Annamite revelations of the Paris exhibition of 1889. In central Europe, 'open' melodic patterning was a conditioning factor in Schoenberg's 'emancipation of dissonance' as well as his abiding concern for musical cohesiveness, stimulated, interestingly enough, by intensive studies of Bach and Mozart. With melody thus restored to its once dominant position in European compositional practice, reassessments from different analytical-historical perspectives were merely a matter of time. Four years after Lach, Kurth came forth with his epochal treatise on the foundations of linear counterpoint which draws general conclusions regarding the laws of melody from the specifics of Bach's style. Eventually, in his last major work, *Musikpsychologie* (1931), Kurth made configurational perception the ultimate touchstone of melodic experience.

In contrast to Lach's visual-architectonic approach, which emphasized the static-structural aspects of melody, Kurth found analogies in the discoveries of modern science for his discussion of melodic energy; and unlike Lach, who documented his theories with melodic excerpts from non-Western cultures on the one hand and, on the other, variation-prone eras and styles in the history of Western music, Kurth based his observations on music that represents Western teleology at its motoric musical best. Artistically, his ideas about musical energy generation had contemporaneous parallels in the neo-Baroque works of Stravinsky, Schoenberg and Hindemith, who emulated Scarlatti and Bach with melodic incipits designed to project tightly controlled groups of closely related ideas into the musical time-space continuum where they are sustained and if necessary reinforced by recurring motivic boosts, emanating as a rule from transposed restatements of the incipit or an appropriate variant. The resulting melodic lines typically reach their climax about three-quarters of the way along, when their energies begin to be spent. The completed melodic course of such motoric music is reminiscent of the well-known projectile curve where a forceful yet smooth ascent is followed by a rather rapid decline. Melodic projectile curves of this sort retain a certain expressive neutrality. They are neither dramatic nor specifically lyrical. Instead, they appeal to one's inherent sense of musical movement, especially when, as in Bach's music, rhythm and metre are perfectly synchronized to avoid any suspicion of periodicity. Periodization, of course, had sacrificed freely unfolding rhythm to the mandates of dance and metrical poetry, and had done so justifiably also in the interest of rational organization conducive to immediate appeal and ease of perception. 19th-century textbook writers, unfortunately, made periodization the principal basis for their broad generalizations concerning the essence of melody at large, the growing testimony of history to the contrary notwithstanding. Composers of the first rank, though, were quick to recognize the 'tyranny of the bar-line' as an additional threat to melody struggling against the paralysing effects of tonal harmony. Responding with alacrity to the

rediscovery of Bach and Palestrina, among other masters of the past, they proceeded to balance periodic and non-periodic elements in their melodic idiom to the point where, in Beethoven's last quartets, polyphonic-kinetic forces take hold of the harmonic-metric sub-structure in a manner that anticipates not only the mature Wagner but also Schoenberg.

Prose-based music for the stage, meanwhile, required strong motivic contrasts if it was to do justice to swift dramatic change. The German lied, on the other hand, favoured the use of motivic variants or, at the very least, motivic family relationships in keeping with its subtle poetic moods. Lyrical melody caters to conjunct motion, just as its dramatic counterpart thrives on the sensation of tension associated with intervallic leaps. Dramatic idioms are also marked by higher degrees of rhythmic irregularity, since rhythmic analogy and metric equivalence tend to convey a sense of repose.

The opening theme of Mozart's Haffner Symphony, no.35 in D (ex.4), furnishes an excellent example, because it mirrors in instrumental terms the same kind of dramatic situation that motivates the first duet in the opera *Don Giovanni*. Here as there, three basic moods are represented by three sharply differentiated melodic patterns heard in immediate succession. In the symphony the first idea takes up the initial five bars, while the second idea occupies the next four, and the third concludes what is, oddly enough, a 13-bar melody. These three components do, however, share a march-like rhythm first heard in bar 4. Thanks to the ingenious use of this persistent motivic pattern, which undergoes significant changes in meaning as its relative position shifts within the melody as a whole, contrast and continuity are kept in perfect balance. The explosive energy emanating from the long initial low D prepares the startling effect of the octave leap, but it also accounts for the irregular completion of the melody in bar 13. The opening note thus fulfils a multiple function like that of the motivic incipit of Bach's E major concerto. But Mozart's theme is instructive in other ways as well. The melodic infrastructure of the first five bars consists of a conjunct descending 4th. This ubiquitous pattern is, of course, equally familiar from lyrical compositions like the celebrated 'Largo' in Handel's *Serse*. But there the conjunct descent is solemnly straightforward and immediately followed by an equally unadorned retrograde. That this directional reversal manages to overshoot the original pitch level is due to a combination of the law of melodic compensation and the 'trampoline effect'. Mutual reinforcements of this sort can trigger even more drastic reactions to a relatively rapid descent. Handel, anxious to maintain a lyrical mood, prolonged the retrograde motion but slightly. Mozart's dramatic leap, on the other hand, unleashes compensatory forces that are further energized by the ever-so-brief shortening of the long note values. Instead of pursuing the sequential descent of the melodic line all the way, he inserted the march motif just ahead of the long trill which prepares the half-close on the dominant, perhaps because he wished to underscore the heroic implications of his work. The second thematic component picks up that same motif but softly and in conjunction with an upward leap to a long appoggiatura that lends this fragment a reflective, if not melancholy flavour. Finally, the same dotted pattern reappears at the higher octave from where it skips gaily down to the opening note, like Leporello, the *buffo* character, returning to his stern master.

Ex.4 Mozart: Symphony in D K385, first movt

Structurally, the Haffner theme illustrates both Lach's notion of architectonic infrastructures and Kurth's laws of musical energy. Moreover, since Mozart made the most of a simple descending 4th and did so for primary melodic reasons, one of Szabolcsi's most cherished postulates is also upheld. The general validity of these basic concepts, whatever the exact harmonic or textural context, will be confirmed by a brief examination of the first bars of Wagner's *Tristan* (ex.5). Here the upward leap of a minor 6th finds immediate conjunct compensation in keeping with the rules laid down by Zarlino and other early theorists. While the cellos pursue the descending line a semitone further, the oboes mirror the chromatic descent of the cellos with a semitone rise to the tonic. In essence, if not note-for-note, this procedure corresponds to the manner in which Mozart complemented the appoggiatura in bar 7 of his Haffner Symphony with a semitone rise in bar 9. Wagner, however, went two chromatic steps further to the supertonic, whereas Mozart called a dramatic halt with a three-quaver rest before moving to the minor 3rd above, as if nothing had happened. The *Tristan* Prelude as a whole offers a veritable compendium of melodic procedures in a chromatic-harmonic context. The cello melody beginning in bar 17 is a poignant instance, since it generates tremendous energies with a single motivic idea spurred by strict adherence to the law of directional compensation.

The remaining examples, taken from the string quartets of Schoenberg, may serve to demonstrate that the abandonment of functional tonality, far from impeding melodic forces, actually restored the well-nigh absolute rule in all matters of musical texture they had enjoyed in the final quartets of Beethoven. The soprano melody in

Ex.5 Wagner: *Tristan und Isolde*
(a) Langsam und schmachtend

Ex.6 Schoenberg: String Quartet no.2, 4th movt

Schoenberg's Second Quartet (ex.6) is composed almost entirely of minor 2nds. But the law of directional compensation is scrupulously observed. The appoggiatura treatment of 'Kreisend, webend' is in fact strikingly similar to Mozart's and Wagner's manner, while the words 'mich in tönen' are actually set to the 'Jupiter' motif. That ever popular variant of the 3rd-cum-2nd idea resurfaces in Schoenberg's Fourth Quartet, a work based coincidentally on the same melodic materials as Beethoven's String Trio op.9 no.3, the thematic precursor of the late quartets. By the same token, the recitative-like opening of Schoenberg's Largo (ex.7) demonstrates Lach's 'melic' concept even more forcefully than its apparent model, the Hebrew *Kol nidrei*, a melody which, as Schoenberg himself observed, is not so much a tune in the Western sense as a quasi-oriental series of related and interlocking 'melodicles'.

Ex.7 Schoenberg: String Quartet no.4, 3rd movt

11. Absolute melody? Unlike Schoenberg, who placed himself squarely in the European tradition, as represented by Bach, Mozart and Wagner, Webern favoured octave transposition to an extent that placed the age-old laws of melodic design under severe strain. A serial work like the Symphony op.21 abandons the last vestiges of vocal constraint for the seemingly limitless possibilities of advanced instrumental techniques. A quarter of a century later musical synthesizers, computers and machines of all sorts managed to achieve what the mere serial treatment of conventional pitch materials had left unfinished. Busoni (1922) uttered indeed prophetic words when he attempted to define 20th-century melody as follows:

A row of repeated (1) ascending and descending (2) intervals which (3) organised and moving rhythmically (4) contains in itself a latent harmony and (5) which gives back a certain atmosphere of feeling; which can and does exist (6) independent of accompanying voices for form; and in the performance of which (7) the choice of pitch (8) and of instrument (9) exercise no change over its essence ... This 'absolute' melody, at first a self-sufficient formation, united itself subsequently with the accompanying harmony, and later melted with it into oneness; out of this oneness the continually progressive polyharmony aims to free and liberate itself. It must be asserted here, in contradiction to a point of view which is deeply-rooted, that melody has expanded continuously, that it has grown in line and in capacity for expression, and that it must succeed in attaining universal command in composition.

In this sense, Webern emerged as the supreme master of 'absolute melody'. But paradoxically, the 'melodic rhythm', created by the conspicuous peaks and low points of his intricate textures, recalls very similar aspects of a much simpler medieval monophony, while the spatial metaphors he employed for his essentially elliptical musical ideas recall the non-teleological music of the orient he so admired. More specifically, the disembodiment of traditional melodic continuity at the behest of the 'tone-colour melody', postulated by Schoenberg as early as 1911, appears to be a function of omnidirectional sonorous forays that issue from and return to a small number of stable pitch centres, not unlike the circular harmonic excursions of the mature Wagner. By assigning unprecedented aesthetic significance to single pitches as well as selected intervallic relationships, moreover, Webern accomplished for traditional melody what Wagner had done for tonal harmony. Inevitably, his unrestrained explorations of musical space at the expense of temporal factors raised serious questions about the very future of melody. It was one of the more ironic quirks of history which turned the herald of 'absolute melody' into the revered godfather of an avant garde that has decreed the virtual demise of melody as a primary factor in musical experience.

But melody will not die that easily. After surviving handily in eastern Europe in the name of socialist realism, it has reasserted its strength in the West under the guise of an ideologically motivated folksong revival as well as in elaborate concert pieces relying on outright quotation or, at the very least, unqualified imitation of the past. During the decades of melodic drought, popular music of the commercial variety had been the only persistent and pervasive source of melodic inspiration. Some of the best tunes of the post-World War II era issued from the pens of the Beatles, just as those of the interwar period had been written by the Gershwins, the Cole Porters and the Irving Berlins. In the later 20th century the melodic circle appeared to be closing once again. For with its devotion to small, often descending and pentatonically conditioned melodicles, Afro-American rock music has returned melody, quite unwittingly, to its very beginnings.

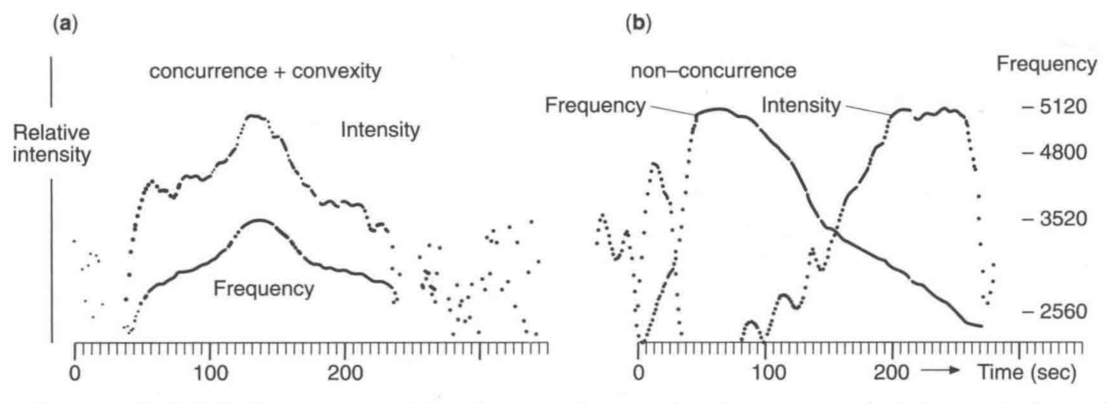
Melody type. A term used in literature on Gregorian chant to describe melodies adapted to new texts. *See* CENTONIZATION.



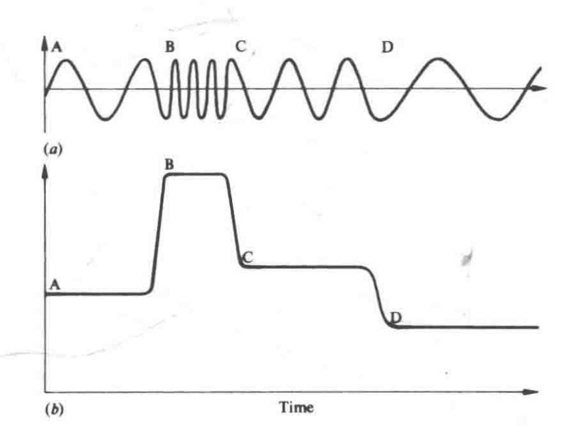
Melograph. An electronic instrument used in musicological research for the continuous graphic representation of melody or any monophonic vocal expression with a defined pitch. The melograph displays acoustical information in the form of a melogram which generally shows pitch and loudness as functions of time. Although the computer has replaced the melograph, the manner of presenting the musical material remains an essential stage in research and has changed very little even though the information is now obtained directly from a computer. The computer is used primarily for the measurement based on the graphic representation (which without the computer is done manually) and with the final summation; these two stages may be based on melographic or computer representations.

The melograph was created in the 1950s for the analysis of those melodic elements which cannot be expressed exactly in traditional notation, such as intonations based on systems other than those of Western music, microtonal intervals, contours of glissandos, the attack and decay of notes individually and in relation to adjacent notes, vibrato and relationships between the contours of pitch and loudness. Such elements are important mostly in the study of non-Western music, but also in that of certain Western folk musics and in the performance style of Western art melodies, and in nonverbal vocal communication, such as sounds made by infants, the prosodic layer in speech, and animal sounds. Most of these 'melodic' elements, even when they play an important role in shaping the musical style, have not been formulated in musical theory; those that have been addressed in theory exhibit a discrepancy between theory and practice.

The melogram can thus be regarded as a complementary notation (to that based on learned schemata in the theory of the culture) revealing the latent schemata that appear in practice. Moreover, most of the elements discussed, by their very nature, vary during performance, either due to changes during a specific musical event or in its repetitions. Sometimes a considerable inconsistency in repetition is an essential condition for a 'correct' performance. Measurement of a single event is therefore meaningless, and thus in formulating the latent regularity one should take the statistical scatter into account. However, doing so requires precise measurements (within certain limits of precision). From an acoustic standpoint, the melogram provides continuous information about the fundamental frequency (the main factor in the perception of pitch) and the overall intensity of the note as a whole (the main factor in the perception of loudness). These two are represented in the melogram by two continuous, simultaneous graphs, which provide information about the intervals (when the pitch axis uses a logarithmic scale), durations of events, and the relative change in loudness (the last two can also be obtained for sounds without a defined pitch, as in drumming). The scales of the axes of frequency, intensity and time may be contracted or expanded so as to suit the degree of detail required in the analysis. Sounds of indefinite pitch ('noise'; for example, the sound of breathing) cannot be recorded on this graph and their

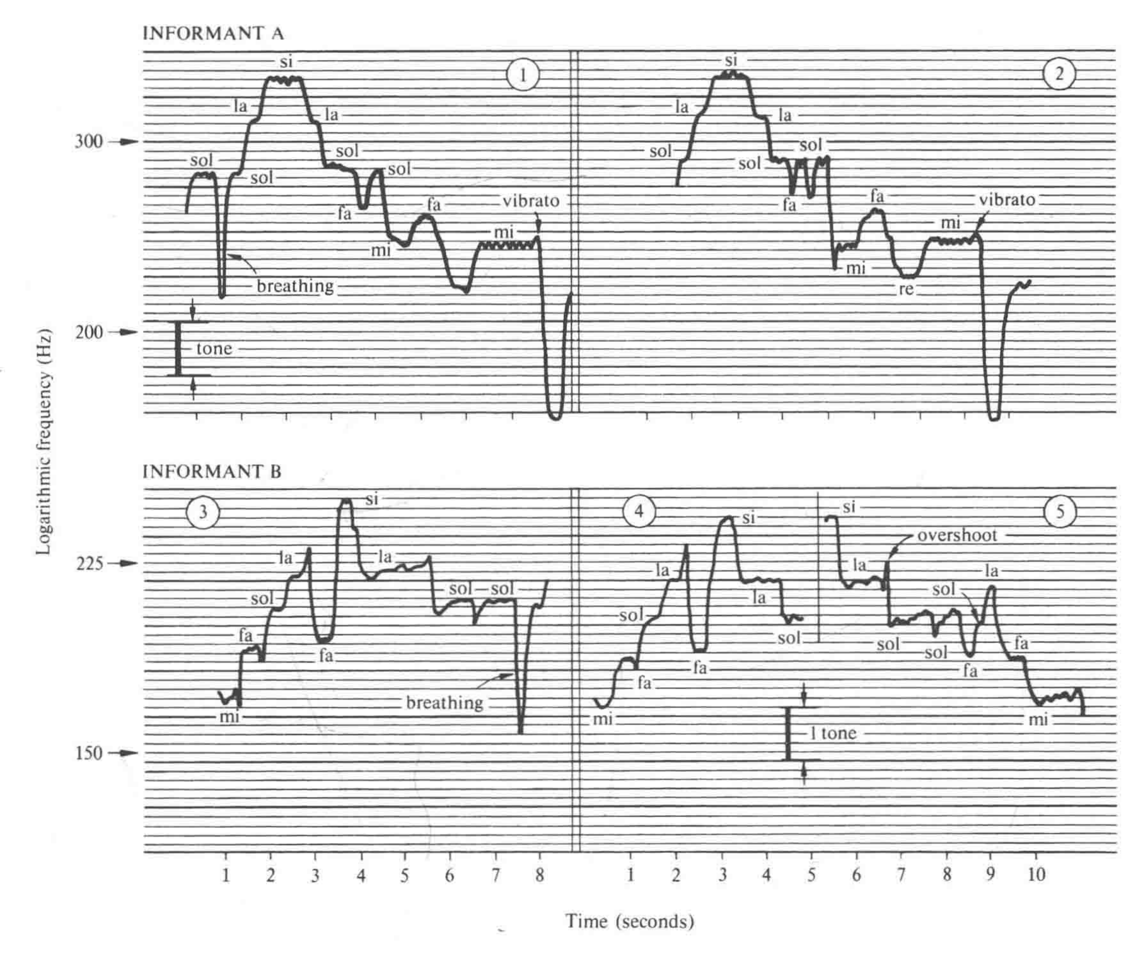
1. Melogram of the beginning of 'Barbara Allen' (Child no.84) showing pitch and loudness in relation to time; made on melograph model B at the Institute of Ethnomusicology, UCLA, from a recording (1935) by A. Lomax and M.E. Barnicle of the singing of Molly Jackson of Kentucky

2. Two types of 'syllables' in the calls of birds (babblers), from a recording (1991) by Z. Katsir, corresponding to two emotional states of the bird: (a) relaxed, (b) tense



existence may be indicated in various ways, as a break in the graph or as some schematic symbol.

The actual registration of the graphs in the early days was carried out in various ways: by a mechanical needle, which notates in ink on paper; by light-beams striking light-sensitive paper; by photographing from a cathode ray tube, etc. For example, in fig.1 the graph above the notated melody shows the pitch (fundamental frequency) of the melody and its change with time; the graph below the notation is of the relative intensity. Here there is great concurrence between the change in the pitch curve and in the intensity curve. This, however, is not always the case. Moreover, the fact of concurrence or nonconcurrence is of great significance. For example, fig.2 illustrates two 'syllables' in bird calls: the first (a), which is sounded in a relaxed state, is concurrent; whereas the second (b), which is sounded in an excited state, is extremely nonconcurrent. The graph showing the intensity is relatively simple to obtain, and many machines besides the melograph can supply one. Obtaining the pitch graph is more complicated. The melograph is not concerned with the shape of sound vibrations (wave-form, which may be seen on an oscilloscope), but has to extract the magnitude of the fundamental frequencies from these wave-forms. One way of doing this is as follows: each time a vibration passes the zero point an electric pulse is produced, the number of pulses per time unit being proportional to the frequency of the vibration. The combined pulses form an electric current with an intensity proportional to the frequency of the original vibration. A stronger current indicates a higher frequency, and vice versa. Fig.3*a* demonstrates schematically a sequence of four different pure vibrations (A, B, C and D) as they would appear on an oscilloscope and, in the graph below (fig.3*b*), how they would be registered by the melograph. Since only fundamental frequencies are to be measured, the melograph incorporates a filter unit to suppress the upper partials, which are often of high intensity.



Before the invention of the melograph in the 1950s, exact intonation was determined with the aid of the simple monochord. The pitches of notes were compared by ear to the pitches of the monochord, the frequencies of which were known. From the 1920s researchers used electronic devices such as the oscilloscope, to obtain the fundamental frequency from the wave-form. The monochord had many shortcomings: in measuring pitch, it relied on the keenness of the ear of the researcher; only one note could be measured at a time; it was impossible to examine variations within a note, for the pitch was related to a single point in time; rapid notes could not be isolated; and the work was very slow. The deficiency of early electronic instruments designed to replace the monochord lay in the detailed calculations involved and in their inconvenience when examining a large body of material.

The melograph has opened up the field for accurate, reliable and convenient analysis of many details important in determining melodic style, and, because it can handle large quantities of material, it is useful for statistical analysis. For instance, it is now possible to determine the rules of intonation in different types of music and styles of performance, whereas previously these subjects had been a matter for speculation without a sound empirical basis.

Melographs have been developed and used at the following centres: at the University of California at Los Angeles (under the direction of Charles Seeger); in Norway (where Olav Gurvin pioneered development of 'melody writers' during the early 1950s); in Jerusalem (Cohen and Katz) from 1957; and in Uppsala, Sweden, from 1966. In each of these places the melograph underwent several different stages of development to improve convenience, efficiency and precision; it should be noted that the Seeger melograph model C incorporates the function of the

3. (a) Schematic representation of four different pure vibrations as they would appear on an oscilloscope; (b) the same vibrations as they would be registered by a melograph

4. Recurrent musical motifs from the same song, 'Indama', sung by two Israeli Arabs (after Cohen and Katz)

sonagraph so that the melogram includes a sonagram which supplies information about the spectrum of the examined material. Researches with Seeger's successive models have encompassed many areas of vocal and instrumental music (particularly oriental music) and heightened speech (some of this work is discussed by Crossley-Holland). In Norway a team at the Institute of Folk Music in Oslo examined the differences noted in various folksingers' performances of a single 'control' melody, as well as the characteristics of modern performances of melodies collected 100 years earlier by Ludwig Lindeman and published in his *Aeldre og nyere norske fjeldmelodier* ('Old and more recent Norwegian mountain melodies', Christiania, 1853–67/*R*), and the study of *lokk* (cattle calls) and lullabies (see Dahlback). During the 1970s Anna Johnson was carrying out similar research at the University of Uppsala, Sweden. Efforts have been made in Jerusalem to formulate and understand musical phenomena that have previously not been formulated theoretically but are important for characterization of styles; examples include types of 'intonation skeleton', concurrence or nonconcurrence between parameters, and the degree of stability or instability of phenomena. Characteristics of the parameter of timbre, which is selected from various points on the melogram, also play a significant role. These characteristics were studied separately from and together with the study of components obtained from standard notation (e.g. motives and melisma) in various styles, including the music of Samaritans and of Syrian Jews, the sacred and secular music of Arabs (fig.4), the recitation of the Rig Veda, bird calls in various situations, the prosodic layer in Hebrew speech and the playing of the *shakuhachi*.

The switch from the melograph to the computer (other than for the summaries of the information from the manual measurements) has been carried out gradually. First the information obtained from the melograph was converted from analog to digital, then the melogram was obtained directly from the computer, then the measurements were carried out and summed up by the computer. The final stage (measuring and summing up the quantitative components derived from the graph's basic parameters of interval, duration, intensity and the interactions between them) is under development, though the sounds produced by keyboard instruments, which are of predetermined pitch, have been successfully measured and summed up by computers.

The addition of timbre to the list of parameters studied by means of the melograph has also been facilitated by the use of computers. Timbre, the subject of many studies,

is generally examined without looking at the other parameters and the changes in them. As a complete understanding of the principles of musical organization (with attention to the aesthetic preferences of cultures, periods and composers) requires the examination of all musical components, the melograph in its various incarnations has been and remains useful for the accomplishment of this aim.

Mélophone. A portable free-reed instrument. It was invented in Paris in 1837 by Pierre Charles Leclerc in the shape of a deep-bellied guitar or hurdy-gurdy. The body houses a bellow worked by pulling out and pushing in a metal handle (*archet*) with the right hand, and the sets of free reeds. The broad neck is fitted with rows of buttons (seven rows of ten buttons in the original patent; Louis Dessare's and R. Jacquet's tutors describe instruments with six or seven rows of thirteen buttons), which are depressed by the player's left hand, and which open and close the pallets admitting wind to the batteries of reeds by means of brass-wire levers and springs. The entire mechanism is covered by a lid. The buttons are curved to facilitate moving smoothly from one note to the next. The compass is *B–e″*. An additional lever (*pédale*) underneath the neck is operated by the left thumb to add octave pitches. Leclerc's patent of 9 January 1837 presented the mélophone as a 'new instrument fitted with double bellows, keys and strings, able to reproduce the tone of the clarinet, violin and cello'. His instruments were made by himself, in partnership with Leclerc's pupil Charles Alexandre Pellerin and Anthony Brown, both of whom acquired the rights in 1842. Pellerin patented some improvements (18 July 1843). A third maker and teacher, Jacquet, produced mélophones until 1851; by this time, however, because of its size and fragility, it was superseded by other, more practical portable free-reed instruments. Many examples of the instrument survive in museums and collections.

Melophone, French, after 1842 (Museum of Fine Arts Boston)

Melopiano (It.). *See* SOSTENENTE PIANO, §4.

Méloplaste. A chart showing a vacant staff. It was used to point out intervals in the GALIN-PARIS-CHEVÉ METHOD of teaching sight-singing.

Melos Ensemble (of London). English ensemble. It was formed in 1950 by Cecil Aronowitz (viola) and Gervase de Peyer (clarinet), with the flautist Richard Adeney and the cellist Terence Weil, as a variable group of up to 12 players (string quintet, wind quintet, harp and piano). Their original purpose was to rehearse and perform the larger chamber works (such as the Schubert and Mendelssohn octets, the Beethoven and Ravel septets) under better conditions than generally obtained at that time, and the ensemble soon gained a reputation for style and artistry which set new standards for the performance of this repertory. The bassoonist William Waterhouse joined the group in 1959, after which its basic personnel remained unchanged until the death in 1972 of Ivor McMahon, the second violinist, and the departure shortly afterwards of Emanuel Hurwitz, the first violinist, and two other players.

During this time, in addition to the repertory of chamber music classics, the ensemble gave numerous first performances (including Birtwistle's *Tragoedia*, 1965, Hoddinott's Sextet, 1960, and Maxwell Davies's *Seven In Nomine*, 1965), and took part as the separate chamber group at the première, and in many later performances, of Britten's *War Requiem* (1962). Besides giving concerts and BBC broadcasts, it has appeared frequently at

principal festivals in Britain and elsewhere (including Venice, Warsaw, Zagreb, the Netherlands and Iran), and first toured the USA in 1966. The ensemble has made over 50 recordings, several of which received international awards. After a period of inactivity in 1973–4 it was re-formed with eight of the original players, and gave a 25th-anniversary concert (Queen Elizabeth Hall, 20 January 1975) as a prelude to renewed regular performances. From 1976 the ensemble was led by Hugh Maguire, and in the same year de Peyer was replaced by Thea King. The pianist Lamar Crowson worked with the group for many years. The ensemble's character has been achieved by the sum of the individual talents of its members, each a distinguished solo player, together with the responsiveness derived from their mutual respect and friendly rapport.

NOËL GOODWIN

Melosio, Francesco (*b* Città della Pieve, 1609/10; *d* Città della Pieve, 2 March 1670). Italian poet and librettist. His works are distinguished by extravagant puns and metaphors in the style of Giambattista Marino. Melosio was active mainly in and around Rome, where his verse was set by such leading composers as Carlo Caproli, Giacomo Carissimi, Fabrizio Fontana, Arcangelo Lori, Marco Marazzoli, Atto Melani, Carlo Rainaldi, Luigi Rossi, Mario Savioni and Loreto Vittori; settings by Filiberto Laurenzi and Carlo Grossi also survive. Melosio's *Poesie e prose*, first published in Rome two years after his death, went through at least 12 editions by 1704.

Melosio spent the early 1640s in Venice, where he wrote two librettos: *Sidonio e Dorisbe* was set by Nicolò Fontei in 1642; *L'Orione*, written the year before, was set by Francesco Cavalli in 1653. He also wrote sonnets in honour of such Venetian musical luminaries as Claudio Monteverdi and Anna Renzi.

ROBERT R. HOLZER

Melos Quartet (of Stuttgart). German string quartet. It was formed in 1965. The original members were Wilhelm Melcher (*b* Hamburg, 5 April 1940), Gerhard Ernst Voss (*b* Burscheid, 17 Dec 1939), Hermann Voss (*b* Brünen, 9 July 1934) and Peter Buck (*b* Stuttgart, 18 May 1937). All four players had established careers as soloists and orchestral musicians before the quartet was formed. Melcher studied in Hamburg and Rome, won the 1962 International Chamber Music Competition in Venice, and became leader of the Hamburg SO in 1963; Gerhard and Hermann Voss studied in Düsseldorf (with Maier) and Freiburg (with Végh), Gerhard also at Cologne (with Marschner); Buck studied at the Musikhochschule in Stuttgart with Ludwig Hölscher. Between 1960 and 1967 Hermann Voss was solo viola player of the Stuttgart Chamber Orchestra; his colleagues were members of the Württemberg Chamber Orchestra until 1967, when they left their orchestras to concentrate on quartet playing. The quartet had already won the Geneva International Competition (with the prize for the best quartet) and an award at the Villa-Lobos String Quartet Competition in Rio de Janeiro, both in 1966. Its first concert tours were sponsored by the Deutsches Musikleben foundation and it represented West Germany at the 1966 Jeunesses Musicales in Paris. From 1967 it embarked on extensive international concert tours and made a complete recording of Beethoven's quartets (1968–70). Other notable recordings include the complete quartets of Schubert and Mendelssohn, and an outstanding collaboration with the guitarist Narciso Yepes in quintets by Boccherini. In 1993 Gerhard Ernst Voss was replaced by Ida Bieler. The members' chamber orchestral experience, individual maturity and collective excellence have combined to ensure the development of a style that is consistently warm and romantic without undue sentiment, totally secure and assured. They have given the premières of several new works, including the Quartet no.4 of Wolfgang Fortner (1977). Melcher plays a violin by Domenico Montagnana (1731), Bieler a violin by J.-B. Vuillaume (1846), Voss a viola by C.F. Landolfi (Milan, 18th century) and Buck a cello by Francesco Ruggieri (Cremona, 1682).

LESLIE EAST/R

Melpomene. The Muse of tragedy, Aeolic poetry and songs of mourning. *See* MUSES.

Meltzelius, Jiří. *See* MELCELIUS, JIŘÍ.

Meltzer, Adam (*b* Neustadt an der Heide, nr Coburg, *c*1570; *d* Dillingen an der Donau, 1609). German printer. In 1587 he was a journeyman at Frankfurt an der Oder; subsequently he moved to Dillingen an der Donau (1591) to work for Johann Mayer, and in 1603 he established his own business. After his death his widow ran the press until 1610, when she sold it to the printer Gregor Haenlin. Meltzer's publications consist mainly of music, and he was responsible for disseminating the works of such Swabian composers as Erbach, Aichinger, Klingenstein and Jacob Reiner.

THEODOR WOHNHAAS

Melville, Herman (*b* New York, 1 Aug 1819; *d* New York, 28 Sept 1891). American novelist, short-story writer and poet. As a seaman he was steeped in sea ballads, songs and shanties, and his novels, particularly *Mardi*, include many songs which he either wrote himself, borrowed directly or adapted. Among the songs set to music are, from *Mardi*, *Departed the Pride, and the Glory of Mardi* and *Her Bower is not of the Vine* by Robert Helps; and from *Moby Dick* Ernst Bacon's *The Sermon* (*Jonah's Song*) and Leonard Kastle's *Three Whale Songs from Moby Dick*.

Melville's often highly cadenced prose is well suited for musical treatment; most settings have been drawn from *Moby Dick*, among them Marshall Bialosky's *There is a Wisdom that is Woe*, Jeffrey Hall's *Two Settings from Ahab*, and John McCabe's *Aspects of Whiteness*. Roger Reynolds's *Blind Men* is based on a collection of fragments from *Journal up the Straits*. Melville's novel *Typee* has been of particular interest to ethnomusicologists for

its detailed descriptions of Polynesian instruments and music.

Although best known for his fiction, Melville produced a considerable amount of poetry throughout his life. Most of the poems set to music have themes of war, such as *Shiloh: a Requiem*, *The Portent*, *Under the Ground* and *The Night-March*. David Diamond and William Flanagan have set several each, the latter in his cycle *Time's Long Ago!*. The few operatic adaptations are mostly derived from *Billy Budd*, notably that by Benjamin Britten; others have been made from the novels *Bartleby the Scrivener* and *Moby Dick*, and the short stories *The Bell Tower* and *Benito Cereno*. Almost all the Melville musical settings were written after 1940.

Membranophone. General term for musical instruments that produce their sound by setting up vibrations in a stretched membrane. Membranophones form one of the original four classes of instruments (along with idiophones, chordophones and aerophones) in the hierarchical classification devised by E.M. von Hornbostel and C. Sachs and published by them in *Zeitschrift für Ethnologie* in 1914 (Eng. trans. in *GSJ*, xiv, 1961, pp.3–29, repr. in *Ethnomusicology: an Introduction*, ed. H. Myers, London, 1992, pp.444–61). Their system, which draws on that devised by Victor Mahillon for the Royal Conservatory in Brussels and is widely used today, divides instruments into groups which employ air, strings, membranes or sonorous materials to produce sounds. Various scholars, including Galpin (*Textbook of European Instruments*, London, 1937) and Sachs (*History of Musical Instruments*, New York, 1940), have suggested adding electrophones to the system although it has not yet been formally extended.

Membranophones are subdivided into those which are struck, those which are sounded by friction and those which resonate in sympathy with some other sound ('singing membranes'). A fourth category, plucked drums, was included by Hornbostel and Sachs but subsequent research (L. Picken and others in *Musica asiatica*, iii, 1981) has suggested that these should be reclassified as variable tension chordophones. Each category is further subdivided according to the more detailed characteristics of an instrument. A numeric code, similar to the class marks of the Dewey decimal library classification system, indicates the structure and physical function of the instrument. The Hornbostel-Sachs classification (from the *GSJ* translation, with minor alterations) follows as an appendix to this article.

For further information on the classification of instruments in general *see* INSTRUMENTS, CLASSIFICATION OF.

APPENDIX

2 *Membranophones*: the sound is excited by tightly stretched membranes

21 *Struck drums*: the membranes are struck

211 *Drums struck directly*: the player himself executes the movement of striking: this includes striking by any intermediate devices, such as beaters, keyboards etc.: drums that are shaken are excluded

211.1 *Kettledrums* (timpani): the body is bowl- or dish-shaped

211.11 *(Separate) kettledrums* (European timpani)

211.12 *Sets of kettledrums* (West Asian permanently joined pairs or kettledrums)

211.2 *Tubular drums*: the body is tubular

211.21 *Cylindrical drums*: the diameter is the same at the middle and the ends; whether or not the ends taper or have projecting discs is immaterial

211.211 *Single-skin cylindrical drums*: the drum has only one usable membrane. In some African drums a second skin forms part of the lacing device and is not used for beating, and hence does not count as a membrane in the present sense

211.211.1 *Open cylindrical drums*: the end opposite from the membrane is open – found in Malacca [now West Malaysia]

211.211.2 *Closed cylindrical drums*: the end opposite from the membrane is closed – found in the West Indies

211.212 *Double-skin cylindrical drums*: the drum has two usable membranes

211.212.1 *(Individual) cylindrical drums*: found in Europe (side drum)

211.212.2 *Sets of cylindrical drums*

211.22* *Barrel-shaped drums*: the diameter is larger at the middle than at the ends; the body is curvilinear – found in Asia, Africa and ancient Mexico

211.23 *Double-conical drums*: the diameter is larger at the middle than at the ends; the body is rectilinear with angular profile – found in India (*mṛdaṅgam*)

211.24* *Hourglass-shaped drums*: the diameter is smaller at the middle than at the ends – found in Asia, Melanesia and East Africa

211.25* *Conical drums*: the diameters at the ends differ considerably (minor departures from conicity, inevitably met, are disregarded here) – found in India

211.26* *Goblet-shaped drums*: the body consists of a main section which is either cup-shaped or cylindrical, and a slender stem; borderline cases of this basic design, like those occurring notably in Indonesia, do not affect the identification, so long as a cylindrical form is not in fact reached (*darabukka*)

211.3 *Frame drums*: the depth of the body does not exceed the radius of the membrane; NB the European side drum, even in its most shallow form, is a development from the long cylindrical drum and hence is not included among frame drums

211.31 *Frame drums* (*without handle*)

211.311 *Single-skin frame drums* (tambourine)

211.312 *Double-skin frame drums*: found in North Africa

211.32 *Frame drum with handle*: a stick is attached to the frame in line with its diameter

211.321 *Single-skin frame drums with handle* (Inuit)

211.322 *Double-skin frame drums with handle*: found in Tibet

212 *Rattle drums* (subdivisions as for drums struck directly, 211): the drum is shaken; percussion is by impact of pendent or enclosed pellets, or similar objects – found in India and Tibet

22 *Plucked drums*: a string is knotted below the centre of the membrane; when the string is plucked, its vibrations are transmitted to the membrane – found in India (*gopīy antra*, *ānandalaharī*) [*see* VARIABLE TENSION CHORDOPHONE]

23 *Friction drums*: the membrane is made to vibrate by friction

231 *Friction drums with stick*: a stick in contact with the membrane is either itself rubbed, or is employed to rub the membrane

231.1 *With inserted stick*: the stick passes through a hole in the membrane

231.11 *Friction drums with fixed stick*: the stick cannot be moved; the stick alone is subjected to friction by rubbing – found in Africa

231.12 *Friction drums with semi-fixed stick*: the stick is movable to a sufficient extent to rub the membrane when it is itself rubbed by the hand – found in Africa

231.13 *Friction drums with free stick*: the stick can be moved freely; it is not itself rubbed, but is employed to rub the membrane – found in Venezuela

231.2 *With tied stick*: the stick is tied to the membrane in an upright position – found in Europe

232 *Friction drum with cord*: a cord, attached to the membrane is rubbed

232.1 *Stationary friction drum with cord*: the drum is held stationary – found in Europe and Africa

232.11 *Single-skin stationary drums with friction cord*

232.12 *Double-skin stationary drums with friction cord*

232.2 *Friction drum with whirling stick*: the drum is whirled on a cord which rubs on a [resined] notch in the holding stick (*Waldteufel* [cardboard buzzer]) – found in Europe, India and East Africa
233 *Hand friction drums*: the membrane is rubbed by the hand
24 *Singing membranes* (kazoos): the membrane is made to vibrate by speaking or singing into it; the membrane does not yield a note of its own but merely modifies the voice – found in Europe and West Africa
241 *Free kazoos*: the membrane is incited directly, without the wind first passing through a chamber (comb-and-paper)
242 *Tube or vessel-kazoos*: the membrane is placed inside a tube or box – found in Africa (while also East Asian flutes with a lateral hole sealed by a membrane exhibit an adulteration with the principle of the tube kazoo)

Suffixes for use with any division of this class:

6 with membrane glued to drum
7 with membrane nailed to drum
8 with membrane laced to drum

81 *Cord- (ribbon-) bracing*: the cords are stretched from membrane to membrane or arranged in the form of a net, without employing any of the devices described below
811 *without special devices for stretching*: found everywhere
812 *with tension ligature*: cross ribbons or cords are tied round the middle of the lacing to increase its tension – found in Sri Lanka
813 *with tension loops*: the cords are laced in a zig-zag; every pair of strings is caught together with a small ring or loop – found in India
814 *with wedge bracing*: wedges are inserted between the wall of the drum and the cords of the lacing; by adjusting the position of the wedges it is possible to control the tension – found in India, Indonesia and Africa
82 *Cord-and-hide bracing*: the cords are laced at the lower end to a non-sonorous piece of hide – found in Africa
83 *Cord-and-board bracing*: the cords are laced to an auxiliary board at the lower end – found in Sumatra
84 *Cord-and-flange bracing*: the cords are laced at the lower end to a flange carved from the solid – found in Africa
85 *Cord-and-belt bracing*: the cords are laced at the lower end to a belt of different material – found in India
86 *Cord-and-peg bracing*: the cords are laced at the lower end to pegs stuck into the wall of the drum – found in Africa
NB 82 to 86 are subdivided as 81 above
9 *with membrane lapped on*: a ring is slipped over the edge of the membrane
91 *with membrane lapped on by ring of cord*: found in Africa
92 with membrane lapped on by a hoop
921 without mechanism (European drum)
922 with mechanism
9221 without pedal (machine timpani)
9222 with pedals (pedal timpani)

*To be subdivided like 211.21

HOWARD MAYER BROWN/FRANCES PALMER

Membre (Fr.). A term used by Antoine Reicha and others to denote a small unit of melodic construction. *See* ANALYSIS, §II, 2.

Memo [Memmo], **Dionisio** (*fl* 1507–39). Italian organist. According to his contemporary, Marino Sanuto, he was a Crutched friar. He was a pupil of Paul Hofhaimer and became first organist of S Marco, Venice, from 1507 to 1516. With the doge's permission, he left Venice for London in September 1516, bringing with him 'a most excellent instrument', presumably an organ. The reports of the Venetian ambassador, Giustiniani, contain several references to Memo and his triumphs at the English court: that through the offices of Henry VIII he was released from his monastic vows, given a chaplaincy by the king and made 'chief of his instrumental musicians'; how he was required to play frequently at court, often before foreign ambassadors, and once for four hours at Windsor, where the king had gone to escape the plague. Memo appears to have acted as an agent for the Venetians: in one of his reports to the signory, Giustiniani mentions asking Memo 'to make his report'. Such political activities may have led to his sudden departure from England ('for fear of his life', according to Sanuto) sometime before 24 December 1525. Memo appears to have gone first to Portugal, then to Santiago de Compostela, where in 1539 he was mentioned as organist in the cathedral. Even the little we know about his career well illustrates the important role played by peripatetic virtuosos in the diffusion of musical styles in the 16th century. Of Memo's compositions, including the setting of *Memor esto verbi tui* (perhaps an arrangement of Josquin's motet) which he played before Henry, nothing remains.

JOHN M. WARD

Memory, memorizing.

1. Memory and music. 2. Collective memory. 3. Degrees of memory. 4. Mind and body. 5. Memory and musical quality.

1. MEMORY AND MUSIC. Memory seems to be a distinctive characteristic of the human being. If humans are to be considered distinguishable from other animals (Darwin, 1872; Edelman, 1992), memory is the essence of that distinction, and it is of special importance to the musician. It is impossible to escape from the fact that, without the practice and use of memory, music is literally unthinkable; it may be that the 'music' of animals is music free of thought and conscious memory (*see* ANIMAL MUSIC). Since music is a temporal phenomenon, it relies completely on our ability to store and relate musical 'information'. Human memory, however, is a profoundly mysterious entity over which individuals seem to have little conscious control. It can seem to be difficult, perhaps impossible, to decide not to remember something; and it is impossible to decide to remember something one believes one has forgotten.

Contemporary psychology normally identifies four different types of memory: recollection, recall, recognition and relearning (*see also* PSYCHOLOGY OF MUSIC, §II, 4). Whereas recollection relies on cues (of which musical notation is an assemblage), recall is a totalizing act, and 'eidetic' or complete memory is a common experience of music among professionals, even though the memory of any perception, however 'complete', is not of course the same as the original perception itself. Recognition, whether cued or not, brings to us the belief that something is familiar (and this sense of familiarity may have a basis in experience or may — as in the case of the so-called 'déjà vu' — be in all likelihood illusory), whereas relearning, which is found to be easier than learning, rests on actual familiarity to build memory in yet a different way.

The human capacity for memory seems in effect limitless; this includes music just like other activities. Sigmund Freud wrote of 'tunes that come into one's head . . . determined by . . . a train of thought which has a right

to occupy one's mind' (Strachey, 1973, p.138). We know this from everyday experience. Millions of human beings who do not think of themselves as musicians can nevertheless recognize or recall thousands of musical items, be they nursery songs, popular songs, film music, hymns and so on, and the power of music to trigger associations in the memory is legendary (see Nattiez, 1989).

2. COLLECTIVE MEMORY. Scientists have settled on a differentiation between short-term and long-term memory, which makes such obvious sense to individuals in their own experience that these terms have gone into everyday parlance. Endel Tulving in particular has posited a more technical, specialist distinction between procedural memory, or knowing about skills, and propositional or declarative memory, or knowing about knowledge (Mithen, 1996, p.231). In general, we have an individual sense of skill, but feel that knowledge often comes from outside our individual selves. Even memory for skills, however, is further categorized into the episodic, which concerns remembered individual action, and the semantic, which concerns remembering the world apart from the self. This division conforms well with the musical experience of many cultures, and seems to conform with what we know about human artistic evolution. All art seems to rely significantly on collective memory, something beyond purely individual psychological processes and experiences. Indeed Brăiloiu, the Romanian ethnomusicologist who pioneered the investigation of so-called 'primitive' human music, argued that it was difficult to maintain that any one individual can be called the 'creator' of musical works, and this is as true of the musical performer as of the composer (1984).

The mnemonic helps us to summon up memories that we know we have. The rosary is a familiar example that is as self-evidently collective in its origins as it is individual in its present meaning. Musical notation is a device of this kind, offering a network of 'cues': the musical score is a metaphor that triggers one or another example of a 'piece' of music, an episode in our artistic life. Musicians are particularly interested in episodic memory and its connections to the semantic. Perhaps what is most striking is the precision of episodic memory. Precision is obvious in the case of, say, some star performer playing a virtuoso Romantic concerto; yet such precision ought to be no less obvious when we watch a slick popular music group on television miming so perfectly — and by definition 'from memory' — to a pre-recorded audio track (we usually forget that the 'live' performance is actually dubbed). Mnemonic devices are assumed to date from human prehistory, and in modern Western music go back at least as far as the famous Guidonian Hand of the 11th century. Nevertheless, mnemonics engage conscious thought and there is a price to be paid for them; there is ample testimony that musicians usually play or sing better when relying on their memory rather than 'reading' from notation of any kind. Conversely, there is growing evidence that using musical memory facilitates general memory (Storr, 1992, p.21), and Hanslick was probably wrong to argue (1854) that music has no 'purpose', since it seems increasingly likely that music played a special role at least in the development of cognitive fluidity founded upon episodic and semantic memory in our remote ancestors.

3. DEGREES OF MEMORY. The capacity for memory clearly varies greatly, innately, and over the course of a human life. Considering the vast capacity for memory of any normal human being, enabling us for example to speak a language, individual differences in the capacity for musical memory may not be generally significant. As Edelman observed, 'it is no surprise that different individuals have such different memories and that they use them in such different fashions' (1992, p.104). There is however one clear distinction between those few who can accurately recall and recognize actual pitch (so-called ABSOLUTE PITCH, and easily tested by comparing the frequency of a note named and sung with the frequency of some reference sound such as that of a tuning fork) and those many who cannot; it is not known whether this rare kind of musical memory is genetically determined, the result of childhood experience, or a combination of the two (Heaton, 1998), but experimental psychologists agree that it cannot be learnt by adults to any significant extent. It is generally thought that absolute pitch is a considerable advantage for performers and composers, since it offers a kind of clinical certainty in perceiving and in imagining music (a distinction discussed in Cook, 1992), although it is noted that people who cannot remember actual pitch are able to move more comfortably between different tuning standards and different musical cultures.

'Learning' is however the central element in musical memorization. Rarely, memorization can be instant, as when Mozart reputedly wrote down a complete, sophisticated polyphonic vocal piece he had heard only once; even if that story were not true, there are records of prodigious instant musical memory, and its possibility is beyond doubt. Rarely too, memorization is either impossible or nearly impossible, for pathological reasons. In the main, however, memorization relies on the process of habituation: hence the proverb 'practice makes perfect'. Thus 'relearning' probably has a privileged role in music from among the four basic types of memory. Evidence of this is to be found in the fact that modern Western music has developed a large collective memory in the form of scales, arpeggios and similar routines that are used to 'train' the autonomic nervous system and its associated neural networks to 'memorize' basic patterns of notes in all keys, producing musicians whose memories are primed to find the familiar in music not previously encountered — not unlike the way in which musicians of the Indian classical tradition acquire a palette of rāgas enabling them to recognize and generate new but comprehensible pitch successions. One of the challenges of memorizing much post-tonal Western music is that such music may not refer to the collective memory of what is often and sensibly called the 'common practice' period.

4. MIND AND BODY. It is useful to understand clearly how 'playing' a modern Western instrument, the keyboard being perhaps the simplest case, is nothing more or less than an act of choreography. The performer in fact memorizes a sequence of physical movements; this is equally true, if more intimately so and harder to observe, of the most basic form of music-making, human song. It seems to be an aspect of our condition that, when we observe playing or singing (as it were) out of context — for example by watching a video recording of a performance with the sound turned off — the sequence of movements appears to be of an astonishing variety,

complexity and extent, far too varied, complex and long for us to be able to begin to comprehend how we are able to remember it. The listener's recollection of this performance, however, includes or need include not a single trace of that choreography, but exists in the abstract 'language' of music, as a purely mental image. It is this language which musicians believe lies at the heart of their ability typically to recall, perfectly, large amounts of music, and without which visual and tactile memory are, in isolation, relatively weak tools. If musical memory moves between these poles of the mental and the physical, different practices will lie at different relative distances from the poles. Some are so physically orientated that their notation records the required choreography or aspects of it (an example is lute tablature) rather than offering a symbolic picture of the resulting music such as staff notation provides. Staff notation emphasizes the factor of linked visual memory, which can be of real importance; an illustration of this is that a performer who has learnt a piece from memory can become subsequently confused if relearning the same piece from a different edition, in which the music appears at a different place on the page. In music of the oral tradition, on the other hand, there may be no repository of a musical culture at all other than that existing in the memories of living members of that culture, and it is presumed that the earliest human music was of this kind. Intermediate practices include jazz, often notated on a 'lead-sheet' which provides a harmonic and sometimes rhythmic map, to guide the player's or vocalist's memory of the melodic detail that will be appropriate to that number and produce a satisfying improvised ensemble.

5. Memory and musical quality. There is clearly an intimate connection between memory and the aesthetics of music. We remember not merely music in its physical and mental representations, but also the degree of quality or value of music and music-making, which is again without doubt a function of both the collective and the individual. What we are to make of these particular memories is, however, a different matter. Philosophers and especially linguists in the 20th century occasionally tried to convey the limits of remembered human understanding by positing a Martian (e.g. Koestler, 1967), who differs from the human in not only being able to speak (sing, play and remember as a conscious being) but in being able to know how it speaks, a kind of knowledge that may lie beyond the destiny of our species.

JONATHAN DUNSBY

Memphis. City in Tennessee, USA. In the south-west corner of the state, on the Mississippi river, it was founded in 1819 and incorporated in 1826. It has been influential as a centre of popular music in the 20th century.

1. Art music. 2. Popular music.

1. Art music. Founded as a river trading outpost, Memphis had grown large and prosperous enough by the 1850s to stage concerts by travelling soloists and opera companies at the New Memphis Theatre. Local operatic and orchestral groups performed at the Greenlaw Opera House from its opening in 1866 until it was destroyed by fire in 1884. German immigrants were prominent in the musical life of Memphis from the 1850s to the 1870s, but many of them perished or left the city as a result of yellow fever epidemics in 1878 and 1879. The Beethoven Club, founded in 1888, has continued to sponsor appearances by leading classical musicians. It was also responsible for the founding in 1909 of the first Memphis SO, which lasted into the 1920s. The composer Burnet C. Tuthill founded and directed a second Memphis SO in the 1940s and 50s. In 1952 Vincent de Frank founded the Memphis Sinfonietta, later renamed the Memphis SO, which he directed until his retirement in 1984. In that year Alan Balter became director, and the orchestra became a full-time organization. Balter remained as director until 1998. The Memphis Opera Theatre was founded in 1956 and is now known as Opera Memphis. With the Metropolitan Opera Guild in 1996 it jointly commisioned Mike Reed's *Different Fields*, and in 1997 it staged the world première of *Buoso's Ghost* by Michael Ching, who has been its general director since 1992.

The music programme at Rhodes College (formerly Southwestern College) achieved prominence during the Tuthill years. The largest music programme in the city is at the University of Memphis (formerly Memphis State University), which offers a full range of BM and MM degrees as well as the DMA degree in various subjects and a PhD in musicology and ethnomusicology. The music department has produced the New Music Festival (now known as the Imagine Festival) since 1972 as a forum for contemporary composers and has been the home since 1979 of High Water Recording Company, which produces recordings of regional vernacular music such as blues and gospel.

2. Popular music. The population of Memphis grew rapidly after the yellow fever epidemics, mostly by settlement of blacks and whites from the surrounding rural territory. Many were poor, but some brought wealth acquired in agriculture and the timber industry. The population was also enriched by Irish, Italian and Jewish immigrants. The dichotomies of black and white, rich and poor, rural and urban, as well as Memphis's status as a transport centre for Mid-America, are responsible for the special character of much of the city's culture and music. Throughout the 20th century these forces have converged in various ways, leading to important developments in blues, gospel, jazz, country music, rock and soul music.

There is little documentation of traditional music in Memphis in the 19th century, but its richness can be assumed from 20th-century recoveries of solo and group

work songs, spirituals, instrumental dance music, ballads and ragtime and blues songs. Ragtime by local composers was published for about the first 15 years of the century. Compositions by Joseph H. Denck, Geraldine Dobyns, Elma Ney McClure, Saul Bluestein, Wheatley Davis and W.C. Handy often contain folk and blues elements and reveal ragtime to have been a vehicle for musical expression by women and members of immigrant groups. Italian and Irish Americans were also prominent at this time as owners of theatres and saloons attracting black customers. In 1910 Fred Barrasso founded the Tri-State Circuit of theatres presenting black entertainment, including some of the first performances of blues by professional singers.

W.C. Handy had settled in Memphis by 1907 as the leader of a black American band that performed for both white and black social functions. He had already encountered traditional blues music in the Mississippi Delta and begun arranging these tunes for his band. Handy continued to exploit blues material as a bandleader in Memphis and in 1912 published the *Memphis Blues*, one of the first published tunes to have the word 'blues' in its title. He followed this with *St Louis Blues* in 1914 and a series of other blues hits, establishing Pace and Handy (later Handy Brothers) as the leading publishing house for blues in the 1910s. Handy soon gained a reputation for himself as 'father of the blues' and for his publishing house and later the city of Memphis as 'home of the blues'. The city has displayed an ambivalent attitude towards this reputation ever since. Handy relocated his business to Chicago and then New York in 1918, but other Memphis composers emulated his success into the 1920s. The most successful were the bandleaders Charles H. Booker and Bob Miller.

Between 1927 and 1930 five record companies set up studios in Memphis for brief periods and recorded a range of local talent. Blues by resident Memphis performers were heavily represented, ranging from solo singer-guitarists (Robert Wilkins, Furry Lewis, Jim Jackson), to duos (the Beale Street Sheiks, Memphis Minnie and Kansas Joe) and larger ensembles (Cannon's Jug Stompers, the Memphis Jug Band). The latter groups combined traditional instruments of African derivation with harmonica and various stringed instruments. The country music performers who recorded during this period were mostly from outside Memphis. The city thus fulfilled its role as a major distribution centre for music. Black American religious music was represented by the preaching and spiritual singing of Rev. E.D. Campbell and Rev. Sutton E. Griggs, vocal harmony by the I.C. Glee Quartet, and especially the music of the Church of God in Christ, America's largest predominantly black American Pentecostal denomination. Artists representing this church, such as Elder Richard Bryant's Sanctified Singers, Elder Lonnie McIntorsh, Bessie Johnson and A.C. and Blind Mamie Forehand, introduced a rough-voiced singing style and the use of musical instruments, including even jug bands, into black religious music. Many of the jazz artists recorded in Memphis had served in bands under the direction of W.C. Handy in the 1910s and displayed the influence of his formalism and emphasis on arrangement, in contrast to the more improvisational styles prevailing elsewhere. Among the leaders whose bands were recorded were Douglas Williams, Charles Williamson and Jimmie Lunceford, along with white jazz groups under the leadership of Slim Lamar and Blue Steele. Other artists such as the trumpeter Johnny Dunn, the drummer Jasper Taylor and the arranger Gene Gifford left Memphis and achieved success through recordings made in the north.

For nearly two decades from 1931 there was only one recording session in Memphis, held in 1939. Recordings by black groups led by James De Berry and Charlie Burse present a synthesis of elements from jug bands and small jazz combos, pointing to the sounds of later blues ensembles. A similar synthesis of string band and jazz elements is heard in the recordings of the white Swift Jewel Cowboys, a group performing in the 'western swing' style. Other artists such as the blues pianist Memphis Slim (Peter Chatman) and the blues guitarist Memphis Minnie (Lizzie Douglas) had to relocate to Chicago in order to maintain recording careers during this period.

A permanent recording industry was launched in Memphis in 1950 with the opening of the Memphis Recording Service headed by Sam Phillips. By 1952 this had become Sun Records, a company that would record an extraordinary range of musical talent for the next decade. Another important factor affecting the development of Memphis music in this period was the radio station WDIA's change in 1949 to an all-black on-air format. Its steady diet of live and recorded blues and gospel music, along with increased black music programming at other local stations, drew not only many black listeners but whites as well. Among the Memphis artists in the blues and rhythm and blues fields to achieve fame through recordings in the early 1950s were Howlin' Wolf (Chester Burnett), B.B. King, Bobby Bland, Junior Parker, Rosco Gordon, Doctor Ross, Joe Hill Louis, Rufus Thomas and Johnny Ace. Strong instrumental music programmes in the public high schools nurtured jazz talent, but the city's prevailing tastes in blues and other vocal forms did not allow a prominent jazz scene to develop. Gospel recording was dominated by the sound of quartets, such as the Spirit of Memphis, which featured lead switching and a 'pumping' bass singer. The gospel compositions of Lucie Campbell and Rev. W. Herbert Brewster of Memphis were also widely recorded during the 1940s and 50s. In the field of country music a number of groups were recorded in a 'honky tonk' style, while the most distinctive country artist to appear in the 1950s was Johnny Cash. The most significant new style to emerge from Memphis at this time was 'rockabilly', an important component of rock and roll that featured a small combo blues instrumentation dominated by electric guitar and/or piano, musical structures based in the blues and lyrics appealing to adolescent sensibilities. Most rockabilly performers were from the region around Memphis and had direct contact with black music and musicians. The chief exponent of the style was Elvis Presley, who began recording in 1954. Other important rockabilly performers were Carl Perkins, Jerry Lee Lewis, Billy Riley, Warren Smith, Johnny Burnette, Charlie Feathers, Johnny Bond and Charlie Rich.

Popular music in Memphis during the 1960s and first half of the 1970s was dominated by soul music. In its most characteristic Memphis variety it featured highly emotional gospel-influenced vocals with a backing of electric guitar and bass, organ and drums, usually supplemented with trumpet and saxophone and sometimes additional wind instruments. The leading record companies associated with this music were Stax and Hi,

with other significant contributions made by Goldwax and Home of the Blues. The backing musicians and some of the vocalists were from Memphis, but many of the latter were recruited from other parts of the country. Some of the backing musicians, particularly at Stax, were white, marking the first period of sustained racial integration in Memphis recording studios. Among the leading Memphis soul recording artists of this era were Booker T. and the MGs, Carla Thomas, Rufus Thomas, Otis Redding, William Bell, Sam and Dave, Eddie Floyd, Isaac Hayes, Willie Mitchell, Ann Peebles, Al Green, James Carr, O.V. Wright, Johnny Taylor and the Staples Singers. While a number of the soul music performers, such as Rufus Thomas, drew heavily on blues sources, those who recorded strictly blues were fewer in number. Among the most prominent of these were Albert King, Little Milton and Big Lucky Carter. Meanwhile, the efforts of blues researchers stimulated a revival of older blues styles and the rediscovery of performers such as Furry Lewis, who often appeared at local clubs and festivals and inspired musicians of a younger generation.

Since the decline of soul music in the mid-1970s, Memphis has fostered individual successes in a variety of popular musical styles, but no distinctive new genre. The last quarter of the 20th century saw a wave of appreciation of the city's musical past, symbolized by the opening of Elvis Presley's home Graceland as a tourist destination following his death in 1977, the redevelopment of Beale Street as a centre of blues activity and a number of festivals highlighting the musical heritage of Memphis and the surrounding region.

DAVID EVANS

Memphis Minnie [Douglas, Minnie; Douglas, Lizzie] (*b* Algiers, LA, 3 June 1897; *d* Memphis, 6 Aug 1973). American blues singer and guitarist. When a child she went to Memphis, where, as Kid Douglas, she earned her living as a street musician. From 1916 to 1920 she toured the South with the Ringling Brothers Circus. With her husband, the Mississippi blues guitarist and mandolin player Joe McCoy, she began a highly popular series of blues recordings (1929), and about 1930 they moved to Chicago. After their divorce in 1935 she recorded with Black Bob (piano) and Casey Bill Weldon (guitar), with whom she made the rousing *Joe Louis Strut* (1935, Voc.). Her common-law husband, Ernest 'Lil Son' Lawler, also a blues guitarist, supported her on *Me and my Chauffeur Blues* (1941, OK). For nearly 30 years her 'Blue Monday' parties in Chicago were celebrated among blues singers. In 1957 she returned to Memphis and five years later had a stroke which ended her singing career.

Memphis Minnie enjoyed unequalled stature among women country-blues singers. Her performances were greatly admired by male blues artists, and she was the only significant female blues instrumentalist, playing the guitar with the forceful, swinging rhythm characteristic of many Memphis-based musicians. Her voice was strong, with breadth in the middle range, and her guitar playing well phrased, as for example on her best-selling *Bumble Bee* (1930, Voc.). Many of her blues were topical or autobiographical, as in *Memphis Minnie-Jitis Blues* (1930, Voc.), referring to her illness; the lyrics of many others were rich in their use of imagery or thematic interest. Among her finest recordings were the guitar duets with McCoy, including the exceptional *Let's Go to Town* (1931, Voc.).

PAUL OLIVER

Mena [de Texerana], **Gabriel** [Graviel; 'el músico'] (*d* Medina de Rioseco, 3 Sept 1528). Spanish poet and composer. According to Luís Zapata's *Miscelánea* (after 1592/*R*) he was a servant of the Admiral of Castile, don Fadrique Enríquez (*d* 1537), and according to the *Cancionero general* (Valencia, 1511) he was a singer in the royal chapel. The first reference to him in the royal household accounts dates from 1496; he continued to serve there until at least 1502. Barbieri suggested that Mena entered the service of Enríquez after the death of his cousin, King Ferdinand, in 1516. If he did, he had returned to royal service at least by June 1523 when he was employed in the household of Juana 'the Mad', where he remained until his death. A poem included in the 1554 edition of the *Cancionero general* describes him as a married singer living in Torrelobatón, close to Tordesillas, where Juana had withdrawn. His will reveals that he was, in fact, married twice, and had three children. Romeu Figueras (MME, xiv/1, 1965, p.209) suggested that he may have been of Jewish descent, although his will makes it clear that if he was, he must have been a *converso*.

As well as being an accomplished and respected poet, his 19 surviving musical settings reveal that he was one of the best composers of his generation. (A further song, *¡A la caça, sus, a la caça!*, attributed to him by Barbieri, is in fact ascribed to 'Luchas'; only the last verse, a late addition to the work, is by Mena.) All but one of his villancicos are preserved in the Cancionero Musical de Palacio (ed. in MME, v, x, 1947–51), the majority of these being later additions made to the manuscript in about 1515 or 1516 (Romeu Figueras). One further song, *Aquel pastorcico, madre*, is in the manuscript *E-Bbc* M.454.

Almost all the songs are concerned with the suffering of the courtly lover, but a striking feature is his tendency to gloss, in terms of both text and music, popular refrains. In four songs, *Aquel pastorcico, madre*, *La bella malmarida* (MME, x, no.234), *Aquella mora garrida* (MME, x, no.254) and *Sola me dexastes* (MME, x, no.422), the popular melody appears to be cited in full in the tenor. Usually, however, the popular melody is reworked or emulated in a more sophisticated manner typical of the court song composers of the early 16th century. The texture of Gabriel's songs is often imitative and generally more contrapuntal than the essentially homophonic idiom developed by Juan del Encina.

TESS KNIGHTON

Mena, Luis Emilio (*b* Santo Domingo, 12 Nov 1895; *d* Santo Domingo, 15 Nov 1964). Dominican composer, conductor and teacher. He studied the flute, harmony and composition with J. de J. Ravelo, playing in his teacher's band by the age of 14; he also learnt the piano, oboe, cello and bassoon. After abandoning a dentistry degree to follow music, he studied with Alfredo Soler at the Liceo Musical in Santo Domingo, graduating as a professor of flute (1926); he also studied composition with E.C. Chapí. He taught solfège and music theory at the Liceo Musical, and taught at the National Conservatory. He directed several music schools and the orchestras of radio stations HIX and HIN. He was a founder member of the Santo Domingo SO (1932), the precursor of the Orquesta Sinfónica Nacional (1941) which he conducted many times. Among his activity in sacred music, he conducted at the ceremony for the coronation of the image of Nuestra Señora de Altagracia (1922), the unofficial patroness of the country. In the 1970s he was posthumously made a Caballero of the Order of Duarte, Sánchez and Mella.

Principally a composer of over 200 short works, he is perhaps the best Dominican orchestral composer of his time, winning two national prizes and gaining performances in the USA. His secular music includes salon and chamber music and arrangements for string quartet and guitar. The orchestral suite *Recuerdos de infancia* is well known to Dominican audiences; his important symphonic works include *Sinfonía giocosa* and *Ecos de la libertad*, a symphonic fantasy on three Dominican national anthems.

MARTHA ELLEN DAVIS

Mena'ane'im (Heb.). Ancient Jewish instrument, possibly a rattle. *See* BIBLICAL INSTRUMENTS, §3(v).

Menalt, Gabriel (*b* Martorell, nr Barcelona; *d* Barcelona, 1687). Spanish composer and organist. Accounts exist of his competing for the posts of organist at SS Justo y Pastor in 1678 and S María del Mar in 1679, both in Barcelona; he won the latter position and held it until his death, which apparently occurred when he was still young. All his known works are for the organ and are contained in two manuscripts (*E-Bc* M. 729 and M. 751.21); they include six pieces of the tiento type (some termed 'gaytilla' or 'partido'; one ed. J. Muset, *Early Spanish Organ Music*, New York, 1948; five ed. in *Antología de organistas españoles del siglo XVII*, i–ii, Barcelona, 1965–6), two sets of versets, and several settings of *Sacris solemniis* and the Spanish *Pange lingua*. One set of versets for the eight psalm tones treats the plainsong in each of the four voices in turn amid imitative counterpoint. The other set, as well as most of the larger pieces, is less contrapuntal. Several are for divided register – a Spanish tradition – and feature lively figuration in the solo register against a relatively static accompaniment; those for single register tend to pursue lengthy sequences in a somewhat homophonic texture.

ALMONTE HOWELL

Mena Moreno, Juan Manuel (*b* 1917; *d* Managua, 1989). Nicaraguan composer and choir director. He studied at the School of Sacred Music in Morelia, Mexico. After his return to Nicaragua he played the organ in León and taught at the National Conservatory in Managua, but his principal contribution came as director of the Nicaraguan National Choir until shortly before his death. Under his leadership the ensemble became the nation's second most important outlet after the National Symphony for classical works and classically arranged material, and also made several international tours. Mena contributed nearly the entire Nicaraguan professional choral repertory, arranging dozens of folksongs and melodies, and he remains the nation's most accomplished composer of vocal works in the classical idiom. His setting of Ernesto Cardenal's *Psalm V* was recorded by the Göteborg Chamber Choir

in September 1985. He also wrote several short pieces for chamber orchestra. *Lajicarita*, written in the early 1980s, was the largest of these works. Especially in his orchestral writing, Mena's style is characterized by inventive melodic counterpoint favouring fugue and the use of chromaticism within a strong tonal foundation. Mena's abiding concern with creating a nationally rooted classical repertory is shown in his last compositions, a projected set of works based on *sones* (folk music forms) inspired by the Villa-Lobos cycle *Bachianas brasileiras*. Only two were completed: *Monimbó es Nicaragua (Sonniquería bachiana* no.1), first performed in 1985 by the Matanzas SO, Cuba, under the direction of César Prado, and *Sonniquería bachiana* no.2, a short concerto written in 1988 and scored for the Nicaraguan *marimba de arco* and a chamber orchestra.

T.M. SCRUGGS

Menander [Menandros] (*b* Athens, 342 BCE; *d* Athens, *c*290 BCE). Greek comic poet. The most famous playwright of Greek New Comedy, he wrote more than 100 plays, domestic comedies in which intrigues, reversals and recognition scenes abound. The plays, of which few survive, have little metrical variety, being mostly in iambic trimeters. However, in a long scene (880–958) from the *Misanthrope*, Menander changed the metre to the 15-syllable catalectic iambic tetrameter which was recited to an aulos accompaniment. Two brief fragments of another play, the *Possessed Girl*, contain an invocation to CYBELE and a corybantic dance and song in hexameters. For the latter the aulos modality would almost certainly have been Phrygian. A mosaic (100 BCE) from the Villa of MARCUS TULLIUS CICERO at Pompeii shows three actors in this comedy playing (or pretending to play) the double aulos, small cymbals and hand-held tympanum.

The characters represented as musicians in these comedies were usually young women of slave status skilled in playing the double aulos or *psaltērion* (a harp-like instrument; *see* PSALTERY, §1). Apparently the *psaltria* was more respectable than the *aulētris*, who was often a prostitute (*see* AULOS, §II, 4). One *psaltria*, Habrotonon, had a major role in the *Arbiter*. Phanias, the main character of the *Citharistes*, was apparently a successful concert performer, freeborn and wealthy. One fragment of this play (Sandbach, no.7) refers to someone (presumably not Phanias) who through instruction (*paideuesthai*) is acquiring or perhaps imparting an affected taste for music; but little more than 100 lines have survived.

The male aulete who provided the accompaniment played the music that was supposedly being performed by an *aulētris*, but his principal task was to accompany the chorus (by convention a group of drunken revellers, votaries of Pan, huntsmen etc.), who were irrelevant to the plot. Only their initial appearances were even acknowledged in dialogue; otherwise a mere stage direction 'chorus' (*chorou*) sufficed, or occasionally 'aulos music' (*aulei*, '[someone] plays the aulos'), as in the manuscripts of Aristophanes. These entr'acte performances were probably a combination of song, dance and mime.

WARREN ANDERSON/THOMAS J. MATHIESEN

Menantes. Pseudonym of CHRISTIAN FRIEDRICH HUNOLD.

Menault, Pierre (*b* Beaune, 1642; *d* Dijon, 1694). French composer. He attended the choir school of the collegiate church of Notre Dame, Beaune, from 1650 to 1660 and was taught by Jacques Huyn, the *maître de chapelle*, and Claude Chardenet, the organist. He was made *maître de musique* at Châlons-sur-Marne Cathedral, and he then occupied the same post in the collegiate church of his native city from 1671 to 1676. He was back in Châlons-sur-Marne from 1676 to 1687. In 1683 he took part in the competition for the appointment of *sous-maîtres* to the royal chapel at Versailles, but he did not get past the first round. He ended his career in Dijon, where he became choirmaster of the large collegiate church of St Etienne (where Rameau's father was organist). The works by Menault which have come down to us were published by Christophe Ballard between 1676 and 1693. The five masses are in the old Franco-Flemish style and, like many others of the period, use the same head-motif at the beginning of several sections. Most movements begin with successive entries in imitation and some approach a fugal exposition, but on the whole the counterpoint is treated with the greatest freedom. From 1686 onwards Menault regularly wrote a basso continuo part for those movements where the vocal forces were reduced. The Vespers setting is ambitious in both its dimensions (five psalms, antiphons and motets) and its scoring (for few voices, strings, organ and continuo). It is the only complete surviving example of the early evening Office set by a French composer of this period.

MICHEL CUVELIER

Mencía (Tajueco), Manuel (bap. Berlanga de Duero, 20 May 1731; *d* Madrid, 7 Aug 1805). Spanish composer and *maestro de capilla*. He may have trained at the Palencia Cathedral, where his uncle, Manuel Tajueco, was organist. Up until 1752 he held the post of organist at the collegiate church of Berlanga de Duero (Soria), but in that year he took up the position of second organist of the Palencia Cathedral on an interim basis. Between 1754 and 1755 he competed unsuccessfully for various posts as organist and *maestro de capilla* in Osma, Segovia and Zamora. In December 1755 he was named *maestro de capilla* of León Cathedral, a position in which he encountered a number of problems. Following a series of cautions, the León town council dismissed him in 1758.

He fought his dismissal in court, and after a lengthy process was awarded compensation and reinstatement in his post in January 1768. During the intervening years he lived in Madrid, trying to find favour at court. Towards the end of 1769 he was appointed *maestro de capilla* of the convent of the Descalzas Reales in Madrid, a post he held until his death and in which he enjoyed a great reputation.

Mencía's few surviving works are typical of the late 18th century. In his Latin works he exploited the textual possibilities of alternating solos, duets and choruses with instrumental passages of an orchestral character. Also reflected in his output is the contemporary trend of preferring responsorios to villancicos for major festivals.

WORKS

PABLO L. RODRÍGUEZ

Menckin, Thomas. *See* MANCINUS, THOMAS.

Mendel, Arthur (*b* Boston, MA, 6 June 1905; *d* Newark, NJ, 14 Oct 1979). American musicologist. From Harvard University (AB 1925) he went to the Ecole Normale de Musique in Paris, where he studied music theory and composition with Nadia Boulanger (1925–7). He was music critic of the *Nation* (1930–33), literary editor for G. Schirmer, Inc. (1930–38), editor of the American Musicological Society's journal (1940–43) and editor for Associated Music Publishers (1941–7). In addition he was also an active translator (of Bekker, Hindemith and Alfred Einstein) and from 1936 to 1953 he was the conductor of the Cantata Singers, one of the first choral groups in the USA to give authentic performances of Baroque music. He taught at the Dalcroze School of Music and the Diller-Quaile School in New York from 1938 to 1950, serving as president of the former (1947–50).

In the late 1940s Mendel gained recognition as a musicologist (self-taught). He held lectureships at Columbia University (1949) and at the University of California, Berkeley (1951), and was appointed professor of music at Princeton University (1952), where he was department chairman (1952–67) and held the Henry Putnam University Professorship from 1969 until his retirement in 1973. In 1976 he was awarded the honorary doctorate from Brandeis University. He was a member of the editorial boards of the Neue Bach-Ausgabe and of the new Josquin edition.

Mendel published some editions in vocal score of works by Schütz and Mozart and studies in the history of musical pitch and on the rhythmic structure of Renaissance and Baroque music. He also examined the basic assumptions of musicological method and wrote on the goals and tasks of higher musical education. His editions and studies of Bach's life and works, most notably the documentary biography *The Bach Reader* (with Hans T. David), and his practical and critical editions of the *St John Passion*, brought him recognition as the foremost American Bach scholar of his generation. In his later years he investigated the music of Josquin and the possible applications of computer technology to musicological problems.

ROBERT L. MARSHALL

Mendelsohn, Alfred (*b* Bucharest, 4/17 Feb 1910; *d* Bucharest, 9 May 1966). Romanian composer, teacher and conductor. He studied composition with F. Schmidt and Marx at the Vienna Music Academy (1927–31),

where he was also a pupil of Wellesz and Lach in music history; he continued his composition studies under M. Jora at the Bucharest Conservatory (1931–2). After a period as a harmony teacher at the E. Massini Conservatory in Bucharest (1932–6), he directed that institution from 1936 until 1940; later he was assistant director of music and conductor at the Romanian Opera in Bucharest (1945–54). He held the posts of secretary (1946–9, 1954–63) and vice-chairman (1963–6) of the Romanian Composers' Union, and taught counterpoint and composition at the Bucharest Conservatory (1949–66). Mendelsohn made his mark both as an exceptional teacher and as a prolific composer of wide culture, working in a great diversity of styles, forms and genres. He had a propensity for the monumental and grandiose, particularly in his cantatas and oratorios on patriotic historical subjects. His dramatic temperament is evident in the operas *Meşterul Manole* ('Master Manole') and *Michelangelo*, but even more so in the oratorios *Horia* and *1907* and in the Symphony no.3. The basis of his style evolved from Regerian late Romanticism to serialism in the manner of the Second Viennese School; his final mature manner was realized in several works of a nationalist spirit written during the period 1950–66.

WORKS
(selective list)

Stage: Harab Alb (ballet), 1948; Meşterul Manole [Master Manole] (lyrical drama, 3, A. Jar, after folktale), 1949; Călin (ballet), 1956; Anton Pann (operetta, 3, I. Roman and R. Albala), 1961, Bucharest, 10 Dec 1963; Michelangelo (op, 3, Mendelsohn, after Kiriţescu), 1964, Timişoara, 29 Sept 1968; Spinoza (op, 6 scenes, P. Sterian), 1966

9 syms.: 1944–64

Other orch: 3 suites, 1937–43; Sym. Poem [no.1], 1949; Sym. Poem [no.2], 1953; Vn Conc. [no.1], 1953; Vn Conc. [no.2], 1957; Org Conc., 1960; Vn Conc. [no.3], 1963

Choral: Poemul păcii [Poem to Peace], 1952; Cantata Bucureştiului, 1953; Horia (orat), 1955; '1907' (orat), 1957; Sub cerul de vară [Summer Sky] (sym.-cant.), 1959; Pentru marele octombrie [For the Great October] (orat), 1960

VIOREL COSMA

Mendelssohn, Arnold (Ludwig) (*b* Ratibor [now Racibórz], Silesia, 26 Dec 1855; *d* Darmstadt, 19 Feb 1933). German teacher, composer and organist, son of a second cousin of Felix Mendelssohn. After studying law at Tübingen (1877), he pursued a musical education at the Institut für Kirchenmusik in Berlin (1877–80), where his teachers included Karl August Haupt for the organ, Loeschhorn for the piano and Grell, Friedrich Kiel and Taubert for composition. In the 1880s he occupied in rapid succession a number of increasingly important posts: music director and organist of Bonn University (1880–82) where he made friends with Spitta; music director in Bielefeld (1882–5); teacher of composition at the Cologne Conservatory (1885–90); and finally Hessian master of church music and professor at the conservatory in Darmstadt (1891–1912). From 1912 he taught at the Frankfurt Conservatory where Hindemith and K. Thomas were among his students. He was also the recipient of numerous honorary degrees and titles, as well as other awards.

Mendelssohn contributed significantly to the renewal of interest in Lutheran church music both by his promotion of the works of Bach and Schütz and through his own compositions, which began to chart a new course that Distler, Pepping, Raphael and others would later follow. Rejecting the romanticized style of his contemporaries, he evolved a purer and more appropriate polyphonic liturgical idiom. The influence of Bach is strongest in such early works as the *Abendkantate* (1881); Mendelssohn later showed considerable individuality in his incidental music to Goethe's *Paria* (1906) and *Pandora* (1908) and in his *Geistliche Chormusik* (1926). In his operatic works he avoided Wagnerian influences and accordingly chose a fairytale subject and a folklike musical setting for *Der Bärenhäuter* (1897); many of his later lieder are in a similar vein, while his earlier ones, more complex in style, betray the influence of Hugo Wolf, whom he met in 1890.

A man of impressive cultural breadth, Mendelssohn wrote essays (*Gott, Welt und Kunst* is the best-known), edited music by Hassler, Schütz and Monteverdi, and was well-versed in literature, theology and philosophy. He was also widely respected as a sensitive judge and source of encouragement to talented young musicians.

WORKS

At least 219 items, prints and MSS, all in *D-Bsb*; complete list compiled by F. Noack in *D-DS*; all printed works published in Leipzig, unless otherwise stated

STAGE

Elsi, die seltsame Magd (op, 2, H. Wette, after J. Gotthelf), op.8, Cologne, 16 April 1896 (Berlin, 1896)

Der Bärenhäuter (op, 3, Wette), op.11, Theater des Westens, Berlin, 9 Feb 1900 (Berlin, 1897)

Paria (incid music, J.W. von Goethe), op.36 (Berlin, 1906)

Pandora (incid music, Goethe), op.37 (Berlin, 1908)

OTHER VOCAL

Sacred choral works incl. Abendkantate (Berlin, 1881); Das Leiden des Herrn, solo vv, chorus, org, orch, op.13 (1900); Auferstehung, A, chorus, org, orch, op.17 (Berlin, 1900); Aus tiefer Not, S, chorus, org, orch, op.54 (1912); Auf meinen lieben Gott, solo vv, chorus, org, orch, op.61 (1912); Zagen und Zuversicht, 3 solo vv, chorus, orch, op.84 (1920); Deutsche Messe, 8vv chorus, op.89 (1923); Geistliche Chormusik, 14 motets for the liturgical year, op.90 (1926)

Secular works incl. Zehn Volkslieder, 3–4 male vv, op.99 (1929); lieder comprising 4 collected vols. and individual op. nos.

INSTRUMENTAL

Orchestral works incl. 3 syms., E♭, C and a (all MS); Vn Concerto, op.88 (Berlin, 1922)

3 str qts, incl. no.2, D, op.67 (Leipzig, 1916) and no.3, B♭, op.83 (Leipzig, 1926)

Trio, a, 2 vn, pf, op.76 (Leipzig, 1916); Sonata, f♯, vc, pf, op.70 (Leipzig, 1916); Sonata, C, vn, pf, op.71 (Leipzig, 1916); 2 pf sonatas, c and e, op.66, both (1916)

EDWARD F. KRAVITT

Mendelssohn(-Bartholdy) [Hensel], **Fanny (Cäcilie)** (*b* Hamburg, 14 Nov 1805; *d* Berlin, 14 May 1847). German composer, pianist and conductor, sister of the composer Felix Mendelssohn. She was the eldest of four children born into a post-Enlightenment, cultured Jewish family. Of her illustrious ancestors, her great-aunts Fanny Arnstein and Sara Levy provided important role models, especially in their participation in salon life. Her paternal grandfather, Moses Mendelssohn, was the pivotal figure in effecting a rapprochement between Judaism and German secular culture. In Fanny Mendelssohn's generation this movement resulted in the conversion of the immediate family to Lutheranism. Despite baptism, however, Fanny retained the cultural values of liberal Judaism.

An important element in the family circle was her special relationship with her younger brother Felix (1809–47). In close contact their entire life, they stimulated and challenged each other musically and intellectually. Fanny played a major role in shaping some of Felix's compositions, notably his oratorio *St Paul* (completed in 1837), and advised him on musical matters. Felix, likewise, encouraged her compositional activities, but he discouraged publication. Although his attitudes echoed his father's views and reflected the prevailing cultural values, they may have been motivated by jealousy, fear of competition, protectiveness or paternalism. In any case, these negative aspects exacerbated Fanny's own feelings of ambivalence towards composition. She depended on Felix's good opinion of her musical talents, as expressed in a letter to him of 30 July 1836, where she speaks of a Goethe-like demonic influence he exerted over her, and said that she could 'cease being a musician tomorrow if you thought I wasn't good at that any longer'. But after Felix's marriage in 1837, their relationship became less intense. In 1846 Fanny embarked on publication without her brother's involvement, as she declared in a letter of 9 July 1846 regarding a forthcoming project that became her collection of Lieder op.1 (both letters in Citron, 1987). Her pointed avowal of independence suggests pent-up frustration on this sensitive issue.

From 1809 Fanny Mendelssohn lived in Berlin. She received her earliest musical instruction from her mother, Lea, who taught her the piano (she is reputed to have noted her daughter's 'Bach fingers' at birth). She then studied the piano with Ludwig Berger, and in 1816 with Marie Bigot in Paris. A few years later she embarked on theory and composition with C.F. Zelter, a conservative musician and early champion of J.S. Bach. Her first composition dates from December 1819, a lied in honour of her father's birthday. In 1820 she enrolled at the newly opened Berlin Sing-Akademie. During the next few years Mendelssohn produced many lieder and piano pieces; such works were to be the mainstay of her output of about 500 compositions. On 3 October 1829 she married the Prussian court painter Wilhelm Hensel. Their only child, Sebastian, was born the following year (recent evidence shows that there was at least one stillbirth).

Beginning in the early 1830s, Mendelssohn became the central figure in a flourishing salon, for which she created most of her compositions and where she performed on the piano and conducted. Her tastes favoured composers who were then unfashionable, including Mozart and Handel, and especially Bach. Her only known public appearance was in February 1838, performing her brother's First Piano Concerto at a charity benefit. Two trips to Italy, in 1839–40 and 1845, were among the highpoints of her life. In Rome she formed a close relationship with Gounod, who later noted Fanny's influence on his budding musical career. Her impressions of the first Italian trip are inscribed in *Das Jahr*, a set of 12 character-pieces that combine musical and autobiographical motifs. Her last composition, the lied *Bergeslust*, was written on 13 May 1847, a day before her sudden death from a stroke.

Fanny Mendelssohn: portrait by her husband Wilhelm Hensel, pencil, 1829 (Kupferstichkabinett, Berlin)

While lieder and piano pieces dominate her output, she composed a few large-scale dramatic works in the early 1830s, perhaps to test her role as *saloniste*, including the *Lobgesang* (1831), the cantata *Hiob* (1831), the *Oratorium nach Bildern der Bibel* (1831), the dramatic scene *Hero und Leander* (1832) and the Overture in C (*c*1830). Of note among the relatively small number of instrumental chamber works is the Piano Trio op.11 (composed 1846) and the String Quartet. Only a very small amount of her music was published – 11 opus numbers and about 16 single pieces without opus number. This fact, combined with the previously restricted access to her manuscripts (many still in private hands), has impeded a thorough evaluation of her style. Nonetheless, the available music suggests certain traits we may assume to be typical: lyricism, as in the published piano pieces; neo-Bachian procedures, as in the Prelude in E minor and in the *Oratorium nach den Bildern der Bibel*; and, above all, attention to craftsmanship and respect for traditional syntax and procedures. It further suggests that her music

has been unduly neglected. Many modern editions have now appeared, especially from Furore Verlag (Kassel) and Hildegard Publishing (Bryn Mawr, Pennsylvania), but the great majority of works are still in manuscript.

Fanny Mendelssohn's letters and diaries reveal a witty, perceptive and intelligent woman, fully conversant with intellectual life. Her strong self-image in this regard contrasts with her shaky confidence in her creativity (not uncommon in women composers). Yet despite her doubts, she created and maintained in her salon a flourishing showcase for her many musical talents. Any full-scale evaluation will have to take into account the importance of the salon for Mendelssohn as for countless other female composers, writers and artists.

MARCIA J. CITRON

Mendelssohn(-Bartholdy), (Jacob Ludwig) Felix (*b* Hamburg, 3 Feb 1809; *d* Leipzig, 4 Nov 1847). German composer. One of the most gifted and versatile prodigies, Mendelssohn stood at the forefront of German music during the 1830s and 40s, as conductor, pianist, organist and, above all, composer. His musical style, fully developed before he was 20, drew upon a variety of influences, including the complex chromatic counterpoint of Bach, the formal clarity and gracefulness of Mozart and the dramatic power of Beethoven and Weber.

Mendelssohn's emergence into the first rank of 19th-century German composers coincided with efforts by music historiographers to develop the concept of a

Classic–Romantic dialectic in 18th and 19th-century music. To a large degree, his music reflects a fundamental tension between Classicism and Romanticism in the generation of German composers after Beethoven.

1. EARLY YEARS. Mendelssohn's paternal grandfather was Moses Mendelssohn (1729–86), the pre-eminent Jewish philosopher of the Enlightenment in Germany (and colleague of G.E. Lessing, J.K. Lavater and Immanuel Kant), who had argued for religious tolerance and the assimilation of German Jewry into German culture. In 1787 the Prussian monarch, Friedrich Wilhelm II, granted a letter of protection (*Schutzbrief*) to the philosopher's widow and six children. Two of the children retained the Jewish faith, two (including Brendel, who married Friedrich von Schlegel in 1804) converted to Catholicism and two (including the composer's father Abraham, 1776–1835) converted to Protestantism. Mendelssohn's maternal great-grandfather was Daniel Itzig (1723–99), a wealthy court banker, who in 1791 obtained a royal patent that extended to his family, including his children and grandchildren, 'all the rights of Christian citizens' throughout Prussia.

In 1804 Abraham, in partnership with his brother Joseph, established the Berlin banking firm J. & A. Mendelssohn (which survived until its liquidation by the Nazis in 1938); in the same year he married Lea Salomon (1777–1842), a granddaughter of Daniel Itzig. The next year a branch of the bank was opened in Hamburg, where Abraham and Lea settled, and where three of their four children were born (Fanny in 1805, Felix in 1809 and Rebecka in 1811; the fourth, Paul, was born in Berlin in 1812). When Napoleon proclaimed the continental blockade against England in 1806, Hamburg became a centre of smuggling activities; to enforce the blockade, the city was annexed and occupied by the French on 1 January 1811. For reasons that remain unclear, Abraham Mendelssohn was forced to flee with his family to Berlin, where they arrived by July 1811. During the war of liberation in 1813 he equipped two Prussian battalions and after Napoleon's defeat in 1815 was among those sent to Paris to collect war reparations imposed by the allied coalition.

In 1812 the Prussian chancellor, Hardenberg, issued a decree (the *Gleichstellungsgesetz*, or emancipation act) extending further rights to Prussian Jews. Nevertheless, on 21 March 1816 the Mendelssohn children were secretly baptized into the Protestant faith and Felix was given the additional names Jakob Ludwig. But not until 1822 did Lea and Abraham Mendelssohn become Protestants. At the same time they added the surname Bartholdy (after the precedent of Lea's brother Jakob Salomon, who had converted to Christianity several years before and adopted Bartholdy, the name of a family dairy farm, as a surname; Jakob advised Abraham to use the name Mendelssohn Bartholdy 'as a distinction from the other Mendelssohns'). In explaining his decision to his daughter Fanny, Abraham Mendelssohn noted in 1820 that the Christian faith 'contains nothing that can lead you away from what is good, and much that guides you to love, obedience, tolerance, and resignation, even if it offered nothing but the example of its Founder, understood by so few, and followed by still fewer'.

The early musical education of Mendelssohn and his sister Fanny was overseen by Lea. In 1816 and 1817 the family visited Paris; there the children took piano lessons with Marie Bigot, whose technique had been admired by Haydn and Beethoven, and played chamber music with the violinist Pierre Baillot. In April 1817, in Frankfurt, the children met their aunt Dorothea von Schlegel, who reported that Felix played with genius and Fanny with a virtuosity beyond all comprehension. At this time Mendelssohn was evidently reading complex scores with ease and transposing at the keyboard studies by J.B. Cramer. By July 1818 he had completed his elementary schooling and his father, impressed by his talent for music and drawing, decided to engage a private tutor. His choice was a lecturer in history at the University of Berlin, G.A.H. Stenzel, who instructed both Felix and Paul in 1818 and 1819. About this time, the nine-year-old Felix began to study the piano with Ludwig Berger, a former pupil of Clementi. In October 1818 Mendelssohn appeared in public, probably for the first time, accompanying the horn players Heinrich and Joseph Gugel in a trio by Joseph Wölfl. The same year he performed J.L. Dussek's 'Military' concerto, evidently from memory; but this accomplishment was eclipsed by Fanny's rendition from memory (at the age of 13) of 24 preludes from Bach's *Wohltemperirte Clavier*.

By May 1819 Mendelssohn was studying the violin with the court violinist C.W. Henning, and attending with Fanny the Friday rehearsals of the Berlin Singakademie, where they heard the 'most serious things', namely, instrumental works by Bach and Handel. The following year he began to study the organ with A.W. Bach and (with Fanny) joined the Singakademie chorus; after his successful audition as an alto the director, Carl Friedrich Zelter, drily noted that the boy was 'usable' (*brauchbar*). The Singakademie had been founded in 1791 by Carl Fasch and was dedicated to the preservation and performance of 18th-century sacred choral music, especially that of Bach; an ancillary Ripienschule rehearsed instrumental music. On Fasch's death in 1800 the directorship passed to his pupil Zelter (the musical confidant of Goethe), who enjoyed a close association with the Mendelssohn family. By June 1819 Zelter was instructing Fanny in music theory and about this time he began to teach Felix as well. A surviving composition workbook documents his astonishing progress. Figured bass exercises, begun about July, were concluded in October and were followed in 1820 and early 1821 by a rigorous course of chorale, invertible counterpoint, canon, and fugue in two and three parts, all according to a method of instruction drawn from Kirnberger's monumental *Kunst des reinen Satzes in der Musik* (which had been written to disseminate Bach's pedagogical method). The workbook also preserves variation sets and sonata-form movements for piano and for piano and violin, carefully modelled on Haydn and Mozart. It is likely that Mendelssohn's early compositional essays included duo sonatas for piano that he played with Fanny; but the earliest datable composition is the *Lied zum Geburtstag meines guten Vaters*, performed in Berlin on 11 December 1819.

To tutor his children Abraham Mendelssohn procured the services of Karl Ludwig Heyse (father of the novelist

1. Autograph MS of Mendelssohn's 'Recitativo', for piano and strings, 7 March 1820 (D-Bsb Mendelssohn Nachlass 1)

Paul Heyse) and Felix's general education advanced rapidly. By the early months of 1821 he was reading Caesar and Ovid, and studying history, geography, arithmetic and French. No small measure of the youth's intellectual industry is recorded in a mock epic poem, *Paphlëis* (ed. in M.F. Schneider, E1961), drafted during the latter part of 1820 or the beginning of 1821, which relates in German dactylic hexameters the adventures of his brother Paul and affords an amusing glimpse of daily life in the Mendelssohn household. (Felix became an avid classicist; he later studied Greek with his sister Rebecka and in 1826 made a translation of Horace's *Ars poetica*, which he completed on 15 Oct; manuscript in *D-Bsb*.)

2. Apprenticeship and early maturity, 1821–9. Abraham and Lea Mendelssohn had supported without discrimination their children's musical pursuits, but by July 1820 Abraham had begun to temper Fanny's enthusiasm. He declared that though music might become a profession for Felix, it must remain only an 'ornament' for Fanny, for whom, in the Berlin high society of the 1820s, the idea of a profession was inconceivable. While Fanny's compositional outlets were confined in the main to the lied and piano miniatures, Felix essayed an ever broader range of genres, including keyboard, chamber and sacred choral works. Encouraged by his father, he now undertook his most ambitious project to date. Early in August 1820 he received a libretto for a Singspiel, *Die Soldatenliebschaft*, arranged from a French vaudeville by the doctor J.L. Casper; by early December the score, comprising an overture and 11 numbers, was finished. After a private reading, the Singspiel was performed fully staged, with orchestra, on 3 February 1821, the composer's 12th birthday. For this event a special theatre was constructed in a hall of the Mendelssohns' home and the orchestra was recruited from the royal Kapelle.

Buoyed by this success, Mendelssohn dispatched in six weeks his second one-act Singspiel, *Die beiden Pädagogen*,

with a libretto arranged by Casper from Eugène Scribe's comedy *Les deux précepteurs*. It was performed in March for his mother's birthday and in April for J.N. Hummel, who was giving concerts in Berlin. Comparing the two Singspiele, his mother found the new work to possess 'more comic whim and a more mature execution'. Mendelssohn's productivity now took a sudden leap. The same year he completed some sacred choral works, including a setting of Psalm xix for the Singakademie (performed on 18 September 1821); six sinfonias for strings; a Piano Sonata in G minor (posthumously published as op.105); numerous fugues for string quartet; his third Singspiel, *Die wandernden Komödianten*; and possibly also a wedding cantata for a cousin. All these compositions were dutifully submitted to the critical judgment of his sister Fanny, whom he dubbed his Minerva.

Two events in 1821 proved critical for the young composer's musical and intellectual development. On 18 June, at the opening of the rebuilt Berlin Schauspielhaus, he attended the première of Weber's 'romantic opera' *Der Freischütz*, which created a sensation in the German press, and a few days later he heard Weber's *Concert-Stück* for piano and orchestra. Then, in November, Zelter accompanied Mendelssohn to Weimar, where he introduced the prodigy to the septuagenarian Goethe. During a two-week visit Mendelssohn worked on the finale of *Die wandernden Komödianten*, made a sketch of the house of Lucas Cranach, practised an end-rhyme game with Goethe's daughter-in-law Ottilie and enjoyed daily conversations with the German 'poet laureate'. In preparation for the trip Mendelssohn had developed his skill at improvisation and he was called upon to play for Goethe and for members of the Weimar ducal court and its Kapellmeister, Hummel. He obliged with several Bach fugues, the overture to Mozart's *Nozze di Figaro* and his own compositions and improvisations, and read autographs of Mozart and Beethoven at sight (for illustration *see* GOETHE, JOHANN WOLFGANG VON).

On his return to Berlin, he completed and prepared *Die wandernden Komödianten*. But a hand injury forced the delay of its private première, scheduled for March 1822, and he took up other projects. By then, he had already essayed nearly all the standard musical genres of the time. Thus, his fourth Singspiel, the three-act *Die beiden Neffen* (also known as *Der Onkel aus Boston*), was begun in May 1822 and finished in November 1823; by the end of 1823, he had completed his 13th string sinfonia; and between 1822 and 1824 he produced five concertos, one each for piano and violin and three double concertos (two for two pianos, which he performed with Fanny, and one for violin and piano). He continued to appear in public concerts, but his principal performance venue now came to be the lavish Sunday 'musicales' at the family home. Inaugurated by early 1822, these events attracted the cultural élite of Berlin, who came to hear Felix and Fanny perform, and to marvel at Felix's precocity as a composer. On 24 March, for example, Fanny performed a concerto by Hummel; Felix directed one of his sinfonias (probably from a piano) and, at the request of Prince Anton Heinrich Radziwiłł (patron of Beethoven), improvised on the subject of Mozart's Fugue in C minor K426.

In July 1822 the family departed for a Swiss holiday. En route Mendelssohn met several prominent musicians, including Louis Spohr in Cassel and the young Ferdinand Hiller and the choral conductor J.N. Schelble in Frankfurt. By this time Mendelssohn had begun to study drawing with the Berlin painter J.G.S. Rösel and he now produced some 50 meticulous drawings of scenic landscapes. The family reached Lucerne in August and, with a party of 34, climbed the Rigi, where they were fogbound for a day. Near Geneva, Mendelssohn began his Piano Quartet in C minor, which appeared in print as his op.1 the following year. Early in October, during the return to Berlin, his parents converted to the Protestant faith, and the family visited Goethe in Weimar. Likening himself to Saul and Mendelssohn to David, Goethe again enjoyed his improvisations, but also heard for the first time Fanny, who performed her own settings of Goethe's poems and Bach fugues.

In 1821 Fanny had met and fallen in love with the young court painter Wilhelm Hensel; on Christmas Eve 1822 Hensel gave her his self-portrait, along with a volume of poetry by his friend Wilhelm Müller (the poet of *Die schöne Müllerin*), who visited Berlin in July 1823. The same year the virtuoso pianist Frédéric Kalkbrenner was received at the Mendelssohn home, where he heard Fanny and Felix perform. In August Mendelssohn travelled to Silesia, accompanied by his father, brother and Heyse; and in Reinerz, where he visited his uncle Nathan Mendelssohn, he performed in a charity concert. The year ended with an eventful gift: Mendelssohn received from his grandmother Bella Salomon a copy of Bach's *St Matthew Passion*. The copy had been made by Eduard Rietz (Henning's replacement as Mendelssohn's violin teacher), possibly from a manuscript in Zelter's possession. (After some five years of preparation, Mendelssohn revived the work in the celebrated performance at the Berlin Singakademie in March 1829.)

By early 1824 *Die beiden Neffen* was made ready for private performance and rehearsed on Mendelssohn's 15th birthday; Zelter took this occasion to acknowledge the end of his student's apprenticeship and to welcome him into the brotherhood of Bach, Mozart and Haydn. Meanwhile Mendelssohn was already considering a libretto for a new Singspiel, *Die Hochzeit des Camacho*, based on an episode from Cervantes's *Don Quixote*; composition of this work began in earnest in June. A significant stylistic shift is detectable in Mendelssohn's music from this year: though Zelter's brotherhood excluded contemporary figures such as Beethoven and Weber, Mendelssohn now began to assimilate elements of their styles, and of others, in a series of rapidly composed works, among them the Symphony no.1 op.11 and Double Concerto in A♭ for two pianos. Perhaps his most remarkable effort in 1824 was the *Harmoniemusik* for 11 wind instruments, composed in July for an ensemble at the Baltic resort Bad Doberan, where he took a cure with his father (the work was later revised and published as op.24). No less industrious was Fanny; in December, Zelter reported to Goethe that she had completed her 32nd fugue. Around this time Berlin musical life was stimulated by the visit of the virtuoso pianist Ignaz Moscheles, who gave concerts in November and December. Ever attentive to her children's needs, Lea Mendelssohn engaged him to give Fanny and Felix finishing lessons at the piano.

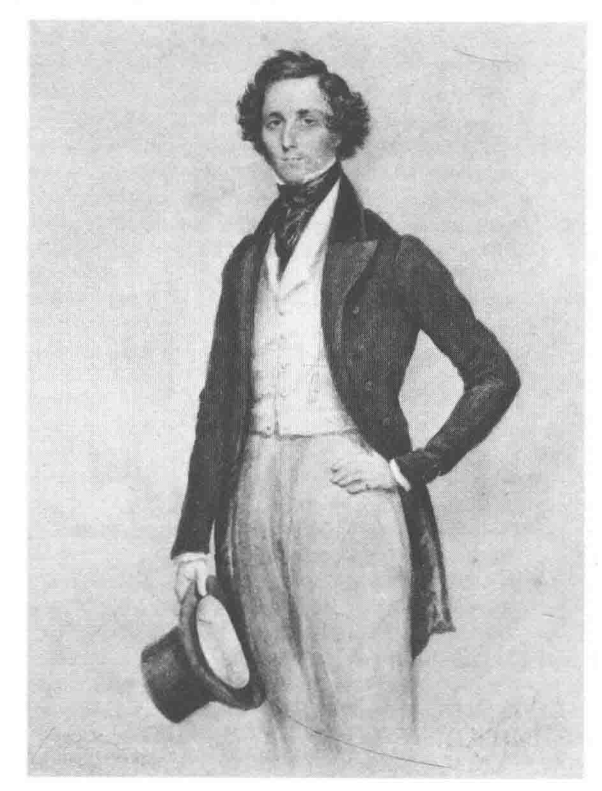
By March 1825 Mendelssohn had begun work on the second act of *Die Hochzeit des Camacho*, but further progress was interrupted by a trip he made with his father

2. Felix Mendelssohn: drawing by his future brother-in-law, Wilhelm Hensel, pencil, 14 November 1822 (D-Bsb Mendelssohn-Archive)

to Paris. On the way there they briefly visited Goethe in Weimar before they arrived on 22 March. The purpose of the journey was to accompany Abraham's sister, Henriette Mendelssohn, back to Berlin, but he seized the opportunity to solicit the opinion of Cherubini, the indomitable director of the Paris Conservatoire, about his son's professional prospects. At this time several virtuosos and composers were assembled in Paris, including the pianists Hummel, Moscheles, Kalkbrenner, J.P. Pixis, the Herz brothers and the 14-year-old Liszt; the violinists Baillot, Kreutzer, Boucher and Rode; the composer and theorist Antoine Reicha; and the opera composers Rossini, Paer, Auber, Catel and Halévy. The young Mendelssohn took his place among these ranks, performing his piano quartets in private soirées and sending to Berlin highly perceptive, if critical, letters about French musical life. Thus Auber's *Léocadie* (based, like *Die Hochzeit des Camacho*, on Cervantes) was dismissed for its over-reliance on the piccolo, the 14-year-old Liszt had 'many fingers but not much intelligence', Reicha was a huntsman who chased parallel 5ths and Cherubini an extinct volcano that occasionally spewed forth ash. For his part, the usually acerbic Cherubini astonished his colleagues by approving of Mendelssohn's piano quartets ('Ce garçon est riche, il fera bien', was the verdict); after examining a severely academic Kyrie in D minor for five-part chorus and orchestra, submitted by Mendelssohn in May, Cherubini urged Abraham to leave his son in Paris for further study.

During the return trip to Berlin they again visited Weimar and Mendelssohn performed for Goethe the Piano Quartet in B minor (published later that year as op.3 with a dedication to the poet). In August the score of *Camacho* was finished, and in September Mendelssohn was confirmed in the Protestant faith. By this time his family had moved from 7 neue Promenade, the house of Lea Mendelssohn's mother, Bella Salomon, to a new residence off the Leipzigerplatz. Purchased on 18 February 1825, 3 Leipzigerstrasse comprised a stately if dilapidated mansion, an imposing courtyard and gardens, stables and summerhouse. Renovations of the main structure continued throughout the summer and autumn, while the family took up temporary quarters in the summerhouse. It was probably there that Mendelssohn composed his first indisputable masterpiece, the Octet op.20, finished on 15 October and written for Eduard Rietz, whose influence is perceptible in the florid first violin part. As he was creating this extraordinary work, Mendelssohn was also preoccupied with his classical studies: by mid-October he finished a metrically accurate German translation of Terence's comedy, *The Woman of Andros*, which Heyse, his tutor, published anonymously the following year (*Das Mädchen von Andros*, Berlin, 1826).

3 Leipzigerstrasse became a musical and cultural centre for an ever widening circle of acquaintances. Visitors included the poets Heinrich Heine and Karl von Holtei, Ludwig Börne, the philosopher Hegel, the classicist August Böckh, and the scientist Alexander von Humboldt, who later erected a small structure in the garden for recording magnetic measurements. Among Mendelssohn's friends were the music critic and theorist A.B. Marx, the philologist J.G. Droysen, and the pastor Julius Schubring, who later collaborated with the composer on the librettos of *St Paul* and *Elijah*; friends who rented rooms at the house included the actors Eduard and Therese Devrient, and Carl Klingemann, a clerk at the Hanover legation. During the summer months the Mendelssohn children maintained a mock literary journal, the *Gartenzeitung*, and, according to Sebastian Hensel, 'led a fantastic, dreamlike life'. They read voraciously the novels of Jean Paul and the plays of Shakespeare, reissued in 1825 in the German translations of Ludwig Tieck and A.W. von Schlegel. In July 1826 Mendelssohn wrote to his sister that he would soon begin to 'dream the Midsummer Night's Dream'; by early August he had finished his remarkable concert overture, 'the most striking example', according to Bernard Shaw, 'of a very young composer astonishing the world by a musical style at once fascinating, original and perfectly new'. The overture was first performed privately at the Mendelssohn residence; in November, Felix and Fanny rendered it as a piano duet for Moscheles, who was again giving concerts in Berlin.



After considerable delay and against the opposition of Spontini (the Generalmusikdirektor) *Die Hochzeit des Camacho* was placed in rehearsal at the beginning of 1827. In February Mendelssohn visited Stettin in Pomerania, where the *Midsummer Night's Dream* overture received its public première under Carl Loewe; there Mendelssohn performed in public Weber's *Concert-Stück* and (with Loewe) his own Double Piano Concerto in A♭ and, in private, Beethoven's Hammerklavier Sonata from memory. By April, as Mendelssohn prepared to take an entrance examination for the University of Berlin, *Camacho* was made ready for its première at the Schauspielhaus. Intrigues against the work, the illness of the principal singer and the weakness of the libretto mitigated against its success, and it was withdrawn after only one performance (29 April), the composer's only opera to reach the public stage.

During the summer semester of 1827 Mendelssohn matriculated at the University of Berlin, in order to receive an education, as his mother observed, 'so often lacking in musicians'. He attended the lectures of Eduard Gans in legal history and Carl Ritter in geography, and, during the winter semester of 1828–9, Hegel's lectures on aesthetics. Between terms Mendelssohn enjoyed an extended holiday, from late August to mid-October 1827, with two student companions. Their itinerary led them to the Harz mountains, Thuringia and Franconia, and then to Heidelberg, Frankfurt (where they were joined by Ferdinand Hiller) and Coblenz (where they visited Mendelssohn's uncle). Mendelssohn divided his time between sketching, working on the String Quartet in A minor op.13, and meeting several musicians, among them Gottfried Weber and Lindpaintner. In Heidelberg Mendelssohn discussed 17th- and 18th-century settings of *Tu es Petrus* with Justus Thibaut, who had argued in *Ueber Reinheit der Tonkunst* (Heidelberg, 1825) for a 'pure' style modelled on the choral music of Palestrina and Handel. Mendelssohn's own, neo-Baroque setting of *Tu es Petrus* was presented to Fanny on her birthday in November 1827, and by Christmas he had prepared two more musical gifts: a toy symphony (*Kindersymphonie*) for Rebecka (a second followed a year later) and a setting of *Christe, du Lamm Gottes*, the first in a series of cantatas in the style of Bach, for Fanny.

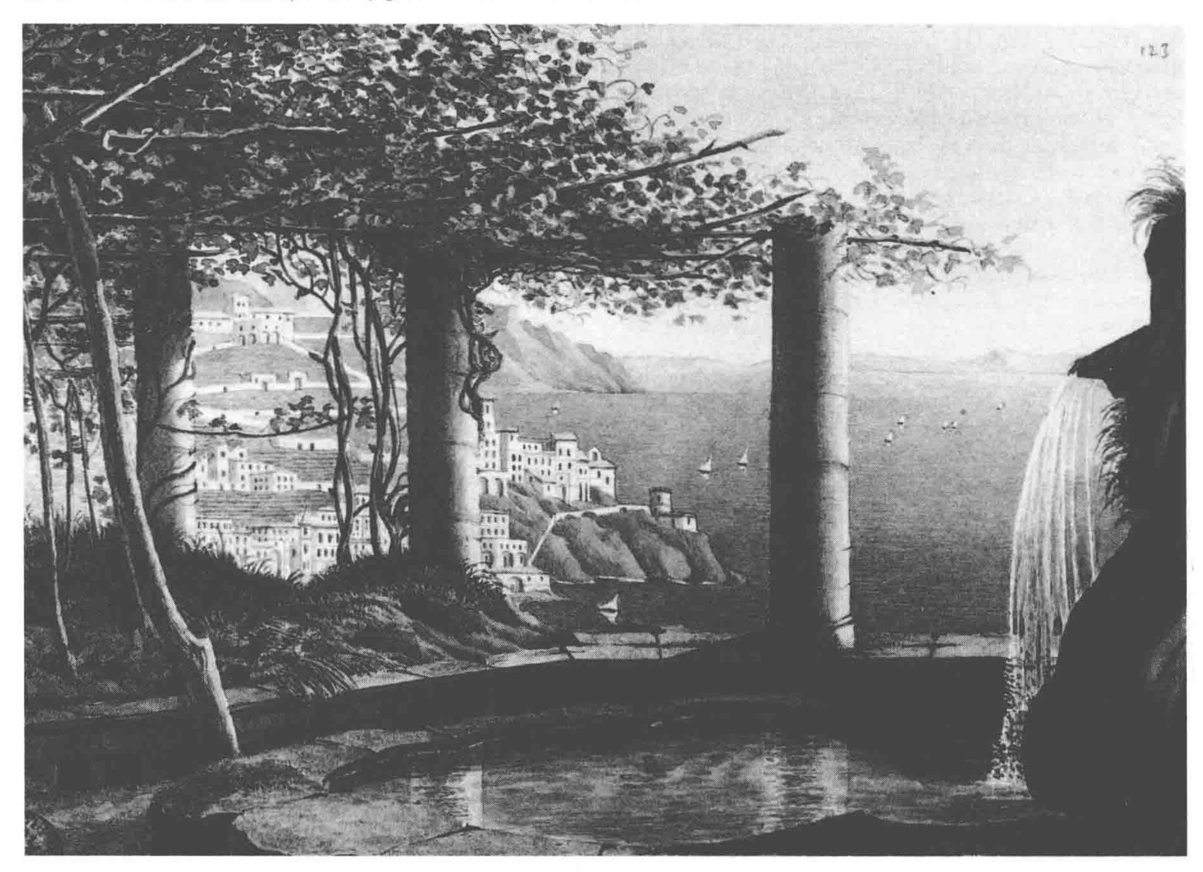
A second cantata, *Jesu, meine Freude*, followed within weeks, again a product of the composer's Bachian pursuits (in January 1828, Mendelssohn was able to examine part of the estate of W.F. Bach, rich in autographs of J.S. Bach's cantatas). But these efforts were overshadowed by the momentous decision to revive the *St Matthew Passion*. For several years, Mendelssohn had assiduously examined the work, but had been discouraged from performing it by Zelter, who viewed the task as insurmountable. Prompted by Eduard Devrient, Mendelssohn now overcame Zelter's objections, and in October 1828 rehearsals began in earnest at the family residence. The historical spirit that marked this effort found expression in other projects as well. Around the same time Mendelssohn undertook for Zelter arrangements of Handel's *Acis and Galatea* and 'Dettingen' *Te Deum*; and in December he completed *Hora est*, for 16-part chorus and organ continuo, inspired by the 17th-century Italian polychoral tradition and by a 16-part Mass by the Singakademie's founder, Carl Fasch.

During most of 1828, Mendelssohn remained in Berlin, where he composed two secular cantatas. The first was hastily written in honour of Albrecht Dürer, the 300th anniversary of whose death was commemorated in April. The second, *Begrüssung*, commissioned by Alexander von Humboldt, was performed in September for a gathering of physicians and natural scientists (on this occasion, Mendelssohn may have met Chopin, then visiting Berlin). From the same year date Mendelssohn's earliest *Lieder ohne Worte* for piano solo (the first was evidently written as a birthday present for Fanny), and the concert overture *Meeresstille und glückliche Fahrt*. The latter, inspired by Goethe's two short poems, was conceived, according to Fanny, as two 'tableaux' (significantly, about this time Mendelssohn began to study painting); it was performed privately at 3 Leipzigerstrasse during the summer.

3. Years of travel and the Grand Tour. The new year found the young composer contemplating a grand musical tour of Italy, France and England, in order, as he explained to Moscheles, to refine and cultivate his own taste. On 22 January 1829 Fanny became engaged to Wilhelm Hensel. Meanwhile preparations for the centenary revival of the *St Matthew Passion* continued, and it was performed on 11 March to critical acclaim at the Singakademie, with Mendelssohn conducting from a piano; against the opposition of Spontini, a second performance was ordered by the Crown Prince for Bach's birthday (21 March). On 10 April, accompanied by his father and his sister Rebecka, Mendelssohn departed for Hamburg, where he stayed for several days with Salomon Heine, uncle of the poet. After a difficult crossing of the English Channel Mendelssohn arrived on 21 April in London; he was greeted by Klingemann and soon introduced by Moscheles to English concert life.

3. Felix Mendelssohn: portrait by James Warren Childe, watercolour, 1829 (D-Bsb Mendelssohn-Archiv)

Initially, Mendelssohn refrained from appearing in public concerts, electing instead to perform as a pianist at private gatherings. He mingled with musicians such as Sir George Smart, J.B. Cramer, Moscheles, Thomas Attwood, Dragonetti, Malibran and the critic Fétis. He visited the House of Commons and St Paul's Cathedral, consulted with the phrenologist J.C. Spurzheim (who examined his skull and made a plaster mould), studied Handel's autograph manuscripts at the King's Library in the British Museum, attended productions of Shakespeare's plays (including Kemble's performance of Hamlet), and appeared at fashionable balls. But on 25 May Mendelssohn made his official English début by conducting his Symphony in C minor op.11 at the seventh concert in the Philharmonic Society's season (for the occasion, he replaced the minuet with a new orchestral arrangement of the scherzo from the Octet). The work was repeated



on 10 June, and on Midsummer's Day (24 June) Mendelssohn conducted the English première of his overture to *A Midsummer Night's Dream* (a reviewer found it 'sparkling with genius and rich in effect ... the whole indicating that the musician has studied the poet, entered into his thoughts, and even caught some of his imagination'); a second performance followed on 13 July. During this season Mendelssohn also appeared publicly as a pianist, performing Weber's *Concert-Stück*, Beethoven's 'Emperor' Concerto and, with Moscheles, his own Double Concerto in E major. He was commissioned to compose an opera for Covent Garden and made progress on his String Quartet in E♭ op.12.

With the end of the London concert season Mendelssohn was free to travel, and in July he departed with Klingemann for a walking tour of Scotland. In Edinburgh, where they arrived on 26 July, he attended an assemblage of bagpipe musicians and, at Holyrood Palace, found the inspiration for the opening of the Scottish Symphony (no.3). After a short visit to Sir Walter Scott, whose authorship of the Waverley novels had recently been revealed, the two began their tour of the Highlands, with Mendelssohn sketching memorable landscapes and Klingemann composing verses. On 7 August they arrived at Oban, on the western coast; there, looking out at the Hebrides, Mendelssohn found the germinal idea for the overture *Die Hebriden*. The following day they visited Fingal's Cave on the island of Staffa and the equally desolate island of Iona, settled by St Columba in the 6th century. After returning to the mainland they proceeded to Glasgow before separating at Liverpool. Klingemann returned to London, while Mendelssohn travelled to Wales, spending several days with the family of John Taylor, a proprietor of lead mines; during a visit to one of the mines Mendelssohn contemplated his Reformation Symphony. On 6 September he returned to London. Within a week he had finished the String Quartet op.12 and began preparations to return to Berlin, in order to attend Fanny's wedding on 3 October. But in the middle of September his leg was lacerated in a coach accident and he was confined for several weeks to his room, where he copied Handel's *Dixit Dominus* for Zelter. After a recuperative visit to Attwood in Norwood, he left London near the end of November.

Since August, Mendelssohn had planned to compose a Liederspiel for his parents' silver wedding anniversary in December. Klingemann provided the libretto, and Mendelssohn rapidly began to draft the music on the way to Berlin, where he arrived on 8 December. Titled, appropriately enough, *Heimkehr aus der Fremde*, it was finished on 19 December, quickly rehearsed, and performed, along with a new Festspiel by Fanny, on 26 December; among the guests attending the private celebration was the Swedish composer Franz Berwald. The beginning of 1830 found Mendelssohn at work on the *Zwölf Lieder* op.9, which were sent to the publisher in February, and the Reformation Symphony (finished on 12 May). By late March, he was ready to depart on an extended Italian visit, but he contracted measles and could not leave until mid-May. In Leipzig he saw Marschner and the theorist Heinrich Dorn, and established a relationship with the publishing firm Breitkopf & Härtel. He then paid a two-week visit to Goethe in Weimar, where he was invited to contribute to the mock-literary journal *Chaos*, and debated with the poet the virtues of Beethoven's Fifth Symphony. In exchange, Goethe gave his young friend a manuscript page from the second part of *Faust*. In June, Mendelssohn proceeded to Munich. He remained there until early August, appearing in private gatherings with the clarinettist Heinrich Bärmann and flirting with the pianist Delphine von Schauroth, to whom he inscribed the *Rondo capriccioso* op.14. After a brief holiday in the Bavarian Alps with A.B. Marx (they attended a performance of the Oberammergau Passion Play), Mendelssohn travelled via Salzburg to Vienna, arriving there in mid-August. Among his Viennese acquaintances were the poet Grillparzer, the composers Mayseder and Gyrowetz, the publisher Haslinger, the theorist Simon Sechter, the music historian Kiesewetter and the autograph collector Aloys Fuchs (who gave Mendelssohn the Beethoven 'Wittgenstein' sketchbook). From the baritone Franz Hauser he received a volume of chorale melodies, a gift that revived his interest in sacred music. Before leaving Vienna he composed a 'very grave little sacred piece', a Bachian chorale cantata, *O Haupt voll Blut und Wunden*, and began a setting of *Ave Maria* (op.23 no.2). In October he visited Venice, where he sketched for Delphine von Schauroth the first *Venetianisches Gondellied* (op.19*b* no.6) and drafted a second cantata, *Aus tiefer Noth* (op.23 no.1), before proceeding to Florence. He spent much of his time in Venetian and Florentine galleries, absorbing the artistic treasures of Italian Renaissance and baroque art.

On 1 November Mendelssohn arrived in Rome and soon composed several sacred works, including an elaborate setting of Psalm cxv (after the Vulgate text, *Non nobis, Domine*, op.31); four more chorale cantatas, *Mitten wir im Leben sind* (op.23 no.3), *Verleih' uns Frieden*, *Vom Himmel hoch* and *Wir glauben all' an einen Gott*; and two motets (op.39 nos.1 and 3). He consulted the Palestrina scholar Giuseppe Baini, examined the library of Fortunato Santini (rich in Italian sacred polyphony) and visited the former residence of his uncle Jakob Bartholdy, the Casa Bartholdi, where he saw the frescoes of the 'Nazarene' painters. He became friendly with Berlioz, but found the *Symphonie fantastique* hyperbolic and wanting in taste. To Berlin he sent detailed reports of the requiem service for Pius VIII and the accession of Gregory XVI; Carnival in February; the Easter services in the Cappella Sistina, where the Papal choir performed Allegri's *Miserere*; and the work of several artists, including the Frenchman Horace Vernet, the Danish sculptor Bertel Thorvaldsen and several German painters. While in Rome Mendelssohn also finished the first draft of his Hebrides overture (as *Ouvertüre zur einsamen Insel*, announced as a birthday present for his father on 11 December); he also contemplated ideas for the Italian and Scottish symphonies and began to draft a setting of Goethe's ballade *Die erste Walpurgisnacht*.

In April 1831 Mendelssohn visited Naples, where he met Donizetti and renewed his friendship with Weber's pupil Julius Benedict. He explored the Isle of Capri, Pompeii and Vesuvius, and, accompanied by the German painters Wilhelm Schadow, Theodor Hildebrandt, C.F. Sohn and Eduard Bendemann, sketched Italian landscapes and seascapes (fig.4). After briefly returning to Rome in June he departed for Florence and by early July reached Milan. He socialized with the pianist (and friend of Beethoven) Dorothea von Ertmann, with Glinka and with

4. 'Amalfi in May 1831' by Felix Mendelssohn: watercolour (GB-Ob MS M.D.Mendelssohn c.21, f.123r)

Mozart's son Franz, who was among the first to hear parts of the newly drafted cantata *Die erste Walpurgisnacht*. By the end of July Mendelssohn reached Switzerland, and after witnessing serious flooding in the Bernese Oberland returned to Munich in September. He improvised at the piano before the Bavarian queen, gave counterpoint lessons to the talented composer of lieder Josephine Lang and gave the première of the hastily composed Piano Concerto in G minor (op.25). A commission to compose an opera for Munich led him to consult the playwright Karl Immermann in Düsseldorf, about a libretto based on Shakespeare's *The Tempest*; then he proceeded to Paris, where he arrived on 9 December 1831.

Again, as in 1825, Mendelssohn sent to Berlin perceptive accounts of French cultural life. He reported on his contacts with Chopin, Kalkbrenner, Ferdinand Hiller, Meyerbeer, Heine, the violinist Pierre Baillot and the conductor Habeneck. While there he also completed the last of his chorale cantatas, *Ach Gott, vom Himmel sieh' darein*; at the Conservatoire his Octet and *Midsummer Night's Dream* overture were given; and he was heard by the court in a performance of Beethoven's Fourth Piano Concerto. But there were several disappointments as well. The Reformation Symphony was rehearsed but rejected for performance. Mendelssohn found much of French opera too contrived (of the diabolical Bertram in Meyerbeer's *Robert le diable* he quipped, 'the devil is a poor devil'). Equally offensive to him were the utopian doctrines of the Saint-Simonians, whose meetings he briefly attended. He was deeply depressed by the death of his boyhood friend Eduard Rietz, in whose memory he composed a new, poignant slow movement (the Intermezzo) for the String Quintet op.18. In March came the news of Goethe's death, and in Paris there was an outbreak of Asiatic cholera, which Mendelssohn contracted.

After his recovery he went to London, arriving on 22 April 1832. There he performed his new compositions for Moscheles and participated fully in English musical life. The first volume of the *Lieder ohne Worte* (op.19*b*) was prepared for publication (it appeared in July with the title *Original Melodies for the Pianoforte*) and the revisions of the Hebrides overture were finally completed (the work was given its première by the Philharmonic Society on 14 May as *The Isles of Fingal*). Mendelssohn frequently appeared as a piano soloist and with Moscheles performed Mozart's Double Concerto K365/316*a*. But again news of a death, this time Zelter's, cast a pall on Mendelssohn's spirits and he returned to Berlin at the end of June.

His career prospects remained uncertain. Though his father encouraged him to apply for the directorship of the Singakademie, Mendelssohn found objectionable a proposal from that institution that he share the post with a person of considerably lesser talent, C.F. Rungenhagen. He rejected Immermann's opera libretto for Munich and instead considered composing an oratorio. For A.B. Marx he drafted an oratorio libretto on Moses, but in turn was discouraged by Marx from pursuing an oratorio on St Paul. In October his spirits were raised by a short visit from Moscheles, and in November, December and January he gave three charity concerts, which included

the premières of the Reformation Symphony and *Die erste Walpurgisnacht*.

4. Düsseldorf, 1833–5. On 22 January 1833 the membership of the Singakademie voted to offer the directorship to Rungenhagen; Mendelssohn declined to serve as assistant director and instead pondered new opportunities from London and Düsseldorf. These included a commission of three works (a symphony, an overture and a vocal work) for the Philharmonic Society and the directorship of the 15th Niederrheinisches Musikfest. By mid-March the Italian Symphony was drafted, and several incidental pieces for a production of Calderón's *El príncipe constante* were dispatched to Immermann. After a short visit to Düsseldorf, Mendelssohn arrived in London on 25 April. With Moscheles he concocted and performed a set of variations on the Gypsy March from Weber's *Preciosa*. He appeared in private gatherings with Paganini, improvised on the organ in St Paul's Cathedral, and led the official première of the Italian Symphony on 13 May, before returning to Düsseldorf to conduct the festival from 26 to 28 May. The highlight was a performance of Handel's *Israel in Egypt*, for which Mendelssohn's own 'Trumpet' Overture op.101 was pressed into service.

Mendelssohn was now offered a three-year position as the Düsseldorf music director, to begin on 1 October 1833. His duties would include conducting the choral and orchestral societies and the sacred music for Catholic services. As remuneration he would receive a salary of 600 thalers and an annual three-month leave. Before taking up this post he travelled to London with his father. There they remained until early September, visiting English friends and sightseeing in Greenwich, Portsmouth and the Isle of Wight.

Early during his Düsseldorf tenure Mendelssohn arranged a lavish entertainment for the visiting Crown Prince Friedrich Wilhelm of Prussia, in which *tableaux vivants* were presented with choruses from *Israel in Egypt*. For this occasion (22 October) members of the Düsseldorf Kunstakademie collaborated, including Hildebrandt (who painted Mendelssohn's portrait), J.W. Schirmer (with whom he studied watercolours) and Schadow (in whose house he resided). In November the second London commission, the overture *Die Schöne Melusine* (inspired by an opera of Conradin Kreutzer), was finished. Meanwhile, Immermann, endeavouring to found a new German theatre, encouraged Mendelssohn to mount 'master' productions of operas and staged works. The first, Mozart's *Don Giovanni*, was given on 19 December after 20 rehearsals, but a controversy about ticket prices led to a disturbance, and tensions soon emerged about the division of responsibilities between Immermann and Mendelssohn. In January 1834 Mendelssohn directed Beethoven's incidental music to Goethe's *Egmont*; other productions included Cherubini's *Les deux journées*, Weber's *Oberon* and *Der Freischütz*, and Mozart's *Die Entführung aus dem Serail* and *Die Zauberflöte*. On 15 March he agreed to serve as the musical Intendant for Immermann's new theatre, which officially opened in October. Not surprisingly, Mendelssohn's involvement with the stage led him to consider once again writing an opera. He corresponded extensively with Klingemann about a libretto based on Kotzebue's *Pervonte*, but, like so many of Mendelssohn's other operatic ambitions, the project did not come to fruition.

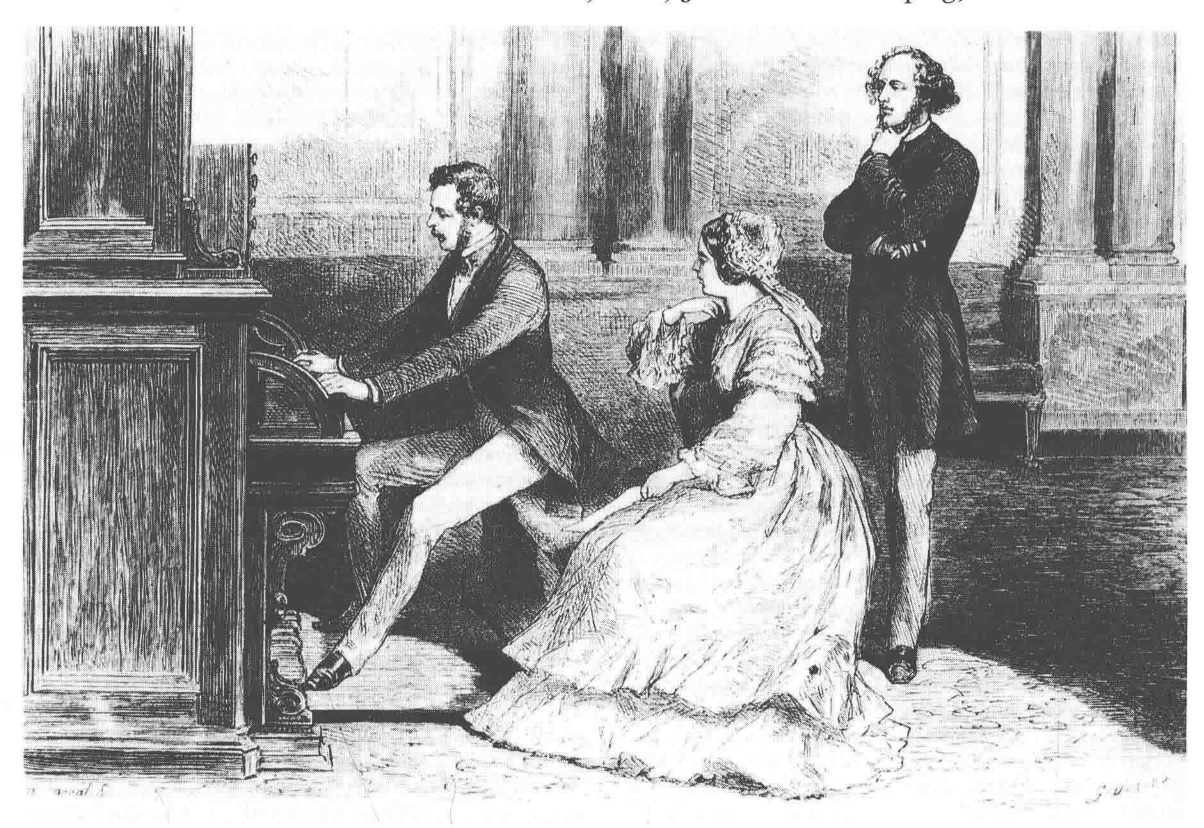
Each month for the Düsseldorf church services Mendelssohn prepared a major sacred work; his repertory was drawn from masses by Mozart, Haydn, Cherubini and Beethoven, and from the cantatas of Bach. He also explored choral music of earlier historical periods, including works by Palestrina, Lotti and Francesco Durante. But Mendelssohn's principal energies as a choral conductor were devoted to reviving the oratorio, including Haydn's *The Seasons* and *The Creation*, and several works by Handel (*Alexander's Feast*, *Messiah*, *Judas Maccabaeus*, *Solomon* and the 'Dettingen' *Te Deum*). These pursuits strengthened his resolve to undertake his own first oratorio, *St Paul*, based on *The Acts of the Apostles*, for which he consulted with Julius Schubring and Julius Fürst. Composition began in earnest in March 1834; around this time, Mendelssohn also revised the overture *Meeresstille und glückliche Fahrt* and the Italian Symphony, and completed the third London commission, the concert aria *Infelice* (op.94).

In October, after visiting his parents in Berlin, Mendelssohn stopped briefly in Leipzig, where he heard the Gewandhaus orchestra rehearse *Meeresstille und glückliche Fahrt*. Dissatisfaction about his position in Düsseldorf now became intolerable and he asked to be relieved from directing church music and from his responsibilities in Immermann's theatre. By January 1835 he was mulling over two new offers: to direct the opera in Munich and the Gewandhaus and Thomasschule in Leipzig; he was also offered the editorship of the *Allgemeine musikalische Zeitung*, the house journal of the music publisher Breitkopf & Härtel. Ultimately, he decided in favour of Leipzig, where he agreed to serve as the municipal music director and to conduct the Gewandhaus orchestra; in exchange, he was paid a salary of 1000 thalers and granted an annual leave of six months. After directing the Niederrheinisches Musikfest in Cologne, which featured a performance of Handel's *Solomon*, Mendelssohn gave his last concert in Düsseldorf in early July. Before assuming his new post he visited Berlin, and witnessed in August an insurrection against the military authorities. At the end of the month he arrived in Leipzig, where he met Schumann, renewed his acquaintance with Friedrich Wieck and his 16-year-old daughter Clara, and was visited by Chopin. On 13 September he was formally introduced to the members of the Gewandhaus and held his first rehearsal, the beginning of an illustrious 12-year association with Leipzig.

5. Leipzig, 1835–40. At the Gewandhaus Mendelssohn conducted each year a subscription series of 20 concerts that ran from October to March. These were supplemented by concerts given by visiting virtuosos, charity concerts and a series of chamber concerts (promoted as 'Morgen-' and 'Abendunterhaltungen'). With indefatigable energy Mendelssohn presided over what now became one of the most prestigious European orchestras. He participated not only as a conductor but as a pianist, and worked to improve musical standards (for which he was championed by Schumann in the *Neue Zeitschrift für Musik*) and the status of the musicians in the ensemble. At the Gewandhaus he performed many of his own works and of contemporaries such as Schumann, Hiller, Spohr, Moscheles, Gade and William Sterndale Bennett. His programming showed a predilection for Beethoven and Mozart (Haydn figured to a lesser extent), and reinforced the consolidation of the German Classical instrumental

repertory. Though Mendelssohn did not mount full operatic productions in Leipzig, he performed concert versions of complete acts from standard operas (Mozart, Gluck, Cherubini and Beethoven) and excerpts from contemporary French, German and Italian works. The programme of his second concert for the 1835 season (11 October) is representative: it included Mozart's Symphony no.39 and the finale to Act 2 of *Don Giovanni*, and Moscheles's concert overture *Jeanne d'Arc* and virtuoso piano duet *Hommage à Händel* (performed by Moscheles and Mendelssohn); it thus offered a mixture of instrumental and vocal music, and 'classical' and contemporary music.

On 19 November 1835, only six weeks into the new concert season, Mendelssohn's father died. Shattered by the loss, Mendelssohn rededicated himself to completing *St Paul*, which his father had awaited as a work that would 'unite old customs with modern means'. After receiving an honorary doctorate from the University of Leipzig in March 1836, he put the finishing touches to the oratorio and left Leipzig on 1 May. On the way to Düsseldorf, where he was to direct the 18th Niederrheinisches Musikfest, he stopped in Frankfurt to visit Schelble and met Cécile Jeanrenaud, the daughter of a Huguenot minister. The festival opened on 22 May (Pentecost Sunday) with the première of *St Paul*; on the next day Beethoven's Ninth Symphony and first *Leonore* overture were given; and on the 24th an additional concert was arranged in which the oratorio was repeated, and Mendelssohn and Ferdinand David performed Beethoven's Kreutzer Sonata from memory. The festival was the signal event that assured Mendelssohn's emergence, at the age of 27, into the front rank of German musicians and secured his international fame; *St Paul* was accepted as a milestone in the revival of the oratorio.



Mendelssohn had planned an Italian holiday but, concerned about Schelble's ill-health, offered to deputize for him at the Cäcilienverein during the summer. In Frankfurt Mendelssohn deepened his acquaintance with Cécile Jeanrenaud and enjoyed contacts with his aunt Dorothea von Schlegel, and with Hiller and Rossini (the latter encouraged him to adopt a more popular tone in his scores). By the end of July, he was clearly in love with Cécile and resolved to test his affection for her by absenting himself and taking a cure at Scheveningen, near The Hague. There, accompanied by Schadow and Schirmer, he made drawings and considered an oratorio on the subject of Elijah. He returned to Frankfurt at the end of August 1836 and was soon engaged to Cécile.

The new concert season featured the young English pianist and composer Sterndale Bennett, who performed at the Gewandhaus on several occasions. For the final concert (16 March 1837) Mendelssohn conducted the revised version of *St Paul*. He then hastened to Frankfurt, where he married Cécile on 28 March. They spent their honeymoon in Freiburg and the Schwarzwald, returned to Frankfurt in May and visited Bingen and Coblenz in July and August, meticulously recording their experiences in a diary. During this blissful time Mendelssohn finished the three organ Preludes and Fugues op.37, made a setting of Psalm xlii (op.42), and composed the String Quartet in E minor op.44 no.2 and, for the Birmingham Festival, the Piano Concerto no.2 in D minor (op.40). Arriving in London on 27 August, Mendelssohn was greeted by Klingemann, with whom he began to sketch a plan for the oratorio *Elijah*. He attended a performance of *St Paul* in Exeter Hall on 12 September and the next day travelled to Birmingham, where he conducted the oratorio, gave the première of his new piano concerto and performed organ works by Bach. Reunited with Cécile in Frankfurt on 27 September, he immediately departed for Leipzig and arrived on 1 October, with only hours to spare before he conducted the inaugural concert of the new Gewandhaus season.

For the next four years Mendelssohn was based in Leipzig, presiding over the brilliant concert life of the city. In February 1838 he inaugurated a series of historical concerts, organized 'according to the order of the most celebrated masters from the last one hundred years up to the present'. A similar series, in 1841, comprised five concerts, with programmes devoted to Bach and Handel, Haydn, Mozart, Beethoven and contemporary composers. Mendelssohn's Bachian pursuits found further outlets in a piano accompaniment he devised for the Chaconne in D minor for solo violin (performed with Ferdinand David in February 1840) and in a challenging organ concert of Bach's music presented in the Thomaskirche in August 1840, as part of an effort to raise funds for a new Bach monument. Other notable concerts included the première of Schubert's Symphony no.9 in C (March 1839), which had been rediscovered by Schumann in Vienna; a performance of all four overtures to Beethoven's *Fidelio* (January 1840); and the première of Schumann's First Symphony op.38 (March 1841). Among the many musicians who appeared at the Gewandhaus during these years were the sopranos Clara Novello, Mary Shaw and Sophie Schloss; the pianists William Sterndale Bennett, Ignaz Moscheles, Adolf Henselt, Alexander Dreyschock, Marie Pleyel, Sigismond Thalberg, Franz Liszt and Ferdinand Hiller; and the violinist Ole Bull.

Mendelssohn now stood at the forefront of German music. Frequently in demand as a conductor, he was engaged to direct music festivals in Cologne (June 1838), Düsseldorf (May 1839 and May 1842), Brunswick (September 1839), Schwerin (July 1840) and Birmingham (September 1840). No less active as a composer, he completed the three String Quartets op.44, the Piano Trio in D minor op.49, the overture *Ruy Blas* op.95, and the 'Lobgesang' symphony-cantata (Symphony no.2, op.52), which received its première in June 1840 at a festival commemorating the quadricentenary of the invention of movable type.

6. Berlin and Leipzig, 1840–47. The accession of Friedrich Wilhelm IV after the death of Friedrich Wilhelm III on 7 June 1840 led to an ultimately unsuccessful attempt to revitalize the arts in Berlin. The initial plan called for a reorganization of the Akademie der Künste. Ludwig Tieck was offered a position to oversee the theatre, and the painter Peter Cornelius and the Grimm brothers were summoned to Berlin. In November, an approach was made through Paul Mendelssohn to bring the composer to Berlin. Six months later Mendelssohn was offered a one-year position, with a generous salary of 3000 thalers. But his exact duties were not clearly defined and in July after drafting the *Variations sérieuses* for piano (op.54) and receiving the Danish author Hans Christian Andersen in Leipzig, he warily referred to the Prussian capital as 'one of the most sour apples into which a man can bite'. On 1 July the Saxon king, Friedrich August II, offered Mendelssohn the title of Kapellmeister

5. Mendelssohn with Queen Victoria and the Prince Consort: engraving by H. Hannal after G. Durand

(in April Mendelssohn had directed a highly successful performance of *St Paul* for the Saxon court in Weimar); nevertheless, at the end of July he left Leipzig for a one-year term in Berlin. In his absence, Ferdinand David oversaw the direction of the Gewandhaus season.

In September 1841 Friedrich Wilhelm IV appointed Mendelssohn Kapellmeister. Within weeks he had received his first royal commission: to compose music for the choruses of Sophocles' *Antigone*, the first part of an initiative to revive Greek drama, with the collaboration of Tieck and the classical scholar August Böckh. Quickly finished, Mendelssohn's score was given its first performance privately at Potsdam before the court and Berlin intelligentsia on 28 October; several public performances were given at the Schauspielhaus in Berlin in mid-April 1842. Meanwhile, Mendelssohn performed *St Paul* twice (10 January and 17 February) at the Singakademie, where he became an honorary member on 15 March. These were Mendelssohn's only Berlin concerts for the 1841–2 season, apart from appearances in some chamber music concerts and one orchestral concert, in which the 'Lobgesang' symphony was given. He continued to return to Leipzig to conduct some of the Gewandhaus concerts; there the Scottish Symphony, which had been finished in Berlin in January, had its première on 3 March 1842.

After co-directing (with Julius Rietz) the Niederrheinisches Musikfest in Düsseldorf (May 1842), where he conducted the 'Lobgesang' and Handel's *Israel in Egypt*, and appeared as soloist in Beethoven's 'Emperor' Concerto, Mendelssohn travelled to London. He had begun to draft a piano concerto in E minor for the new concert season, but was unable to complete it; instead, the highlight of his English sojourn was the London première on 13 June of the Scottish Symphony, which was subsequently dedicated to Queen Victoria. On 20 June and 9 July, during visits to the queen and Prince Albert at Buckingham Palace, he improvised on *Rule, Britannia!*, presented a new piano duet arrangement of seven of his *Lieder ohne Worte*, and accompanied the queen, who sang his lieder and some by his sister Fanny. After visiting Frankfurt and enjoying a Swiss holiday, which afforded him some leisure for drawing and watercolours, he returned to Leipzig, in time to conduct the first concert of the new season on 2 October 1842.

His prospects in Berlin still not fully determined, Mendelssohn now requested an audience with the king, fully intending to tender his resignation. Instead, he was convinced, partly by the remonstrations of his mother, to accept a new arrangement: in exchange for waiving half his salary, Mendelssohn would be free to resume his activities in Leipzig. In addition, he was appointed Generalmusikdirektor and entrusted with overseeing sacred music in Berlin. To that end, a new cathedral choir was to be trained and placed at his disposal. In Leipzig Mendelssohn again conducted several concerts at the Gewandhaus, but was abruptly called to Berlin by the death of his mother on 12 December.

Writing to his brother that 'we are children no longer', Mendelssohn grieved over this loss by fully resuming his duties at the Gewandhaus. The highlights of the 1843 subscription concerts included the première of the revised version of *Die erste Walpurgisnacht* on 2 February; among the audience was Berlioz, then in the midst of his first concert tour, who praised the score for its 'apparent

confusion that is art perfected'. On 4 February, Berlioz himself gave a benefit concert that featured his own *King Lear* overture, the Offertorium from the *Grande messe des morts* and the *Symphonie fantastique*, in which Mendelssohn was enlisted to perform the harp part on a piano. In March came the première of Niels Gade's First Symphony and a concert commemorating the centenary of the Gewandhaus, with a programme including works by Leipzig Thomaskantors. In April the new Bach monument was unveiled outside the Thomaskirche, an event witnessed by Bach's last surviving grandson, W.F.E. Bach. The same month Mendelssohn went to Dresden, to conduct *St Paul* on Palm Sunday, a performance enthusiastically received by the new Kapellmeister there, Richard Wagner. In May, Mendelssohn met (on Fanny's recommendation) Charles Gounod and in June again visited Dresden, to hear Wagner conduct the occasional cantata *Gott segne Sachsenland*, which Mendelssohn had written in honour of the Saxon monarch.

Mendelssohn's central role in the cultural life of Leipzig was acknowledged by the conferring of honorary citizenship in March 1843. Meanwhile, he had been discussing with Friedrich August II the establishment of a new conservatory in Leipzig, funded by a 20,000 thaler bequest from the estate of the lawyer Heinrich Blümner, who had died in 1839. In January 1843 notices announcing the new institution were published. Instruction was offered in composition, violin, piano, organ and singing, supported by classes in chamber music and choral ensembles and lectures on the history of music. The students, who matriculated from Germany and abroad, were expected to attend the rehearsals and concerts of the Gewandhaus and other municipal musical organizations. The faculty included Mendelssohn (composition, singing, instruments), the Thomaskantor and theorist Moritz Hauptmann (harmony and composition), Ferdinand David (violin), Robert Schumann (piano and score reading), the singers Ferdinand Böhme and Henriette Bünau (née Grabau), and the organist Carl Ferdinand Becker (organ and music history). On 3 April 1843 the Conservatory opened its doors to 22 pupils, of whom the first was the composer Theodor Kirchner.

By May the new cathedral choir in Berlin was in place; nevertheless, little progress had been made in clarifying Mendelssohn's duties. On 10 July, at a conference with the king, attended by Meyerbeer (since 1842 the Generalmusikdirektor for the opera), Mendelssohn was instructed to direct each year orchestral soirées and two oratorios, and to supervise the church music for high holy days. But decisions about the nature and role of music in the Prussian service were deferred. Soon afterwards Mendelssohn received a commission to prepare a new setting of the *Te Deum* ('Herr Gott, dich loben wir'), an onerous task he completed in two days, for a performance in Berlin Cathedral on 6 August marking the millennium of the founding of the German Reich. On his return, he participated in a concert that featured the Leipzig début of the 12-year-old violinist Joseph Joachim (19 August). On 1 October Mendelssohn directed the first Gewandhaus concert of the new season, but soon left for Berlin to oversee the rehearsals for a new production (by Ludwig Tieck) of Shakespeare's *A Midsummer Night's Dream*, for which he had composed the incidental music (op.61). This production – Mendelssohn's second collaboration with Tieck – was realized for the court at Potsdam on 14 October and during the following week several times publicly at the Schauspielhaus, to great acclaim.

Preparations were now made to inaugurate the revised Prussian liturgy at Berlin Cathedral. On the advice of the minister C.J. von Bunsen, the king encouraged a return to *a cappella* writing in the style of Palestrina and the performance of psalms divided antiphonally between the choir and congregation; also, the role of wind instruments in the orchestra was severely curtailed. Towards the end of November, Mendelssohn wound up his affairs in Leipzig and moved with his family to Berlin. On 29 November he conducted a Sinfoniesoirée, the first in a series shared with Wilhelm Taubert, and in December set to work writing sacred music for the cathedral. For Christmas he composed an *a cappella* setting of Psalm ii (op.78 no.1) and *Frohlocket, ihr Völker* (op.79 no.1) for the introit and gradual; for New Year's Day, a more ambitious setting of Psalm xcviii with orchestral accompaniment (op.91) and the verse *Herr Gott, du bist unsre Zuflucht* (op.79 no.2). Four more *a cappella* settings followed for Passion Sunday and Good Friday in 1844 (Psalms xliii and xxii, op.78 nos.2 and 3; and two verses, op.79 nos.4 and 6). These compositions represent the extent of Mendelssohn's service as royal composer of church music, apart from a few minor chorale harmonizations and an unfinished attempt (1844 and 1846) to set the German liturgy. While in Berlin he attended a performance of *Der fliegende Holländer*; composed the anthem *Hear my Prayer* for his English friend William Bartholomew; and on Passion Sunday conducted *Israel in Egypt*, with an ensemble of 450. In April the fifth volume of *Lieder ohne Worte* (op.62) appeared, with a dedication to Clara Schumann. After brief stays in Leipzig and Frankfurt, where he worked on a royal commission for incidental music to Racine's *Athalie*, Mendelssohn arrived in London on 8 May and began a hectic schedule of concerts. He conducted five Philharmonic Society concerts, including performances of *Die erste Walpurgisnacht* and some of the *Midsummer Night's Dream* music, and appeared frequently as a soloist, performing Beethoven's Fourth Piano Concerto and (with Moscheles and Thalberg) Bach's Triple Concerto in D minor (BWV1063). He met Offenbach (who was appearing in concerts as a cellist), composed the overture to *Athalie* and worked on a new edition of *Israel in Egypt*. With little respite from these engagements, he left London on 10 July and enjoyed a few days in Soden (near Frankfurt) before directing the Zweibrücken music festival (31 July and 1 August), where he again performed *St Paul* and *Die erste Walpurgisnacht*.

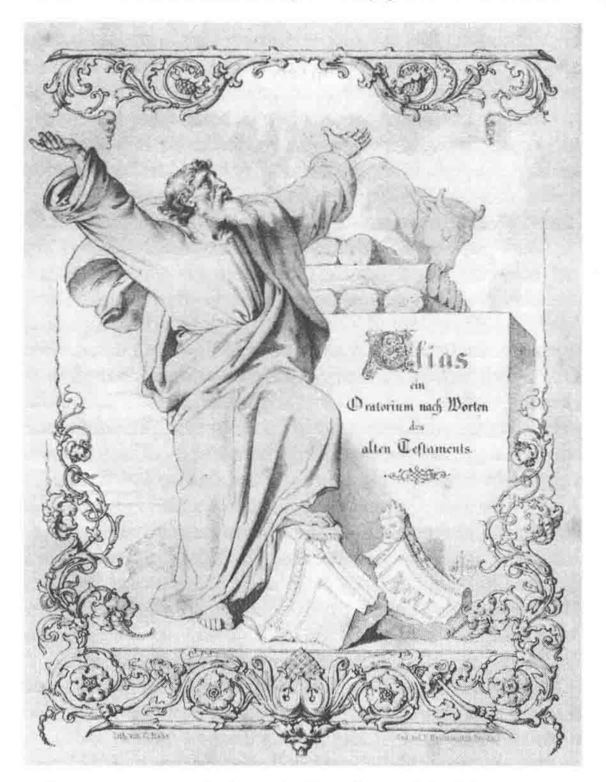
After these activities, at last Mendelssohn could enjoy the relative tranquillity of the summer holiday. In Soden, after learning of an assassination attempt on Friedrich Wilhelm IV, he composed the *a cappella* double quartet *Denn er hat seine Engeln befohlen über dir* (later re-used in *Elijah*). During this time he began to draft a series of organ pieces that gradually coalesced as the six organ sonatas op.65, and the Violin Concerto in E minor (op.64), on which he had laboured for years, was finished in September. By the end of September he had returned to Berlin and requested to be released from royal service. The king granted his wish, but asked Mendelssohn to continue to fulfil special commissions; in exchange, his salary was fixed at 1000 thalers. About this time, Mendelssohn met the young Swedish soprano Jenny Lind. On 28 November 1844 he performed *St Paul* at the

Singakademie, his last concert for the king, and departed the next day.

After appearing at the Saxon court in Dresden, where he improvised at the piano, he returned to Frankfurt to settle with his family, remaining there for the first half of 1845 and enjoying the simple pleasures of domestic life. He declined an invitation to the USA to conduct a music festival in New York; he also declined the Prussian monarch's request to compose music for Aeschylus's *Oresteia*. Instead, for Berlin he continued to work on music for Sophocles' *Oedipus at Colonus* and contemplated sketching music for *Oedipus tyrannus*. During this period he completed the Piano Trio in C minor op.66, worked on a new symphony in C major, finished editing a selection of Bach's organ works and studied the sketches of Schubert's unfinished symphony in E major (D729).

In July Mendelssohn was on vacation in Soden, where he drafted the String Quintet in B♭ op.87, and in Freiburg, where he joined the Hensels. He was asked by the Saxon monarch to resume his former position in Leipzig and received from Birmingham a commission to compose a new oratorio for the music festival of 1846. In Berlin, preparations were made for productions of *Oedipus at Colonus* and *Athalie*, which took place before the court on 1 November and 1 December respectively. Mendelssohn found himself commuting between Berlin and Leipzig, sharing the Gewandhaus concerts with Gade. From Berlin he dispatched to Leipzig a hastily composed choral work, *Die Frauen und die Sänger*, for a Schiller festival, and in December returned there with Jenny Lind, who made her triumphant Leipzig début at the Gewandhaus on the 4th of the month.

During the early months of 1846 Mendelssohn was increasingly preoccupied with the music for *Elijah*. Meanwhile he continued to search in vain for a suitable opera libretto, rejecting many proposals and prose sketches sent to him by poets and would-be librettists. In February he again enjoyed the company of H.C. Andersen, welcomed the harpist Parish Alvars to the Gewandhaus and completed yet another major choral work, a setting of Thomas Aquinas's sequence *Lauda Sion*. In May he sent the first part of *Elijah* to England (where Bartholomew began to prepare the English translation) and he directed a music festival in Aachen, where he was joined by Jenny Lind in performances of Haydn's *The Creation* and Handel's *Alexander's Feast*. From Aachen he proceeded to Liège, to attend the première of *Lauda Sion* (11 June), in observance of the 600th anniversary of the feast of Corpus Christi, and to Cologne, where his setting of Schiller's *An die Künstler* (op.68) was performed at the Deutsch-Vlaemisches Sängerfest.



Returning to Leipzig in June, Mendelssohn hosted a visit from Spohr, and laboured over the second part of *Elijah*. As if an afterthought, the overture was composed just days before the entire orchestral score was finished on 11 August. Mendelssohn departed for London soon afterwards, arriving by 18 August. At once he began a frenzied rehearsal schedule; on the 23rd a special train conveyed the orchestra, soloists, chorus and the press to Birmingham, where *Elijah* was first heard on 26 August (*see* BIRMINGHAM, fig.1). No sooner had he returned to Leipzig in September than he began an extensive revision of it; at this time he also completed the concert aria *On Lena's Gloomy Heath* (on texts from Ossian) for the English bass Henry Phillips. On 4 October Mendelssohn conducted the first concert of the new Gewandhaus season and in November he welcomed the arrival of Moscheles as the new professor of piano at the Conservatory. Hopes for a Mendelssohn opera were again raised, when Jenny Lind agreed to appear in a new work for the 1847 London season. The ever scrupulous Mendelssohn examined a new version of *The Tempest* by Eugène Scribe, but rejected it and the commission for the opera, observing: 'instead of *The Tempest*, isn't that *Much Ado about Nothing*?'

During the early months of 1847 he continued to share the Gewandhaus concerts with Gade. In February and March they presented a series of four historical concerts, with works from Bach up to Mendelssohn's own time. On Good Friday (2 April) Mendelssohn appeared in a charity concert to conduct *St Paul*, his last public performance in Leipzig. Within days he again departed for London, to oversee six performances of the revised version of *Elijah*, including four in London (16 April, 23 April – before Queen Victoria and Prince Albert – 28 April and 30 April) and two in Manchester and Birmingham (20 and 27 April). On 26 April, Mendelssohn directed his Scottish Symphony at a Philharmonic concert. He was again received at Buckingham Palace and on 6 May was heard by Gladstone in a concert at the Prussian embassy.

Exhausted from his English sojourn, Mendelssohn returned to Frankfurt and there received the traumatic news that his sister Fanny had died on 14 May. Unable to attend the funeral, he visited Baden-Baden in June and, with his brother Paul, departed for Switzerland at the end of the month. In Thun and Interlaken he mourned his loss by turning not to music but to painting watercolours, and only gradually was able to take up composition again. In Switzerland he completed the Three Motets op.69, drafted the highly discordant String Quartet in F minor op.80 and worked on two large-scale compositions (both unfinished at his death): *Christus*, his third oratorio, and *Die Lorelei*, on a libretto by the poet Emanuel Geibel, which would have been his first opera since the staging of *Die Hochzeit des Camacho* 20 years earlier.

By the middle of September Mendelssohn had returned to Leipzig; a visit to Berlin at the end of the month to see his sister's grave was so disturbing that he was unable to conduct at the Gewandhaus. On 3 October he heard Joachim perform the Violin Concerto in E minor and a few days later he examined applicants to the Conservatory in figured bass. But later that month he suffered a series of strokes, which increased in severity, until at last, weakened and incapacitated, he died during the evening of 4 November. On 7 November a funeral service was held in the Paulinerkirche in Leipzig; the pallbearers included Schumann, David, Gade, Hauptmann and Moscheles. The coffin was placed on a train to Berlin and was met by mourners during the night at stops along the way. The following day Mendelssohn was buried in the cemetery of the Dreifaltigkeitskirche, next to the grave of his sister Fanny.

Only weeks before the composer's death, the full score of *Elijah* was issued as op.70 by Simrock in Bonn (fig.6). The end of the year saw the publication of two other works authorized by Mendelssohn, the *Sechs Lieder* op.71 and *Sechs Kinderstücke* for piano, op.72. Then, between 1848 and 1873, about 50 unpublished compositions were issued, beginning with the *Lauda Sion* op.73 and *Athalie* op.74 and concluding with the *Responsorium et Hymnus*

6. *Frontispiece (second title) to the first edition of the full score of Mendelssohn's 'Elijah' (Bonn: Simrock, 1847): lithograph by C. Hahn*

op.121 (among the posthumous works were the Italian and Reformation symphonies, and the *Ruy Blas* overture, all judged unworthy of publication by the composer). In 1874 Breitkopf & Härtel, Mendelssohn's principal publisher, began to issue the first collected edition, overseen by Julius Rietz, of which the final volume appeared in 1877. But many unpublished works, including some one hundred juvenilia and student efforts, were dismissed as of minor consequence and excluded from the edition. In 1960 a second attempt at a collected edition was begun (the *Leipziger Ausgabe der Werke Felix Mendelssohn Bartholdys*), with the publication of several volumes – among them the 12 string sinfonias of 1821–3, the two double piano concertos, the Violin Concerto in D minor, the Singspiel *Die beiden Pädagogen* and the *Te Deum* of 1826 – renewing scholarly interest in Mendelssohn's student period. In the 1990s a new, comprehensive Gesamtausgabe was conceived. Launched in 1997 by Breitkopf & Härtel, the edition will include for the first time Mendelssohn's complete works and the first critical thematic catalogue of his music.

7. Musical style. The conservative cultural milieu of Restoration Berlin was the crucible in which the young Mendelssohn formed his style during the 1820s. With Zelter's encouragement, he sought to emulate the proven models of Bach, Handel, Haydn and Mozart. The close study of Bach's music no doubt explains in large measure Mendelssohn's characteristic love of learned counterpoint and complex chromatic part-writing; indeed, the generating of fugues and canons became an avocation for him, in an age when other composers were eschewing the rigour of strict counterpoint (Berlioz, for example, suggested that Mendelssohn had perhaps studied the music of the dead too closely). In Handel's oratorios Mendelssohn found a rich variety of choral techniques, which he used to great effect in his own oratorios and psalm settings. From the Viennese Classical style he inherited a preference for clearly balanced themes with symmetrical phrase structures. His scores often exude a refined elegance reminiscent of Mozart, a comparison not lost on Schumann, who, in reviewing the Piano Trio in D minor op.49, dubbed Mendelssohn the Mozart of the 19th century.

If the roots of Mendelssohn's style lay in the 18th century, he was deeply affected also by the music of Beethoven and Weber, and not untouched by the emergence of the new Romantic music aesthetic. Mendelssohn's romantic imagination found its fullest expression in his exploration of the fanciful, a category Leigh Hunt defined as the 'youngest sister of Imagination without the other's weight of thought and feeling'. The two early masterpieces from the composer's 16th and 17th years, the Octet and *Midsummer Night's Dream* overture, contain examples of the light, capricious *scherzando* writing that soon became a hallmark of his style. Here, Mendelssohn found his inspiration in Goethe's *Faust* and Shakespeare's comedy, though he refused to elaborate a detailed programmatic interpretation of his music, preferring to leave that task to the listener, a stance that set him apart from other 19th-century composers of programmatic music such as Berlioz and Liszt.

Though Mendelssohn was among the distinguished pianists of his age, he did not challenge in his own music the limits of new piano techniques, lest virtuosity should become an end in itself (he greatly admired the playing of Liszt, but found his compositions lacking in original thematic ideas). Similarly, though he was one of the foremost conductors of the 1830s and 40s – a time when Berlioz and Wagner were writing for increasingly larger orchestras – he continued to restrict his own orchestral means, typically preferring to score for a Classical double-wind ensemble. Nevertheless, Mendelssohn was able to extract from familiar means unfamiliar orchestral nuances and colouristic effects, giving his scores a certain irrepressible vividness. To appreciate his skill at orchestration, one need only examine the motto-like four wind chords that appear three times in the course of the *Midsummer Night's Dream* overture, with very slight inflections in the scoring.

8. Orchestral music. Among Mendelssohn's first attempts to write for full orchestra are the overtures to *Die Soldatenliebschaft* (1820) and *Die beiden Pädagogen* (about March 1821), which exhibit a debt to Mozart in their harmonic language, formal plan and orchestration. Around this time, Mendelssohn embarked on an extended series of string sinfonias, of which 13 were completed by 1823. Severely academic in tone, they reveal in their chromatic fugal writing the strong influence of Bach and, in their striking stylistic discontinuities, of his son C.P.E. Bach, whose string sinfonias offered compelling precedents. Sinfonia no.8, originally for string orchestra but re-scored for full orchestra, stands curiously apart: Mozartian in style, its finale, based on four distinct thematic ideas, presents a fusion of sonata form and contrapuntal permutations modelled on the finale of Mozart's Symphony no.41. In nos.9 and 11, Mendelssohn introduced scherzos in lieu of minuets, used folksongs he

had notated during his Swiss visit of 1822 and experimented with a Janissary percussion complement.

Mendelssohn's first published symphony (op.11 in C minor) dates from 1824, but was withheld from print until ten years later. It was among the works taken in 1829 to England, where the composer conducted it with an arrangement of the scherzo from the Octet substituting for its minuet. The energetic opening betrays something of the storm music from Weber's *Der Freischütz* and the minuet and finale reveal a close study of Mozart's Symphony no. 40 and Beethoven's Fifth Symphony. Beethoven's influence is apparent, too, in Mendelssohn's first programmatic symphony, the Reformation, written for the tercentenary of the Augsburg Confession (June 1830), but given its première only two years later and subsequently rejected by the composer (it appeared posthumously as Symphony no.5 in 1868). In the outer movements Mendelssohn sought to oppose two types of music: Palestrinian imitative writing based on the 'Jupiter' motto (D–E–G–F♯) and quotations of the 'Dresden Amen' to symbolize the Catholic faith; and a homophonic chorale texture (culminating in the use of *Ein' feste Burg* in the finale) for the Protestant.

The Italian sojourn of 1830 provided the raw musical material for the Italian Symphony, finished and performed in London in 1833, revised the following year, but published only posthumously as Symphony no.4 in 1851. For Julius Benedict, the brightly scored opening was 'warmed with the balmy air of a southern clime'. The slow movement, profitably compared to the 'Marche des pèlerins' from Berlioz's nearly contemporaneous *Harold en Italie*, begins with a haunting modal melody evidently meant to depict a religious ceremony or procession. The third movement was probably inspired by Goethe's humorous poem *Lilis Park*. The finale, labelled 'Saltarello', begins with a characteristic hopping figure reminiscent of the saltarellos Mendelssohn heard in Rome and Naples, but then introduces in its development a new conjunct figure intended, according to William Rockstro, as a tarantella; the two are juxtaposed in the closing bars of the score.

With the 'Lobgesang' Symphony, composed in 1840 and published as Symphony no.2 in 1841, Mendelssohn again produced a symphony extending into the realm of religious music. Also, by introducing texted elements into the work, he took up an equally daunting challenge, that of responding to Beethoven's Ninth Symphony (Berlioz's 'answer', the *Roméo et Juliette* symphony, dates from 1839). Mendelssohn's solution, as he explained to Klingemann, was to attempt a hybrid symphony-cantata: a three-movement, through-composed orchestral sinfonia attached to a nine-movement vocal cantata, with biblical texts celebrating mankind's progress from darkness to enlightenment (the agent of this process was the word of God, as disseminated by the Gutenberg Bible). Linking the symphony and cantata is a recurring motto-like intonation (F–G–F–B♭), initially announced by the trombones and then given verbal meaning in the cantata by the addition of the text 'Alles was Odem hat, lobe den Herrn'.

Mendelssohn's final symphony, the Scottish, was inspired by his visit to Scotland in 1829, but not finished until 1842, in Berlin. Amidst the ruins of Holyrood Palace in Edinburgh the 20-year-old conceived the brooding theme of the opening slow introduction, scored with the darkly hued colours of the low wind instruments and violas. In Edinburgh, too, he attended a competition of bagpipe musicians; some element of Scottish folk music no doubt resurfaces in the lively pentatonic clarinet melody that opens the scherzo. As in the 'Lobgesang', Mendelssohn opted for a through-composed structure; at the première in Leipzig (1842), he even took the trouble to suppress the tempo markings of the movements from the concert programme. By deriving much of the thematic material of the symphony from the basic motivic cell of the slow introduction (E–A–B–C) he again created a work in which the unity of the whole was of paramount importance. Characteristically, he left no programme for the symphony, though the score vividly conjures up extra-musical interpretations. The slow movement, for instance, includes stately music with dotted rhythms suggestive of a lament-like procession; the fourth movement Mendelssohn described as Allegro guerriero, that is, a struggle symbolized musically by the inclusion of a dissonant fugato. The euphonious fifth movement, on the other hand, resolves the conflict through several repetitions of a hymn-like melody in A major, a device that Mendelssohn may well have borrowed from Beethoven's Pastoral Symphony.

7. *Autograph MS of the opening of Mendelssohn's Italian Symphony, first performed in London, 13 March 1833 (D-Bsb Mendelssohn 27)*

Mendelssohn's concert overtures are among his most popular orchestral works. Not counting the *Harmoniemusik* op.24 for wind orchestra, there are six independent overtures. The 'Trumpet' Overture op.101 of 1825–6, so named because of its motto-like trumpet fanfare, impresses in its flexible treatment of sonata form and colouristic scoring as a preliminary study for the *Midsummer Night's Dream* overture, finished in 1826. In this masterpiece Mendelssohn constructed a rich network of

motifs, all drawn from a descending tetrachord embedded in the celebrated wind chords, to capture Shakespeare's elves, lovers and tradesmen, and the Athenian court (A.B. Marx claimed credit for urging Mendelssohn to include the braying music to depict Bottom). Between the opening and closing statements of the chords (which Liszt compared to 'slowly drooping and rising eyelids, between which is depicted a charming dream-world'), the motifs undergo a series of transformations, and thereby are fittingly 'no more yielding than a dream'.

In the case of *Meeresstille und glückliche Fahrt* (1828), Mendelssohn took as his subject two short poems by Goethe about a ship becalmed at sea. In contrast to Beethoven, who had earlier set the poems as a short cantata for chorus and orchestra (published in 1822), Mendelssohn limited himself to the orchestra, to express the poems, according to Marx, 'without words'. Here, too, he indulged in a certain formal freedom: the overture divides into two 'tableaux', joined by a transition; a coda, appended to 'glückliche Fahrt', suggests the jubilant arrival of the vessel into port, an interpretation Mendelssohn extrapolated from Goethe's poem, which concludes only with the sighting of land.

Mendelssohn's third programmatic overture, *Die Hebriden*, was inspired by his visit to the western coast of Scotland in 1829 (his letter of 7 August reveals clearly that the opening, with its characteristic rocking bass figure, was conceived before the visit to Fingal's Cave the following day). Once again he derived his thematic material from a quintessential motif, announced at the beginning of the composition and recalled at its conclusion, lending the work a certain formal circularity. Dissatisfied with the first draft, completed in Italy in 1830, he continued to revise it, complaining that the development tasted 'more of counterpoint than of train oil, gulls and salted cod'. He continued to struggle, too, with the title, and considered 'Overture zur einsamen Insel' and 'The Isles of Fingal', before returning to *Die Hebriden*. When the piano-duet arrangement was published in 1833 the title *Fingals Höhle* was introduced, possibly at the bidding of Mendelssohn's publisher.

The two other overtures were based on dramatic subjects. The *Ouverture zum Märchen von der schönen Melusine* (1833) was an attempt to improve on the music of Conradin Kreutzer's fairy tale opera about the mermaid Melusina and the knight Raimund (Mendelssohn summarized their relationship, and their sharply contrasting types of music in his score, as a 'mésalliance'). *Ruy Blas*, with its solemn slow introduction and colourful amphibrachic rhythms, was designated for a production in March 1839 of Victor Hugo's tragedy about 17th-century Spanish court life.

In the genre of the concerto Mendelssohn focussed on two instruments that he himself played, the piano and the violin (in 1847, impressed by a performance of the cellist Alfredo Piatti, Mendelssohn evidently began to draft a concerto for that instrument, but no vestige of this work remains). Of the early student concertos, the Piano Concerto in A minor of 1822 was closely modelled on a concerto in the same key by Hummel, with whom Mendelssohn briefly studied in Weimar. The Violin Concerto in D minor, from the same year, was dedicated to Mendelssohn's teacher Eduard Rietz, a former pupil of Pierre Rode, and evinces stylistic features of the French school. Considerably more ambitious, however, are the two concertos for two pianos, which Mendelssohn performed privately and publicly with his sister Fanny and with Loewe and Moscheles. Their formal structure and harmonic language betray the influence of Beethoven, their technical demands on the pianists the idiomatic styles of such virtuosos as J.L. Dussek, Weber and John Field.

Weber's *Concert-Stück* for piano and orchestra figured prominently in Mendelssohn's repertory as a pianist, and its telescoped formal arrangement, with several relatively short movements linked by transitions, served as a model for his mature piano concertos, including two full-length works in three movements (opp.25 and 40) and three shorter pieces, the *Rondo brillant* op.29 (for which he occasionally improvised a slow introduction), and the *Capriccio brillant* op.22 and *Serenade und Allegro giojoso* op.43, in which slow movements are elided to lighthearted finales. Throughout his career Mendelssohn found the writing of concertos an especially arduous task and confessed to friends his struggle to reconcile the competing demands of virtuosity and the integrity of the compositions as works of art. His piano writing featured a light, brilliant variety of virtuosity; only rarely did he experiment with fashionable pianistic effects, such as the *martellato* octave passages in the First Piano Concerto or the Thalbergian 'three-hand' technique in the Second.

Standing quite apart is his final concerto, the Violin Concerto in E minor op.64, which is among the most important 19th-century concertos for the instrument. In three connected movements, this work is often cited for several distinctive features, including the early entrance of the soloist in the first movement, to present the elegiac first theme, and the placement of the cadenza so that it links the development and recapitulation. The slow movement, in a ternary *ABA* form, offers a lyrical 'Lied ohne Worte'; the fleet-footed finale, in sonata-rondo form, a capricious Mendelssohnian scherzo.

9. CHAMBER WORKS. Significantly, the young Mendelssohn chose four chamber works – three piano quartets and a violin sonata – as his first published opuses (composed 1822–5). Preceding them are numerous other chamber pieces, including some dozen fugues for string quartet (1821), a Piano Trio in C minor, a Piano Quartet in D minor (possibly performed for Goethe in 1821) and a Violin Sonata in F. All of these reveal Bach, Haydn and Mozart as the primary stylistic influences, as does a fully fledged String Quartet in E♭ (1823), which culminates with a studious double fugue for its finale.

Of the three published piano quartets, the third (op.3), performed for Cherubini and dedicated to Goethe, is the most ambitious. The thematic richness of its first movement, the use of a 'new' theme in the development and the extended coda are all features that give the music a Beethovenian breadth. The whimsical scherzo anticipates the gossamer textures of the *Midsummer Night's Dream* overture; the finale of nearly 500 bars, with its amalgamation of sonata and rondo forms, anticipates the finale of the Octet. Among the chamber works from the 1820s that Mendelssohn withheld from publication are clarinet and viola sonatas and the Sextet op.110. The minuet of the Viola Sonata was revised and re-used in the First Symphony op.11. The Sextet uses the device of thematic recall: its scherzo briefly returns in the finale, thereby linking the last two movements, a stratagem Mendelssohn borrowed from Beethoven's Fifth Symphony and employed again in the Octet.

8. Autograph MS of the opening of the Scherzo from Mendelssohn's Octet in E♭ op.20, composed 1825 (US-Wc)

The Octet, composed in 1825, is generally acknowledged as Mendelssohn's first masterpiece. He may have known Spohr's Double String Quartet in D minor (op.65), which was published that year. Whereas Spohr scored his work for two antiphonal quartets, the 16-year-old Mendelssohn explored a considerably broader spectrum of instrumental combinations, ranging from the minimalist unison textures of the scherzo through any number of divisions of the ensemble to the opulent eight-part fugato of the finale. From Fanny Mendelssohn we know that the Scherzo was inspired by the 'Walpurgisnachtstraum' in the first part of Goethe's *Faust*, a dream-like sequence with appearances by Oberon, Titania and Puck (not from Shakespeare, but from Wieland's epic poem *Oberon* of 1780), and a Kapellmeister who leads an orchestra of insects and small animals. The finale, with its display of intricate counterpoint (including a quotation from the 'Hallelujah' chorus of Handel's *Messiah*), places the work in a distinguished tradition, at the apex of which stands the finale of Mozart's Symphony no.41.

Between 1827 and 1847 Mendelssohn composed six string quartets, and had begun work on a seventh at the end of his life (the Andante and Scherzo from op.81 may have belonged to this final project). The first two, op.13 in A minor (1827) and op.12 in E♭ (1829), show a rapprochement with the late quartets of Beethoven. To the Swedish musician Adolf Lindblad Mendelssohn explained his concern for the organic relationship of the various movements to the whole. In op.12 the opening of the first movement is brought back to conclude the finale; in op.13 the quintessential thematic material is drawn from the lied *Frage* (op.9 no.1), with explicit quotations from the song in the outer and more hidden references in the inner movements of the quartet. The three quartets op.44, written during the idyllic period of Mendelssohn's honeymoon and first year of marriage, show signs of a

Classical tendency. In striking contrast is the discordant last quartet, op.80 in F minor, generally viewed as Mendelssohn's response to the death of his sister.

Among Mendelssohn's most successful chamber works are the piano trios in D minor (op.49, 1839) and C minor (op.66, 1845), and the Cello Sonata no.2 in D (op.58, 1843). Mendelssohn subjected the first draft of op.49 to a thorough revision and, at Ferdinand Hiller's urging, rewrote the piano part entirely in order to 'modernize' its passage-work. Both trios contain 'Lied ohne Worte' style slow movements and brisk scherzos. The finale of op.66 (which left its mark on the finale of Brahms's Piano Quartet in C minor op.60) is distinguished by its newly composed chorale subject that functions as the second episode in a rondo design. In the Second Cello Sonata Mendelssohn also employed a freely composed chorale; here it appears in the slow movement, where its strains alternate with recitative-like passages, in preparation for the ebullient virtuoso display of the finale.

Of the two string quintets the first, op.18 in A, begins with a graceful Mozartian theme somewhat reminiscent of the Clarinet Quintet K581. The use of fugal writing and, in the original minuet, intricate double canons, imbued the first version of this work with a severely academic quality; in 1832, Mendelssohn replaced the minuet with the emotionally charged Intermezzo in memory of Eduard Rietz. The second quintet, op.87 in B♭, offers in its soaring opening theme and passionate slow movement some of Mendelssohn's most inspired music; nevertheless, he did not see the work through the press, owing to his dissatisfaction with the finale.

10. KEYBOARD MUSIC. Mendelssohn composed piano music throughout his career, but maintained an ambivalent attitude towards much of the piano music of his own time. Though attracted to the music of Hummel, Ludwig Berger and Moscheles, he dismissed many of the fashionable virtuosos as shallow and uninspired (thus, Kalkbrenner was an 'indigestible sausage'). He greatly admired the pianism of Chopin and Liszt, but found some of Chopin's works mannered and Liszt's music 'unpremeditated'. In Mendelssohn's own mature keyboard music, three influences stand out: the contrapuntal rigour of Bach, the dramatic gestures and transcendental utterances of Beethoven's middle and late periods, and the scintillating pianistic textures of Weber.

Not surprisingly, Mendelssohn's fascination with Bach's counterpoint is evident in his piano essays of the early 1820s, whereas the influences of Beethoven and Weber only gradually emerge, beginning around 1823. The sonatas op.6 in E and 106 in B♭, betray their origins in Beethoven's op.101 and Hammerklavier sonatas. Mendelssohn's debt to Weber is perhaps most evident in the *Perpetuum mobile* in C (op.119), modelled on the finale of Weber's Piano Sonata no.1 in C, and the *Rondo capricciosoop*.14 of 1830, indebted to Weber's *Concert-Stück*. On the other hand, the studious Capriccio in F♯ minor (op.5), Mendelssohn's first published piano work (1825), reminded Rossini of the sonatas of Domenico Scarlatti. And the *Sieben Charakterstücke* (op.7) can best be described as eclectic: they include Handelian and Beethovenian fugues, but also Bach-like pieces in binary form and, in a more progressive vein, two études and a buoyant scherzo – marked 'Leicht und luftig' ('Light and airy') – that is of a kind with the elves' music in the *Midsummer Night's Dream* overture.

The origins of the *Lieder ohne Worte*, of which Mendelssohn published 36 pieces in six volumes between 1832 and 1845 (two more volumes followed posthumously), remain couched in mystery. Among his earliest piano lieder was one in E♭ written for Fanny's birthday in 1828 (Fanny herself composed numerous examples of the genre); the idea of creating songlike piano pieces may have originated in a game Fanny and Felix played, in which they apparently added texts to piano pieces. Then, too, the critical thought of A.B. Marx, who explored in his writings of the 1820s the expressive potential and 'definiteness' of instrumental music, was not without impact. Most of the lieder fall into three groups, pianistic parallels to the vocal categories of solo songs, duets and partsongs. The meaning of the new genre perplexed Mendelssohn's contemporaries. Schumann suggested that the composer had produced texted lieder, but then suppressed the texts; when the composer's cousin Marc-André Souchay offered to give some of the lieder fanciful titles, Mendelssohn replied that he had intended each lied 'just as it stands'. Only a small number of the lieder bear titles from Mendelssohn (e.g. the three called *Venetianisches Gondellied*) or his circle (e.g. the 'Frühlingslied'); nevertheless, later in the 19th century, a host of insipid titles accrued to the lieder, contributing to the view of Mendelssohn as a composer of overtly sentimental piano music for the parlour.

Mendelssohn's mature piano music includes three large-scale works. The Fantasia in F♯ minor op.28 (*c*1828–9), originally entitled *Sonate écossaise*, joins his other works on Scottish subjects (the blurry open-pedal passages of the first movement, for example, are not far removed from the world of the *Hebrides* overture). The unusual three-movement form, with a slow first movement and fiery finale, was borrowed from Beethoven's Sonata op.27 no.2 ('Moonlight'). The Six Preludes and Fugues op.35 (published in 1837) were originally conceived as a series of études and fugues. Not surprisingly, the fugal writing is often unabashedly after Bach, though at least one fugue (no.4 in A♭) conjures up the finale of Beethoven's Sonata op.110. Arguably the summit of Mendelssohn's piano music was achieved in the *Variations sérieuses* in D minor (op.54), composed during the summer of 1841 along with two other variation sets (opp.82 and 83; a duet arrangement of the latter followed in 1844). The chromatic, angular theme is subjected to an impressive display of rhythmic, registral and textural manipulations, and is gradually disembodied through the course of the variations before re-emerging in the powerful finale. Op.54 was Mendelssohn's contribution to an album published to raise funds for the Beethoven monument in Bonn, and indeed the work belongs to the tradition of Beethoven's 'serious' 32 Variations in C minor, also for piano solo.

Mendelssohn was one of the finest organists of his day. The Three Preludes and Fugues op.37, dedicated to Mozart's pupil Thomas Attwood, form a pendant to op.35. The Six Organ Sonatas op.65 (1845), teeming with artful fugues and chorales, summarize and epitomize Mendelssohn's rediscovery of Bach, and may have inspired Schumann's six fugues on B–A–C–H op.60.

11. ORATORIOS AND SACRED WORKS. Mendelssohn was not the only 19th-century composer to revive the oratorio form, but his two completed works, *St Paul* (1836) and *Elijah* (1846), were the only representatives of his time to achieve lasting popularity. Mendelssohn himself frequently

performed *St Paul* at music festivals; what is more, after its première, the oratorio at once achieved numerous triumphant performances abroad, in England, Scandinavia, the Netherlands, Poland, Russia and the USA (performances were given in Boston, New York and Baltimore in 1837, 1838 and 1839 respectively). Of course, the subject, the conversion of Saul to St Paul, held a special meaning for the Mendelssohn family, who had embraced the Christian faith. As in *Elijah*, Mendelssohn conceived the work in two parts, each structured around three dramatic episodes: in Part 1, for instance, the persecution of Stephen, the appearance of Christ before Saul on the road to Damascus (scored for female choir and winds, a choice that provoked a controversy), and Saul's conversion. From Bach's Passions and Handel's oratorios Mendelssohn borrowed the use of the traditional narrator, to relate in recitatives the dramatic action of the work. Conspicuously Bachian are the chorales, interspersed throughout the oratorio to demarcate the principal structural divisions, diffusing, according to Carl Klingemann, 'a calmness through the whole'. On the other hand a debt to Handel is revealed in the rich variety of the choruses, which include several that directly engage in the dramatic action and several cast in a variety of fugal styles. Prefacing the oratorio is an overture that evokes Paul's struggle for spiritual awakening by means of the chorale *Wachet auf* and a dissonant fugue, with its subject derived from the first strain of the chorale.

According to Schumann, Mendelssohn's oratorio and Meyerbeer's grand opera *Les Huguenots* pointed in two diametrically opposed directions: the one upholding musical standards, the other, relying on tawdry and sensational effects, debasing the musical art. Schumann predicted that Mendelssohn, a 'prophet of a glorious future', would produce another oratorio. *Elijah*, contemplated as early as 1836 when preparations were under way for the first English performance of *St Paul*, was finished only ten years later (in the penultimate year of Mendelssohn's life) and then thoroughly revised in 1847. Written for England, *Elijah* was nevertheless composed to a German text, for which William Bartholomew expeditiously prepared the English version for the première in Birmingham.

Based largely on the account in *1 Kings*, *Elijah* relates the chief events in the prophet's life: the curse of the Lord and the seven-year drought, Elijah's miraculous revival of the widow's son, his confrontation with the Baal worshippers and the lifting of the drought, his confrontation with Ahab and Jezebel, his flight to the wilderness and encounter with the Lord, and his journey to Mt Horeb and ascension to heaven in a flaming chariot. As in *St Paul*, Mendelssohn employed chorales and relied heavily upon choral numbers; noteworthy is the sheer diversity of choruses, ranging from fugue (the end points, nos.1 and 42) and canon (no.34), to chordal style or chorales (nos.5, 15, 16 and 32), chorus and solo duet (no.2), eight-part double quartet (no.7), *a cappella* trio and quartet (nos.28 and 15), and choral recitative (nos.1 and 36). In contrast to *St Paul*, Mendelssohn dispensed with the narrator, allowing the characters themselves to deliver the dramatic action. *Elijah* diverges from *St Paul*, too, in its broadly conceived musical cohesiveness; in no other work did Mendelssohn concern himself with musical structure on such a large scale.

On the simplest level the oratorio is unified through a network of recurring motifs. Two in particular, a rising triadic figure and a series of interlocking tritones, function topically to identify the prophet Elijah and the catastrophic drought. They appear initially in Elijah's opening recitative and subsequently are revived in a variety of ways: for example, the interval of the tritone, associated with the drought, is embedded in the fugal subject of the overture and in the harmonic vocabulary of the oratorio, which includes prominent use of diminished 7th and augmented 6th sonorities. On a second level, Mendelssohn stitches together several numbers to form larger complexes of through-composed music. Thus, the opening recitative pauses on a half cadence to introduce the orchestral overture, a dissonant fugue that depicts the tribulations of the people during the drought. Unfolding as a series of intensifying gestures, the overture then spills over to the first chorus ('Help, Lord! Wilt thou quite destroy us?'), also designed as a fugue, which, in turn, is followed by a choral recitative. Taken together, the entire complex is unified by a symmetrical design: two fugues framed by two recitatives. Finally, on a third level, Mendelssohn coordinated the musical structure of the oratorio through the use of tonal axes. Part 1, for example, describes a rising tonal motion from D minor to E♭ major, with D minor active in the opening numbers; E♭ is introduced in Obadiah's aria (no.4), and reasserted at the midpoint, Elijah's recitative (no.10), and then secured in the concluding chorus (no.20).

With few exceptions, Mendelssohn's other sacred works lie largely in the shadow of *St Paul* and *Elijah*. They include a series of Bachian chorale cantatas, composed between 1827 and 1832, of which Mendelssohn published only one, *Aus tiefer Noth*, in the *Drei Kirchenmusiken* op.23. The five large-scale settings of Psalms cxv, xlii, xcv, cxiv and xcviii (opp.31, 42, 46, 51 and 91), which contain inspired and vivid choral writing, often impress as preliminary studies for the oratorios (Psalm cxv was originally set to the Vulgate text *Non nobis Domine*; the composer himself then fashioned the German paraphrase *Nicht unserm Namen, Herr* when the work was made ready for publication). Occasionally the composer's historical pursuits led him to write sacred music, e.g. the Kyrie for five-part chorus and orchestra, 1825, with clear ties to Mozart's Requiem, the Palestrinian *Tu es Petrus* (1827) and the *Hora est* for 16-part chorus and continuo (1828), which revives the 17th-century Italian polychoral tradition. Mendelssohn produced several occasional sacred pieces for England; the most popular of these was the anthem *Hear my Prayer*, based on a paraphrase of Psalm lv (1844). The late works include the unjustly neglected *Lauda Sion* (1846), one of Mendelssohn's few settings of a Catholic text, and the majestic *a cappella* Three Motets op.69 (1847).

12. Operas and other dramatic music. Like Schumann, Mendelssohn did not produce a successful opera, though he was by no means inexperienced or unskilled in dramatic composition. Between the ages of 11 and 15, he finished four ambitious dramatic works, three in one act and one in three acts. All were performed privately in the Mendelssohn Berlin residence. The librettos were written by Johann Ludwig Casper, a physician who had studied in France and frequented the vaudeville theatre there. Perhaps the most successful of these youthful attempts is *Die beiden Pädagogen*, a spoof about the educational

methods of Pestalozzi and Basedow, based on Eugène Scribe's comedy *Les deux précepteurs* of 1817. Its vivid characterizations, skilful ensembles and climactic finale reveal the young Mendelssohn to have been a devoted student of Mozart's operas.

Mendelssohn's only opera to reach the public stage, *Die Hochzeit des Camacho*, is based on an episode from the second part of Cervantes's *Don Quixote* (the identity of the librettist remains unclear). Quiteria, in love with the destitute Basilio, is forbidden by her father, Carrasco, to marry; instead, he promises her to the well-to-do landowner Camacho. Their wedding feast, attended by the knight Don Quixote and his servant Sancho Panza, is interrupted by the sudden appearance of Basilio, who in Cervantes's tale feigns suicide, is granted a last wish and is permitted to marry Quiteria. In the end the lovers' union is blessed by Don Quixote and Camacho. Mendelssohn's score, which shows signs of Beethoven's and Weber's influence, contains some memorable music, though the opera as a whole flags because of inherent difficulties in the libretto. The overture presents several motifs that figure later in the opera, including a prominent fanfare associated with the knight-errantry of Don Quixote. In the Act 2 ballet, the opposing forces of Cupid and Wealth are rendered by a bolero and fandango, a rare example of Mendelssohn's use of local colour.

The failure of *Camacho* was an especially hard blow for the young composer, who refused to release his next dramatic work, *Heimkehr aus der Fremde* (1829), to the public stage; instead, it was reserved for his parents' silver wedding anniversary. The theme of homecoming, developed by Klingemann into a Singspiel libretto, alluded to the composer's own return from England. Many of the numbers are set as simple strophic lieder; in 'Wenn die Abendglocken läuten', Mendelssohn introduced a military fanfare later re-used in the reprise of *Die Hebriden*.

For the rest of his life Mendelssohn continued to search for a suitable opera libretto, but rejected dozens of proposals from poets and playwrights, including Karl von Holtei, J.R. Planché (the librettist of Weber's *Oberon*), Karl Immermann, Eugène Scribe and Helminie von Chézy (the librettist of Weber's *Euryanthe*), and from his friends Klingemann, Ludwig Robert and Devrient (Devrient lamented his friend's 'operatic destiny' as a 'Hamlet-like tragedy'). The subjects ranged from historical topics (Edward III and the Siege of Calais, the Peasants' War), to Teutonic myth (the Nibelungenlied), Shakespeare's plays (*The Tempest*, *The Winter's Tale*), and folktales (Hans Heiling, Bluebeard). Finally, in 1845 Mendelssohn took up the Lorelei legend and began an extended collaboration with Emanuel Geibel on an opera in three acts, with continuous music. But the composer lived long enough only to begin the music for the first act, of which the finale and two short numbers were issued posthumously. The dramatic finale – in which Lenore, betrayed by the nobleman Otto, climbs a cliff above the Rhine and swears vengeance, plighting her troth as bride of the river – contains effective music, but reveals a chain-like construction considerably less innovative than the more flexible musico-dramatic designs realized by Wagner during the 1840s.

In a separate category are Mendelssohn's independent concert arias. More or less neglected, they include one that survives only in incomplete form, *Tutto è silenzio*, composed in 1829 for Anna Milder-Hauptmann, the prima donna in Berlin. The scena and aria *Infelice* (op.94), commissioned by the Philharmonic Society in London in 1834, shows clear evidence of the composer's dramatic abilities. Written for Maria Malibran, using texts from Metastasio, the score originally featured an obbligato violin solo; in 1843 it was substantially revised and rewritten for Sophie Schloss, who performed it at her farewell concert in Leipzig. *On Lena's Gloomy Heath* (1846) was Mendelssohn's response to a request from the English bass Henry Phillips for a composition. Phillips himself chose passages from the Ossianic poem *Fingal*, and the composer obliged with a two-part setting, stylistically related to *Die Hebriden*, that culminates in a spirited march.

Mendelssohn wrote incidental music for several plays, including pieces for Immermann's production of Calderón's *El príncipe constante* (as *Der standhafte Prinz*) in Düsseldorf in 1833. For a performance of Victor Hugo's *Ruy Blas* in 1839, he composed a *romance* for women's chorus and strings, and then completed in days the more celebrated overture. His other incidental music, to Sophocles' *Antigone* and *Oedipus at Colonus*, Shakespeare's *A Midsummer Night's Dream* and Racine's *Athalie*, was all owing to royal commissions from Friedrich Wilhelm IV. The Prussian monarch was keenly interested in reviving Greek tragedy and to that end, in collaboration with Tieck and the philologist August Böckh (who lived at Mendelssohn's Berlin residence during the 1840s), the composer began work in 1841 on music for the choruses of *Antigone*. His own classical studies held him in good stead: using the translation of J.J.C. Donner, scrupulously faithful to the original metre, Mendelssohn rendered the strophes and antistrophes of Sophocles' choruses with syllabic settings for double male choir accompanied by an orchestra, occasionally resorting to a recitative-like style of declamation. The parts of the principal characters were left as spoken dialogue, or set as melodrama, with the orchestra accompanying the spoken text. (Four years later, a similar procedure was employed for *Oedipus at Colonus*.) Though opinion varied about Mendelssohn's music (Schumann viewed the score as 'half opera, half tragedy'; *The Times*, 'too modern, and at the same time not modern enough'), *Antigone* was widely performed and used as a model for later classical revivals. In 1845 alone, it achieved 45 performances at Covent Garden; the same year, it was satirized in Lortzing's comic opera *Der Wildschütz*, another sign of its popularity.

Though little-known today, the music for *Athalie* merits performance. Especially striking are Mendelssohn's paraphrases of chorales, including *Ach Gott, vom Himmel sieh' darein* and, in a scene in which the high priest Joad describes a vision of the New Jerusalem, *Vom Himmel hoch*. Undoubtedly the most celebrated of Mendelssohn's incidental music are the 12 numbers and finale composed in 1843 for *A Midsummer Night's Dream*, which include entr'acte movements (among them the Scherzo, Nocturne and famous Wedding March), several shorter pieces cast as melodramas, a strophic song with chorus ('You spotted snakes'), and miniatures for the tradesmen and their presentation of 'Pyramus and Thisbe'. Rather than compose entirely new music for the production, Mendelssohn strategically chose to re-use his concert overture and its colourful assortment of motifs, thereby facilitating, retrospectively, their identification in the youthful composition of 1826. Schumann questioned Mendelssohn's

heavy reliance on the material of the overture, perhaps most conspicuous in the finale, which revives the elves' music and the coda of the overture, and concludes with the four ethereal wind chords. But throughout the course of the incidental music the familiar motifs of the overture are themselves subjected to a series of fanciful metamorphoses, extending a process already at work in the product of the 17-year-old's imagination. Thus, the quintessential tetrachord of the elves' motif is invoked in any number of ingenious ways, including, in nos.4 and 8, sequences of rising and falling chromatic tetrachords to accompany Puck's administering of the magic potion to Titania and, *mutatis mutandis*, her release from the charm.

13. LIEDER AND OTHER VOCAL WORKS. Among Mendelssohn's most impressive works is the secular cantata *Die erste Walpurgisnacht* (1832), on a poem by Goethe that treats the springtime pagan rituals of the Druids on the Brocken. Goethe himself probably encouraged Mendelssohn to attempt the work during their last meeting in 1830. The poem was intended to symbolize the suppression of old customs by new ideas, in this case, the persecution of the Druids by Christian zealots. Through-composed, the cantata begins with an energetic overture that depicts the end of winter and coming of spring (a topic previously treated by Haydn in the overture to *The Seasons*; Mendelssohn's transition to spring, in turn, inspired a passage in the first movement of Brahms's Second Symphony). There follow nine connected movements; the climax is reached in nos.5 and 6, in which the Druid guards disguise themselves as devilish figures in order to deflect the assault by the Christians. Here Mendelssohn fortified the orchestra with cymbals and bass drum and experimented with abrupt metrical shifts to achieve that musical confusion so prized by Berlioz when he heard the work in 1843.

Mendelssohn composed several occasional works for choral forces, including the 'Dürer' and 'Humboldt' cantatas (both 1828), a setting of the Saxon anthem, *Gott segne Sachsenland*, for Friedrich August II and other festive choruses, among them the *Festgesang* ('Möge das Siegeszeichen', 1838, for a singing society in the Austrian Tyrol), rediscovered in 1996, a setting of Schiller's *An die Künstler* for Cologne and the *Festgesang* for the 1840 Gutenberg festival, of which one movement was later adapted by W.H. Cummings as the Christmas carol *Hark! the herald angels sing*. Of the four sets of partsongs Mendelssohn published, three (for mixed chorus, opp.41, 48 and 59) were intended for performance outdoors and one (for male chorus, op.50) was dedicated to the Leipzig singing societies (other partsongs were issued posthumously). The majority fall into strophic designs and not infrequently attain the artful simplicity of folksong, as in *Abschied vom Wald* (op.59 no.3) and *Hirtenlied* (op.88 no.3, an arrangement of the solo lied op.57 no.2); in op.41, Mendelssohn included three Heine settings (nos.2–4) that he labelled separately as 'Drei Volkslieder'. The preferred poets are Eichendorff, Uhland, Goethe and Heine, and the texts treat, in the main, romantic themes of springtime, forests and wandering.

According to conventional wisdom, Mendelssohn's solo and duet lieder do not rank among his most significant efforts. He remained uninfluenced by the rich corpus of Schubert's songs (it was Zelter who advised Goethe in 1816 to return a parcel of Schubert's Goethe settings, and later Mendelssohn came to know only a few Schubert lieder). Instead, initially his models were the north German lieder, including those of Reichardt and Zelter, in which the piano parts provided only modest accompaniments to the poetry. Many of Mendelssohn's songs are simple strophic settings; only rarely is the accompaniment allotted musically challenging material (e.g. *Des Mädchens Klage* and the *Reiselied* op.34 no.6). Of considerably greater interest, however, is the relationship between the songs and the composer's instrumental music. Thus, *Frage* (op.9 no.1), which is cited and paraphrased in the String Quartet op.13, provided the direct inspiration for the quartet. *Scheidend* (op.9 no.6) begins with a descending bass figure borrowed from the opening of *Meeresstille und glückliche Fahrt*. The *Venetianisches Gondellied* op.57 no.5 is stylistically akin to the similarly titled *Lieder ohne Worte* opp.19 no.6, 30 no.6 and 62 no.5. And the duet *Herbstlied* (op.63 no.4) was originally conceived for solo piano, titled *Lied* (1836), to which Klingemann later fitted a text. Like the *Lieder ohne Worte*, Mendelssohn published his lieder in sets of six, with the exception of opp.8 and 9, which comprise 12 songs each (including six by his sister Fanny, whose authorship was suppressed). Op.9 shows some evidence of a cyclic design: in the first edition, its two halves were subtitled 'Der Jüngling' and 'Das Mädchen'; what is more, the questioning motif of the first song, *Frage* ('Ist es wahr?'), is reworked in nos.2 and 3, thereby linking the three together. But, in decided contrast to Schubert and Schumann, Mendelssohn did not fully explore the potential or ramifications of the song cycle.

14. RECEPTION. Mendelssohn's posthumous fame followed a most unusual trajectory for a major European composer. Already during his lifetime his position at the forefront of German and English culture was secured. His death in 1847 at the age of 38, announced in *The Musical World* as the 'eclipse of music', was mourned as an international tragedy. His memory was soon idealized, most notably in the fictional historical romance by Elizabeth Sheppard, *Charles Auchester* (1853), in which the composer Seraphael worships the music of Bach and composes a 'fairy overture' for an opera on Shakespeare's *The Tempest*. Thus began a process by which Mendelssohn's music and memory came to be sentimentalized, so that ultimately Bernard Shaw (in the 1880s) could criticize the composer's 'kid-glove gentility, his conventional sentimentality and his despicable oratorio mongering'. Mendelssohn was inevitably associated with Queen Victoria and Prince Albert, and his fame was susceptible to late 19th- and early 20th-century critiques of Victorian society and mores. In Germany, after the Revolution of 1848, the classicizing tendencies of his music were increasingly viewed as incongruous with the aims of the new 'Zukunftsmusik' promoted by Wagner and others. Mendelssohn's posthumous reputation was also severely tarnished by rising anti-Semitism, as evidenced in Wagner's 'Das Judenthum in der Musik', published anonymously at mid-century in the *Neue Zeitschrift für Musik*. In the 20th century the rise of Nazism in Germany did further, seemingly irreparable harm: Mendelssohn's music was banned and his statue in front of the Leipzig Conservatory was surreptitiously removed and destroyed (a new statue was unveiled before the Neues Gewandhaus in 1993). Nietzsche's formulation in *Jenseits von Gut und Böse* (1886), that Mendelssohn was a 'lovely interlude' in German music, was interpreted to confirm the composer's

intermediary position between Beethoven and Wagner. Even Friedrich Niecks, who took up Mendelssohn's defence (Niecks, J1875), conceded that the

serene beauty of Mendelssohn's music has to most of us not the same charm as the rugged energy, the subtle thoughtfulness and morbid world-weariness of other composers. As the Romans of old took delight in the struggle and writhing agony of the gladiator, so we of the present day enjoy watching the beats and throes of the human heart as exhibited by our tone and word poets, the gladiators of modern times.

But a century later Mendelssohn scholarship began to focus on the wealth of surviving primary sources, including manuscripts, sketches, diaries, paintings and correspondence, a substantial amount of which remained unpublished by the late 1990s. Investigation of these materials for the first complete edition of Mendelssohn's music and letters will undoubtedly reveal much new information about this critical figure in 19th-century musical life, who, if he missed true greatness, may have missed it, as the American critic H.L. Mencken suggested, 'by a hair'.

Mendelssohn societies. Although attempts were made in Germany soon after Mendelssohn's death to form a musical fund in his memory the first successful venture was the founding in England of a fund to endow a scholarship for composers and performers. The fund was launched in 1848 and the first Mendelssohn Scholarship was awarded in 1856 to Arthur Sullivan; it was restricted to composers in 1890 and is still in existence. No comparable body emerged in Germany until 1878 when the Felix Mendelssohn-Bartholdy-Stiftung was founded. With the annual revenue paid by the Prussian government for the receipt of Mendelssohn's manuscripts, the heirs of Mendelssohn established two annual scholarships and provided other support for music. The foundation was active until 1934 when political pressure caused its closure; the scholarships were revived in 1962 by the Preussischer Kulturbesitz, Berlin, and since 1963 Mendelssohn prizes have been awarded annually.

In 1958 Hugo von Mendelssohn-Bartholdy and Max Friedrich Schneider founded in Basle the International Felix-Mendelssohn-Gesellschaft; its activities centred on a research institute with a special library containing autograph and unpublished works, letters, pictures and newspapers. The society edited the first volumes of the Leipziger Ausgabe der Werke Felix Mendelssohn-Bartholdys devoted to hitherto unpublished works. In 1964 the Staatsbibliothek of the Preussischer Kulturbesitz in Berlin took over the Basle collection as the nucleus of the new Mendelssohn-Archiv in the music department.

In 1967 Cécile Lowenthal-Hensel (great-granddaughter of Fanny and Wilhelm Hensel) founded the Mendelssohn-Gesellschaft Eingetragener Verein, which is devoted to research into the descendants of the philosopher Moses Mendelssohn. It soon developed into an international society, particularly through its academic journal *Mendelssohn-Studien*, 11 volumes of which were published up to 2000. Volume ten, published in 1997, was a special edition to mark the 150th anniversary of the deaths of Felix and his sister, Fanny Hensel. In 1970 the society mediated the purchase by the *Land* Berlin of many family documents, including autograph writings by Felix and Fanny. The society collects autograph manuscripts, documents, pictures and other items now held in the Mendelssohn-Archiv.

FRANZ KRAUTWURST/CÉCILE LOWENTHAL-HENSEL

Mendès, Catulle (*b* Bordeaux, 20 May 1841; *d* St Germain-en-Laye, Paris, 8 Feb 1909). French writer. His excellent education and considerable talents helped him, while still a youth, to make his way to Paris. Encouraged by Hugo, De Banville and Gautier, he became friendly with Baudelaire, Coppée, Heredia and Villiers de l'Isle-Adam, some of the poets who contributed to *Le Parnasse contemporain*. After the *Tannhäuser* débacle at the Opéra in 1861, the discerning Mendès, eager to demonstrate his faith in Wagner, invited the composer to contribute an article to the *Revue fantaisiste*, the journal founded and edited by Mendès. In 1866 Mendès married a fellow Wagnerite, JUDITH GAUTIER; they separated in 1874. Mendès later established a liaison with AUGUSTA HOLMÈS, by whom he had three daughters.

In 1873 Wagner published the crude anti-French parody *Eine Kapitulation* and consequently lost favour with several of his French supporters, among them Mendès. Nevertheless, and in spite of a novel *Le roi vierge* mocking the relationship between Wagner and Ludwig II, Mendès published in 1886 the first full-length biography of Wagner. The book's epilogue reprinted an article, published in the *Revue Wagnérienne* the previous year, in which Mendès urged his countrymen to practise what Wagner preached, and to seek their musical inspiration from within their own country and its literary and historical heritage rather than to imitate Wagner slavishly. Mendès's championing of French nationalism and native composers brought him into contact with the young Debussy in 1889. He paid for the engraving of Debussy's *Fantaisie* and the composer agreed to his proposal that they work together on *Rodrigue et Chimène*, Mendès's adaptation of Corneille's *Le Cid*. Two years later, when Debussy discovered Maeterlinck, their collaboration was abandoned: Debussy let it be known that the score had gone up in flames when the table on which he had been working overturned near his fireplace. Sketches for the

almost completed work were found, however, in Cortot's library after his death.

WORKS SET TO MUSIC

theatrical works first produced in Paris, unless otherwise indicated

Le capitaine Fracasse (after T. Gautier), oc by Pessard, 1878
Penthésilée, sym. poem by Bruneau, 1884
Gwendoline, op by Chabrier, Brussels, 1886
Isoline, fairy op by Messager, 1888
Le collier de saphirs, ballet by Pierné, 1891
Les joyeuses commères de Paris (collab. G. Courteline), ballet by Pierné, 1892
Le docteur Blanc, ballet by Pierné, 1893
La reine Fiammette, incid music by P. Vidal, 1898; oc by X. Leroux, 1903
Medée, incid music by d'Indy, 1898
Briseïs (collab. E. Mikhaël), op by Chabrier, Berlin, 1899
Le cygne, ballet by Lecocq, 1899
La Carmélite, oc by Hahn, 1902
Le fils de l'étoile, op by C. Erlanger, 1904
Ariane, op by Massenet, 1906
La fête chez Thérèse, ballet pantomime by Hahn, 1910
L'amoureuse leçon, ballet by Bruneau, 1913

Lieds de France, songs by Bruneau (1892)
12 songs by Paderewski, op.22 (1903)
Other songs by Bizet, Chabrier, Fauré, Messager, Pierné, Roussel, Saint-Saëns and others

ELAINE BRODY

Mendes, Gilberto (Ambrósio Garcia) (*b* Santos, 13 Oct 1922). Brazilian composer. He studied harmony with de Benedictis and the piano with A. Rudge at the Santos Conservatory (1941–8). After a period of independent composition study, he had lessons with Santoro (1954) and Olivier Toni (1958–60). He also took part in the Darmstadt summer courses of 1962 and 1968, attending classes given by Boulez, Pousseur and Stockhausen. While in Europe on various occasions he visited the electronic music studios of West German Radio, the ORTF and Karlsruhe University. He has taught new musical techniques in Santos at the Clube de Arte (1956), the Escola de Jovens (1966) and the Colégio Vocacional Stella Maris (from 1968). In 1962 he took charge of the annual New Music Festival of the Santos Ars Viva Society, and from the late 1950s he has been a member of the Santos Música Nova group, whose aim, as announced in their manifesto of 1963, is to promote 'a new Brazilian music ... according to the modern theories of cybernetics, information, probability, quanta, semantics and semiotics, structuralism and human communication'. He taught composition both at the University of Brasília and at the University of São Paulo, from where he gained the doctorate (1990); he held visiting academic positions at the universities of Wisconsin-Milwaukee and Texas-Austin. In the 1970s he began to attend new music festivals in Europe and the Americas, where many of his works were first performed to critical acclaim.

Mendes has created highly individual works to texts by Brazilian concrete poets, among them Décio Pignatari and José Lino Grunewald. His choral piece *Beba Coca-Cola* (after Pignatari, 1967) achieved outstanding popularity for an avant-garde composition. He has also been strongly influenced by developments in the visual arts of the 1960s: the pop art of Rauschenberg, Lichtenstein and Oldenburg, the films of Godard, and conceptual art. These interests stimulated his exploration of visual aspects in such works as *Cidade*, *Vai e vem*, *Son et lumière*, *Asthmatour* and *Pausa e menopausa*, where there is an obvious affinity with the indeterminacy and music-theatre of Cage. He later amplified his interest in theatrical action with experimental mixed-media works such as *Opera Aberta* (1976), *Der Kuss* (1976, first performed 1985) and *Grafito* (1985). In the 1980s and 90s numerous works for chorus, piano and instrumental ensembles achieved success. Among his major works for orchestra is *O último tango em Vila Parisi* (1987), a smart, unique and humorous combination of minimalism, musical theatre and social criticism. Mendes stands as a major creative figure in late 20th-century Brazilian music.

WORKS

(selective list)

Orch: Ricercare, 2 hn, str, 1960; Pf Conc., 1981; O último tango em Vila Parisi, 1987; Dal finestrino di un treno (Omaggio a Pescara), 1997

GERARD BÉHAGUE

Mendes, Manuel (*b* Lisbon, *c*1547; *d* Évora, 24 Sept 1605). Portuguese composer. He was *mestre da capela* at Portalegre Cathedral and then *mestre* of the private chapel of the Cardinal Infante Henrique, accompanying him to Évora when Henrique became Archbishop there in 1575. From 1578 Mendes was master of the choirboys at Évora Cathedral. He was ordained priest in 1575 and a decade later became *bacharel* (bachelor) of the cathedral.

Mendes's considerable reputation rested not only on his own works (just six surviving pieces have been identified) but also on his abilities as a teacher: among his pupils were the most famous Portuguese composers of the next generation, including Manuel Cardoso, Duarte Lobo and Filipe de Magalhães. In his *Fuente de Aganipe* (Madrid, 1644) Manuel de Faria e Sousa included Mendes among the four finest Portuguese composers and considered him worthy of comparison with Morales and Guerrero. In his will Mendes left his music books to Magalhães, but an attempt by the dean of the royal chapel (of which Magalhães was a member) to have some books of Mendes's masses and *Magnificat* settings published came to nothing because of the price demanded by the Plantin firm of Antwerp.

Of Mendes's surviving works, an *Alleluia* (ed. in PM, ser.A, xxxvii, 1982) achieved widespread circulation, being preserved in sources in Arouca, Coimbra, Lisbon, Oporto and Puebla, Mexico. An *Asperges me* was still being sung on Palm Sunday in the chapel of the Dukes of Bragança at Vila Viçosa in the 1730s, and six motets (together with an *Arte de musica*) once existed in the library of King João IV (listed in *JoãoIL*).

OWEN REES

Mendoza(-Guardia), Emilio (*b* Caracas, 8 Aug 1953). Venezuelan composer. He trained with Ioannidis in Caracas (1973–7) and studied live electronics with Günther Becker at the Schumann Institut in Düsseldorf (composition diploma, 1981). He attended the Darmstadt summer courses (1978, 1980), several Latin American contemporary music courses, and workshops in Venezuelan *bandola llanera* and in West African percussion and dance. He studied composition and Latin American art music at the Catholic University of America in Washington DC (DMA 1990). He taught at the Crane School of Music at Potsdam College, SUNY (1991–7), and the Central University of Venezuela (1996). He also co-founded and directed the Orchestra of Latin American Instruments. He was president of the Fundación de Etnomusicología y Folklore in Caracas and coordinator of ethnomusicology and folklore programmes for the Organization of American States (1995–7). As a composer and performer Mendoza maintains links with dance and popular music ensembles. His works combine a strong rhythmic profile with experimentation, and his search for an original Latin American compositional system is based on the study of traditional indigenous musical resources.

CARMEN HELENA TÉLLEZ

Mendoza (Gutiérrez), Vicente T(eódulo) (*b* Cholula, Mexico, 27 Jan 1894; *d* Mexico City, 27 Oct 1964). Mexican folklorist. He was born of a musical family (his great-grandfather was an organist, his grandfather a tenor and his father a piano teacher) and he began his studies at home at an early age. When his family moved to Mexico City in 1906, Mendoza began working as a barber while continuing his music instruction; this lasted for 12 years. At the same time he also worked as a draughtsman and as a pianist for silent films. In 1916 he entered the National Conservatory, where he studied under Lauro Beristáin and Rubén M. Campos, and until 1925 he studied intermittently with Julián Carrillo.

After four years working in state schools, he took a post in 1936 at the Institute of Aesthetic Investigations at the University of Mexico, which he held until his death. He was founder and president of the Sociedad Folklórica de México from 1938, editor and a principal contributor to its *Anuario*, and participated in many congresses in Latin America, Europe, Japan and the USA. In 1946 he studied at Indiana University and the University of North Carolina (with Ralph Steele Boggs); he received the master's degree at the University of Mexico in 1955.

His first wife, Virginia Rodríguez Rivera, was herself a prominent folklorist, and with her he carried out his most

important field work and produced the significant *Folklore de San Pedro Piedra Gorda, Zacatecas* (1952). The aim of his life's work was to make folklore a scholarly discipline in Mexico.

E. THOMAS STANFORD

Mendoza-Nava, Jaime (*b* La Paz, 1 Dec 1925). Bolivian composer and conductor. He studied in New York at the Juilliard School of Music and Columbia University, at the Madrid Conservatory (completing the five-year syllabus in one year and winning first prize in composition, 1950), in Lausanne with Cortot and at the Paris Sorbonne with Nadia Boulanger. In 1951 he was appointed conductor of the Bolivian National SO, whose standards he brought to a professional level. In 1952 he settled in California and became a composer at the Walt Disney and UPA film studios.

CARLOS SEOANE

Mene. *See* MEANE.

Menehou, Michel de (*fl* Paris, 1557–68). French theorist and composer. In 1558 he was *maître de chapelle* at the abbey church of Saint Maur-des-Fossés and enjoyed the patronage of Cardinal Guillaume Du Bellay, the dedicatee of his *Nouvelle instruction familière, en laquelle sont contenues les difficultés de la musique*. According to Du Verdier and La Croix du Maine, and Draudius, the treatise was reissued in 1571 under the title *Nouvelle instruction contenant en brief les preceptes ou fondemens de musique tant pleine que figurée*; an edition with this title was published at Paris in 1582. The book responded to contemporary demand for vernacular treatises on music, but it differs from similar works by Loys Bourgeois, Maximilien Guilliaud, Philibert Jambe de Fer and Claude Martin in devoting much space to elementary harmony; the full title referred to 'concordances et accords' (concordances and intervals) and their use in two- to five-part writing, while Menehou's prologue mentioned young people's desire to learn 'how to practise chords in order to set something down in writing'. He accordingly included chapters on three-, four- and five-part harmonization, counterpoint, canons and cadences, as well as the usual ones on rudiments (mode, mutation, time, prolation and proportion) which quote from earlier theorists, notably Gaffurius, Frosch, Lampadius and Glarean. The treatise ends with a four-voice chanson, *Le souvenir de ma dame jolie*. Du Chemin printed eight more chansons by Menehou between 1557 and 1568. All but one are courtly *épigrammes* set in a predominantly homophonic style with occasional imitative entries; their rhythm and musical form reflect the decasyllabic metre and structure of the texts.

FRANK DOBBINS

Menestrier, Claude-François (*b* Lyons, 9 March 1631; *d* Paris, 21 Jan 1705). French writer. Menestrier studied at the Jesuit Collège de la Trinité in Lyons and subsequently taught rhetoric there, having joined the Jesuit order in 1646. He later taught at Chambéry, Vienne (Isère) and Grenoble before being recalled to the college at Lyons. It was during this latter stay there that he developed the special interest in the history and organization of public festivals and ceremonies that occupied him for most of his life. This interest resulted not only in his organizing such events (for example on the occasion of the visit of Louis XIV to Lyons in 1658, an event which is known to have included student performances of ballets devised by Menestrier, and for the beatification of François de Sales at Annecy in 1662), but also in his publishing a series of works dealing with their details. His studies in heraldry, in imagery and decoration, in stage design and construction, in the writing of occasional poetry and ballets, and in the theatrical use of music and dance are all notable. In 1667 he was named librarian of his college, but he left shortly afterwards for a period of travel in Europe (notably to Italy, Germany, Flanders and England). Finally, in 1670, he made his home in Paris, where he remained for the rest of his life except for occasional trips undertaken as a preacher for the Jesuit order.

The four works by Menestrier that have particular relevance to music are among the earliest publications to combine what was, for the time, a thorough study of the history and aesthetics of theatrical performance with practical and detailed descriptions of actual events (chiefly ballet and opera in France and Italy). As such they are valuable documents bearing on the development of theatre and dance, as well as of music, from the time of the

ancient Hebrews and Greeks to that of Louis XIV. His works in general remained current through much of the 18th century.

ALBERT COHEN

Mengal, Martin-Joseph (*b* Ghent, 27 Jan 1784; *d* Ghent, 4 July 1851). Belgian composer and horn player. He studied the horn with his father, and by 13 was playing at the theatre in Ghent. He entered the Paris Conservatoire in 1804 and after playing the horn in the orchestra at the Odéon he became principal horn at the Opéra-Comique and remained there for 13 years. He studied composition with Reicha and wrote a number of operas and instrumental works; three of his *opéras comiques* were produced in Paris in 1818–23. In 1825 he was appointed director of the theatre in Ghent but soon resigned and after the 1830 Revolution became a conductor in Antwerp and The Hague. Finally, in 1835, he obtained the directorship of the new conservatory in Ghent, where his pupils included Gevaert and Van Duyse. His brother Jean-Baptiste (*b* Ghent, 21 Feb 1792; *d* Paris, 19 Dec 1878) was also a distinguished horn player as well as one of the founders of the Paris Société des Concerts du Conservatoire.

JOHN LADE

Mengelberg. Dutch family of musicians.

(1) **(Josef) Willem Mengelberg** (*b* Utrecht, 28 March 1871; *d* Zuort, Switzerland, 22 March 1951). Conductor. After studying music in Utrecht and becoming proficient at the organ and piano he was sent to the Cologne Conservatory, where he studied theory and counterpoint (with G. Jensen), piano (with I. Seiss), organ (with F.W. Franke), solo singing (with B. Stolzenberg) and conducting and composition (with the director, Franz Wüllner). After graduating with first prizes in conducting, piano and composition he became music director in Lucerne in 1892. On the strength of his success there and a recommendation from Wüllner, he was appointed conductor of Amsterdam's Concertgebouw Orchestra in 1895. He appeared as the soloist in Liszt's Piano Concerto in E flat at his predecessor's farewell concert before conducting Beethoven's Fifth Symphony in his first programme. During the next 50 years he created a first-rank orchestra while also conducting the Museum Concerts in Frankfurt (1907–20) and making many guest appearances. From 1899 he gave annual Palm Sunday performances of the *St Matthew Passion*. He appeared in New York from 1920–30, first with the National SO and then from 1921 as principal conductor of the New York PO, an honour he shared with Toscanini from 1927.

Mengelberg was a great advocate and friend of many contemporary composers, including Mahler, Strauss, Schoenberg and Reger. He corresponded with each of these and his scores are littered with detailed remarks on interpretation. His Mahler scores passed between him and the composer, and Mengelberg's comments are mingled with retouching and comments in Mahler's own hand and other comments Mengelberg attributed to him. Strauss dedicated *Ein Heldenleben* to Mengelberg and his orchestra. In 1920, during his 25th season at the Concertgebouw, Mengelberg led the first major cycle of Mahler's works.

Mengelberg was a vituoso conductor whose desire to enhance the music's poetic content led to performances characterized by an acute attention to detail and sometimes startling tempo fluctuations. His desire to illuminate nuance led to lengthy, heated and voluble rehearsals. He had no hesitation about making alterations to scores (even Beethoven's), citing both the conductor's superior experience in the handling of the orchestra and his studies with Wüllner, who himself had studied with Beethoven's friend Schindler. He continued to massage virtually every phrase with rubato and to use string portamento long after it became unfashionable, and his performances are sometimes criticized as overly fussy and fragmented. Films of his recordings demonstrate a reasonably clear baton technique, dramatic cues and a tremendous dynamic energy.

In 1928 Mengelberg received an honorary degree from Columbia University and in 1934 he was appointed professor of music at Utrecht University. His speech at Columbia ('The Essence and the Effect of Music') demonstrates a political naivety which ultimately led to the collapse of his career. He accepted invitations to conduct in Germany and in occupied countries during the war. While not actively supporting Nazi ideology (he insisted on performing Mahler's First Symphony in 1941),

Willem Mengelberg

he lent his name to Nazi music organizations. While the 1947 Central Council of Honour hearing cleared him of both 'Nazi sympathies' and 'collaboration', the Dutch had banned him from conducting in the Netherlands in 1945, leaving him to retire to Switzerland, where he died months before the restriction was lifted.

(2) (Curt) Rudolf Mengelberg (*b* Krefeld, 1 Feb 1892; *d* Monte Carlo, 13 Oct 1959). Musicologist and composer of German origin, nephew of (1) Willem Mengelberg. He studied law at Geneva and Munich, took piano lessons from Neitzel in Cologne and read musicology at Leipzig with Riemann. Then in Amsterdam he studied composition with Dopper and his uncle, and in 1917 he was appointed artistic assistant to the Concertgebouw Orchestra, later becoming artistic manager (from 1925) and director (1935–54). In 1920 he organized the Concertgebouw Mahler Festival, during which all Mahler's works were performed in nine concerts. Mengelberg's compositions are predominantly vocal, this preference being expressed at first in Romantic songs and later in large-scale sacred pieces, sometimes drawing on Gregorian chant.

(3) Karel (Willem Joseph) Mengelberg (*b* Utrecht, 18 July 1902; *d* Amsterdam, 11 July 1984). Conductor and composer, nephew of (1) Willem Mengelberg. He studied composition with Pijper and later at the Berlin Hochschule für Musik, and was a conducting pupil of Scherchen. After some years as a choral and opera conductor in Germany, he was attached to the theatre in Greifswald (1927–30). From 1930 to 1933 he was music adviser to the Reichsrundfunk and chief sound producer for the Deutschlandsender in Berlin. He held contracts in Barcelona and Kiev, made many European concert tours, and in 1938 settled in Amsterdam. Thereafter he appeared as a conductor with Dutch orchestras, and from 1945 established a reputation as a music critic. He composed orchestral and chamber music, choral, piano and carillon pieces in a conventional style, as well as numerous scores for plays, films and radio dramas; Donemus published his works. The ballet *Signalen* (1935) and the Horn Concerto (1950) each won a City of Amsterdam Prize.

(4) Misha [Misja] **Mengelberg** (*b* Kiev, 5 June 1935). Dutch pianist and composer, a son of (3) Karel Mengelberg. After briefly occupying himself with architecture, he studied composition with van Baaren at the Hague Conservatory, where he took a final examination in theory in 1964. In the meantime he had acquainted himself with Cage's ideas (Darmstadt, 1959) and played in a trio and in the Misha Mengelberg Quartet, to which the percussionists Han Bennink and Willem Breuker belonged. The compositions with which Mengelberg attracted public attention were chiefly provocative and brutalistic. Examples include his submission for the Gaudeamus Music Week in 1961, *Musica per 17 strumenti* (awarded a prize by a jury including Stockhausen and Ligeti), in which the instrumentalists were allowed to play only one note; and his contribution to the Fluxus Festival of 1964, *In memoriam Hans van Sweden*, which consisted of the obsessive repetition of only a few notes. *Spel* is purely conceptual: all that happens is that the composer stands gazing at a clock on the grand piano. More serious in intent is *Vietcong*, a protest against imperialism, and *Omtrent een componistenactie* ('On a Composer's Campaign'), directed against national arts policy.

An impassioned advocate of social renewal, Mengelberg, together with other composers of his generation such as Schat, van Vlijmen, Reinbert de Leeuw and Louis Andriessen, campaigned for a greater democratization of Dutch musical life. He also contributed to the opera *Reconstructie* (1969), the joint project of a group of seven composers and writers. In the 1970s, his collaboration with the writer and performance artist Wim Schippers led to some remarkable improvised theatrical productions.

As co-founder of the Instant Composers Pool (1967) and first chairman of the Bond van Improviserende Musici (established in Amsterdam in 1974), Mengelberg fulfilled a pioneering role for improvised music in the Netherlands. He was also involved in the Studio voor Elektro Instrumentale Muziek, and his work for the Society of Dutch Composers, GeNeCo, provided the basis for a subsidized commissions policy for composers.

In both his compositions and his improvisations (methods of working which he always equated), Mengelberg displays a prickly sense of humour. A strong tendency towards self-mockery and self-deprecation can also be seen in the titles of his works and in his often provocative, absurdist programme notes. Unlike many of his generation for whom jazz formed the only point of reference, Mengelberg has drawn not only on the music of colleagues with whom he has performed, including the saxophonists Eric Dolphy and Charlie Parker, but also from Arab music, Moroccan street sounds, Dutch barrel organ music and classical traditions from Bach to Webern. Using montage and collage, he draws freely on a range of styles, at times exaggerating their characteristics to almost grotesque proportions.

JOSÉ A. BOWEN (1), ROGIER STARREVELD (2–3), TON BRAAS (4)

Menges, (Siegfried Frederick) Herbert (*b* Hove, 27 Aug 1902; *d* London, 20 Feb 1972). English conductor and composer, brother of ISOLDE MENGES. He was the son of a German father and a British mother, both violinists, who ran a music school in Brighton. He studied at the RCM, where he worked with Holst and Vaughan Williams. Much of his career was spent in the London theatre but he also maintained a connection with Brighton as founder and director of the Brighton PO from 1925 until his death. In 1931 he became musical director of the Old Vic Theatre and composed or arranged and conducted incidental music for most of Shakespeare's plays. He served Sir John Gielgud in all his productions from *Richard of Bordeaux* in 1933 to the end of World War II. He conducted most of the principal British orchestras, and was made an OBE in 1963.

FRANK HOWES

Menges, Isolde (Marie) (*b* Hove, 16 May 1893; *d* Richmond, Surrey, 13 Jan 1976). English violinist, sister of HERBERT MENGES. After learning with her parents, both violinists, she had lessons from Sauret, and studied for three years with Auer in St Petersburg and Dresden from 1910. Her London concerto début was in February 1913. In May she played the Brahms and Glazunov concertos under Mengelberg, and continental engagements began. In 1916 she was invited to the USA, and in 1922 was the first to make a complete recording of the Beethoven concerto with orchestra (under the direction of Landon Ronald).

An expressive player of deep insight, Menges had a classical style of great purity and a range of interest that made her a world soloist in considerable demand. A natural chamber musician, in the late 1920s she played piano trios with Ivor James and Harold Samuel. In 1931 she founded the Menges Quartet and began her teaching activities at the Royal College of Music.

ROBERT ANDERSON

Mengozzi [Mengocci, Mingozzi], **Bernardo** (*b* Florence, 1758; *d* Paris, Feb or March 1800). Italian composer and singer. He studied singing in Florence with Guarducci and at S Marco in Venice with Potenza. His name appears in two librettos for Sarti's *Le gelosie villane*, performed in 1777 in Florence and in 1784 in Naples. His London début was in February 1787 as a tenor in the Haymarket company, to which his wife, the soprano Anna Benini, also belonged. The Mengozzis went to Versailles during the summer of 1787 with other singers from the Haymarket for performances of Italian *opera buffa*; they then settled in Paris, and in 1789 joined the company of the Théâtre de Monsieur, where Mengozzi became famous both as a singer and as the composer of many substitute arias. His *L'isola disabitata* is a landmark in the history of opera in France, being the first serious opera performed in Italian in Paris since Cavalli's *Ercole amante*. The most successful of his French operas seem to have been *Isabelle de Salisburi* and *Selico*, principally because of their spectacular element. Under the Directory Mengozzi spent some time in Bordeaux, and then returned to Paris to teach singing at the Conservatoire; he took an active part in the writing of the *Méthode de chant du Conservatoire de Musique* (1804) in collaboration with Garat, Cherubini and Langlé.

WORKS
performed in Paris unless otherwise stated

L'isola disabitata (azione teatrale, 1, P. Metastasio), Florence, 1783; in 2 acts, Paris, Monsieur, 22 Aug 1789; 1 air (Paris, 1783)

Aujourd'hui, ou Les fous supposés (op, 3, Bouyon), Montansier, 3 Feb 1791

Isabelle de Salisburi (comédie-héroïque et lyrique, 3, P.F.N. Fabre d'Eglantine, after F.-T. Arnaud: Salisbury), Montansier, 20 Aug 1791, collab. G.G. Ferrari

Les deux vizirs (prol, 3, P. Desforges), Montansier, 10 March 1792

Pourceaugnac (op, after Molière), Montansier, 25 Jan 1793

L'amant jaloux (op, 3, T. d'Hèle), Montansier, 2 Feb 1793

Selico, ou Les nègres (cmda, 3, Saint-Just), National, 5 Oct 1793

Une faute par amour (cmda, 1, Vial), Feydeau, 16 May 1795

Les habitans de Vaucluse (op, 1, Montanclos), Montansier, 1 June 1799

Brunet et Caroline, ou Le chansonnier impromptu (op, 1, Ségur *jeune*), Jardin-Egalité [Montansier], 5 July 1799

La dame voilée, ou L'adresse de l'amour (oc, 1, Ségur *jeune*), OC (Favart), 28 Nov 1799

MICHEL NOIRAY

Mennin [Mennini], **Peter** (*b* Erie, PA, 17 May 1923; *d* New York, 17 June 1983). American composer and educator. He was the brother of Louis Mennini. He studied briefly at Oberlin College Conservatory under Normand Lockwood before joining the US armed forces (1942). After military service he attended the Eastman School, where he studied with Hanson and Rogers (BM and MM 1945, PhD 1947). On graduating he was appointed to the composition faculty of the Juilliard School. He remained there until 1958, when he was named director of the Peabody Conservatory. In 1962 he became president of the Juilliard School, a position he held until his death. Throughout his time at the Juilliard School Mennin emphasized the value of performance skills, and was also responsible for the establishment of its Theater Center (1968), American Opera Center (1970) and Contemporary Music Festival. A major accomplishment was his introduction in 1972 of a permanent programme for conductors.

Although Mennin is often grouped with the traditional school of American symphonists, his music is more international than that of many of his colleagues. While its aggressive energy and syncopated rhythmic drive suggest American roots, its abstract, linear emphasis and lofty tone indicate an affinity with such northern European symphonists as Rubbra, Holmboe and even Pettersson. From the beginning Mennin concentrated almost exclusively on serious works in large forms. He exhibited a natural gift for flowing counterpoint as early as the 1940s, and acknowledged the influence of Renaissance polyphony on his development as a composer. The grandeur and vigour, as well as the robust bass lines found in early compositions such as the Symphonies nos.3, 4 and 5 suggest the influence of Vaughan Williams's Fourth Symphony. Mennin's succeeding works revealed a consistent evolution towards greater stringency and compression, culminating in the Symphony no.8 (1973) which almost abandons a linear framework altogether in its exploration of terse colouristic gestures. The slow movement of the Symphony no.9 (1981), however, returns to a more characteristic language. Except for the *Cantata de virtute* (1969), his one major excursion into programmatic music, his means of expression was purely abstract. Perhaps the most distinctive quality of his music is its nervous energy, abating only for periods of grave reflection. Some have charged that this single-minded severity has resulted in too narrow an expressive palette, while others feel that the eloquence and power of each work compensate for any lack of breadth.

Peter Mennin, 1974

Mennin's music is performed widely, and much has been recorded. He received commissions from America's leading organizations, including the Coolidge Foundation in the Library of Congress and the Cleveland Orchestra, the National SO and the New York PO. Among his many awards were the Bearns Prize and the first Gershwin Memorial Award, both given in 1945 for his Symphony no.2, an award from the National Institute of Arts and Letters (1946), two Guggenheim Fellowships (1949, 1957) and a Naumburg Award (1952). He served on the boards of many organizations, including the Composers Forum, the Koussevitzky Foundation, ASCAP, the National Institute of Arts and Letters (to which he was elected in 1965) and the State Department Advisory Committee on the Arts.

WALTER G. SIMMONS

Meno (It.: 'less'). A word used both adjectivally and adverbially as an adjustment to a tempo or expression mark. *Meno mosso*, normally found in the middle of a movement, indicates a change to a slower tempo.

Menon, Tuttovale [Tudual, Tugdual, Tuttualle, Tutval] (*fl* *c*1538–52). Italian composer of French origin. He was often known as 'Tudual' or some variant, and several individual works were published under that name. In the dedication of his *Madrigali d'amore* (Ferrara, 1548) to Renée of France, Duchess of Ferrara, he referred to France as 'that homeland which … made me a faithful subject of Your Excellency'. As 'Tutval' he was a 'peritevole guida' in music to Gaspara Stampa, the noted Paduan poet and singer (*c*1523–54), and he must have been living in Venice or Padua in 1545–6. In 1546 he was the subject, together with other musicians, of poems by Girolamo Fenaruolo published that year in Padua. He probably left Venice prior to 1547; a dedication by Antonio Barges in that year refers to Menon in the past tense. In 1552 he was described by Ortensio Landi as 'habitatore di Correggio huomo singolare', and was probably one of the teachers there of Claudio Merulo. Nothing is known of his whereabouts and activities thereafter, but in 1588 a previously unpublished *Canzon* in four parts by 'Menon' appeared in *Giardinetto de madrigali et canzonette a tre* (Venice, 1588), edited by the Veronese composer Paolo Bozi.

The bulk of his surviving work consists of the 45 *Madrigali d'amore*. This is probably the collection to which Doni referred, naming the composer as 'Tutuual' or 'Tuduual'. Some of the madrigals must have circulated earlier, for Fenaruolo suggested in 1546 that some of Menon's madrigals were so amorous as to 'make short work of honour'. One piece from the collection, *Coppia felice*, an epithalamium, was indeed published earlier; it was attributed to Constantio Festa in a collection of 1543.

Musically Menon works within the style of his time with some individual characteristics. His imitative entries are often obscured by an accompaniment of 'animated homophony', sometimes with pseudo-imitative entries. Strictly homorhythmic chordal passages provide variety to the texture, as do brief successions of 6-3 chords. Vigorous syncopation sometimes livens the rhythm. The harmony is not striking except when Menon's accidentals contradict the solmization of some other part, creating simultaneous cross-relations. Parallel 5ths and octaves are frequent and often ill-concealed. An unusual feature of his music is his predilection for anachronistic under-6th cadences.

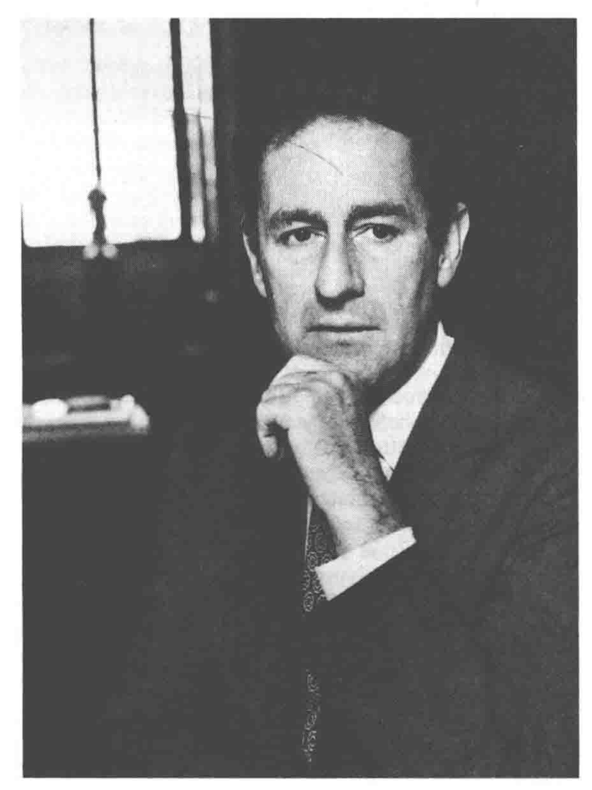
THOMAS W. BRIDGES

Menotti, Gian Carlo (*b* Cadegliano, 7 July 1911). American composer of Italian birth.

1. Up to 1950. 2. 1951–72. 3. From 1973. 4. Style.

1. Up to 1950. The sixth of ten children, he was born in a country town on Lake Lugano. His father was a prosperous businessman and his mother a talented amateur musician. He had already written two operas when he entered the Milan Conservatory at the age of 13. In 1928 he began studies with Rosario Scalero at the Curtis Institute, where a close friendship with his fellow student Samuel Barber began. The two spent several summers in Europe attending opera performances in Vienna and in Italy. It was in Vienna, having received his diploma with honours from the Curtis Institute in 1933, that Menotti began the libretto for a one-act *opera buffa*, *Amelia al ballo*. He completed the orchestration on his return to the USA in 1937; the opera received its première in an English translation by George Mead as *Amelia Goes to the Ball*. A few days later it was performed in New York with such success that the Metropolitan Opera accepted it for the following season.

The success of *Amelia* brought Menotti a commission from NBC for a radio opera. Using the *opera buffa* tradition of set numbers, he wrote his first libretto in English, *The Old Maid and the Thief*. His next opera, *The Island God*, was poorly received. Menotti remained in the USA during World War II but retained his Italian citizenship. A commission by the Alice M. Ditson Fund led to his first international success: *The Medium*, a tragedy in two acts for five singers, a dance-mime role and a chamber orchestra of 14 players. The work is theatrically effective and the music, often quite dissonant, conveys an eerie, morbid atmosphere. Typical of the Italian operatic tradition, *The Medium* has memorable melodies such as the folk-like 'O, black swan'. The opera had a run of 212 performances during 1947 at the Ethel Barrymore Theatre on Broadway. As a curtain-raiser for these performances (and a striking contrast), Menotti wrote a light one-act comedy, *The Telephone*, sub-titled *L'amour à trois*. The State Department organized a European tour of these works in 1955. In 1951 Menotti directed a film version of *The Medium*, collaborating with the young conductor Thomas Schippers and with Enzo Serafin, the director of photography. It remains one of the finest examples of filmed opera.



Menotti's versatile dramatic skills, as director, librettist and composer, brought him a contract from Metro-Goldwyn-Mayer to write film scripts. Although his scripts were never filmed, one contained the seeds of his first full-length opera, *The Consul*, considered by many to be his greatest work. In keeping with Menotti's preference for contemporary subjects, the opera tells the story of a family trying to obtain a visa to leave a police state. Music and stage techniques combine to communicate strongly and directly. The New York première at the Ethel Barrymore Theatre on 15 March 1950 was a great success and performances continued there for about eight months. The work received the Pulitzer Prize and the Drama Critics' Circle Award. It has been translated into 12 languages and has been performed in over 20 countries. With *The Consul* and his next two operas, Menotti seemed at the height of his powers and of public acclaim.

2. 1951–72. *Amahl and the Night Visitors*, commissioned by NBC, was the first opera written expressly for American television. In writing it, Menotti was influenced by *The Adoration of the Magi* of Hieronymus Bosch. The work was first televised on Christmas Eve 1951 and has been broadcast annually. The roles, particularly the main part for boy soprano, are skilfully conceived so that they can be performed by amateurs. The charm and clear diatonicism of the work have helped to make it one of the

most frequently performed operas of the 20th century. Menotti's next opera, *The Saint of Bleecker Street* (1954), is a full-length piece in the broad and serious style of *The Consul*. It is an effective drama set in contemporary New York and concerned with the conflict of the physical and spiritual worlds. The opera received the Drama Critics' Circle Award for the best play, the New York Music Critics' Circle Award for the best opera and the Pulitzer Prize in music for 1955.

Choral music was an important element in *Amahl* and *The Saint of Bleecker Street*; it is basic to the 'madrigal fable' *The Unicorn, the Gorgon and the Manticore*. Commissioned by the Elizabeth Sprague Coolidge Foundation, it is one of Menotti's most charming works. The model was the late Renaissance madrigal comedy (such as Vecchi's *L'amfiparnaso*), and the work consists of an introduction, 12 madrigals (some *a cappella*) and six instrumental interludes. At about the same time Menotti wrote the text for Barber's opera *Vanessa*.

Menotti's next opera, *Maria Golovin*, was again commissioned by NBC. The première formed part of the 1958 International Exposition in Brussels and, a year later, was broadcast by NBC. From 1958 much of Menotti's time was taken up by the Spoleto Festival of Two Worlds, which he founded and directed; Schippers became music director of this major summer festival in 1967, but Menotti continued as president. From 1963, however, he again found time to compose: *Labyrinth*, written for NBC television, exploits the possibilities of special camera techniques; the cantata *The Death of the Bishop of Brindisi* (concerning the Children's Crusade of 1212) was commissioned by the Cincinnati May Festival; and *Le dernier sauvage* was written for the Paris Opéra. The première of the latter, in 1963, was in fact given by the Opéra-Comique, and the following year it received a lavish production at the Metropolitan Opera in New York.

Gian Carlo Menotti

A CBS commission for the 1964 Bath Festival was fulfilled by a church opera in one act, *Martin's Lie*. Other works of this period include *Canti della lontananza*, a song cycle on Menotti's own texts written for Elisabeth Schwarzkopf; *Help, Help, the Globolinks!*, a 70-minute 'opera in one act for children and those who like children' (commissioned by the Hamburg Staatsoper); and a New York City Opera commission, *The Most Important Man*. A drama without music, *The Leper*, was first performed in Tallahassee, Florida, on 24 April 1970.

3. FROM 1973. In 1973 Menotti and Barber sold their home in Mount Kisco, New York, where they had lived since 1943. Menotti, with his adopted son Francis, moved to Scotland. In 1977 he expanded his Spoleto Festival to Charleston, South Carolina (the other of its Two Worlds). In spite of the festival's claims on his time, which included directing plays as well as operas, he maintained an active artistic career. As an elaborate farewell vehicle for Beverly Sills he wrote the opera *La loca* (1979), the story of the daughter of Isabella and Ferdinand of Spain. His non-operatic works include the symphony 'The Halcyon' – which he has said represents 'the most sincere and optimistic days of my youth, when the horizon [was] unclouded' – and the *Missa O pulchritudo*, a Mass to beauty which replaces the Credo with a setting of a poem by St Augustine. Many of his later operas are directed towards children, both as subjects and as performers. In 1984 Menotti was awarded a Kennedy Center Honor for lifetime achievement in the arts. In 1986 his opera *Goya*, written for Placido Domingo, was given its première by the Washington Opera. In honour of the 1995 Nobel Peace Prize, the American Choral Directors commissioned *Gloria* as part of the Mass celebrating the occasion. In 1996 Menotti directed his second filmed version of *Amahl*.

4. STYLE. Menotti noticeably cares about his audience and about the human voice. He wrote: 'There is a certain indolence towards the use of the voice today, a tendency to treat the voice instrumentally, as if composers feared that its texture is too expressive, too *human*' (1964). He is sensitive to new musical techniques that will serve his dramatic purpose: a high, sustained dissonant chord in *The Consul* as Magda turns on the gas stove to commit suicide; the 12-note music used to parody contemporary civilization (and indirectly the avant-garde composer) in Act 2 of *Le dernier sauvage*; or electronic tape music to represent the invaders from outer space in *Help, Help, the Globolinks!* Menotti's melodies are tonal, sometimes with a modal flavour, and often easily remembered. Sequence and repetition are common, but aria-like passages tend to be brief so as not to interrupt the dramatic flow. The continuous, recitative-like passages set the text with naturalness and clarity. His harmony is tonal, sometimes using parallel chords over a clear and simple tonal basis. Many of his more commanding musical gestures, like the opening of *The Medium*, reflect his avowed fondness for Musorgsky. His orchestration tends to be light and open and he writes particularly well for small instrumental ensembles. His rhythms, even when metrical irregularities are used, are natural and easily grasped by performer and listener.

Critical appraisal of Menotti's works has ranged from sincere appreciation (Sargeant) to bitter denunciation,

later retracted (Kerman). There are signs that Menotti's legacy in future will be more complex and wide-ranging than anticipated. In deftly side-stepping the Second Viennese School he has provided an alternative model, that of the rigorously trained classical musician whose prime motivation has been to communicate with his audience. To that end, he invented both the first opera for radio and for television and has hopes for composing an opera expressly for film. Like Gershwin before him and Lloyd Webber after, he has fused together music and theatre. Whether we decide to define the results as opera, music theatre or musical does not detract from the achievement of creating new audiences for one of the oldest of genres.

WORKS

all texts by Menotti unless otherwise stated

DRAMATIC

Amelia al ballo (ob, 1), 1936, Philadelphia, Academy of Music, 1 April 1937, cond. F. Reiner
The Old Maid and the Thief (radio op, 1), 1939, NBC, 22 April 1939; staged, Philadelphia, 11 Feb 1941, cond. A. Erede

BRUCE ARCHIBALD/JENNIFER BARNES

Mensah, E(mmanuel) T(ettey) (*b* Accra, 31 May 1919; *d* 19 July 1996). Ghanaian trumpet and saxophone player and bandleader. After learning to play the organ and the saxophone while at secondary school, he formed the Accra Rhythmic Orchestra in the 1930s. He played in several bands during the 1940s before joining the Tempos in Accra in 1947; in addition to highlife, the band's repertory included calypsos, boleros and cha cha chas. Mensah became known as 'The King of HIGHLIFE' and performed with Louis Armstrong during the latter's visit to Ghana in 1956. With the decline of big band highlife, Mensah earned his living as a government pharmacist for some time, but during the 1970s he took part in a revival of big band highlife during which he made several important recordings. He made further comebacks during the 1980s, one of which coincided with the reissue on the RetroAfric label of several recordings from 1956.

GREGORY F. BARZ

Mensur (Ger.). *See* SCALING.

Mensuratio morosa, media, cita, citissima. Four levels of tempo, reflecting stylistic categories of music, formulated by Jacobus of Liège. They are similar to the *mores* of PETRUS LE VISER.

Mensuration. The system, in use between about 1250 and 1600, that governed the metrical relationship between note values, and in particular between the value of one note and that of the next smaller degree. *See* NOTATION, §III, 3.

Mensurstrich (Ger.). A vertical line drawn between (not through) the staves to show the metrical division in editions of early music. *See* STRICH.

Menta, Francesco (*b* Brussels, *c*1540; *fl* 1560–77). Italian composer of Flemish birth. In the dedication of his *Primo libro de madrigali a cinque voci* (Venice, 1564, incomplete) Menta stated that he went to Italy in his youth. It can be deduced from the dedication of *Madrigali a quattro voci* (Rome, 1560) that he lived and studied at Naples; and these madrigals are described as his first compositions. He also contributed a setting of Petrarch's *Padre del ciel* to *Aeri racolti insieme* (RISM 1577[8]).

Mentalism. *See* PSYCHOLOGY OF MUSIC, §I, 2.

Menter, Sophie (*b* Munich, 29 July 1846; *d* Stockdorf, nr Munich, 23 Feb 1918). German pianist and composer. The daughter of the cellist Josef Menter and the singer Wilhelmine Menter (née Diepold), she was taught the piano by Siegmund Lebert and, later, by Friedrich Niest. At 15 she played Weber's *Konzertstück* for piano and orchestra with F.P. Lachner conducting. Her first concert performances took her to Stuttgart, Frankfurt and Switzerland. In 1867 she was acclaimed for her interpretation of Liszt's piano music at the Leipzig Gewandhaus. In Berlin she became acquainted with Tausig, and occasionally joined the circle of pianists studying with Liszt, who described her as 'my only legitimate piano daughter'; Anton Rubinstein called her 'the sole ruler of all piano keys and hearts'. From 1872 until 1886 she was married to the cellist David Popper. In 1883 she became piano professor at the St Petersburg Conservatory but left in 1886 to continue her concert tours. She first appeared in England in 1881 and in 1883 was awarded honorary membership of the Philharmonic Society. She was regarded as one of the greatest piano virtuosos of her time. She composed various pieces for piano, mostly in a brilliant style, yet spoke of herself as having a 'miserable talent for composing'. Tchaikovsky arranged her *Ungarische Zigeunerweisen* for piano and orchestra.

EVA RIEGER

Mentionnière (Fr.). *See* CHIN REST.

Mento. An indigenous Jamaican folk form in which music, words and movement are closely linked. *Mento* (Old Sp. *mentar*: 'to mention') is sung in the Jamaican vernacular, and covers a wide range of subjects expressed in humorous satirical style. When the songs are used to ridicule or censure, personal references are veiled in symbols to avoid undue embarrassment or offence.

Mento is similar to the Afro-Cuban rumba but sung at a slower tempo (ex.1). It is characterized by strong accents on the last beat of the four-beat bar; accents sometimes occur not in the melody but in the supporting percussion rhythms, clapping and stamping (ex.2). *Mento* involves group participation, usually with a soloist improvising and leading vocally or instrumentally.

Mento is accompanied by ensembles of four to ten instrumentalists playing various combinations of flute, fiddle, harmonica, penny whistle, accordion, clarinets and trumpets (sometimes home-made) for the melody; guitars, banjos, bass fiddles (with one, three or four strings) and rumba boxes for the harmony; and drums, sticks, maracas, triangle, tambourine, jawbone of a horse or ass (used as

Ex.1 transcr. O. Lewin

a rattle) and grater stroked with a nail or other metal object (percussion).

Ex.2 transcr. O. Lewin

Mento is danced either independently or as the fifth figure of Jamaican quadrille sets; the hips move circularly in a horizontal plane while the feet cover a small area in backwards, sideways and turning steps. *Mento* music depends largely on the virtuosity and improvisatory skill of musicians, many of whom have had no formal training. Unlike calypso it has never enjoyed great commercial

popularity, but the political independence of Jamaica (1962) created renewed interest in the genre.

OLIVE LEWIN

Mentoniera (It.). *See* CHIN REST.

Mentzer, Susanne (*b* Philadelphia, 21 Jan 1957). American mezzo-soprano. She studied at the Juilliard School and with Norma Newton, and made her stage début in Houston in 1981 as Albina in Rossini's *La donna del lago*. After her European début at Cologne in 1983, as Cherubino, she sang Rosina at Covent Garden in 1985 and has since appeared with all the leading US companies, including the Metropolitan Opera, where she made her début as Cherubino in 1989. Mentzer has been particularly successful in the Strauss and Mozart travesty roles, but is also an accomplished Zerlina, Dorabella, Adalgisa, Giovanna Seymour (*Anna Bolena*) and Marguerite (*La damnation de Faust*). Her agile, lyrical high mezzo, well heard in recordings of such roles as Idamantes, Cherubino and Rosina, is matched to an engaging stage presence.

ANDREW CLARK

Menuet (Fr.; Ger. *Menuett*). *See* MINUET.

Menuetto, tempo di menuetto. Widely used corruptions of the Italian terms 'minuetto' and 'tempo di minuetto', perhaps derived from the German 'Menuett'. They are not found in Italian works. *See* MINUET and TEMPO DI MINUETTO.

Menuhin. American family of musicians of Russian origin.

(1) **Yehudi Menuhin** [Baron Menuhin of Stoke d'Abernon] (*b* New York, 22 April 1916; *d* Berlin, 2 March 1999). Violinist and conductor. The purity of his style and the depth of interpretative power that he displayed in his finest performances made him one of the most significant artists of the 20th century.

Menuhin began lessons in San Francisco when he had just turned five. After two years under the tutelage of Sigmund Anker, with whom he first studied the Mendelssohn Concerto, he spent three years with Louis Persinger, making such rapid progress that he appeared professionally in San Francisco, when only seven, and gave a full-length recital the following year. His New York début in January 1926 was followed two months later by his first concerto appearance (aged nine) with the San Francisco Symphony (playing Lalo's *Symphonie espagnole*). He made a sensational début in Paris in February 1927, with Paray conducting, and thereafter studied with Enescu. When he returned to the USA in November, his interpretation of the Beethoven Concerto with the New York SO under Fritz Busch brought him wider celebrity and paved the way for annual tours of the USA and Europe. He made his first gramophone records in 1928 and became one of the most prolifically recorded artists of the century. His April 1929 concert with the Berlin PO, at which he performed concertos by Bach, Beethoven and Brahms under Walter, prompted the scientist Einstein to exclaim that such phenomenal musicality was proof of the existence of God. For two summers he studied witht the classicist Adolf Busch in Basle; then, in the early 1930s, the family settled in Paris, where Menuhin received further coaching from Enescu, whose musical personality was a lasting influence. He formed a duo with his pianist sister, Hephzibah; they made their public début in Paris in 1934. After a world tour in 1935 he took an 18-month sabbatical at the family's Californian home in Los Gatos. The dominant characteristics of his playing during this period, apart from his remarkable technical ability, were the maturity and depth of his musical understanding and his spontaneity and freshness. These qualities enabled the 12-year-old to play works of the stature of the Beethoven Concerto and Bach's music for solo violin with absolute conviction, and Mozart's concertos with a completeness of identification that has seldom been equalled. One of the most notable events of his youth was the performance and gramophone recording, in 1932, of Elgar's Violin Concerto conducted by the composer, then 75.

In his 20s, Menuhin championed the 'lost' concerto of Schumann and commissioned Bartók's important solo sonata (1944). His first marriage, in 1938, was to the Australian Nola Nicholas, with whom he had a son and a daughter. Their principal home was near his parents, in California, but his concert engagements continued to keep him on the road for much of the year. During World War II he gave an estimated 500 performances for US and Allied troops, many of them in theatres of war such as the Aleutian Islands, the Central Pacific and the UK, which he visited twice. In 1944 he was the first artist to appear at the Paris Opéra after the liberation and in July 1945 he and Britten played for survivors of the Belsen concentration camp as well as for German civilians. In 1947 he was the first Jewish artist to appear with the Berlin PO under Furtwängler. His ardent support for the German conductor, who had stayed in Nazi Germany until 1945, was criticized but he defended his bridge-building actions with courage and conviction and his recordings with Furtwängler are post-war landmarks. It was noted that his playing, while it had maintained many of its old qualities and added thereto a further nobility and spirituality, had at times lost something in spontaneity and technical reliability. In his autobiography, *Unfinished Journey*, Menuhin made no secret of the fact that he went through a period when he had to rethink the whole basis of his approach to violin playing: the self-examination led eventually to the foundation, in 1963, of an international school. Based in Stoke d'Abernon, Surrey, it continues to provide full-time education for nearly 60 musically gifted children between 7 and 18. Menuhin also published several books on violin technique. He stressed the importance of physical relaxation and was a long-term advocate of yoga, which he discovered in 1951; within months, while touring in India, he was able to recruit his own yoga teacher, B.K.S. Iyengar, who became very influential. Menuhin's admiration for Indian music prompted an important musical friendship with Ravi Shankar; his love of improvisation also led to a partnership in 1970s and 1980s with the popular French jazz violinist Stéphane Grappelli.

In 1947 he married the British ballerina Diana Gould, with whom he had two sons. The family left California in the mid-1950s and established permanent homes in Gstaad, Switzerland, and London, where Menuhin became a familiar figure in musical life, directing festivals at Bath (1959–68) and Windsor (1969–72). He also mounted an annual festival in Gstaad (1957–96). His second career, as a conductor, was initiated with the Dallas SO in 1947 and became a regular feature of his activities in Britain with the foundation in 1959 of the Bath Festival Orchestra (later the Menuhin Festival Orchestra), a flexible ensemble of the best British musicians, with whom he made nearly 100 recordings. In the

Yehudi Menuhin

1980s and 90s he was closely associated with the RPO of which he was president (1982–99), and the Sinfonia Varsovia, with which he also made many recordings, notably complete cycles of Beethoven and Schubert symphonies. His first opera was *Così fan tutte* at Bath (1966) and over the next 30 years he conducted all Mozart's mature operas except *Figaro* in German and Austrian opera houses and concert halls. He conducted Rossini's *Otello* at the Theater an der Wien in Vienna when he was 82. He died suddenly of a heart attack while on an extensive orchestral tour in Germany.

Menuhin achieved a remarkable position on the world stage, as a humanist, philanthropist and champion of ethnic and cultural minorities. From 1969 to 1975 he served as president of the International Music Council, a subsidiary of UNESCO. (He ruffled Soviet feathers during his term by speaking out against the repression of Solzhenitsin, Rostropovich and other critics of the communist regime.) In 1977 he founded Live Music Now!, an organization operating in nine countries, sending young professionals to play in hospitals, prisons, special schools and other sections of the community deprived of public concerts. The same year saw the foundation of the International Menuhin Academy for young profesional musicians in Gstaad. A string quartet competition followed in 1978 (based first in Portsmouth and since 1988 in London). In 1983 he founded the competition for young violinists that bears his name; it alternates between Folkstone and Boulogne. In 1991 he created an international foundation in Brussels dedicated primarily to musical education and the liberation of latent creativity in schools. In 1997 he inaugurated the Assembly of the Cultures of Europe under the auspices of the European Parliament.

After Bartók, over 40 composers were commissioned by Menuhin to write works for the violin; they include Berkeley, Bloch, Foss, Martin, Panufnik, Walton and Williamson. In a unique tribute for his 80th birthday, held in New York's Avery Fisher Hall, no fewer than 14 composers were heard in music dedicated to Menuhin. He edited a number of violin works, notably Bartók's solo sonata, Walton's Sonata for violin and piano (composed for Menuhin and his brother-in-law Louis Kentner) and the early D minor Concerto by Mendelssohn. He received degrees, doctorates and fellowships from two dozen universities around the world and state honours from 17 countries. In the UK he was awarded the Royal Philharmonic Society's Gold Medal in 1962 (the first violinist to receive it since Kreisler in 1904) and was made an honourary KBE in 1966. After adopting British citizenship in 1985 he was knighted, and in 1987 he was awarded the Order of Merit. He was made a life peer in 1993.

(2) **Hephzibah Menuhin** (*b* San Francisco, 20 May 1920; *d* London, 1 Jan 1981). Pianist, sister of (1) Yehudi Menuhin. After study in San Francisco, she worked with Marcel Ciampi in Paris. In 1934 she made her début there with her brother, thus starting a partnership in sonata recitals that was seldom broken for long; their recordings together include an exquisite account of the Violin Sonata by Lekeu. She also made many appearances as a soloist throughout the world but particularly in Australia, where she lived for 17 years from 1938 with her first husband Lindsay Nicholas. She combined her musical career with an active interest in social problems, founding a Center for Human Rights and Responsibilities.

(3) **Yaltah Menuhin** (*b* San Francisco, 7 Oct 1922). Pianist, sister of (1) Yehudi Menuhin. She studied in Paris with Marcel Ciampi, in Rome with Armando Silvestri, and in New York with Carl Friedberg. She has appeared in many countries as a soloist and has collaborated in chamber music with a number of distinguished colleagues. In 1962 she and her husband Joël Ryce, with whom she played in a longstanding piano duo, were the recipients of the Harriet Cohen International Award.

(4) **Jeremy Menuhin** (*b* San Francisco, 2 Nov 1951). Pianist, son of (1) Yehudi Menuhin. He studied in Paris with Nadia Boulanger, Vienna and Italy and made his début at the Gstaad Festival in 1965. He has toured widely with many European and American orchestras and appears as a recitalist and in chamber music with colleagues including the cellist Steven Isserlis, the soprano Edith Mathis and various string quartets. A pianist of sensitivity and intelligence, he frequently performed concertos with his father conducting; together they recorded some of the violin sonatas of Bartók and Beethoven. His other recordings include recitals of Debussy, Mozart and Schubert.

RONALD KINLOCH ANDERSON/JESSICA DUCHEN, HUMPHREY BURTON

Meo, Ascanio (*b* c1570–80; *d* ?Naples, after 1608). Italian composer. In Venice on 10 January 1601 he dedicated his *Terzo libro de madrigali* for five voices to Francesco Domingo Ruiz de Castro y Portugal, Count of Castro, who in October 1601 succeeded his father as viceroy of Naples. In 1608 Meo was *maestro di cappella* of S Giacomo degli Spagnoli, Naples, a church particularly noted for its music. On 1 January 1608 in Naples he dedicated his *Quinto libro de madrigali* to Cardinal Montalto. His 1601 book, which survives incomplete, is rather old-fashioned: the poems, including sonnets by Bernardo Tasso and others, are set in a style influenced by Andrea Gabrieli, Primavera and Felis, rather than by the composers of the *seconda pratica* madrigal. The 1608 book is more modern in its preference for madrigal and canzonetta texts over sonnets or *stanze*, but the musical style remains old-fashioned; pervasive counterpoint and imitation are rarely interrupted by cadences or chordal phrases, chromaticism is absent and the rhythms are square and inflexible. One five-voice madrigal was printed in an anthology (RISM 1609[16]).

KEITH A. LARSON

Merbecke, John. *See* MARBECK, JOHN.

Mercadante, (Giuseppe) Saverio (Raffaele) (*b* Altamura, bap. 17 Sept 1795; *d* Naples,17 Dec 1870). Italian composer, conductor and teacher. A leading opera composer who also encouraged the revival of Italian instrumental music.

1. LIFE. Mercadante was an illegitimate child whose parents did not marry because of their different social rank; his father belonged to the local nobility, and his mother was a maidservant in his household. Instead, Saverio was adopted by his father as a foundling. The looting of Altamura in 1799 in retaliation for its republicanism dissipated the family finances, and Mercadante's youth was spent in poverty, with no educational prospects. The family's circumstances did not improve until after the French occupation in 1806, when his father took an administrative post in Naples.

Mercadante had shown early musical promise, learning the guitar and clarinet from his half-brother, and the move to Naples made a professional training at the conservatory possible. A forged birth certificate led to a state bursary, and he entered the Conservatorio di S Sebastiano in 1808. He studied the violin, flute and singing, as well as figured bass (with G. Furno) and counterpoint (with G. Tritto), and was soon leading the conservatory orchestra. At this period he had already composed what is probably his best-known work today, the Flute Concerto no.2 in E minor (1813), and in the same year the conservatory's new director, Zingarelli, accepted him into his composition class. Over the next four years he undertook a systematic study of composition, concentrating chiefly on instrumental music which was intended to qualify him as a *maestro di cappella*. The Flute Concerto no.6 in D major (1817), a bravura diploma piece, was his first work to be published.

Mercadante made a smooth transition from study to a professional career; he had already become known to the public as an orchestral leader and composer, and with his prize-winning *Gran Concerto* (1817), dedicated to Fernando I, he came to be regarded by the local press as the great hope of the Scuola Napoletana, which had not produced any composer of international standing since Spontini. With the public distinction of *primo alunno*, Mercadante continued living at the conservatory and to furthered his studies, with the aim of operatic composition. At the same time the publication of his chamber music (mostly for flute) brought him his first earnings. Most important of all, he acquired his first practical stage experience in 1818–19, composing ballet music for arias for insertion into existing operas. When he had demonstrated his ability to write dramatic music by producing two cantatas, he was commissioned to write a work for S Carlo, and his first opera, *L'apoteosi d'Ercole*, had a successful première on 19 August 1819. The subject reflected the cultural and political background of Mercadante's early career, and also accounted for the king distinguishing the young composer and welcoming him to his box. The message conveyed was that the Bourbon Restoration would return Naples to its former brilliance as a musical capital of Europe, and it is in this context that Mercadante's first commissions should be seen.

With *L'apoteosi d'Ercole*, Mercadante was recognized as a professional operatic composer. Although chosen as a musical figurehead for the Bourbon Restoration, his attitude during the revolution in Naples in 1820–21 put an end to the associated career opportunities. After the suppression of the Carbonarists, the production of his third opera for S Carlo, *Maria Stuarda*, an unmistakable tribute to the union of king and people and thus to the idea of constitutional monarchy, was cancelled even before its première, as was a commission from Palermo. He was forced to leave the conservatory, and had to depend subsequently on commissions from northern Italy.

He responded to these political events with his seventh opera, *Elisa e Claudio*, given its première at La Scala, Milan, on 30 October 1821, and an instant international success. On the surface the opera is an innocuous reworking of Cimarosa's *Il matrimonio segreto*, and describes the peasant girl Elisa's successful struggle with Count Arnoldo to preserve her marriage with his son Claudio and ensure the welfare of their children. However, it subtly illustrates the precedence of natural rights over the privileges of nobility, and thus represents the ordinary citizen's desire for self-assertion. This message, which could not be disputed by official censorship, contributed greatly to its success.

The triumph of *Elisa e Claudio* in Milan led to commissions for other north Italian opera houses, where, taking advantage of a less strict censorship system, Mercadante presented himself as a composer of grand tragic operas in the tradition of Carafa's *Gabriella di Vergy* and Rossini's *Otello*, with productions of *Andronico* (which has much the same plot as *Don Carlos*) in Venice in 1821, *Amleto* in Milan in 1822, and *Didone abbandonata* in Turin in 1823. His self-promotion as a *compositore napoleatano* eventually enabled him to

return to Naples in 1822, although the king allowed him back only after thorough checks by the Neapolitan police and secret service. When the impresario Domenico Barbaia could not engage Spontini or Coccia to succeed Rossini as composer-in-residence at S Carlo he decided to offer Mercadante the post. The three-year contract stipulated the composition of three operas a year in return for a fixed salary.

Mercadante took up his new post in the spring of 1823. He presented *Gli Sciti* and *Costanzo ed Almerisca* at the S Carlo, followed by *Gli amici di Siracusa* in Rome, with moderate success – their conservative subjects did not particularly inspire him. However, the main event of Mercadante's engagement was a guest season at the Kärntnertortheater in Vienna, where Barbaia sent his star singers on tour in 1824. The intention was to present and market Mercadante as Rossini's successor. However, the venture was unsuccessful, not least because Barbaia insisted that Mercadante compose music for *Doralice*, a medieval tale of a heroine who disguises herself as a troubadour to find and rescue her husband, held prisoner in a tower. Barbaia obviously expected this opera to appeal to enthusiasts of German Romanticism, and hoped to produce an Italian counterpart to Weber's *Euryanthe*, which he had staged successfully in 1823. He overlooked the fact that the opera also echoed the *Leonora* story. The Viennese critics reacted unfavourably, accusing Mercadante of trivializing a moral subject to which contemporary Italian opera, an art of pure entertainment, should not aspire. Moreover, they complained that the attempt had been made by a composer with less talent than Rossini. The same criticism was made of his second opera for the city, *Il podestà di Burgos*.

Mercadante's failure in Vienna also undermined his position in Naples, especially as Giovanni Pacini had just had two sensational successes there during the 1824–5 season and was commissioned to write the music for the coronation of Francesco I. Barbaia decided to let Mercadante's contract run out and engaged Pacini instead in 1826, enlisting Mercadante once again to compose ballet music. His experiences in Vienna, however, marked an important turning-point in his creative career. Until now, as the Viennese critics correctly commented, Mercadante had followed older Neapolitan models, paying rather superficial tribute to Rossini's popularity with his use of crescendos and cabalettas; he had thus appealed chiefly to the conservative element of the public. However, his operas written in 1825 – the second version of *Didone abbandonata*, *Erode* and *Ipermestra* – combined a preference for tragic subjects with intensive study of Rossini's experimental works from his Neapolitan period. *Ipermestra* in particular, a work not based on Metastasio's 18th-century version of the story but going back to the Classical legend, is among the most remarkable and radical scores of the 1820s, with its rejection of convention and the modernity of its musical structure. It introduces a genuine baritone role (Danao), replaces a concluding aria with an extended *declamato*, and injects a new psychological grasp of situation and character into the drama.

Although the termination of Mercadante's engagement in Naples enabled him to compose with less thought of pleasing the public in 1825, he became more conciliatory again in the works that followed. The second enduring success of his career came in Venice at the beginning of 1826, with *Donna Caritea*. For contemporary critics the success of the opera was due chiefly to its warrior heroine and the account of her defensive campaign against a foreign enemy. However, Caritea, who overcomes her hatred of men to become a loving wife, was also Mercadante's first depiction of an operatic character suffering inner conflict, a theme that later became central to many of his operas and inspired his most successful works.

Later the same year, Mercadante accepted a contract as director of music at the Italian Opera in Madrid. He composed two operas, *I due Figaro* and the second version of *Il posto abbandonato*, first written for Milan in 1822. This period also marks his first encounter with Spanish folklore, reflected in his *Sinfonia spagnuola* (1826), and a number of later works, such as the *Serenata spagnuola* (1869). After a brief visit to Turin and Milan at the beginning of 1827, he returned in the spring to Madrid, where a patron had commissioned a large-scale mass, and then proceeded to Lisbon in September. Here he composed *La testa di bronzo* to an existing libretto by Romani, for Count Farrobo, who maintained a private theatre outside the gates of Lisbon.

On 1 January 1828 he took up an appointment as director of the city's Teatro de S Carlos, where his first work was a setting of Metastasio's *Adriano in Siria*. He then took advantage of his geographical distance from Italy to write his own version of *Gabriella di Vergy*. (Carafa's 1816 opera was famous for containing the first fully sung death scene on stage.) The production in September 1827 of a second version of *Ipermestra* (this time after Metastasio), unrelated to his first opera of that title (1825) and musically as well as dramatically inferior in every respect, can be explained only by the political situation after Prince Miguel I's *coup d'état* against his brother, King Pedro IV, which allowed the work to be seen as a direct (but ineffectual) call for reconciliation in the ruling house.

In October 1828 Mercadante, foreseeing the coming civil war and the closure of the opera house, decided against an extension of his contract, and early in 1829 he and some of the Lisbon singers moved to Cádiz, where a rich businessman provided financial backing for a short spring season to which Mercadante contributed his *opera buffa*, *La rappresaglia*. The venture was so successful that in the summer of 1829 he travelled to Milan to engage more singers. He organized a complete season in Cádiz in 1829–30, concluding it with the production of his *opera buffa*, *Don Chisciotte alle nozze di Gamaccio*.

During his time in Cádiz Mercadante's life was again affected by politics, this time in the form of the projected wedding of the young Neapolitan Princess Maria Cristina – known in musical history for commissioning Rossini's *Stabat mater* – to her great-uncle, Fernando VII of Spain. With a view to making this match more acceptable to the princess, attempts were made to reorganize the rather mediocre musical life of Madrid. Mercadante was asked to direct the Teatro Real, and he accepted, returning to Italy in the summer of 1830 to form a company of singers. With this royal protection he was reconciled with Barbaia in Naples, and he also succeeded in recruiting the Neapolitan star soprano Adelaide Tosi for his Madrid company. At the end of 1830, however, following personal animosities involving Tosi, he decided not to accept an extension of his contract in Madrid and returned to Italy for the next season.

His work as director of the royal opera houses of Lisbon and Madrid, which seemed to contemporaries to be continuing the 18th-century Neapolitan tradition, had considerably enhanced Mercadante's reputation in Italy. The perspicacity with which he absorbed the developments of *melodramma dramatico* from 1827 is remarkable: while he was still in Madrid he staged Bellini's *La straniera* and composed a *Francesca da Rimini* to an existing libretto by Romani. In contrast to his previous practice on similar occasions, Mercadante made considerable changes to Romani's libretto, with the aim of producing a tragic triangular story on the model of *Il pirata*. Musically too, the work betrays the influence of the bel canto style typical of Bellini. It was probably no coincidence that he also chose to set *Zaira*, with which Bellini had just failed in Parma. Mercadante's opera was well received and brought him Zingarelli's official approval. Thus encouraged, he went to Turin, where he gave *La testa di bronzo* its first performance in Italy in the autumn of 1831, and then *I normanni a Parigi*, on 7 February 1832. All the critics agreed that he had caught up with the latest developments, and had emerged as a front-ranking operatic composer, a view that was confirmed with the première of *Gabriella di Vergy* on 16 June 1832 in Genoa.

During rehearsals for *Gabriella* Mercadante met his future wife Sofia Gambaro (1812–98), whom he married on 9 July 1832. He now decided to secure a steady income and a settled home for his wife and family (two sons and a daughter). Early in 1833 he applied, in competition with Donizetti and Coccia, to succeed Pietro Generali as *maestro di cappella* at Novara Cathedral, a post traditionally regarded as one of the great church music appointments of Italy. The fact that he was invited to sign the contract only six weeks later says much for his reputation at this time.

In retrospect, Mercadante saw his years in Novara (1833–40) as a period of serene creativity; he had his greatest artistic successes at this time. He withdrew from opera for a year and wrote a great deal of functional sacred music for daily performance by the cathedral *cappella*. He concentrated mainly on compositions for the chief liturgical festivals of Novara, and since he had additional solo singers and an orchestra as well as the cathedral choir available, he was able to write grand ceremonial works, including a *Missa solemnis* for the feast of the Assumption. The real advantage of the arrangement, however, was that the dates of these church festivals, Novara's proximity to Turin, Milan and Venice, and the provision in his contract for generous leave of absence enabled him to continue his operatic activities, producing two or three new operas every year, and staging about the same number of new productions of his own earlier operas. Since his salary from Novara was sufficient to support his family, he was able to accumulate a considerable fortune in securities during these years, especially since his increasing operatic success meant that his average fee for a new opera, in 1833 roughly the same as his annual salary from the cathedral, had almost quadrupled by 1840.

His economic and artistic success in these years could not necessarily have been foreseen. The revision of *Gabriella* in 1832 had effectively concluded his comeback as an operatic composer. With the exception of *Emma d'Antiochia* (Venice, 1834) all Mercadante's operas of 1832–6 had at best a *succès d'estime*. He was far less popular with audiences than Bellini and Donizetti, a state of affairs clearly reflected in Rossini's decision not to invite him to compose an opera for the Théâtre Italien in Paris until the spring of 1836 (Bellini and Donizetti had written works for the same theatre in 1835), and even then asked for an *opera buffa* or *semiseria*. Meanwhile, Mercadante had accepted a commission to write an opera for Naples in the autumn of 1835, chiefly so that he could show his wife his native city. When a cholera epidemic frustrated their travel plans he changed them, and arrived in Paris in September 1835. However, after three months of delays, Felice Romani, from whom the libretto had been commissioned, finally declined to provide one at all. Mercadante was obliged to work with the inexperienced J. Crescini, and had to set *I briganti* in a very short time. It had its première on 22 March 1836. The opera was not exactly a failure, but was overshadowed by the greatest operatic event of the 1830s in Paris – the première of *Les Huguenots*, three weeks before. However, his time in Paris was not wasted; apparent failure, as in Vienna in 1824, provided creative impetus. *Il giuramento* (La Scala, 11 March 1837) from the night of its première was regarded as his masterpiece and became his most frequently performed opera. It also marked the point of departure for the series of successes (*Elena da Feltre*, *Le due illustri rivali*, *Il bravo* and *La vestale*) with which Mercadante set the trend in replacing the dramaturgy of the pure bel canto opera of Bellini with dramatic action that permeated the whole work. Many contemporaries, chief among them Franz Liszt, thought that in these works Mercadante overtook Donizetti himself as the leading composer of Italian opera between Bellini and Verdi. (A glance at performance history, however, shows that even with these, his most successful operas, Mercadante never attained the popularity of Donizetti; although produced internationally, they were rarely revived in subsequent seasons.)

Early in 1838 Mercadante applied to suceed Zingarelli as director of the Naples Conservatory. His chief rival for the post was Donizetti, who had been a professor there since 1830 and had taken over in the interim after Zingarelli's death. Since both men began with about the same amount of support in influential Neapolitan circles, a decision was delayed. During 1839 they both tried to score further points in support of their candidature, Donizetti with his initially not very successful visit to Paris, Mercadante with the production of his highly acclaimed version of *Le sette ultime parole di Nostro Signore* (inviting direct comparison with the famous earlier works of Haydn and Zingarelli) and with the announcement of a forthcoming *Metodo di canto*. The scales tipped in his favour with the successful Neapolitan première of *La vestale* in March 1840, and with Rossini's public invitation to him to come to Bologna as both *maestro di cappella* at the cathedral and director of the conservatory. The offer of the Bologna appointments also allowed him to make considerable financial demands in Naples. He succeeded in winning the appointment as director of the Naples Conservatory, and took up his new post in 1840.

This appointment represented both the peak of his career and a turning-point; material security allowed him and his family the high standard of living that had previously been a considerable spur to his creativity. His

1. *Part of the finale to Act I of 'Il Giuramentoi', from the first edition of the vocal score published by Ricordi (Milan 1837)*

new post, with duties comprising the artistic (but not administrative) management of the conservatory, taking a master class in composition and directing the conservatory orchestra, freed him to compose as he pleased. Consequently, he turned away from opera in favour of instrumental music, which was at the centre of his creative output after 1860. The reverse side of the coin in his new post was his geographical distance from the centres of Italian musical life in the north and dealing with a despotic government that was under threat and took little interest in the arts. The reason why Mercadante, who remained faithful all his life to the political liberalism of his youth, preferred Naples to Bologna lies in his view of the post: he saw the director of the Naples Conservatory as *de facto* leader of the Neapolitan school of composition. His remark of 1840 in a letter to Florimo, 'I have established a school founded on Neapolitan antiquity, but lacking the prejudices and the pretension that result from the progresses made in the art', may be seen as the key to his own composition and his activities at the conservatory.

In his teaching he aimed to combine theory closely with practice, placing emphasis on instrumental teaching; his experiences with operatic orchestras obviously influenced him in this. His advocacy of an approach to the teaching of singing that would answer the requirements of modern *canto dramatico* was also linked to practice. This attitude led to his estrangement from Florimo, who regarded himself as the guardian of the older tradition, and it explains Florimo's hostile depiction of Mercadante as director of the conservatory in the second edition of his treatise *La scuola musicale di Napoli* (1881), which has affected Mercadante's reputation to this day. It is true that there were no outstanding composers of opera among Mercadante's students of composition; however, in such students as T. Mabellini, A. Mariani and Serrao, Mercadante trained composers and conductors who had a great influence on Italian musical life in the second half of the 19th century, and Cilea and Giordano, pupils of Serrao, made their débuts with operas in his style. He also introduced to the conservatory orchestra works by French and German composers such as Beethoven, Weber, Auber and Offenbach, and presented unusual and spectacular projects for concerts at the conservatory – such as his arrangement for chorus and orchestra of 'Qual mesto gemito', Rossini's *pezzo concertato* from *Semiramide*. Not long after Mercadante took up his post a visit to the conservatory became a regular part of the programme laid on for foreign state guests, and the minister of the interior regularly attended the examination concerts at the close of the academic year. In an unconstitutional state ruled by an avowedly unmusical monarch, such factors were the best possible guarantee of the conservatory's continued existence and they gave Mercadante some limited scope to manoeuvre within the cultural bureaucracy.

During this period he contemplated withdrawing from the operatic stage entirely, but he finally presented *Il proscritto* at S Carlo early in 1842. However, its modernity proved too taxing for the theatre's rather conservative audiences. The following year he accepted an invitation

from Turin to set a subject (*Il reggente*) that the censor would not have permitted in Naples; this work proved more successful. In contrast, *Leonora*, produced at the Teatro Nuovo in Naples in 1844, was a nod in the direction of the Neapolitan *buffo* tradition, mingling the advanced operatic style of the 1840s in the serious parts with 18th-century *parlando* in the *buffo* sections (in Neapolitan dialect and with *secco* recitatives); it was the most successful opera of Mercadante's late Neapolitan period.

At the beginning of the 1844–5 season, Mercadante took up the post of music director at S Carlo, while continuing in his position at the conservatory, thereby becoming the dominant figure in Neapolitan musical life. This restricted his ability to accept outside engagements, although there was no shortage of invitations: until the early 1850s, for instance, he was repeatedly invited to write for the Opéra in Paris. The duties of his new post included conducting, and an undertaking to write a new opera for S Carlo every three years. Early in 1845 he made use of this agreement to realize a project he had long cherished, the reworking of *Francesco Donato*, written in 1835 for Turin; even in its new version, however, it was not successful. In March 1845 he produced *Il vascello di Gama*, a version of the Raft of the Medusa story disguised for the sake of the censor, and probably the closest he ever came to grand opera. It would probably have been more successful if Mercadante and his librettist Cammarano had not allowed themselves the luxury of a happy ending, and instead had left the rescue ship to appear after the soprano's death on stage from thirst. However, an opera originally intended by Cammarano for Pacini, *Orazi e Curiazi*, was a triumph in the

2. *Saverio Mercadante*

autumn of 1846, although Florimo was probably right in assuming that the applause was for the evocation of ancient Rome rather than the work's unmistakable pacifist message. This success sent Mercadante on a protracted tour (August 1847 – March 1848) to conduct performances of his own works in Venice, Trieste and Milan. Almost incidentally, this led to a commission to write a new opera for Milan, *La schiava saracena*. Its première was to have been in January 1848, but the revolutionary troubles of the time meant that it had to be postponed until December.

On returning to Naples, Mercadante found the short-lived constitutional government in place. He was made a Cavaliere, a distinction Fernando II had always declined to award him. Mercadante made his own comment on the suppression of the constitution in 1849 by his choice of subject for his next opera at S Carlo, *Virginia*, set in ancient Rome, with a heroine whose actions lead to the revolt of the plebeians and the institution of tribunes of the people. Although Cammarano's libretto avoids the political conclusions to be drawn from the subject, the opera was banned by the king shortly before its planned première in March 1850, a measure of censorship that attracted attention and condemnation throughout Europe. The appointment of Mercadante as inspector of the royal military bands in 1852, and the commissioning of several works for these ensembles (*Fantasia sull'inno russo*; *Fantasia sull'inno borbonico*), may be regarded as an attempt on the part of the state to improve its image. However, Mercadante locked away the score of *Virginia* and refused to agree to a compromise permitting its performance if the scene of the action were moved to Egypt. As a substitute opera for S Carlo, he presented *Medea* in 1851. Although based on a revision of Romani's libretto of 1813 for Mayr, the Classical legend had distinctly modern features in Mercadante and Cammarano's psychological interpretation. The failure of this opera hit Mercadante hard. He tried to build on the success of *Leonora* with *Violetta* (1851–2) for the Teatro Nuovo, but the sudden death of the leading singer meant that the première had to be postponed until January 1853, when Mercadante found he was competing with himself; the première of *Statira* was to be given at S Carlo in the same month. Neither work was very successful, and Mercadante felt reluctant to compose any more operas. After the 1855–6 season he resigned his post as director of music at S Carlo; his last work for the theatre, *Pelagio* (1857), is a kind of afterthought, owing its existence chiefly to the fascination the libretto held for Mercadante.

Mercadante turned instead to orchestral music, writing a number of programmatic works, mostly free in form, responding to the need for the revival and reinvigoration of instrumental music in Italy. They were deliberately intended to be different from the German symphonic music he admired and performed. His two *Decimini*, an individual response to Beethoven, were written at this time. He also returned to church music with two great masses, and kept in touch with a wide public by publishing demanding *romanze* and folklike *canzone napoletane*. An admirer of Offenbach, Mercadante also wrote light polkas, waltzes and mazurkas for piano or wind, as well as several more substantial concert waltzes.

His standing in Naples was illustrated by his being commissioned in 1859 to write the coronation and wedding music for Francesco II. His compliance was by

no means a personal declaration of loyalty, as became evident when the state collapsed in 1860. Not only did the new government of a united Italy very swiftly confirm Mercadante's appointment at the conservatory, but at its express wish he also resumed musical direction of S Carlo. He paid tribute to the political change with an *Inno a Vittorio Emanuele*. His true sympathies, however, can be deduced from his dedication of two separate *Inni* to Garibaldi, and from the musical character study of the hero of the Italian war of unification in his *Sinfonia Garibaldi* of 1861. Similarly, his orchestral fantasy *Insurrezione Polacca* commented musically on the Polish revolt against Russian rule in 1863 and the assistance given by Garibaldi's soldiers.

In 1862 Mercadante suffered a stroke that left him completely blind; he had already lost the sight of one eye after an inflammation in 1838. He naturally had to give up his post as conductor at S Carlo, but remained nominally director of the conservatory, although his work was largely done by his colleague Carlo Conti. He concentrated on teaching composition by dictating new works to his students. The symphonic poem *Il lamento del bardo*, one of the few compositions to reflect his personal circumstances, was written in 1862–3. His *Melodie preparatorie al canto drammatico* of the same period was a modern operatic counterpart and complement to Florimo's tutor codifying the 18th-century Neapolitan tradition in song. The most significant event of his last years was the successful première of *Virginia* in 1866. It came too late to make the work the national opera of Italy, as Mercadante may have hoped, but it won him the highest possible civil distinction of the kingdom of Italy with his appointment as Cavaliere dell'Ordine Civile di Savoia, together with promotion to the ranks of the hereditary nobility, and it spurred him on to continue composing. In 1869 he produced his Mass in G Minor, but his intention of returning to opera with a setting of Cammarano's posthumous libretto *Caterina di Brono* was never completed. He had reached the finale of the first act when he suffered another stroke, and this time did not recover; he died after a short illness.

2. WORKS. Mercadante's extraordinary fame during his lifetime was followed by comprehensive oblivion after his death. His works never became part of the established operatic repertory in the second half of the 19th century, and in the 20th century he was at best seen as a precursor of Verdi. This narrowly aesthetic judgment of his operas ignores the commercial context in which Mercadante worked, which was more akin to the world of modern show business. While some revivals of his works in recent years have led to a general revision of this assessment, however, there has been no new musicological interpretation of his work.

Firmly bound as he was to the 18th-century tradition, Mercadante saw composition as a craft to be practised by a professional rather than a genius, able to write outstanding music in all fields; in this respect he did not value his operas more highly than his compositions in other genres. He thought the 19th-century focus on opera in Italy a mistake, which as director of the conservatory he sought to rectify. Indeed, he began and ended his career writing instrumental music, and his years as an opera composer were to an extent the result of the economic conditions of 19th-century Italian musical life. In terms of his craft, he had no difficulty in accepting the commercial orientation of opera, and the need to adapt to the changing preferences of the public, but he did find it a problem that the development of Italian opera in part ran counter to his nature as a composer and his fundamental position on musical aesthetics. His evolution as an operatic composer can be seen as an attempt to reconcile these opposing ideas.

Mercadante was influenced by Zingarelli's training, which consisted essentially in teaching good musical craftsmanship in relation to a specifically Neapolitan musical aesthetic, its ideological heart being the absolute primacy of melody over harmony and counterpoint. As his many extant sketches show, Mercadante composed in two stages: the first entailed working out the whole of the main melodic line, and the second harmonizing and orchestrating it. Reasonable as such an approach was in terms of composition in the 18th and early 19th century, its application to the advanced harmony and instrumentation that characterized the mid-19th century became a problem, particularly as Mercadante's musical ideas were thematic rather than melodic, and as his real gift was for harmony and instrumentation. The strength of his operas tends to lie in more *concertante* forms such as introduction, finale, quintet and quartet, and in descriptive musical character pieces such as the *romanza* and *preghiera*; conversely, his writing in the more dramatic forms of *scene ed aria* or duet is not always equal to that of Bellini or Donizetti. Mercadante was well aware of this fact, and his chief criterion in his choice of librettos was a distribution of ensemble and solo numbers that suited his talents.

Although Mercadante's student works have been only partially preserved, it is easy to follow the course of his development as a composer. His earliest pieces (for instance the string trios) are linked to his study of the violin and follow the examples of Paisiello and Viotti. His Flute Concerto in E minor, modelled on Devienne's Flute Concerto no.7, shows a knowledge of French music. Under Zingarelli's influence his musical horizons were progressively extended. In 1813–14 he was writing in strict counterpoint, evident in a series of sinfonias of the andante–allegro–alla fuga type. In 1815–16 Zingarelli acquainted him with the works of Haydn and Mozart (see his Sinfonia concertante in D major and his Clarinet Concerto no.2), and in 1816–17 with the early Romanticism of Danzi and Spohr (see his Flute Concerto no.6 and his *Gran concerto*). His training in operatic composition was equally systematic, but while Zingarelli's approach to instrumental music was cosmopolitan, his operatic models were Neapolitan works of the previous century. Rossini's music was deliberately excluded from Mercadante's training; Zingarelli thought that after *Tancredi* it contained errors of taste and subverted the art of good composition. Mercadante's setting of *Climene* (S Carlo, 1807), which concluded his study of operatic composition, shows that Zingarelli hoped to continue the tradition of the *opera seria napoletana* as a drama of emotions, cautiously modernized in its formal language, but modelled on the works of Spontini and Manfroce.

The conservative tendency of his early operas suits their traditional librettos, and certainly appealed to musically conservative listeners who, like Zingarelli, disliked Rossini's operas. But only rarely did he achieve international success, as with *Elisa e Claudio*, and that opera owed its popularity less to its music than to the way it captured

the mood of the time. When Mercadante attempted tragedy on the grand scale his touch was less sure: the first-act finale of *Amleto*, for instance, concentrates on the ghostly apparition of Hamlet's father, in an almost precise parallel to the first-act finale of Rossini's *Semiramide*, written at the same time. However, while Rossini brings the diverse reactions of the characters together in one of his finest scenes, Mercadante confines himself to representing separate emotions. A Milanese theatrical chronicler accounted for the failure of *Amleto*, despite excellent performances from the singers, by pointing out that the music had 'nessuna novità'.

Mercadante profited from the failure of his visit to Vienna in 1824 by reacting against Zingarelli's antiquated operatic aesthetic. His development as a composer became guided as much by Rossini's dramatic concept as by his vocal style. However, when he combines the Rossinian singing technique with the Neapolitan tradition, he achieves an unmistakably personal style, harmonically and technically rich, that transcends Rossini and accounts for the success of *Donna Caritea*. The introductory terzetto 'Dopo due lustri, ah, misero', for example, is modelled structurally on the terzetto from Rossini's *Armida*, but it far outstrips it in emotional depth and individual characterization, and gives a glimpse of what he was to produce in the late 1830s.

While Mercadante was in Spain, Italian opera turned towards the *melodramma romantico*. Adapting to this trend was an essential prerequisite for Mercadante's successful return to the Italian operatic stage, but the speed with which he did in fact adapt says much for his skilful craftsmanship, and is all the more impressive in that it went against his own inclinations. Mercadante did not think highly of the stark dramatic style of *melodramma romantico*, with its emphasis on big solo arias, nor did he possess Bellini's outstanding melodic power of invention. Moreover, he clung to clear periodic structures in contrast to the free transitions from recitative to arioso and aria favoured by Donizetti. Despite his initial successes in the new genre, Mercadante never developed the individuality of form that distinguishes the works of Bellini and Donizetti in the same period. His correspondence with Florimo, leading up to his planned visit to Naples in 1835, shows that he was in search of new directions; his readiness to experiment with new kinds of subjects was a practical attempt to break away from a trend which did not suit him. However, the real turning-point came only with his long (and involuntary) stay in Paris in 1835–6, during which he familiarized himself with the works of Rossini, Auber and Meyerbeer which did not reject virtuoso singing, but subordinated it to the drama itself. In his works composed after 1836, generally termed his 'reform operas', Mercadante assimilated these experiences.

The essential achievement of these reform operas is their depiction of more complex and realistic situations of emotion and conflict. Mercadante's main stylistic change was to abandon bel canto singing in favour of the highly declamatory *canto dramatico*, largely free of fioritura. The inclusion of virtuoso singing in the course of the dramatic action made it possible to adapt for Italian opera, at least in part, the dramatic principle upon which grand opera was based. By giving less prominence to the solo aria as a show-stopper and placing more musical and dramatic emphasis on choral and ensemble passages, Mercadante was able to combine a succession of single numbers into a musically self-contained dramatic whole similar to the French *tableau*, while adhering to the conventions of Italian number opera. Setting the action in a real historical or social context provided an opportunity to replace dramatic stereotypes with individual situations, which called for the musical construction of psychologically convincing and complex characterization. To Mercadante, personal conflict is in the foreground, a feature distinguishing his reform operas from grand opera, which emphasizes the historical and real context: whereas Auber and Scribe made the plot against Gustav III of Sweden the subject of *Le bal masqué*, in *Il reggente* Mercadante and Cammarano were chiefly concerned to show the increasing alienation that must be felt by the character of Ankastrom/Hamilton before he assassinates his former friend. With the concept of reform opera, Mercadante thus found a way of employing his particular talents for harmony and orchestration in a striking new operatic manner, and emphasized the importance of the individual in the musical expression of dramatic action. It should be noted that the influence of the reform operas on other composers derived from a specific concept of music drama rather than a particular Mercadante 'sound' (as with Rossini or Bellini); they were thus models for adaptation rather than imitation. Although Verdi incontestably made use of Mercadante's understanding of dramatic writing, for example, he was much closer to such composers as Pacini in terms of vocal and instrumental technique.

With his later operas on subjects from Classical antiquity, Mercadante further reinforced the significance of music as drama by abandoning consecutive narrative action and concentrating on the depiction of dramatic peaks and turning-points in the drama. Rather than linking single numbers together into large musical scenes, he expanded the individual number. Camilla's aria at the end of the second act of *Orazi e Curiazi* provides a good illustration of this. She has entered a cave under the Aventine to pray, and is disturbed by Roman priests entering in haste to question the oracle about the forthcoming battle. After the oracle has spoken, and the people and priests have left again, Camilla expresses her despair. Formally, this aria consists of a cavatina and cabaletta linked by the *tempo di mezzo* of the oracle scene. However, the 20-minute oracle scene occupies a third of the aria, and is its chief attraction. Its interpolation emphasizes the transitional nature of the *tempo di mezzo*, and at the same time questions the logic of the cavatina and cabaletta sequence as two contrasting musical movements. Mercadante was aware of these contradictions; even before the première he replaced the original cabaletta with a character piece which is really an anti-cabaletta, and might be described as 'veristic' in its intensity of feeling but for the ostinato chords in the orchestral introduction. Rather than simply returning to traditional forms, he tried to renew them from within. For all his willingness to experiment with details, he still wanted to retain the *scena ed aria* model; in the last resort he was a Classicist who would not have considered sacrificing musical beauty to dramatic truth.

The widening gulf between the Classical aesthetic and the modernity of his approach to composition and drama also points up the real problem in Mercadante's late operas: his attempt to combine conflicting concepts increasingly lent these works academic features that were

alternately praised and condemned, even at their premières, as 'distinguished scholarship' and 'exaggerated bombast'. In addition, the attempt to extend single numbers into self-contained musical scenes brought with it the danger of overloading the traditional forms: a cavatina or cabaletta could unexpectedly become a concert piece, destroying the illusion of the independent course of time on stage simply through its greatly extended duration in performance. A contemporary critic identified this difficulty in the first-act finale of *Medea* when he commented that it was far too beautiful for him to criticize its *longueurs*.

Not all critics showed such forbearance: the failure of Mercadante's late operas shows that his endeavours to achieve beautiful singing in great tragedy had failed in the last resort, and indeed were probably bound to fail in view of the change in the aesthetic paradigm that occurred about 1850. This is where the difference between his and Verdi's operas lies; while Verdi built on the achievements of Mercadante's early reform operas, he combined them with a progressively realistic aesthetic, thus attaining the dramatic power that made him the outstanding composer of the 1850s, so that by comparison with his work Mercadante's late operas, for all their modernity, seem curiously antiquated.

Although Mercadante's fundamental Classicism proved a problem in his later operas, the same cannot be said of his late instrumental works. Almost all of them were conceived as programme music; they are 'operatic scenes without words' and in a way represent a symphonic transformation of operatic subjects, although here Mercadante did not have to conform either to traditional formal patterns or to the requirements of the drama, and consequently he could let his imagination roam with more freedom than in his operas. The *Sinfonia Garibaldi*, for instance, is a free orchestral fantasy on the battle song of the followers of Garibaldi and compares favourably with similarly constructed works by Glinka; the various sinfonias on themes by Rossini, Bellini and Donizetti deserve notice as orchestral pendants to Liszt's piano paraphrases. Far from being mere potpourris, they display Mercadante's ability to take melodic ideas, extend them, and integrate them into a symphonic context. Although his later instrumental works are largely unknown today, in concept they made an original contribution to the revival of Italian instrumental music in the 19th century; an understanding of that contribution also casts new light on Giuseppe Martucci's promotion of the German symphonic tradition at the Naples Conservatory later in the century.

Mercadante's church music still awaits revival. In the tradition of Durante and Zingarelli, it is chiefly indebted to contemporary operatic style and contains little complex polyphony. However, in transferring the stylistic and technical development of his operas to his sacred music, Mercadante also made significant changes. Writing initially in the bel canto style of the early 1830s, he turned later (after his visit to Paris) to the *canto dramatico* typical of his reform operas in his sacred works – it is tempting to term his dramatization of settings of the mass 'reform masses'. After 1840 he finally achieved the Classical monumentality that presented problems in the late operas in his masses and psalm settings; to a composer with his particular gifts, the text of the mass resembled an ideal libretto. In terms of the history of the genre, his church music forms a link between Donizetti's *Missa di gloria* and Verdi's Requiem. Mercadante's songs also deserve mention; composed in the years from 1820 to 1870, they provide a good summary of his development in composition and in vocal style.

There is some personal tragedy in the fact that by freeing himself from conformity with the operatic standards of the time in order to emphasize his (retrospective) ideals, Mercadante was sowing the seeds of their oblivion and his own. However, it seems time to abandon the superficial musicological notion that the repertory obeys the laws of natural selection, and allow Mercadante his proper place as one of the most significant Italian composers of the 19th century.

MICHAEL WITTMANN

Mercer, Johnny [John] **(Herndon)** (*b* Savannah, GA, 18 Nov 1909; *d* Los Angeles, 25 June 1976). American lyricist and composer. Mercer had no musical training but as a child he loved the songs of Victor Herbert, Irving Berlin and Jerome Kern, and wanted to be a singer. He worked his way to New York where he found work as an actor and eventually as a vocalist for the Paul Whiteman and Benny Goodman bands. Some singing assignments led to lyric writing and by 1930 his songs were heard in a number of Broadway revues, most memorably *Garrick Gaieties* (1930) and *Americana* (1932). In 1933 Mercer went to the West Coast and soon became one of Hollywood's leading lyricists, working with composers Harold Arlen, Hoagy Carmichael and Henry Mancini, among others. Although he could not read music, he sometimes provided the melody for his songs and wrote the complete scores for a handful of films and Broadway musicals. Throughout his career he periodically returned to Broadway and provided lyrics for various shows, some of them critical successes, such as *St Louis Woman* (1946) with Arlen, but, except for *Li'l Abner* (1956) with composer Gene de Paul, most were financial failures.

In Hollywood, however, his popularity never waned, receiving the Oscar for Best Song four times: *On the Atchison, Topeka, and the Santa Fe* (1946), *In the Cool Cool Cool of the Evening* (1951), *Moon River* (1961) and *Days of Wine and Roses* (1962). He wrote scores and individual songs for many films, his last being *Robin Hood* (1973). His final stage work was the British musical *The Good Companions* (1974) with composer André Previn. Mercer's remarkable career was distinguished by his versatility. He could write nonsense songs such as *Jeepers Creepers* or painful laments such as *Come Rain or Come Shine*. When necessary he could be blatantly commercial in his songs but he also had a talent for regional sounds, ethnic idioms and poetic, evocative character lyrics.

WORKS

(*selective list*)

names of composers given in parentheses

STAGE

dates are those of the first New York performance, unless otherwise stated

Walk With Music (H. Carmichael), 4 June 1940 [incl. Way Back in 1939 A.D.]
St Louis Woman (H. Arlen), 30 March 1946 [Come Rain or Come Shine, I had myself a true love, Any place I hang my hat is home]
Texas, Li'l Darlin' (R.E. Dolan), 25 Nov 1949 [The Big Movie Show in the Sky]
Top Banana (Mercer), 1 Nov 1951 [incl. Top Banana]
Li'l Abner (G. de Paul), 15 Nov 1956 [incl. Jubilation T. Cornpone, If I had my Druthers, Namely You]
Saratoga (Arlen), 7 Dec 1959 [incl. Love Held Lightly]
Foxy (Dolan), 16 Feb 1964
The Good Companions (A. Previn), London, 11 July 1974
Dream: The Johnny Mercer Musical (various), 3 April 1997

FILMS

Ready Willing and Able (R. Whiting), 1937 [incl. Too Marvelous for Words]; Hollywood Hotel (Whiting), 1938 [incl. Hooray for Hollywood]; Hard to Get (H. Warren), 1938 [incl. You must have been a beautiful baby]; Going Places (Warren), 1938 [incl. Jeepers Creepers]; Blues in the Night (H. Arlen), 1941 [incl. Blues in the Night, This time the dream's on me]; The Fleet's In (V. Schertzinger), 1942 [incl. Tangerine]; You Were Never Lovelier (J. Kern), 1942 [incl. You were never lovelier, I'm old fashioned]; Star Spangled Rhythm (Arlen), 1942 [incl. That Old Black Magic, Hit the road to dreamland]; Here Come the Waves (Arlen), 1944 [incl. Accentuate the positive]; The Harvey Girls (Warren), 1946 [incl. On the Atchison, Topeka, and the Santa Fe]
Here Comes the Groom (H. Carmichael), 1951 [incl. In the Cool Cool Cool of the Evening]; Dangerous When Wet (A. Schwartz), 1953 [incl. I got out of bed on right side]; Seven Brides for Seven Brothers (G. de Paul), 1954 [incl. Wonderful Day]; Daddy Long Legs (Mercer), 1955 [Something's gotta give]; Li'l Abner (de Paul) 1959 [incl. Namely You, The country's in the very best of hands]; Breakfast at Tiffany's (H. Mancini), 1961 [Moon River]; Days of Wine and Roses (Mancini), 1962 [Days of Wine and Roses]; Charade (Mancini), 1963 [Charade]; The Great Race (Mancini), 1965 [The Sweetheart Tree]; Darling Lili (Mancini), 1970 [incl. Whistling Away the Dark]

THOMAS S. HISCHAK

Mercer, Mabel (*b* Burton upon Trent, 3 Feb 1900; *d* Pittsfield, MA, 20 April 1984). English popular singer, naturalized American. She was the daughter of a black American, who died before she was born, and a white English music-hall singer and actress. At the age of 14 she formed a family act with her mother and two cousins. During World War I she joined a black touring show called Coloured Society, later becoming its conductor and music director, and after the war she went to Europe and toured as a dancer and singer. She spent several years in Paris at Bricktop's cabaret, where she introduced the practice (later customary in nightclubs) of singing from a seated position. From this time onwards she was something of a cult figure, greatly admired not only by her audiences but by other singers in every field. In 1938 Mercer went to New York (she became an American citizen in 1952). She was engaged first at Le Ruban Bleu, then at Tony's on 52nd Street; she also sang at the Byline and at the St Regis Hotel. Her voice, originally soprano, became more limited in range as she grew older. She was always more a diseuse than a singer, and her ability to convey the emotional sense of a song influenced many other performers, notably Frank Sinatra, Billie Holiday, Peggy Lee and Tony Bennett. Composers such as Cole Porter, Bart Howard, Cy Coleman and Alec Wilder were also inspired by her interpretive skills; many of their songs were made popular by other singers who had fallen under the influence of Mercer's performances.

Mercher, Matthias. *See* MERCKER, MATTHIAS.

Merchi [Melchy, Merchy, Merci], **Joseph Bernard** (*b* Naples, *c*1730; *d* Paris, 22 May 1793). Italian instrumentalist and composer, active in France. He is often confused with his brother Giacomo ('di Brescia') since almost all their published works simply have the name 'Merchi'. The earliest documented reference to the brothers is from Rennes in France on 25 May 1751. Described as 'brothers from Venice, musicians of the chamber of his majesty the King of Sardinia' (Paolini) they played the mandolin, lute, 'calissonciny' and theorbo. They also performed that year in Dijon. Five concerts on the colascione, mandolin and cello in Frankfurt were announced for August and September 1752, one with the violinist Carlo Tessarini, while the *Mercure de France* noted a performance by the Merchi brothers of a 'concerto of their composition on the calsoncini' at the Concert Spirituel in Paris on 31 May 1753. They also gave concerts in London. After 1760 it seems that only one Merchi brother (possibly Joseph Bernard) remained in Paris; contemporary comments suggest he had a high reputation as a composer and as a teacher of the guitar, mandolin and violin.

A *privilège générale* to publish their own vocal and instrumental music was granted to the Merchis in 1755, 1766, 1771 and 1777, and each year from about 1760 to about 1780 one or two books for guitar were published in Paris; the titles of opp.3 and 4 still bear the first name Giacomo. As publishers the Merchi brothers contributed to the wide variety of music published in Paris before the Revolution, including newly-composed songs and works for guitar, mandolin and violin as well as compositions by Albanese, Gluck, Grétry, Monsigny, Philidor and Piccinni. Some works, including pieces for the English guitar, were also published in London. The brother remaining in Paris published two guitar methods: *Le guide des écoliers de guitarre* op.7 (*c*1761) and *Traité des agréments* op.35 (1777), a supplement to the earlier work.

As adherents to the Enlightenment the Merchi brothers endeavoured to provide guitarists with new repertory of a higher quality than before and to continue to develop the instrument. Vocal accompaniments in their works have melodic accompanying parts to complement simple arpeggios. In the guitar duos both parts are of equal importance and there is some surprising harmonic phrasing. Merchi publications up until op.6 employed a parallel system of tablature and staff notation for the guitar part, as in the music of Corrette and Genty, but after op.7 tablature was abandoned. The use of double strings, advocated in op.7, gave way to the use of single strings for the sake of improved sound and timbre in op.35. Some of J.-J. Rousseau's ideas are included in op.35, and some of his music in op.36. The *Mercure de France* in 1770 also described the Paris Merchi as an advocate of a newly-invented method of adjusting the frets in mandolins and guitars. His tireless exertions made him the most important figure in his field in the pre-Revolutionary period, when the Baroque guitar was finally developing into the Classical instrument.

WORKS

published in Paris unless otherwise stated; London publications are probably by Giacomo

INSTRUMENTAL

op.	
2	Sei duetti, 2 vn/mand (n.d.)
3	Quatro duetti, 2 gui, e 6 minuetti . . . con variazione, gui (n.d/*R*)
5	Sei trio, 2 vn, b (*c*1755)
9	Sei trio, 2 vn/mand, vc (n.d.)
12	Sei duetti, gui, muted vn (1764/*R*)
15	Six duo, 2 mand/vn/tr viol (1764)
16	Dodici suonate, 6 for gui, 6 for 2 gui/(gui, vn) (London, 1766)
21	Sei sonate, gui, muted vn (1769)
21	Twelve divertimentos, 2 gui/(gui, vn) (London, n.d.)
22	A Collection of the Most Favorite Italian, French & English Songs & Duets, 2 gui (London, n.d.)
28	Sei Sonate, gui, vn (n.d.)
33	Sei duetti, 2 gui/(gui, muted vn) (1775)
–	Six Lessons and Six Duets . . . Book First, gui and 2 gui/(gui, vn) (London, n.d.)

VOCAL

1	Six barcaroles italiennes, 1v, insts, bc (1755)
4	Raccolta d'ariette francesi ed italiane, 1v, gui (*c*1760/*R*)
5	Ariette et vaudevilles nouveaux, 1v, gui (1760)
15	Scelta d'arietta francesi, italiane ed inglesi, 1v, gui (London, 1766)
17	12 ariette et 4 duetti per cantare o sonare, 1v, vn/fl/hpd/gui, bc (n.d.)
–	Collection of the Most Favourite Italian, French & English Songs, gui acc. (London, n.d.)
–	A Collection of the Most Favourite Italian, French & English Songs and Duets, gui acc. (London, n.d.)

Livre[s] de guitare, opp. 6, 8, 10–11, 13–14, 16, 18–20, 22–7, 29–32, 34, 36 (1761–1780), incl. La guitarre de bonne humeur, Les soirées de Paris, Recueil d'airs avec accompagnement de guitarre
Various pieces, *CH-BEb* [Giacomo], *Bu* [Joseph Bernard], *E*; *GB-Lam*; *S-HÄ* [Giacomo]; *SK* [Giacomo]

PEDAGOGICAL WORKS

op.
7 *Le guide des écoliers de guitarre, ou Préludes aussi agréables qu'utiles . . . V^e livre de guitarre* (*c*1761/*R*, 2/1761 as *Instruction préliminaire ou Méthode courte et facile pour apprendre la guitarre*)
35 *Traité des agréments de la musique exécutés sur la guitarre* (1777/*R*)

JÜRGEN LIBBERT

Merck, Daniel (*b* Augsburg, *c*1650; *d* Augsburg, 1713). German writer on music and composer. He spent his life in his native city. He received his musical education at the Protestant Gymnasium and college of St Anna and sang in the choir in the production of a play there in 1671. His teacher was Tobias Kriegsdorfer. From about 1678 he was Kantor of the Barfüsserkirche and from 1686 an instrument teacher. In 1697 he is recorded as a city wait. In the same year, on the death of Georg Schmezer, he succeeded him as Kantor and director of music at St Anna, and he held these posts until 1712. He published *Compendium musicae instrumentalis Chelicae, das ist: kurtzer Begriff, welcher Gestalten die Instrumental-Music auf der Violin, Pratschen, Viola da Gamba, und Bass gründlich und leicht zu erlernen seye* (Augsburg, 1695). This short volume is the first German tutor for string instruments. In addition Merck is said to have composed two funeral songs and the music for the play *Cevilinda*, produced in 1702 in the Meistersinger's hall at Augsburg.

ADOLF LAYER

Mercker [Maercker, Merkher, Mercher], **Matthias** (*b* Amsterdam; *fl c*1585–1622). Dutch composer and instrumentalist. Between 1585 and 1588 he was taught by Cornelius Conradus, a pupil of Sweelinck. He was active as a cornett player in Lüneburg in about 1600, where he worked for about a year before entering the service of King Christian IV of Denmark. In 1602 he travelled to Russia as leading instrumentalist to the younger brother of Christian IV. After his return to Copenhagen in 1603 he discovered that his post had been filled by someone else and so left the country. Four years later he became organist in Franeker (the Netherlands), but by Christmas Eve 1608 had taken up a post as cornett player to Duke Ernst of Holstein, Bückeburg. Because of the duke's financial difficulties he was forced to leave in 1615, after which he almost certainly went into the service of Eberhard Otto von Münchhausen for three years, as suggested by the dedication in *Musica instrumentalis*. From 1618 to 1622 he was organist of the St Nicolas Church in Strasbourg. The last mention of his name is found in a document dated 1622 recommending his appointment as director of an instrumental ensemble at the Latin School.

Mercker seems to have been a very skilful musician and was versed both in composition and in the playing of several instruments. According to Tobias Speccerus (in the 1620 archives of the St Nicolas Church in Strasbourg), Mercker played the organ, trombone, cornett, flute and viol. His works show a thorough knowledge of musical theory and good craftsmanship; he often exploited harsh sonorities, and in the *Odae spirituales binae* made effective use of contrasting homophonic and polyphonic textures. Among his compositions instrumental dances are in the majority.

WORKS

Musica instrumentalis: Wir wünschen frölich jederman, 5vv; 3 Fugen, Pavana, a 5 (n.p., n.d.)
Fantasie seu cantiones gallicae, 4vv, accomodatae cymbalis (Frankfurt, 1604), lost
20 neue ausserlesene Padouane und Gaillard, a 5 (Helmstedt, 1609)
Matthie Merckeri belgae concentus harmonici, varii generis, instrumentis quibusuis congruentes, 2–6vv (Frankfurt, 1613), lost
Neue künstliche musicalische Fugen, Pavanen, Galliarden und Intraden, a 2–6 (Frankfurt, 1614)
Odae spirituales binae, 5vv (Strasbourg, 1619)
Paduana, 5vv, in 1607[28]; 4 Paduanas and 3 Galliards, 5vv, in 1609[30]
Christ, Gottes und Mariae Sohn, 5vv, 1599, *D-Bsb*
Harmonia musica, 4–5vv, 1609, *Kl*
41 sacred pieces, formerly Breslau, lost, doubtful

F.J. DE HEN/JOACHIM KREMER

Mercure, Jean [John] (*b c*1600; *d* before 1661). French lutenist and composer. He was probably unrelated to Mercure d'Orléans. According to Mary Burwell's teacher he was long resident in England. His name first appears in December 1641 in a warrant admitting him 'as a musician to his Majesty for the lutes and voices in ordinary, in the place of Robert Dowland', and payments continued up to the end of March 1642, but he may have been living in England for some time before this. He probably left England at the outbreak of the Civil War in 1642. By 1646 he was in Paris, where he gave John Evelyn lute lessons in 1647. In English court records for 1660 he is mentioned as deceased. His works are all in D minor tuning or in his own *ton Mercoeur*, so must date from the 1640s and 50s. They have originality and charm, and keyboard versions, probably not made by him, preserve the lute's wispy texture and *brisé* repeated notes, features taken over in original English keyboard works of this time.

WORKS

Edition: *Oeuvres des Mercure*, ed. M. Rollin and J.-M. Vaccaro (Paris, 1977)

DAVID LEDBETTER

Mercure, Pierre (*b* Montreal, 21 Feb 1927; *d* Avallon, 29 Jan 1966). Canadian composer. He studied theory, composition (with Champagne) and several instruments at the Quebec Conservatory with the intention of becoming a conductor. However, he quickly showed considerable creative gifts in various incidental scores, a few songs, the orchestral pieces *Kaléidoscope* (1947–8) and *Pantomime* (1948), and in three ballet scores written for Françoise Sullivan. These initiated a constant preoccupation with the fusion and integration of different art forms; among his associates were a group of painters, writers, actors and dancers centred on Paul-Emile Borduas, an artist whose manifesto *Refus global* (1948) indicted conservative middle-class society and called for the liberation of creative man.

In the autumn of 1949 Mercure travelled to Europe and joined Boulanger's class in Paris. His interests, however, were increasingly in new music, and he stayed with his teacher for only a few months before leaving to work assiduously with Gabriel Charpentier, Jocelyne Binet and Clermont Pépin on improvisation, superimposed forms and collective composition. At the same time he studied orchestration with Hoérée and conducting with Fournet. His choral work *Ils ont détruit la ville* (1950), later incorporated as one of the movements of *Cantate pour une joie*, won first prize in a CBC International Service competition.

After a year's absence Mercure returned to his post as bassoonist in the Montreal SO (1947–52); later he also played at the Théâtre des Variétés Lyriques (1951). He studied with Dallapiccola at Tanglewood in 1951 and there discovered the principles of 12-note serialism, a technique that he almost immediately rejected. Instead he went on to develop his poetic manner, hesitantly but surely, in more Charpentier settings, the *Divertissement* for strings (1957) and *Triptyque* for orchestra (1959). Throughout this early period (1948–59) he looked for new sonorities. Failing to find them, he turned to a spontaneous lyrical expression in traditional forms, influenced by Stravinsky, Milhaud and Honegger, as well as popular American music and jazz (several of his themes are from Glenn Miller numbers). In these works rhythms are explicit and the orchestration shimmers. All this while Mercure continued his association with artists in other media, particularly while working in the music department of the CBC French television network (1952–66). The first Canadian producer of music on television, his programmes included performances of *Oedipus rex*, *Jeanne d'Arc au bûcher* and *Wozzeck*.

After this period Mercure was impelled by a desire to align himself with the most modern forms of art. He spent the years 1959–62 seeking a new language in electronic music, stimulated by his contacts with Pierre Schaeffer and the Groupe de Recherches Musicales. The works he produced include *Répercussions*, *Structures métalliques*, *Incandescence* and *Improvisation*, most of them involving dance and/or film. He also organized the Semaine Internationale de Musique Actuelle (1961) in Montreal, presenting music by Cage, Stockhausen, Wolff, Xenakis and others. This single festival, which he had intended be the first of an annual series, prepared the way for the Société de Musique Contemporaine du Québec, founded in 1966 for the promotion of new music.

Mercure returned to Europe in the summer of 1962 to familiarize himself with new developments in electronic and other music in Paris, Darmstadt and Dartington. He then undertook a cantata for radio, *Psaume pour abri* (1963), the first of three works combining electronic and live material, in this case synthetic sounds, transformed sounds from three brass quintets and four string quartets, singing and speaking choruses, a reciter and seven instrumentalists. The work is a 'cry against barbarism, atrocity, absurdity' in seven parts, of which the last three are varied versions of the first three, the whole moving away from and back to the human element. Following this, in *Tétrachromie* for instruments and electronic sounds (1963), Mercure produced a work on the four seasons and the four ages of man, symbolically represented by the colours green, yellow, red and white. It was commissioned by the Compagnie des Grands Ballets Canadiens for the inaugural festival at the Place des Arts, but the performance did not take place because of a labour dispute. *Lignes et points* for orchestra (1963–4) has links with both of the preceding works; indeed, the same melodic cells of three, four or five notes occur in all three. The piece, a set of variations on a theme, attempts to reproduce electronic sounds in the orchestra.

Two film scores for Jacques Giraldeau, *Formes 64* and *Elément III*, were Mercure's last works, though the latter generated a by-product in *H_2O per Severino* (1965), a sequence of eight serial improvisations for flutes and/or clarinets sparked by Severino Gazzelloni's recording of music for the film. Before he was tragically killed in a car accident, Mercure prepared a television production for the CBC of Schafer's opera *Loving*, the performance of which, a few days after his death, made an entirely appropriate tribute.

LYSE RICHER/MARIE-THÉRÈSE LEFEBVRE

Mercure d'Orléans (*fl c*1590–*c*1619). French lutenist and composer. He was probably unrelated to Jean Mercure. His name may be a pseudonym, or he may have been a musician in the service of Philippe-Emmanuel de Lorraine, Duke of Mercoeur (*d* Nuremberg, 1602). 24 lute pieces by him are known, in two printed sources (RISM 1603[15], 1615[24]), and in 17 manuscript sources from the German lands dating from between 1603 and 1619 (ed. M. Rollin and J.-M. Vaccaro, Paris, 1977; for further information on sources see Goy, Meyer and Rollin). The pieces are all in *vieil ton* and represent a rather ordinary cross-section of lute music of the period 1590–1615, though *Auff die Schlacht vor Pavia* is a remarkable and technically demanding battle piece.

DAVID LEDBETTER

Mercurio, Vecchio. Copyist of *GB-Lbl* Add.30342, a companion manuscript to that copied by JACQUES CELLIER.

Mercury (i). Ancient Roman god, possibly identifiable to some extent with the Greek god HERMES.

Mercury (ii). American record company. Established in New York in 1945 as a division of the Mercury Radio and Television Corporation, it has recorded classical music, jazz, popular music, rhythm and blues, country music and the folk revival. In 1948 Mercury acquired the catalogue of the Keynote company. The company maintained a modest level of activity in classical music, establishing the Living Presence series, which issues recordings made between 1950 and 1968. Prominent in this series were recordings by the Chicago SO, with Rafael Kubelík conducting; the Minneapolis SO and London SO, both conducted by Antal Dorati; several Eastman ensembles, under Howard Hanson and Frederick Fennell; the Detroit SO, with Paul Paray; the Hallé Orchestra under Sir John Barbirolli; Marcel Dupré; and Janos Starker.

A new subsidiary label, EmArcy (an acronym for Mercury Record Corporation), devoted to jazz, began issues in 1954 and included sessions by Clifford Brown and Max Roach, Sarah Vaughan and Dinah Washington; activities declined from 1958 onwards. Other jazz recordings were released on the Mercury label. In the 1950s the National label was acquired from Savoy. Mercury was bought by Philips in 1961, and its recordings were issued on various labels: Fontana and Philips, the short-lived Limelight label (jazz), Blue Rock (rock), Cumberland (country music and the folk revival) and Smash (pop). Affiliations were made with the Platters, who began their career on the parent label in 1955, and Jerry Lee Lewis and James Brown, who recorded for Smash. By the 1970s Mercury had been acquired by Polydor, and much of its jazz catalogue was reissued on Trip. Ownership of the repertory was later transferred to Polygram, and reissues of EmArcy albums appeared in the mid-1980s.

BARRY KERNFELD

Mercy, Luis [Lewis] (*fl* 1708–51). English composer and recorder player, presumably of French birth. On 26 July 1708 he played in a concert at Epsom, 'being the second time of his performance in public, since his arrival in England'. In 1716 he played two 'entertainments' in the interval of a play at the Lincoln's Inn Fields Theatre, London. By 1718, when Walsh and Hare published his op.1, he was in the service of James Brydges, Earl of Caernarvon (and soon to become Duke of Chandos) at Cannons, Middlesex. The sonatas are dedicated to Brydges, 'under whose roof they were composed'. In February 1719 he played 'a concerto and solo' for the recorder in a concert at Hickford's Room. A month later, he had left Brydges' service and what he then did for a living is unknown. On 18 July 1730, while living in the parish of St Paul's, Covent Garden, he married Anne Hampshire at St Vedast-alias-Foster. From 1733 to 1737 he lived in Orange Court, Castle Street.

In the preface to his op.1 recorder sonatas, Mercy defended the instrument against the encroachments of the violin (not the flute, as one would expect), praising the recorder's technical capability, clean passagework, ability (though soft) to make itself heard in a 20-strong ensemble, and good intonation even on high notes. According to Hawkins, Mercy was involved in the proposal by Thomas Stanesby (ii) to make the tenor, not the treble, the standard size of recorder, but Stanesby's prospectus (1732) makes no mention of him. Hawkins also reports (in two accounts) that around 1735 Mercy published 'twelve Solos, the first six whereof are said to be for the Traverse-flute, Violin, or English Flute [recorder], according to Mr. Stanesby's new system' or 'six solos for the [recorder], three whereof

are said to be accommodated to Mr. Stanesby's new system'; no such sonatas are extant.

The last notice of Mercy as a performer is for his benefit concert on 1 April 1735 at York Buildings, when he played some of his own compositions. Around the same time he published a set of six sonatas for bassoon or violoncello, and about ten years later a set of six flute sonatas (both designated op.3) under his own auspices. It seems likely that the decline of the recorder had forced him to take up other woodwind instruments. He is last heard of in a letter of 13 August 1751 from Lady Caroline Brydges (James's granddaughter) concerning her visit to the Long Room at Bristol. 'The master of ceremonies . . . is one Mercie, formerly a hautboy in my grandfather's band of music. He scraped acquaintance with me, to my great astonishment, and [I] was more amazed when I found all . . . he had . . . was by knowing my grandfather before I was born'.

Hawkins's claim that Mercy's recorder sonatas 'are among the best compositions for that instrument extant' is not borne out in practice. Although Mercy had some good ideas and an interest in rhythmic variety, the sonatas are gauche and repetitive. His bassoon sonatas represent a considerable advance in compositional technique: the awkwardness is smoothed out into a pleasing and balanced series of phrases of considerable rhythmic imagination.

DAVID LASOCKI

Mercy-Argenteau [née Caraman-Chimay], **(Marie Clotilde Elisabeth) Louise** [Louisa] **(de Riquet),** Comtesse de (*b* ?Belgium, 1837; *d* St Petersburg, 27 Oct/8 Nov 1890). Belgian pianist, music organizer and writer on music. She was brought up in Belgium, and as a child developed remarkable ability at the piano. In 1860 she married Eugène, Comte de Mercy-Argenteau. Through moving in Parisian society, she met Liszt in 1861 and also became the devoted intimate confidante of Louis Napoléon. After the fall of the Second Empire she retired to her estate in Belgium. The countess's fascination with Russian music began in 1882, her eventual favourite being César Cui. Through print and performance she dedicated the last seven years of her life almost exclusively to propagandizing Russian music. In 1885 she organized and performed in the 'Russian concerts', which helped to popularize symphonic works of Russian composers in Belgium, and she was instrumental in mounting Cui's *A Prisoner in the Caucasus* in Liège the following year. Her devotion to Russian music earned her the friendship of such figures as Borodin, Balakirev, Cui, Repin and Lyudmila Shestakova, as well as honorary membership in the Russian Music Society in 1888. Having learnt Russian, she made translations of several Russian operas and songs (including Rimsky-Korsakov's *The Maid of Pskov* and *The Snow Maiden*, operas by Cui and selections from *Prince Igor*). She published an 'esquisse critique' of Cui (Paris, 1888); other critical writings appeared in *Le ménestrel* and *Le guide musical*. Her reminiscences were published as *The Last Love of an Emperor: Reminiscences of the Countess Louise de Mercy-Argenteau, née Princess de Caraman-Chimay* (ed. 'C.L.-W.', London, 1916).

LYLE NEFF

Méreaux. French family of musicians.

(1) Nicolas-Jean Le Froid de Méreaux (*b* Paris, 1745; *d* Paris, 1797). Organist and composer. He was educated in Paris by various French and Italian musicians. By 1767 he was organist at St Sauveur, Paris, and he was later organist of the Petits Augustins and of the royal chapel. He was unusual in his social context for working so consistently in both sacred and secular *milieux*. In a series of works composed between the ages of 27 and 32 for the *opéra comique* players and for the Concert Spirituel, he achieved particular recognition for the oratorio *Samson*. This was given four times, attracting listeners who found it both noble and picturesque. *Samson* and the oratorio *Esther* placed emphasis on choral writing, while *La Résurrection* contained more soloistic writing and was the 'only Parisian oratorio of the period dealing with the life of Christ apart from the Christmas story' (Foster); the figure of Christ does not appear, and the story is told by observers. A letter by Méreaux, describing the current state of church music in France, was published by his friend Martin Gerbert in *De cantu et musica sacra* (1774).

Méreaux's publicly performed *opéras comiques* were not very successful. D'Origny detected dramatic shortcomings in the music for *Le retour de tendresse*, but *Laurette* had an early flurry of enthusiasm. The libretto of *Alexandre aux Indes* was criticized for overzealous limitation of love interest, and the music was deemed derivative. It certainly echoes the gestures of Gluck, but remains lyrical; there is extensive use of the clarinet, and brief use of an Indian cymbal ('Ind. cimbale') and a 'Gros tambour' in Act 1. *Oedipe et Jocaste* (known under various titles) was well received and contains music of great vigour, especially the D minor trio for Jocasta, Oedipus and Phorbas in Act 2. Méreaux wrote parts for the new ceremonial Revolution instruments (tuba curva and buccin), but they were not copied for use by the Opéra staff.

WORKS

OPERAS

performed in Paris unless otherwise stated

La meunière enrichie, ou Le gascon puni (oc, 2, P.L. Moline), private perf., ?Paris, 1767
La ressource comique, ou La pièce à deux acteurs (cmda, 1, L. Anseaume, after C.F. Panard: *L'armoire*), PCI (Bourgogne), 22 Aug 1772 (Paris, 1773)
La rencontre imprévue (compliment de rentrée, Anseaume), PCI (Bourgogne), 11 April 1774

Le retour de tendresse (cmda, 1, Anseaume, after La Ribadière: *La réconciliation villageoise*), PCI (Bourgogne), 1 Oct 1774 (Paris, 1774)
Le duel comique (opéra bouffon, 2, Moline [parody of Paisiello: Il duello]), PCI (Bourgogne), 16 Sept 1776
Laurette (oc, 1, Danzel de Malzéville, after J.F. Marmontel), PCI (Bourgogne), 23 July 1777 (Paris, 1777)
La réduction de Paris par Henri IV (opéra, C.L. Ducrest), private theatre of Mme de Montesson, 1781
Alexandre aux Indes (opéra, 3, E. Morel de Chédeville), Opéra, 26 Aug 1783 (Paris, *c*1784)
Dormenon et Beauval, on Le fils corrigé (cmda, 2), PCI (Favart), 15 Sept 1787
Grisélide, ou La vertu à l'épreuve (comédie-héroïque, 3, P.J.B.C. Desforges), PCI (Favart), 8 Jan 1791, *F-Pc*
Oedipe et Jocaste [Oedipe à Thèbes] (tragédie lyrique, 3, P.A. Duprat de la Touloubre), Opéra, 30 Dec 1791, *Pn*, *Po*
Fabius (tragédie lyrique, 3, M.J.D.M. Barouillet), Opéra, 9 Aug 1793, *Pc*, *Po*
Unperf.: Les Thermopyles, *Pc*; Scipion à Carthage, 1795–6 (3, J. Lacombe) [listed in *FétisB*]

OTHER VOCAL

Aline reine de Golconde (cant.) (Paris, 1767); Ariettes de la feste donnés à Monsieur de La Garde (Paris, 1770); Motet, 1v, 1773; Motet, 3vv, 1773; Samson (orat, after Voltaire), 1774, *Po*; Esther (orat, after Racine), 1775, *Po*; Laudate Dominum, motet, 1775; La Résurrection (orat, P.-L. Moline), 1780, *Pn*; Laudate pueri, motet, 1781; Ode sur la naissance du dauphin (Moline), 1781; TeD, 1789; Cantique française, 1789
Romances and airs, 1v, pf/gui

(2) Jean-Nicolas Le Froid de Méreaux (*b* Paris, 22 June 1767; *d* Paris, 6 Feb 1838). Organist, pianist, teacher and composer, son of (1) Nicolas-Jean Le Froid de Méreaux. He was taught music by his father and, although remaining a Roman Catholic, became organist of the Protestant church of St Louis-du-Louvre in 1791. He remained in this post until 1811 when the church was demolished, and he was transferred to the Chapelle de l'Oratoire St Honoré. He produced an unofficial hymn for solo voices, choir and orchestra for Napoleon's coronation in 1804, and published flute sonatas, piano sonatas and piano fantasias. In 1828 he edited a French psalter, *Les pseaumes de David mis en vers français*.

(3) Jean-Amédée Le Froid de Méreaux (*b* Paris, 17 Sept 1802; *d* Rouen, 25 April 1874). French musicologist, pianist and composer, son of (2) Jean-Nicolas Le Froid de Méreaux. He was given piano lessons by his father, but was sent to university to pursue a legal career. Instead, he took lessons from Reicha in counterpoint and concentrated on becoming a pianist and composer for the piano. After 1830 he travelled in France and went to London in 1832–3, giving concerts and teaching. In 1835 he settled in Rouen, where he combined teaching with the publishing of music and musical articles. Curiosity about music of the past led him to mount 'historical concerts' in Rouen in 1842 and in Paris the following year; later he confessed that his performances on these occasions of early keyboard music were insufficiently based on precise knowledge, especially of the interpretation of ornaments. Contact with early music had awakened an intellectual interest, however, which was later to prove fruitful in the longer term.

Permanent reminders of his keyboard teaching appeared in 1855 with the 60 *Grandes études pour piano*. These were officially adopted by the Paris Conservatoire, and the fact advertised. Three years later Méreaux was elected to the Académie Impériale of Rouen. As a pianist he continued to appear occasionally in Paris; in 1855 (according to *FétisB*) he gave with a pupil the first performance in Paris of Mozart's double piano concerto K365/316*a*.

The double talent of composer and musicologist recognized by Comettant in his obituary was most completely realized in Méreaux's *Les clavecinistes de 1637 à 1790* (1864–7), an edition of a large collection of keyboard music, with full introductory essays on the composers, the problems of their keyboard music and early instruments. The earliest composers dealt with are Frescobaldi, Chambonnières, Purcell, the Couperins and the Bach family; the emphasis is on the 18th century, and a sonata by Steibelt was considered historically justified for inclusion. The editorial outlook was, however, a scholarly one: 'It is necessary to study the theory and meaning of ornaments in order to discover the composer's intentions'. Accordingly, comparative tables of explanation are given and in the music itself the ornaments are all written out in modern notation. This, and the many dynamic markings, make Méreaux's edition seem clumsy. But the importance of the collection was recognized at the time, and it is valuable in the history of 19th-century musicology. Méreaux's compositions for piano appear unoriginal; they are predominantly influenced by Chopin and at times approach salon music. The trio, quartet and second mass represent a late, more ambitious flowering.

WORKS
(*selective list*)

DAVID CHARLTON

Meredith, John (Stanley) (*b* Holbrook, NSW, 17 Jan 1920). Australian folksong collector, folklorist and oral historian. In Sydney he came into contact with other enthusiasts for the collection and performance of Australian traditional bush songs and verse, and in 1954 he formed the original Bushwhackers band, in which he played the button accordion, as a means of ensuring performance of many of the songs and dance tunes he had collected. Also in 1954 he met Sally Sloane, with whom he established regular recording sessions; between 1954 and 1958 he recorded over 150 items from this one singer. From this period his collecting and recording activities became geographically wider in scope and more thorough. The culmination of this work was *Folk Songs of Australia*, i (1967), which remains significant for its wealth and variety of material, as well as for the information it offers on each song's performers and social contexts. A heart attack in 1962 prevented his collecting in the field for 18 years, but during this period he continued to study and write on aspects of Australian folk music, folklore and social history. He returned to the field in 1980 and began work on collecting material for *Folk Songs of Australia*, ii (1987). Australia's leading and most significant collector of traditional songs and dance tunes, Meredith's interest in Australian folk music and folklore is also reflected in his compositions, which include two ballad operas (*The Wild Colonial Boy* and *How Many Miles from Gundagai?*), and documentary films he has made of performers of traditional Australian music.

PATRICIA BROWN

Merelli, Bartolomeo (*b* Bergamo, 1794; *d* Milan, 10 April 1879). Italian librettist and impresario. The son of the steward to a noble Bergamo family, he was intended for a career in law but attended Simon Mayr's composition class together with Donizetti, for whose earliest operas he was to write librettos. In 1812 he was arrested and charged with attempted theft, but, after a few months in gaol, was released for lack of evidence. He found work with a theatrical agent in Milan. Between then and the late 1820s his own opera agency became one of the busiest. Like Alessandro Lanari, he engaged singers and dancers on long-term contracts at fixed salaries and sought to profit by selling their services to managements, or by managing seasons himself throughout a large network of theatres, mainly in north Italian towns.

From 1829 to 1850 Merelli managed La Scala, originally in partnership with others; when Giuseppe Crivelli died during rehearsals, Merelli was responsible for the staging of *Norma* (1831). From 1836 he also managed the Kärntnertortheater, Vienna, where his partner, Carlo Balochino, was in day-to-day control. At La Scala he staged Verdi's first opera, *Oberto*, and its three successors. Verdi's story of how Merelli helped him overcome depression after the deaths of his wife and children by giving him the libretto of *Nabucco* is inaccurate in some ways but may be substantially true. Verdi, however, turned against Merelli after *Giovanna d'Arco* (1845), as did Donizetti after Viennese performances of his operas. Both complained bitterly of careless, shabby productions and cavalier treatment of their scores, and Verdi refused to let Merelli give the first performance of any more of his works. During the 1848 revolution Merelli, openly pro-Austrian, was suspected of spying; he spent part of the 1850s in Vienna but was able to run La Scala again in 1861–3. He kept up a gentlemanly manner, spent much time and money trying to prove his own noble origins, and lived on a grand scale; but he was often regarded as shifty or dishonest. After losing much of his money he retired to the hills above Bergamo. His son Eugenio was an impresario in Venice, Vienna and Paris.

LIBRETTOS

L'idolo Birmanno, P. Brambilla, 1816; *Lanassa* (melodramma eroico, with G. Rossi), S. Mayr, 1817; *Alfredo il grande* (melodramma serio), Mayr, 1818; *Enrico di Borgogna* (op semiseria), Donizetti, 1818; *Una follia* (farsa), Donizetti, 1818; *Il lupo d'Ostenda, ossia L'innocenza salvata dalla colpa* (op semiseria), Vaccai, 1818; *Le nozze in villa* (ob), Donizetti, 1820–21; *Zoraide di Grenata* (os), Donizetti, 1822; *Pietro il grande, ossia Un geloso alla tortura* (ob), Vaccai, 1824; *La pastorella feudataria* (op semiseria), Vaccai, 1824; *Il precipizio, o Le fucine di Norvegia* (melodramma semiserio), Vaccai, 1826; *Don Desiderio, ovvero Il disperato per eccesso di buon cuore* (ob), Morlacchi, 1829; *Emma, ossia Il protettore invisibile*, J. Benoni, 1851

JOHN ROSSELLI

Merengeau, René. *See* MESANGEAU, RENÉ.

Merengue. A dance of Venezuela, Haiti and the Dominican Republic. It combines rural, folk and urban popular traditions. In the Dominican Republic it was originally the music of the peasantry, people who were marginalized politically, socially and economically in the country despite being a majority. In the Trujillo years, the *merengue* of Cibao was promoted as a national dance in ballroom adaptation; its status was raised to that of the folk music which most represented the country's identity, so that by the late 20th century it had become a symbol of national identity, epitomizing the creolism of Dominican culture.

Merengue may by played by *merengue orquestas* (large urban ensembles). As rural traditional *merengue típico* or *perico ripiao*, it was formerly played on stringed instruments of the guitar family but is now performed using the accordion, the *güira* or *guaya* (scraper), the *tambora* (double-headed hand drum) and sometimes the *marimba* or the *marímbola* (large lamellophone). Accompaniment can be in duple and triple metres, sometimes creating 5/8 effects. Afro-Cuban *cinquillo* and *tresillo* rhythmic figures are predominant. Early *merengue* lyrics from the mid-19th century typically concerned current events of local or national import. With a call-and-response vocal structure, often regional in subject matter, the verses of the *merengue* use typical Hispanic *copla* (quatrain) and *estribillo* (refrain) form in a European-style couple dance with African influence, involving hip and pelvis movements. Following the death of Trujillo, who while promoting *merengue* had repressed popular music's function as social commentary by forbidding song texts not supporting his regime, song texts again began to address a wide range of topics. The dance is discussed in D.P. Hernández: 'La lucha sonora: Dominican Popular Music in the Post-Trujillo Era', *LAMR*, xxii/2 (1991), 105–23.

WILLIAM GRADANTE/R

Mergot, Franciscus [Francisco de Novo Portu] (*fl* 1560–76). Singer and composer of ?Spanish birth, active in Austria. He was known by the sobriquet 'de Novo Portu', but his surname was Mergot. He may have come from Spain, as Eitner said. In the court records of Archduke Maximilian of Austria his name first appears in 1560, when he was a court chaplain with a monthly stipend of ten guilders. When his employer became Emperor Maximilian II in 1564, he became a bass singer in the Vienna Hofkapelle at a salary of 15 guilders plus allowances. In 1576 he received an honorarium in recognition of his long and faithful service at court. After Maximilian's death on 12 October 1576 and the consequent dissolution of the court all trace of him is lost. He may be the Franciscus Portu who had a five-part madrigal included in a collection by the Milanese composer Antonio Martorello (1547^{17}, inc.). He was definitely the composer of two three-part motets in 1567^{2} and of four motets in 1568^{2} and 1568^{4-5} (one five-voice motet ed. in TM, xxxiv, 1974).

WALTER PASS

Merian, Wilhelm (*b* Basle, 18 Sept 1889; *d* Basle, 15 Nov 1952). Swiss musicologist and critic. He studied classical philology, and then musicology with Karl Nef at the University of Basle and with Rezniček, Kretzschmar and Johannes Wolf in Berlin. In 1915 he took the doctorate with a dissertation on Hans Kotter's organ tablature. He became a critic and later music editor (1920–51) of *Basler Nachrichten*. In 1921 he completed the *Habilitation* with a study of the keyboard music of the German colourists and was appointed lecturer at the University of Basle; he was subsequently appointed reader (1930) and full professor (1935). He was the first secretary of the IMS (1927–48) and, after having organized its first international congress in Basle in 1924, president of the Schweizerische Musikforschende Gesellschaft (1935–46); later he became an honorary member of both societies. In 1933 with Paul Sacher he founded the Schola Cantorum Basiliensis.

Merian is important for his studies of 16th-century organists, particularly those associated with Basle. In his dissertation, *Habilitationsschrift* and in several articles (e.g. those on Amerbach and Meyer) he drew on archival evidence and letters for biographical information. In *Der Tanz in den deutschen Tabulaturbüchern* (1927) he traced the development of a keyboard style through the intabulation practices of the 16th century.

M.E.C. BARTLET/DOROTHEA BAUMANN

Méric-Lalande [née Lamiraux-Lalande], **Henriette** (**Clémentine**) (*b* Dunkirk, 4 April 1799; *d* Chantilly, 7 Sept 1867). French soprano. She sang in French provincial towns from 1814 to 1822, when she joined the Théâtre du Gymnase-Dramatique in Paris, taking lessons with the younger García before making her appearance on 3 April 1823 in a pasticcio by Castil-Blaze. She then went to Italy, studying further in Milan and singing in the première of Meyerbeer's *Il crociato in Egitto* (1824, Venice); she also created four Bellini roles: Bianca (*Bianca e Gernando*; 1826, Naples), Imogene (*Il pirata*; 1827, Milan), Alaide (*La straniera*; 1829, Milan) and the title role in *Zaira* (1829, Parma). Her London début was at the King's Theatre on 17 April 1830 in *Il pirata* but, according to Chorley, her voice was past its best. Later that year she appeared at the Théâtre Italien, and in 1831 she again

sang in London and Paris, where she was admired as Semiramide. She continued to sing in Italy and Spain, but retired shortly after creating the title role in *Lucrezia Borgia* (1833, Milan). In her prime she was a brilliant dramatic singer, with a fine technique and a powerful stage presence.

PHILIP H. ROBINSON, JULIAN MARSHALL/R

Mericocke, Thomas (*fl c*1535–65). English composer. A five-part In Nomine attributed to him is in *GB-Ob* Mus.Sch.C.212–16; in style it is not dissimilar from those in the same manuscript by Tye; both composers may well have been of the same generation, since Mericocke is known to have been a lay vicar of St Paul's Cathedral, London, from 1535 to 1537. Mericocke was probably also the composer of the English settings of *Te Deum*, *Magnificat* and *Nunc dimittis* attributed simply to 'Merricock', of which a single (alto) part survives in *Lbl* Add.29289. Although, like the manuscript in *Ob*, this partbook dates from the early 17th century, the texts set are not later than 1552.

In *Lbl* R.M.24.d.2 there is a three-part setting, attributed to 'mr. moorecocke', of *Gloria, laus et honor*, the hymn sung in the Use of Salisbury during the procession before Mass on Palm Sunday. In this case, however, a more plausible candidate for identification with the composer would be ROBERT MORECOCK.

ROGER BOWERS

Merighi [Merichi, Merigi], **Antonia Margherita** [Teresa] (*b* Bologna; *fl* 1711–40; *d* by 1764). Italian contralto. For a long time she was in the service of the Dowager Grand Duchess Violante Beatrice of Tuscany. In 1711 she sang Selvaggio in Floriano Arresti's *L'enigma disciolto* in Lugo. She sang in several operas at Florence (1714–16) and regularly in Venetian theatres (1717–21, 1724–6, 1732–3), appearing in 19 operas, the first of them Vivaldi's *Tieteberga*. In 1718 she was in Vivaldi's *Armida al campo d'Egitto* at Mantua. She had a great success in Bologna in Gasparini's *Sesostri* (1719), and sang in at least 19 operas in Naples (1721–4, 1728–9), often in male roles, in Parma and Florence in 1725, Turin in 1726 and Bologna again in 1727. In 1729 Handel engaged her at a high salary for London, where she was advertised as 'a Woman of a very fine Presence, an excellent Actress, and a very good Singer – A Counter Tenor', and remained for two seasons. She created Matilda in *Lotario* (her début in December 1729), Rosmira in *Partenope* and Erissena in *Poro*, and was also heard in *Giulio Cesare*, *Tolomeo*, *Scipione*, *Rinaldo* and probably *Rodelinda*, often in soprano parts adapted for her. That she stood high in Handel's favour is clear from the size and quality of all his parts for her. Rolli paid tribute to her intelligence and acting skill in *Lotario*; Mrs Pendarves wrote that 'her voice is not extraordinarily good or bad . . . she sings easily and agreeably'. Burney dismissed her, quite wrongly, as 'a singer of the second or third class'.

Merighi was singing in Florence in 1731–2 and Modena in 1735. She returned to London in 1736 for the unsuccessful final season of the Opera of the Nobility and sang at the King's Theatre in operas by Hasse, Riccardo Broschi, Pescetti, Veracini and Duni. The following season she appeared in pasticcios, further operas by Pescetti and Veracini, and in Handel's *Faramondo* and *Serse* as the original Gernando and Amastris. By then she had declined and her compass had narrowed: from *a♭* to *f''* in her earlier Handel parts to no more than *c'* to *d''* in *Serse*. She is last heard of in two operas during Carnival 1740 at Munich. She married the tenor Carlo Carlani (1716–76), but was dead by 1764, when he remarried. (*SartoriL*)

WINTON DEAN

Merikanto, Aarre (*b* Helsinki, 29 June 1893; *d* Helsinki, 29 Sept 1958). Finnish composer and teacher, the son of composer and organist OSKAR MERIKANTO. He studied composition at the Helsinki Music Institute (the Sibelius Academy from 1939) with Melartin, completing his studies at the Leipzig Conservatory with Reger (1912–14) and at the Moscow Conservatory with Vasilenko (1915–16). Merikanto taught theory and analysis at the Sibelius Academy in Helsinki between 1936 and 1951, and was then appointed professor of composition. Most Finnish composers born between the world wars were students of his, and his influence was strongly felt.

His background was unusual: because his father was a celebrated organist and composer of songs, he received musical training at home from a young age, and wrote his first compositions during his teenage years. His one-act opera *Helena*, later destroyed, was performed in 1912. In

Leipzig Merikanto furthered his studies in counterpoint; in Moscow he heard Skryabin's music and was greatly influenced by its harmony and tone colours. His own musical language possessed initially a strong attachment to modernism, and was also coloured by chromatic polyphony, Russian mysticism and the rhythms of Finnish folk dance. His output divides sharply into three stylistic periods: modernist (1921–33), national Romantic (1934–50) and finally a synthesis of both (1951–8).

Artistically the most significant period in his life was surely the 1920s, when he produced many notable works and even gained some international success. His style of this time, a blend of late Romantic, Impressionist and Expressionist elements, with a greater rhythmic complexity and harmonic chromaticism than the Sibelian music of the time, nevertheless met with bewilderment in Finland, and his music was largely passed over in silences: Merikanto's contemporaries were working in strictly tonal idioms, and his Central European modernist style was distinctly unusual in Finland at that time. Some works of this period began to be appreciated and performed only in the late 1950s and 60s.

The most significant work of the 1920s is the opera *Juha* (1922), which received its première in a concert version only in 1958, after the composer's death. Its performance at the Finnish Opera in the 1920s was blocked by a number of factors, behind which lay personal disagreements and also a general aversion to Merikanto's style. The main problem, however, was that the orchestra was not capable of performing the work. *Juha* – a successful blend of atonal, Expressionistic textures and stylistic quotations from folk dance – is now widely regarded as the best Finnish opera. Its libretto is based on a novel by Juhani Aho and tells of a three-cornered drama in which Finnish culture, represented by Juha and his wife Marja, meets the more easterly culture of Shemeikka, a pedlar of Archangel Karelia. The dance episode in Act II skilfully demonstrates the influence of folk music, which Merikanto made use of from the 1930s onwards. Among other notable works of the 1920s are the piece which won first prize in a competition run by the Schott publishing house, the Concerto for nine instruments – the 'Schott Concerto' (1925) – and also, inspired by the concerto's success, the Konzertstück for cello and chamber orchestra, which the composer submitted to the publisher in vain. Merikanto partially or totally destroyed many of his compositions from the 1920s, and continued to do so even during the last decade of his life; their failure to be accepted still caused him bitterness. The most significant of these rejected works was the *Symphonic Study* (1928), which his pupil Paavo Heininen completed in 1981.

Merikanto radically changed his style in the mid-1930s, and *Kyllikin ryöstö* ('The Rape of Kyllikki', 1934) is the turning-point between his modernist and national Romantic periods. The reasons for the stylistic change have included the cool reception accorded to his works of the preceding decade, the general change in cultural atmosphere, and Merikanto's weariness of spirit caused by morphine dependence arising from its use in treating stomach pains; the decline in originality of the works from this period may also be due to his addiction. In the 1940s he composed mainly small-scale functional music, but he developed a new interest in composition at the beginning of the 1950s when he was appointed professor of composition at the Sibelius Academy. At the time he produced his Third Symphony (1953) and Third Piano Concerto (1955), which differed greatly from his 1940s work in that he approached, to some extent, the stylistic features of his modernist period.

OSMO TAPIO RÄIHÄLÄ

Merikanto, (Frans) Oskar (*b* Helsinki, 5 Aug 1868; *d* Oitti, 17 Feb 1924). Finnish composer and organist, father of AARRE MERIKANTO. He studied at the Leipzig Conservatory (1887–8) and in Berlin (1890–91). His activities in church music education and in initiating professional opera performances were of great importance in the development of Finnish musical life in the early 20th century; he also appeared as an opera conductor, as an excellent accompanist and as a virtuoso organist (in addition he worked as inspector of organs). His *Pohjan neiti* (1899), which was Singspiel-like in character, was the first opera in Finnish, but he owed his wide popularity to his numerous folksong-influenced salon romances. He was one of the first composers to set his songs to Finnish poems.

ERKKI SALMENHAARA

Meriläinen, Usko (*b* Tampere, 27 Jan 1930). Finnish composer. He studied at the Sibelius Academy in Helsinki (1951–6), taking diplomas in conducting with Funtek and composition with Merikanto; he also studied with Krenek in Darmstadt (1956), and in 1958 learnt 12-note technique from Vogel in Ascona. From 1954 to 1956 he was chorus master at the Finnish National Opera. He then worked as a conductor and teacher in Kuopio (1956–7) and as a theatre conductor in Tampere (1957–60). He gave up regular conducting and remained in Tampere as a theory teacher at the music school (1961–5) and the university (1966–87). In 1986 he was one of the founders of the Tampere Biennale, a festival of contemporary music, and from the outset has served as its artistic adviser. He was also chairman (1981–92) of the Society of Finnish Composers. Among the awards he has received are first prize in a national competition for ballet scores (1958, with *Arius*), first prize in the AIDEM competition at Florence (1963, with the Chamber Concerto) and in 1965 the Sibelius Prize of the Wihuri Foundation. In 1995 Meriläinen became an *honoris causa* professor and in 1997 was awarded an honorary doctorate from the Sibelius Academy.

The conception of tonality and the use of polymodal counterpoint in Meriläinen's early music indicate the influences of Hindemith, Bartók and Stravinsky; many sections of the Partita for brass (1954) are very Stravinskian. After a period of neo-classicism he was drawn towards serial thinking, and composed works characterized by crystalline structures and more complex textures (First Piano Sonata, 1960; Four Love Songs, 1961; Chamber Concerto, 1962). While still working with tone rows (First String Quartet, 1965) he began to develop a technique he terms the 'metamorphosis of musical characters'. These characters, as Heininen has pointed out, are 'ideas or embryos, the identity of which is directly recognizable but not dependent on definite rhythmic or intervallic structure'. Being free to proceed in any direction, the 'characters' are more flexible than the row, and give the music a new sense of elasticity, as in the Second Piano Sonata. Its texture is based on the point, the line and the plane, familiar from Kandinsky's abstract paintings, but seldom treated in music so naturally as here. The flexibility of the character variation technique even allows some of the features of his early neo-classical idiom to return, as in *Metamorfora per 7* (1969), deliberately scored for the same ensemble as Stravinsky's *The Soldier's Tale*. In Meriläinen's subsequent works (e.g. *Simultus for Four*, 1979; *Concerto per 13*, 1971) periodic and free rhythm are juxtaposed, the metamorphosis technique is within a wider span, and instrumental colour increases in importance and form in works such as the Third Symphony of 1971. During the 1980s and 1990s Meriläinen fully exploited the resources of his mature technique in various genres, with an emphasis on concertos and chamber music. Important chamber works from this period include *Mouvements circulaires en danceur* (1985), the Third String Quartet (1992) and the Fifth Piano Sonata (1992).

ILKKA ORAMO

Mérimée, Prosper (*b* Paris, 28 Sept 1803; *d* Cannes, 23 Sept 1870). French novelist and short-story writer. Inheriting a taste for the picturesque and the grotesque from his father, Léonor Mérimée, a drawing master at the Ecole Polytechnique, he began his literary career with *Le*

théâtre de Clara Gazul, a collection of plays never intended for stage performance. He discovered the literary form best suited to his temperament in a series of short stories that first appeared in the *Revue de Paris*. *Tamango*, for instance, presents a mutiny by slaves on board a ship, while the subject of *Mateo Falcone* is a Corsican father's bitter punishment of his son's lapse from honour; there are several operatic versions of the latter.

Mérimée was fond of strong, strange situations, exotic settings and blazing emotions, but an ironic tendency predisposed him to distance himself from this violence even as he presented it. There is a reflection of his attitude in his language, precise in description and laconic to the point of indifference in narrative. Paradoxically, the style enhances the impact of the narrative because the reader feels impelled to respond. Inspired by a performance of *Don Giovanni* at the Théâtre-Italien, Mérimée wrote *Les âmes du purgatoire* (1834), which in turn contained what was to become the duelling sequence at the end of *La forza del destino* (though in Mérimée's story it is the friar who challenges the brother of the seduced heroine). This came to Verdi through the Spanish dramatization of *Les âmes*, the Duke de Rivas's *Don Alvaro, o La fuerza del sino* (1835). *Colomba*, a short novel set in Corsica, attracted a number of composers including Sir Alexander Mackenzie (1883), but none had the success that Bizet enjoyed with *Carmen*. This story of unbridled passion in Spain was first published in the *Revue des deux mondes* in 1845, and the opera, to a libretto by Meilhac and Halévy, had its première in 1875. Its success silences criticism, but the difference in style between the opera and its literary source is striking. A number of Mérimée's plays were adapted as operas and *opéras comiques*, though with only moderate success. His work in later years reflects his many travels. He also translated works by Pushkin, Gogol and Turgenev; Scribe's libretto for Halévy's *La dame de pique* is partly based on Mérimée's translation.

WORKS

Le ciel et l'enfer (play, 1825): G.F. Malipiero, 1954, as Donna Urraca
Inés Mendo, ou Le préjugé vaincu (play, 1825): Erlanger, 1897, revived as Das Erbe, 1898
Le carrosse du Saint-Sacrement (saynète, 1829): Offenbach, 1868, as La Périchole; Berners, 1923; Büsser, 1948
Mateo Falcone (novella, 1829): Zöllner, 1893; T. Gerlach, 1898; Cui, 1907; Ewart, 1932; P. Fejko, 1987
L'occasion (play, written 1829); Durey, comp. 1923–5
La Vénus d'île (story, 1837): Schoeck, 1922, as Venus; H.H. Wetzler, 1928, as Die baskische Venus; Büsser, 1964
Colomba (story, 1840): G. Pacini, 1842, as La fidanzata corsa; A.K.W. Grandjean, 1882; Mackenzie, 1883; V. Radeglia, 1887; Büsser, 1921; N. van Westerhout, 1923
Carmen (novel, 1845): Bizet, 1875
Le chambre bleu (story, 1871): Bouval, 1902; Lazarus, 1937

CHRISTOPHER SMITH

Merino (Montero), Luis (Felix) (*b* Santiago de Chile, 2 May 1943). Chilean musicologist, teacher and composer. He studied piano at the University of Chile under Germán Berner and composition under Gustavo Becerra, and graduated with a bachelor's degree in musicology. He pursued graduate study in Spanish Renaissance and Baroque music at the University of California, Santa Barbara, and Los Angeles (MA 1968), and took the doctorate in 1972 under Robert Stevenson with a dissertation on the masses of Francisco Guerrero. At the University of Chile he was coordinator of undergraduate studies in musicology (1973–81), director of the journal *Revista musical chilena* (1973–), academic director (1983–6) and dean of the College of Fine Arts (1986–7, 1995–), and vice-president for academic and student affairs (1990–93); he became a member of the Fine Arts faculty in 1963, and full professor in 1985.

Merino's extensive research and publications deal primarily with the musical culture and history of Chile and Latin America in an integrative manner, taking into consideration the various contexts of music-making phenomena. He was a John Simon Guggenheim Memorial Foundation fellow (1976–7) and has been a member of the most important international and North and South American musicological associations, including the Chilean Fine Arts Academy of the Instituto de Chile (1983–). His achievements grant him a major place in Chilean musicology of the latter part of the 20th century.

GERARD BÉHAGUE

Merk, Josef (*b* Vienna, 18 Jan 1795; *d* Vienna, 16 June 1852). Austrian cellist and composer. He made a promising start on the violin, but an injury from a dog bite to his left arm forced him to switch to the cello. After one year's study with Schindlöcker he entered the service of a Hungarian nobleman as a quartet cellist. Two years later he began a five-year solo tour throughout the Habsburg Empire. Upon returning to Vienna in 1818 he became solo cellist at the Hofoper, subsequently joining the Hofkappelle. The most important Viennese cellist of the post-Beethoven era, Merk performed with Mayseder and Bocklet in the second Viennese performance of Beethoven's Triple Concerto in 1830. In 1834 he and Mayseder were appointed *Kammervirtuosen*. He was on friendly terms with Schubert, the dedicatee of his op.11 *Exercices*, and with Chopin, who wrote the Polonaise Brillante op.3 for him. From 1822 to 1848 Merk taught at the Vienna Conservatory. His pupils included August Träg and Jacques Franco-Mendès. Apart from a concert tour through Germany and England in about 1835, Merk concentrated his activities in Vienna. As well as the op.11 *Exercices*, Merk's compositions, all for cello, include a Concerto in D op.5, a Concertino in A op.17, several sets of variations, character pieces and six studies.

JOHN MORAN

Merkel, Gustav Adolf (*b* Oberoderwitz, nr Zittau, 12 Nov 1827; *d* Dresden, 30 Oct 1885). German organist and composer. The son of a teacher and organist, he studied at the teachers' college in Bautzen from 1844. He was a schoolteacher in Dresden (1848–53), and then earned a meagre living as a piano teacher while studying the piano with Friedrich Wieck, music theory with Ernst Julius Otto (Kantor at the Kreuzkirche) and the organ with Johann Schneider the younger. Schumann and K.G. Reissiger acted as mentors to the young composer. In 1858 Merkel won a competition with his organ sonata for four hands (op.30, no.1 in D minor). From 1858 until his death Merkel worked as an organist in Dresden, first at the orphanage church, from 1860 at the Kreuzkirche and from 1864 at the Catholic court church (although he was a Lutheran). He taught the organ at the Dresden Conservatory from 1861 and directed the Dreyssigsche Singakademie from 1867 to 1873.

A world-famous organist and highly regarded composer for the instrument, Merkel wrote organ music whose great popularity in Germany in the second half of the 19th century spread to the rest of Europe and even America. By the 1920s, however, he was dismissed as derivative; his works, deeply rooted in the rich tradition of Saxony, employed the forms of the Baroque and also of later periods (e.g. sonata form) without developing them in any way. Some of his organ compositions have recently been revived, although his works for harmonium, piano, chorus and solo voice remain forgotten.

KARL-ERNST BERGUNDER/MARTIN WEYER

Merklin, Joseph (*b* Oberhausen, 17 Feb 1819; *d* Nancy, 10 July 1905). French organ builder of German birth. His father, Franz Joseph Merklin (1788–1857), was also an organ builder. Joseph worked first with Haas in Berne in 1837, and then with Walcker in Ludwigsburg where he met his future brother-in-law Friedrich Schütze, with whom he was in partnership from 1853 to 1870. After two years spent working as a foreman for Korfmacher in Linnich, near Aachen, he settled in Ixelles (near Brussels) in 1843, and exhibited with great success in the national exhibition, Brussels, in 1847. Merklin purchased the prestigious Parisian firm of Ducroquet in 1855. New premises were built not far from the workshop of his rival, Cavaillé-Coll, and the two builders were to engage in serious, sometimes bitter competition for the succeeding 40 years. Large Merklin instruments of this period, e.g. St Eugène-Ste Cécile in Paris and Murcia Cathedral in Spain, still used Walcker-like cone-chests, but his organs gradually became an aesthetic foil to the still-developing Cavaillé-Coll style, and the firm prospered. In 1870 the Franco-Prussian War forced Merklin into exile in Switzerland, but he returned two years later to set up a shop in Lyons, in addition to the one in Paris. He was naturalized in 1875. The prestigious contract for St Eustache in Paris (1879) was a turning point in the firm's fortunes. In 1884 he completed the first of many organs with electro-pneumatic action, for the Brotteaux Reformed Church in Lyons. He moved back to Paris in 1894, and henceforth included tubular-pneumatic actions in certain organs built in partnership with Joseph Gutschenritter. The latter succeeded him upon his retirement in 1899, Pierre Schyven having already taken over Merklin's Belgian operations in the mid-1870s. Subsequently, Merklin's son-in-law Charles Michel and later the Swiss firm of Kuhn continued to operate in Lyons (for several decades under the name Michel, Merklin et Kuhn), where a remnant of the firm still exists. The German branches of the Merklin dynasty produced organ builders well into the 20th century: Albert August (Alberto) Merklin (1892–1925) worked for Walcker in Spain and published a treatise, *Organología*, in Madrid in 1924.

Significant organs include those built for the cathedrals of Arras, Blois, Boulogne-sur-mer, Bourges, Geneva, Guadalajara (Mexico), Havana, Moulins (extant), Oran, Rouen and Soissons, St Epvre, Nancy (extant), and S Luigi dei Francesi, Rome. Many smaller instruments were built for Paris, Lyons and the provinces; the firm being particularly well-represented in the north of France. Although ultimately overshadowed by Cavaillé-Coll,

Joseph Merklin's level of production was comparable, in terms of quantity as well as in artistic and technical viability. In general, Merklin organs retained subtle German influences in the individual timbres, in tonal power from tart reeds and cornets and in openly progressive technical innovation. In other respects he remained fundamentally true to the Daublaine-Callinet line of thinking, readily specifying free-reed solo voices while downplaying the use of overblowing stops in chorus structures. Eschewing the standard Cavaillé-Coll 'Thunderstorm' (*Effet d'orage*) pedal, he often supplied a cumulative pedal for all reed/mixture ventils. In smaller organs he used double sliders instead of double pallet boxes with ventils, and several stops could be borrowed from one manual onto another. The broader characteristics and evolution of Merklin's scaling, voicing and design principles, however, have yet to be studied systematically. Ostensibly, Merklin's reputation ultimately suffered from his foreign origins (for he cannot be seen as emanating from the venerable classical French tradition, save via the tenuous Dallery–Daublaine–Ducroquet lineage) and, above all, from the retrospectively minor stature of his 'house organists' (Vilbac, Batiste, Hocmelle, Dallier). In addition, his work has suffered massive rebuilding and tonal modification, and this has tended unfairly to veil the vital role he played in French organ history.

KURT LUEDERS

Merkù, Pavle (*b* Trieste, 12 July 1927). Slovene composer of Italian birth. He graduated in Slavonic studies at Ljubljana University in 1950 and at Rome University in 1960; his music studies were undertaken privately in Trieste under Ivan Grbec and Vito Levi. Merkù taught in schools in Ljubljana (1950–51) and Trieste (1952–64), and in 1965 he was appointed to the staff of Italian radio and television in Trieste. He also writes on music.

A prolific composer, he always aims for a refined and delicate style, particularly in his chamber music. Much of his chamber music concentrates on miniatures of great subtlety and delicacy and includes a number of works for solo instruments. In his orchestral and instrumental music he has employed new techniques, choosing only those elements that are compatible with clarity of expression and beauty of sound. Much of his instrumental music from the 1960s and 70s uses aspects of 12-note technique, but this has never been used exclusively. His early outstanding work is the extended expressionist cantata *Von der Kindesmörderin Marie Farrar*, which uses recitative and unusual tonal progressions to great dramatic effect. He has made extensive studies of folk music, particularly in the North East of Italy and the neighbouring regions of Slovenia, and has used some of these melodies in his wide range of vocal music. His later prolific vocal output is generally reflective and tonal in nature. His extensive writings have involved important research of the life of the Slovenian composer, Marij Kogoj, who grew up in Trieste.

NIALL O'LOUGHLIN

Merlet, Dominique (*b* Bordeaux, 18 Feb 1938). French pianist and teacher. After early training with Jean-Jules Roger-Ducasse and Rose-Aye Lejour he attended the Paris Conservatoire, where he studied accompaniment with Nadia Boulanger and piano with Jean Doyen, in whose class he won a *premier prix* in 1956. He completed his studies in Switzerland with Louis Hiltbrand and shared the first prize in the 1957 Geneva Competition with Maurizio Pollini. He held teaching posts in Strasbourg and Rouen before his appointment to the Paris Conservatoire, where from 1974 to 1992 he taught one of the most prestigious piano classes. In 1992 he was appointed to the Geneva Conservatoire. He has been a frequent jury member of many leading international competitions, including those at Leeds, Dublin, Geneva and Munich. His recordings include exceptionally refined and poetic accounts of the complete piano works of Ravel, the six *Images* of Debussy and the last works of Chopin. He has contributed a chapter 'Enseignement et carrières du piano' to *Le guide du piano*, ed. Michel Archimbaud (Paris, 1979).

CHARLES TIMBRELL

Merli, Francesco (*b* Milan, 27 Jan 1887; *d* Milan, 12 Dec 1976). Italian tenor. He studied in Milan with Negrini and Borghi, and began his career in 1916 as a second tenor in Buenos Aires, then sang Alvaro in Spontini's *Fernand Cortez* at La Scala. He was soon singing larger roles, and in 1918 he sang Elisero (*Mosè in Egitto*) and created Fausto in Favara's *Urania* at La Scala, where he continued to appear until 1942, sharing the dramatic tenor roles in the repertory with Pertile. He sang at Covent Garden between 1926 and 1930 and was the first London Calaf in *Turandot*. His appearances at the Metropolitan, where he made his début as Radames in 1932, were dogged by ill-health and he was never re-engaged. He participated in numerous revivals of works by Franchetti, Gomes, Catalani and Zandonai and continued to sing until 1948. Merli had a powerful and resonant voice and his feeling for words was notable. Among his recordings are vivid portrayals of Manrico, Canio and Calaf.

HAROLD ROSENTHAL/R

Merlin, John Joseph (*b* Huy, 6 Sept 1735; *d* Paddington, London, 4 May 1803). English instrument maker and inventor of Flemish birth. The third child of Maximilien Joseph Merlin and Marie-Anne Levasseur, Merlin first became noted for his mechanical ability during the six years he spent in Paris from about 1754 until 1760, when he came to England in the suite of the Spanish ambassador, the conde de Fuentes. By 1763, after a brief spell working for a London goldsmith called Sutton, he took a position as 'first or principal mechanic' at Cox's Museum in Spring Gardens. While he was there he became conversant with the range of automata which filled the museum, an experience which was to influence him in setting up on his own. This he did in 1773, nominally as a maker of mathematical instruments, although in fact this was but one aspect of his considerable inventive ingenuity. Illustrated in the catalogue of an exhibition devoted to Merlin, held at Kenwood House, London, in 1985, are examples of his work as a watch and clockmaker, his development of several forms of the wheel-chair, the roller-skate, the Dutch oven (for which he took out a patent in 1773), weighing-machines and many of the ingenious automata which he exhibited at his Mechanical Museum in London.

Merlin also made 'improvements' to the cello and the violin, but his most important instrumental development was a downstriking piano action which he patented in 1774. This could be used in instruments designed specifically as combinations of harpsichord and piano, such as the magnificent compound instrument of 1780 (also fitted with a rudimentary clockwork recording mechanism) in the Deutsches Museum, Munich, or it could be fitted to existing harpsichords (an example of a 1758 Kirkman harpsichord so adapted survives at the Museum of Fine Arts, Boston), or, finally, it could be used solely in pianos (a splendid example of a Merlin grand piano – with four strings per note – survives at Ampthill House, Buckinghamshire). Merlin also produced upright and square pianos, and at least one square survives in combination with a chamber organ (an 'organised piano'). At the request of his friend, Dr Charles Burney, Merlin extended the compass of the piano upwards and downwards to give a full six octaves. Merlin was popular with London society, having a ready wit and an engaging character. A portrait of him by Gainsborough is at Kenwood House.

CHARLES MOULD

Merline (Fr.). A type of bird organ. *See* BIRD INSTRUMENTS.

Merlo, Alessandro [Alexander] (*b* Rome, *c*1540; *d* Rome, 22 April 1601). Italian singer. Brother of the long-time papal singer Giovanni Antonio Merlo (*d* 1590), Alessandro was a virtuoso bass/tenor (Vincenzo Giustiniani credited him with a range of 22 notes). He was listed as a boy soprano in the Cappella Giulia in 1553 and as a tenor in 1560–61. He joined the Cappella Sistina on 20 December 1561, and his name is on all the extant lists of that institution between 1562 and 1594. He seems to have lived in Rome for his entire life; he died in the parish

of S Maria in Vallicella. This career makes it nearly impossible for Merlo to be the same person as the composer Alessandro Romano, with whom he has been confused since the 19th century. Romano, who claimed to be a pupil of Willaert and Rore, published his first book of madrigals in 1554 (when Merlo was a choirboy in the Cappella Giulia). The origin of the confusion appears to have been Baini, who referred to 'Alessandro Merlo Romano detto della Viola' as a composer, thereby conflating Merlo with the 'Alessandro Romano della Viola' whom Andrea Adami (1711) had erroneously listed as entering the Cappella Sistina in 1560 (Merlo's name appears separately on Adami's list).

Merlus, Alessandro [Alexander]. *See* MERLO, ALESSANDRO.

Merman [Zimmermann], **Ethel (Agnes)** (*b* Astoria, NY, 16 Jan 1909; *d* New York, 15 Feb 1984). American actress and singer. As a youngster she sang at church socials, weddings, and at army bases around New York City during America's participation in World War I. While working as a typist and stenographer she appeared in night clubs, and was then contracted to Warner Brothers' New York film studio. She gained a small role, later expanded, in the Gershwin brothers' stage musical, *Girl Crazy* (1930), in which her performance of *I Got Rhythm*, with its legendary held c″ made her an overnight star. Further supporting roles followed in musical features and shorts for Paramount and Goldwyn, and there was a series of brief yet memorable Broadway appearances in *George White's Scandals of 1931* and *Take a Chance* (1932). Her first co-starring role, in Porter's *Anything Goes* (1934), was a critical and public success. Not only did she introduce four standards (*Anything Goes*, *I get a kick out of you*, *You're the top* and *Blow, Gabriel, blow*) but she also fixed her clarion voice and brassy, no-nonsense personality firmly in the public mind as a new kind of heroine for the Depression years: earthy, optimistic and supremely confident.

Porter and Merman collaborated in four more musicals: *Red, Hot, and Blue* (1936), *DuBarry was a Lady* (1939), *Panama Hattie* (1940) and *Something For the Boys* (1943). Films for Twentieth Century Fox were less successful, although in *Alexander's Ragtime Band* (1938) she sang a wealth of Irving Berlin hits, including *Heat Wave*. Berlin also provided the music and lyrics for *Annie Get your Gun* (1946), and, for the first time in a leading role, she was allowed to show a certain degree of vulnerability with *I Got Lost in his Arms*, but the show-business anthem *There's no business like show business* became the number most closely identified with Merman. Her portrayal of Sally Adams, from Berlin's *Call Me Madam* (1950), was repeated on screen in 1953, but it was the only time Hollywood allowed Merman to film one of her stage roles substantially intact: her role in the 1936 film of *Anything Goes* was severely truncated.

Ethel Merman as Annie Oakley, the role she created in 1946 in Irving Berlin's 'Annie Get your Gun': portrait by Rosemarie Sloat, 1971 (National Portrait Gallery, Washington, DC)

Her most challenging musical and dramatic assignment came in 1959, when she appeared as Rose in Styne and Sondheim's *Gypsy*. She refused the lead in Herman's *Hello Dolly* (1964), but appeared in a 1970 revival; that and her appearance in a 1966 revival of *Annie Get your Gun* were her last Broadway shows. In her later years, she appeared in concert with many American symphony orchestras, was a guest on television shows, and concluded a long recording career with a disco album (1979). Her last major film role, non-singing, was in *It's a Mad, Mad, Mad, Mad World* (1963).

Gershwin, Porter and Berlin all publicly stated how glad they were to write songs for Merman's outsized voice and character; because her roles were usually some variant of her own personality, there was no additional interpretation to obscure the song. She is usually thought of as the first belt-voice singer, but this technique of extending the female chest voice past its normal range is mostly absent from Merman's early recordings. In her 1932 recording of Berlin's *How deep is the ocean*, for example, she alternated chest and mixed chest-head voice with no audible break between registers. She was blessed with extraordinary powers of projection, a clean and focussed

attack, and precise yet natural diction. The retention of the hollow, open vowels of her middle-class New York upbringing undoubtedly contributed to the unpretentiousness and exuberance of her persona. She had an unerring sense of rhythm and pitch, which she could alter through rubato and flattened notes for expressive purposes, and she also employed an amazing variety of portamenti. Most remarkably, since she claimed to have never taken singing lessons, she had an instinctive gift for phrasing, with beautifully controlled diminuendos at phrase ends. Only in her last decade did her previously light use of vibrato degenerate into wobbling. She produced three autobiographies: *Don't Call me Madam* (London, 1955), *Who Could Ask for Anything More* (with P. Martin; Garden City, NY, 1955) and *Merman: an Autobiography* (with G. Eells; New York, 1978).

HOWARD GOLDSTEIN

Mermet, Auguste (*b* Brussels, 5 Jan 1810; *d* Paris, 4 July 1889). French composer. His father was a colonel in Napoleon's army and he was himself destined for a military career. But he abandoned this for music, having studied first the flute and later composition privately with Le Sueur and Halévy. Most of his small output was for the stage. His first opera, *La bannière du roi*, was performed at Versailles in 1835 and his *Le roi David* was staged at the Paris Opéra in 1846 with Rosine Stoltz singing David's part. A long gap intervened before *Roland à Roncevaux* in 1864 and yet another between that and *Jeanne d'Arc* in 1876. *Roland à Roncevaux* enjoyed considerable if short-lived success (65 performances by 1867) owing to its patriotic tone and appeal to the spectacular. Mermet's Napoleonic connections served him well under the Second Empire and he exploited the same patriotic vein, with less success, in *Jeanne d'Arc*, the first new work presented at Garnier's Opéra (opened in 1875). Both of these works told of stirring episodes in French history; the music was modelled closely on Meyerbeer and Halévy, and his own librettos were modelled on those of Scribe, but Mermet lacked their imaginative sweep. His music is direct, attractive, unadventurous and noisy. He filled canvases too large for his slender musical skills but knew how to make a direct appeal to certain sectors of Parisian taste, with a special fondness for martial and rousingly rhythmic music. The failure of *Jeanne d'Arc* has been seen as the close of Meyerbeer's domination of French opera. Two further operas were never performed: *Pierrot pendu*, a comic opera, and *Bacchus dans l'Inde*.

WORKS
(*selective list*)

La bannière du roi (oc, 2, P.F.A. Carmouche), Versailles, April 1835

Le roi David (op, 3, A. Soumet and F. Mallefille), Paris, Opéra, 3 June 1846

Roland à Roncevaux (op, 4, A. Mermet), Paris, Opéra, 3 Oct 1864 (Paris, ?1865)

Jeanne d'Arc (op, 4, Mermet, after J. Barbier), Paris, Opéra, 5 April 1876, vs (Paris, 1876)

HUGH MACDONALD

Merques, Nicolas [Nicholas de, C., C. de] (*fl* 1433–45). French composer. The names 'Nicholas' and 'C. Merques' appear in 15th-century music manuscripts; the name 'K. Merques' appears only in modern musicological literature, and has arisen owing to a misreading of the index of the inventory of the Trent manuscripts (in DTÖ, xiv–xv, Jg.vii/1–2, 1900/*R*) where the first composition listed under the surname Merques is a Kyrie, abbreviated K. Nicolas and C. Merques may be the same, since 'C.' could mean either Colin, the diminutive, or Claus, the German equivalent of Nicolas, as was suggested by van den Borren. A singer and cleric from Arras named Nicolas de Merques entered the chapel of the Council of Basle in November 1433 and remained until at least 1436; in 1444–5 he was in the chapel of the antipope Felix V. The style of the 14 works attributed to him or to C. Merques suggests that they were composed in the mid-1430s, and there is no stylistic reason to doubt that anything under the surname Merques, including works attributed to C. Merques, is by Nicolas Merques of Arras.

His liturgical works include Kyries, antiphons, hymns and an introit. In all he employed the treble-dominated style with cantus firmus appearing in the superius in ornamented form. An exception is found in the Kyries where fauxbourdon sections alternate with sections in three voices where the cantus firmus lies in the tenor. All these works are rather small-scale and functional liturgical works.

The five chansons are similar to other works of the 1430s in their use of perfect time and in the application of text to either the superius alone or to the superius and tenor. The motet is somewhat archaic in its use of separate texts in the three voices.

In addition to the above-mentioned works, six antiphons and an incomplete Kyrie in *I-TRmp* 92 can be attributed to Merques on stylistic, liturgical and palaeographical grounds. The antiphons belong to the same service as those actually ascribed to him, they are identical in style, and each group was copied into the manuscript by a single scribe who added no other music. The manner in which the Kyrie is entered in the original index suggests that Merques was the composer and in its treatment of the cantus firmus the work is very similar to his other Kyries. If these attributions are correct, he ranks after only Du Fay and Binchois in the number of his works found in the first section of *I-TRmp* 92.

WORKS

All for 3 voices; precise ascriptions added because of the possible confusion of authorship.

TOM R. WARD

Merriam, Alan P(arkhurst) (*b* Missoula, MT, 1 Nov 1923; *d* nr Warsaw, 14 March 1980). American ethnomusicologist. He took the BA at Montana in 1947, then began studies in anthropology under M.J. Herskovits and Richard A. Waterman at Northwestern University (MM 1948, PhD 1951). After teaching anthropology at Northwestern University (1953–4; 1956–62) and at the University of Wisconsin (1954–6), he became professor (1962) and then chairman of the anthropology department at Indiana University (1966–9), which under his directorship became a leading research centre in ethnomusicology. He was also co-founder (1952) and president (1963–5) of the Society for Ethnomusicology whose journal he edited (*Ethnomusicology Newsletter*, 1952–7; *Ethnomusicology*, 1957–8). He died in an aeroplane crash.

Merriam's extensive field research among the Flathead people of Montana (1950, 1958) and the Basongye and Bashi people of Zaïre (now the Democratic Republic of Congo) and Burundi (1951–2, 1959–60, 1973) resulted in a series of major articles on African music, and in *Ethnomusicology of the Flathead Indians* (1967), which became an exemplar for ethnomusicological studies after 1970. His most important work, *The Anthropology of Music* (1964), argued for a tripartite model for ethnomusicological research involving investigation of the sounds themselves as well as of the behaviour (social, physical and verbal) and the conceptualizations of musicians and audience; this approach has had lasting relevance. Defining ethnomusicology as the anthropological study of music, it is arguably the most influential work in ethnomusicology published after 1950, stressing the importance of cultural and social factors in any investigation of the processes of creation, aesthetics, and the training and acculturation of performers and audience. He also wrote on jazz, American music and Afro-Caribbean music, but his most significant contribution remains his discussions of the theoretical and conceptual problems in ethnomusicology. A dedicated teacher and a visiting lecturer at many institutions, he was largely responsible for the eventual acceptance of ethnomusicology at North American educational institutions.

PAULA MORGAN/BRUNO NETTL

Merrick, Frank (*b* Clifton, Bristol, 30 April 1886; *d* London, 19 Feb 1981). English pianist, teacher and composer. From 1898 to 1901 he studied with Leschetizky in Vienna and made his London début in 1903 at the Bechstein Hall. He was awarded a diploma of honour for composition at the 1910 Rubinstein Competition in St Petersburg. The following year Merrick took over Petri's class at the Royal Manchester College of Music, moving to the RCM in 1929. He retired from the latter in 1956 and subsequently taught at the Trinity College of Music.

Merrick was co-winner of a prize instituted by Columbia in 1928 to mark the Schubert centenary, contributing two final movements to the Eighth Symphony, which the company recorded. Other works include two early piano concertos (unpublished), settings of poems in Esperanto

and music for viola d'amore and piano. Of wide musical sympathies, Merrick was a staunch advocate of contemporary music, and early on championed Debussy and Prokofiev as well as Bax and Ireland. He revived interest in John Field's music, much of which he recorded. Above all a serious pianist of textual integrity and poetic insight, Merrick was especially admired as an interpreter of Beethoven, Schubert, Brahms and Reger. He wrote *Practising the Piano* (London, 1958) and edited a Chopin edition for Novello. He was made a CBE in 1978.

JAMES METHUEN-CAMPBELL

Merricocke, Thomas. *See* MERICOCKE, THOMAS.

Merrill, Robert (*b* Brooklyn, NY, 4 June 1917). American baritone. He was trained first by his mother, Lillian Miller Merrill, a concert singer, then by Samuel Margolis in New York. Although he occasionally appeared in Europe and South America, he preferred to base his career at the Metropolitan Opera where he sang all the major baritone roles of the Italian and French repertories. In terms of vocal endowment, technical security and longevity he was unequalled among baritones of his generation at the Metropolitan, where he made his début as Germont in *La traviata* in 1945 and where he celebrated his 500th operatic performance in 1973, still singing with undiminished vigour. Merrill made numerous complete opera recordings – Toscanini chose him as his Germont and Renato (*Un ballo in maschera*) – and one film, and often sang on radio and television and in *Fiddler on the Roof*. In 1975 he made his London concert début, winning praise for the generosity, if not the subtlety, of his singing. For all the natural beauty and healthy resonance of his voice, he was never highly regarded as an imaginative interpreter or a compelling actor.

PETER G. DAVIS

Merriman, Nan [Katherine-Ann] (*b* Pittsburgh, 28 April 1920). American mezzo-soprano. She studied in Los Angeles with Alexia Bassian, and in 1942 made her début at Cincinnati as La Cieca (*La Gioconda*). Toscanini engaged her for his broadcasts and recordings of Gluck's *Orfeo* (as Orpheus), *Falstaff* (as Meg Page), *Rigoletto* (as Maddalena) and *Otello* (as Emilia). She sang Dorabella at Aix-en-Provence (1953, 1955, 1959), the Piccola Scala (1955–6) and Glyndebourne (1956), and recorded the role under both Karajan and Jochum. She played Baba the Turk in the British première of *The Rake's Progress* at Edinburgh (1953), and Laura in Dargomïzhsky's *The Stone Guest* at the Piccola Scala (1958). She was also an accomplished recitalist, and was especially distinguished in French and Spanish song. Merriman retired in 1965 while her appealingly vibrant mezzo-soprano was still at the height of its powers.

HAROLD ROSENTHAL/R

Merritt, A(rthur) Tillman (*b* Calhoun, MO, 15 Feb 1902; *d* Bedford, MA, 25 Oct 1998). American musicologist. He studied at the Universities of Missouri (BA 1924, BFA 1926) and Harvard (MA 1927). After studying in Paris with Nadia Boulanger and Paul Dukas, he taught at Trinity College in Hartford, Connecticut, from 1930 to 1932. From 1932 he was professor of music at Harvard University, where he served as chairman of the department from 1942 to 1952 and 1968 to 1972. Between 1952 and 1972 he was also curator of the Isham Memorial Library; he retired from the department and from the curatorship in 1972.

Merritt specialized in the music of the Renaissance, particularly the 16th-century chanson. He co-edited the complete secular works of Janequin, and edited the madrigals of Andrea Gabrieli, and several volumes of motets originally published by Attaingnant. His widely used textbook on counterpoint (1939) includes a thorough discussion of 16th-century contrapuntal practice and offers a useful alternative to the study of the subject by species.

PAULA MORGAN

Merritt, Chris (Allan) (*b* Oklahoma City, OK, 27 Sept 1952). American tenor. After studying in Oklahoma, he became an apprentice at the Santa Fe Opera, where he made his début in 1975 as Fenton (*Falstaff*). In 1978 he sang Lindoro (*L'italiana in Algeri*) at the Landestheater, Salzburg, and from 1981 to 1984 was engaged at Augsburg, where his repertory included Tamino, Idomeneus, Julien (*Louise*), Faust and Rodolfo. Merritt has subsequently developed an international reputation as a Rossini specialist, his unusually wide vocal range, extending to *d″*, allowing him to sing the composer's high-lying roles without strain. He has performed Erisso (*Maometto II*), Contareno (*Bianca e Falliero*), Pyrrhus (*Ermione*) and Otello at Pesaro; James (*La donna del lago*) and Idreno (*Semiramide*) at Covent Garden, the former for his début there in 1985; Count Libenskof (*Il viaggio a Reims*) for his La Scala début (1988) and subsequently in Vienna; Aménophis (*Moïse et Pharaon*) at the Paris Opéra; Antenore (*Zelmira*) in Venice and Rome; and Argirio (*Tancredi*) in Los Angeles and Chicago. His resonant, expressive lower and middle registers and free, ringing top notes have been displayed to particular advantage as Arnold (*Guillaume Tell*), which he has sung at La Scala, Paris, Covent Garden (1990) and other theatres. His repertory also includes such roles as Gluck's Pylades, Arturo (*I puritani*), Percy (*Anna Bolena*), Nemorino, Léopold (*La Juive*), Cellini, Aeneas (*Les Troyens*), Arrigo (*Vespri siciliani*), Admetus (*Alceste*), Leukippos (*Daphne*) and Schoenberg's Aaron, which he sang in Amsterdam in 1995. Merritt has recorded several of his Rossini parts

and other roles ranging from Faust and Arrigo to Sobinin (*A Life for the Tsar*).

ELIZABETH FORBES

Merro, John. 17th-century music copyist. *See* SOURCES OF INSTRUMENTAL ENSEMBLE MUSIC TO 1630, §7.

Merseburger. German firm of music publishers. It was founded in Leipzig on 21 September 1849 when Carl Merseburger (1816–85) purchased the C.F. Meusel publishing house in Weissenfels. From 1885 to 1898 Carl's brother Otto Merseburger (1822–98) directed the business, followed until 1918 by Otto's son Max Merseburger (1853–1935) with Georg Merseburger (1871–1958); by 1904 Georg had founded his own book publishing concern in Leipzig. In 1944 the firm in Leipzig was destroyed, but it was re-established in Berlin in 1951 by Georg's son Karl Merseburger (1905–78), with temporary subsidiaries in Heidelberg and Darmstadt. In 1956 Adolf Strube acquired the firm, which became a limited company in 1964. Wolfgang Mattei (*b* 1925) became principal shareholder in 1972.

Carl Merseburger was also a writer on music (*Taschenbüchlein des Musikers*, 1858, 31 editions; *Kleines Tonkünstlerlexikon*, 1860, 15/1971). He established his firm as publishers of educational music, founding an educational periodical *Euterpe* (1851–84, ed. E.J. Hentschel and Ludwig Erk); Strube, an author for the firm from 1924, followed the same policy. The firm is one of the principal Protestant church music publishers in Germany; it also issues musicological literature, new editions of old masters, and the periodicals *Der Kirchenmusiker* (1950) and *Ars organi* (1952).

RUDOLF ELVERS

Mersenne, Marin (*b* La Soultière, nr Oizé, Maine, 8 Sept 1588; *d* Paris, 1 Sept 1648). French mathematician, philosopher, music theorist and savant. He was one of the leading French thinkers of the 17th century, and his work is central to the academic and scientific movements of the second quarter of the century; an important part of it is devoted to the science, theory and practice of music. He was a transitional figure at a crucial confluence of Renaissance and Baroque ideas in France, summing up the accomplishments of the past and posing the difficult questions for the future inherent in the new attitudes of his own time.

1. LIFE. Mersenne studied first at the college at Le Mans and from 1604 at the newly established Jesuit school at La Flèche, where he trained in logic, physics, metaphysics, mathematics and theology. He left for Paris in 1609 to complete his studies at the Collège Royal and the Sorbonne. In 1611 he joined the Order of Minims, beginning his novitiate at the monastery at Nigeon, near Paris, and completing it at St Pierre de Fublaines, near Meaux, where he received his holy orders on 17 July 1612. Thereafter he served the Minim monastery in the Place Royale, Paris, and was named deacon and priest. In 1614 he was sent to the monastery near Nevers as teacher of philosophy (1615–17) and theology (1618), after which he was designated corrector. In 1619 he returned to Paris as conventual of the order, and he remained there for the rest of his life except for occasional trips to the Low Countries, the French provinces and Italy.

2. WORKS. Mersenne's output reflects a neo-Platonic, encyclopedic outlook, in which science is at first used in defence of religion. His later thinking is dominated by the concept of the universality of knowledge and the development of scientific methodology based on experimentation and the principles of mechanics. He strongly believed in the reason of Man and in the order of the universe, and he fostered co-operative ventures and the dissemination of scientific knowledge, championing the establishment of an international academy. His cell in Paris became a meeting place for the intellectually curious, and he maintained an immense correspondence with leading thinkers of the day, including Descartes, Gassendi, Hobbes, Constantijn Huygens, Fermat, Roberval, Galileo, Doni, Arnauld and Peiresc; many of the ideas exchanged therein found their way into his published works.

Although his interests ranged widely, Mersenne's work has particular import in several specific areas of learning: in philosophy he served as an intermediary between Descartes and other thinkers of the time, in mathematics his name is specially associated with research on cycloid curves and on the theory of numbers, in astronomy his writings helped establish a modern science, and in physics he made remarkably original contributions to acoustical theory.

It is notably through mathematics and physics that music is assigned an important role in Mersenne's

Marin Mersenne: engraving by Claude Duflos

writings. For him music was capable of being analysed and rationally explained, and it took its place along with other disciplines as an area for scientific pursuit. Six of his 24 published works are devoted either entirely or in large part to music. He raised fundamental acoustical questions even in the earliest of them, *Quaestiones celeberrimae in Genesim* (1623), notwithstanding the general exegetical and polemical nature of the tract, in which music is treated in a humanistic way and special emphasis is placed on the nature and power of ancient music. By the 1630s his writings on music took on a new scientific interest and format: this is the period of his most indispensable published work, the *Harmonie universelle*, which in spite of its characteristic digressiveness and occasional uncritical reporting, contains his most developed and perceptive ideas on music, both theoretical and practical.

Mersenne's derivation of the basic principles of the behaviour of sound, which are the foundation of the science of acoustics in later times, is central to his contributions to musical knowledge. On the basis of observations derived from experimentation and the study of natural phenomena he discerned sound as pure motion rather than as substance, and he accurately described the method of sound transmission. He is credited with being the first to formulate rules governing vibrating strings, based on an understanding of the variable factors on which pitch depends (length, diameter, tension and mass of the vibrating body), and the first to discern the nature of partials (harmonics) related to a fundamental note. He contributed to the theory of tuning and temperament through a synthesis of knowledge of earlier systems, and he advocated an equal temperament intended for practical application in the construction of certain instruments. He also inquired into the nature of the speed of sound, the phenomena of echo and resonance and the character of a vibrating column of enclosed air: in all of these areas again his work was important for later developments.

Questions of speculative theory are raised throughout Mersenne's work, yet he clearly favoured a theory based on practice, even though he himself was not a performer or composer. He gave wide coverage to practical subjects and sought advice and compositional models from leading musicians of the day, including Mauduit, Titelouze, Du Caurroy, Le Jeune, Antoine Boësset, Moulinié and Charles Racquet. His description of the compositional practice of the early 17th century, though based in large part on the work of Zarlino, provides a view of the effect that new attitudes had on such practice, particularly in France. The nature of consonance and dissonance is reassessed in the light of the laws of vibrating bodies and the nature of partials; but there is a new awareness of the psychological factor in a listener's comprehension of a musical event (a question also discussed by Descartes), and he allowed a certain freedom in the interests of a pleasurable sound or desired effect. For Mersenne consonance provided the basis of a composition, and dissonance served an ornamental function.

In developing rules for the construction of melodies Mersenne stressed the relationship of music to rhetoric and recommended use of the practice of *ars combinandi* in seeking an acceptable solution to a given problem. He contributed to rhythmic theory through a study of Greek metrics and their emotional content and of the oratorical qualities of rhythm. His work provides a virtual compendium of modal systems advocated and used at the time, but he suggested a reduction in the number of such systems, recommending that they be based squarely on the octave species (rather than on finals) and that a seven-syllable solmization procedure be adopted to eliminate mutation.

Mersenne distinguished between national styles of performance. He also showed practical concern about pedagogical techniques in the teaching of children and beginners. He recommended alternative methods of notation with the aim of simplifying the learning and performance of music. He reviewed ornaments and methods of ornamental elaboration and found room for definitions of terminology. His classification of musical instruments (partly indebted to the earlier work of Michael Praetorius) and his extensive presentation of the structures and capabilities of both occidental and oriental instruments then known to him are of particular importance to organology.

ALBERT COHEN

Mersmann, Hans (*b* Potsdam, 6 Oct 1891; *d* Cologne, 24 June 1971). German musicologist and journalist. He studied musicology with Sandberger and Kroyer at Munich University (1910–12), with Riemann and Schering for one term in Leipzig, and with Kretzschmar and Wolf in Berlin (1912–14); he also had some practical training at the Stern Conservatory. He took the doctorate in 1914 with a dissertation on Christian Boxberg and the music history of Ansbach, and then as assistant to Kretzschmar at the musicology institute of Berlin University he catalogued old music in archives and libraries in Germany and Italy (1915–17); he was subsequently the first director of the Musikarchiv Deutscher Volkslieder (1917–34). In 1921 he completed the *Habilitation* at the Berlin Technische Hochschule with a study of new musical methods of research into folksong, and in 1927 he became a reader at the Technische Hochschule. During his years (1924–34) as editor of *Melos* he secured its international standing. In this period he became one of the leading apologists for new music; he was also active in the German youth movement, began broadcasting in 1930, and in 1932 became director of German Radio's music department. The Nazis stripped Mersmann of all his posts, and from 1933 to 1945 he could work only in a private capacity.

In 1946 he held a teaching post at the Munich Musikhochschule, and then directed the Staatliche Hochschule für Musik, Cologne (1947–58). Mersmann held many honorary offices: he was a founder-member (1947) of the Institut für Neue Musik und Musikerziehung and director of the governing body of the Max-Reger-Institut (1948). As a founder-member, chairman (1953–64) and honorary president (1964–8) of the Deutscher Musikrat he laid down and helped realize many of its aims: the publication of the periodical *Musikalische Zeitfragen*, the encouragement of young musicians and the organization of international exchange concerts. He was also a frequent contributor to the *Philharmonische Blätter* (Berlin).

All Mersmann's work as a scholar, journalist and organizer was marked by a vigorous and practical understanding of art, as were his compositions and writings. His central interests – folksong research, performing practice, music teaching and analysis, musical aesthetics, modern music, German and Western music – were closely linked with each other in the context of a creative and humane approach to central problems of history and philosophy.

THOMAS-M. LANGNER/PAMELA M. POTTER

Mertel [Mertelius, Martelius], **Elias** (*b* Wangen, nr Molsheim, Lower Alsace, *c*1561; *d* Strasbourg, 21 July 1626). German lutenist, composer and intabulator. The dedication of his *Hortus musicalis* (1615) indicates that he was in the service of the Elector Palatine Friedrich IV until 1595, but was summoned to Heidelberg to play at

celebrations there in November 1600, October 1601, August 1605 and May 1606. On 27 January 1596 he married at Strasbourg, and on 23 December became a citizen of the city. He later became treasurer of the Strasbourg academy. In 1620 he paid a visit to Basle. Gumpelzhaimer named him as one of the best-known lutenists in Germany.

An assessment of the importance of Mertel's *Hortus musicalis*, which contains 235 preludes and 120 fantasies and fugues, is hindered by the fact that no composers' names appear on the pieces; it is doubtful whether any of the works are his own. J.D. Mylius included nine preludes and six fantasies from *Hortus musicalis* in his *Thesaurus gratiarum* (1622). Of Mertel's few surviving original compositions, most are dances. These are usually rambling movements in variation form, only occasionally enlivened by imitations and sequences; the textures are thin, though, where possible, chords are spread in various ways and the bass notes are played before the beat so that there is some movement in all the parts. However, in the vocal arrangements, many of which are also variations, the notes of the chords are usually plucked simultaneously.

WORKS

all for lute

Hortus musicalis novus ... testudine carpendis atque delibandis consitus: in cuius hac parte prima continentur praeludia, variis ex tonis plusquam ducenta phantasiae item & fugae complures ... ex optimis quibusque authoribus Germanicis, Italicis, Gallicis, Anglicis, constructus (Strasbourg, 1615)

[Hortus musicalis novus, part II], announced but probably never pubd

Allemande, balletto, 4 galliards, 2 passamezzos, prelude, Spectri cujusdam sonus nocturnus, 4 vocal intabulations, untitled piece: 1603[15], 1615[24]

2 ballettos, in J.D. Mylius: Thesaurus gratiarum (Frankfurt, 1622), lost

Lied intabulation, 2 preludes, 2 choreas, 3 ballettos, passamezzo, 3 galliards, *CH-Bu*, *D-BAU*, *Hs*, *LEm*, *Ngm*, *W*

HANS RADKE/WOLFGANG BOETTICHER, CHRISTIAN MEYER

Mertzig, René (*b* Colmar-Berg, nr Luxembourg, 11 Aug 1911; *d* Meaux, France, 17 Sept 1986). Luxembourg composer. He worked as a violinist and pianist at Radio Luxembourg for about 40 years and was an indefatigable advocate of new music. His best works (the String Quartet, two piano trios and his symphonic poems) mark the beginning of a new musical era in Luxembourg. His style was influenced by Richard Strauss, Debussy and Ravel, but with his first chamber and orchestral works he found a personal musical language characterized by honesty, lucidity and skill. Despite international recognition (premières of four of his works were given by the Institut National Belge de Radiodiffusion of Brussels under Franz André), his work was met with indifference in own his country, as a result of which he stopped composing in 1968.

LOLL WEBER

Meruco, Johannes de. *See* JOHANNES DE MERUCO.

Merula, Tarquinio (*b* Cremona, 1594–5; *d* Cremona, 10 Dec 1665). Italian composer, organist and violinist. He was one of the finest and most progressive Italian composers of his generation, and excelled in both vocal and instrumental music.

1. LIFE. The suggested years for Merula's birth derive from the fact that he was confirmed on 23 April 1607, probably at the customary age of 12. His earliest post was probably as organist of S Bartolomeo, the church of the Carmelite Fathers, at Cremona. On 22 October 1616 he signed a three-year contract to serve as organist of the church of the Incoronata, Lodi. He was re-engaged on 8 February 1620 but appears to have left Lodi at the end of January 1621. He probably went directly to his next known position, in Poland, since in a letter of Anton Neunhaber of about that time he is mentioned as being in Warsaw. In 1624 the nature of his position is made explicit: he was serving as 'organista di chiesa e di camera' to Sigismund III, King of Poland.

Returning to Cremona, Merula was elected on 18 February 1626 provisional *maestro di cappella* for the Laudi della Madonna, which took place at the main altar in the cathedral on Saturdays and on vigils of Marian feasts. A regular appointment followed on 13 January 1627. In 1628 he was also holding the position of organist of the collegiate church of S Agata. His next move was to Bergamo, where on 12 April 1631 he signed a three-year contract to serve as *maestro di cappella* of S Maria Maggiore. As successor to Alessandro Grandi (i), who had died in the plague of 1630, Merula began the work of rebuilding the *cappella*. In his first year G.B. Buonamente was one of its members. Merula was, however, dismissed on 29 December 1632 for 'indecency manifested towards several of his pupils'. Threatening a lawsuit to recover his lost salary, he was in turn faced with the prospect of a criminal complaint lodged by the governing body of S Maria Maggiore. On 11 April 1633 the matter was resolved by a statement from him in which he apologized and relinquished all claim to his salary. He again returned to Cremona and at his own request and by prior agreement was reinstated on 19 August 1633 as *maestro di cappella* for the Laudi della Madonna in the cathedral, thereby displacing G.B. Minzio, *maestro* at the time. Disagreements with the governing body there over matters of salary and responsibilities, however, led to his resignation in 1635. He is next heard of in 1638 at Bergamo, this time as *maestro di cappella* and organist at

the cathedral, adjacent to S Maria Maggiore. Further problems with his former employers at S Maria Maggiore prompted them on 14 April 1642 to forbid any of their musicians to perform under his direction, thus disrupting the customary exchange of musicians between the two churches. He appears to have remained at Bergamo Cathedral until his final return to Cremona, which resulted from his appointment on 25 August 1646, in succession to Nicolò Corradini, as organist of the cathedral and as organist and *maestro di cappella* for the Laudi della Madonna. He thus held the last of these posts for the third time, and he now held all three until his death. In 1643 he collaborated with five others in composing music for *La finta savia*, performed in Venice. He was a member of the Accademia dei Filomusi of Bologna and a Knight of the Golden Spur.

2. WORKS. Merula was particularly responsive to Venetian stylistic developments, and his sacred music is thoroughly progressive. The sacred concertos for few voices resemble Monteverdi's in their skilfully wrought lines, often richly embellished, as can be seen in ex.1. He was one of the first to write solo motets with string accompaniment. His sacred concertos for more voices are in the style of Giovanni Gabrieli, with harmonically conceived lines, strong tonal movement and formal clarity. In the mid-1630s Merula turned to writing mass and vesper psalm settings, several of which use ostinato basses. One setting of *Beatus vir* uses the romanesca, and an entire mass is said to be built on the *Aria del Gran Duca*, though in fact it is on the Ruggiero (see Kirkendale, 41). Other formal schemes encountered in his music include the ritornello principle and the *ABB* design common throughout Italy until the 1680s.

Ex.1 *Cantate Domino* from *Il primo libro de motetti e sonate* (1624)

Merula's secular music comprises monodies, dialogues and accompanied madrigals and includes some of the finest settings of his day. His arias are in the Venetian style of Berti and Grandi and are usually in triple metre. In numerous accompanied madrigals from the 1630s he adopted ostinato bass patterns, and in several the division into recitative and aria, characteristic of the mature Baroque cantata, is clearly recognizable. The title piece of his op.13 includes elements of Monteverdi's *stile concitato*. His instrumental music comprises works for both keyboard and ensemble. The ensemble canzonas are among his most significant works and trace the development of the form up to the 1650s, including the gradual fusion with the sonata that led to the *sonata da chiesa*. The earliest, like those of his north Italian contemporaries, use four-part writing and are divided into contrasting sections, which are often repeated. In his second book he adopted three-part textures, specified the violin (using notably idiomatic writing) and often re-used opening material at the end of a work. In his later canzonas the influence of violin technique is more marked, so they are indistinguishable from the early church sonatas subsequently produced by such composers as Cazzati and Legrenzi. In the 1630s and later he wrote several canzonas based on ostinatos, variations on popular tunes, chamber sonatas, sinfonias and a number of dances. He also wrote several sonatas similar to those of Buonamente and G.B. Fontana. His surviving keyboard works show similarities to those of Frescobaldi and Michelangelo Rossi. Several pieces use subjects found in his ensemble canzonas.

STEPHEN BONTA

Merulo [Merlotti, Merulus], **Claudio** [Claudio da Correggio] (*b* Correggio, 8 April 1533; *d* Parma, 4 May 1604). Italian composer and publisher. He was the most gifted of a group of performer-composers who transformed European keyboard genres from simple pieces based on vocal models to idiomatic virtuoso works during the second half of the 16th century; also a prolific composer of madrigals, masses and motets in the mature Venetian style.

1. Life. 2. Works. 3. Publishing and editing.

1. LIFE. Merulo is the twice-modified surname of the Italian composer and organist born Claudio Merlotti. His name appeared as Claudius Merulus in some publications, but he often called himself Claudio da Correggio or simply Claudio Merulo, using an Italianized form of the Latin surname. His mother, Giovanna Govi, was from Brescia. Little is known of his childhood, but it is assumed that he began his earliest musical training in his native town, possibly with Tuttovale Menon or Girolamo Donato, and that as an adolescent he may have gone to Venice for further study with a master such as Adrian Willaert or Gioseffo Zarlino. On 21 October 1556, at the age of 23, he was appointed organist at Brescia Cathedral, and on 2 July 1557 he was unanimously elected to replace Girolamo Parabosco at the Basilica of S Marco, Venice, triumphing over a list of candidates that included Andrea Gabrieli and Florentio Maschera. At S Marco Merulo soon assumed a highly visible role, first requesting enhanced registration for the organ and later taking on a disproportionately heavy load when the basilica's first organist, Annibale Padovano, deserted the chapel to direct instrumental music at the Austrian Hofkapelle in Graz in 1565. His diligence was rewarded by the procurators, who granted him generous salary increases, improved housing in procuratorial properties, and financial assistance when he was faced with family difficulties. It was during his early Venetian years that Merulo commenced an extremely active composing career that would come to encompass most major musical genres – sacred and secular, vocal and instrumental – and span his entire adult life.

Merulo remained in the Cappella Marciana for 27 years, regularly supplying music for its most prominent feasts and, as the contemporary historian Francesco Sansovino stated, 'embraced by the Venetian patriciate', especially for his compositions of music for private and official celebrations. His madrigals were performed at the celebrations for the wedding of Alessandro Farnese, son of the Duke of Parma, and Princess Maria of Portugal in November 1565, and his music figured prominently in the exuberant musical celebrations of Venice's military victory over the Turkish navy at Lepanto in 1571. In the summer of 1574, he was selected by the Venetian government to set a *Tragedia* on the occasion of the state visit of Henri III of France. The text of the *Tragedia* was published later that year. Merulo was further honoured when, as the only musician from Venice, his madrigals were featured at the nuptial festivities of the Venetian Bianca Cappello and Grand Duke Francesco I of Tuscany in October 1579. Almost from the beginning of his tenure in Venice, Merulo was a frequent visitor at musical gatherings in the palaces of aristocratic families such as the Zantani, Corner, Contarini and Bragadino. He also formed strong bonds with printers and *letterati*, collaborating with Lodovico Dolce and Antonio Molino to provide music for two dramatic presentations, *Marianna* and *Le Troiane*, featuring Molino's acting talents.

If Merulo's musical relationships during the 1560s and 70s were primarily with patrons, musicians, writers and bookmen, he was also involved with organ builders and other craftsmen, especially those associated with the shop of Vincenzo Colombo. Shortly after Merulo joined the Cappella Marciana, Colombo was called to the organ lofts to modify and repair the basilica's instruments. Amicable collaboration seems to have resulted, for a number of Merulo's Venetian friends and in-laws subsequently found employment in the Colombo shop. Merulo also collaborated with a certain Frate Urbano, to demonstrate the value of musical instruments, and acted as an organ consultant for the court at Mantua. His own harpsichord was employed on at least one occasion to accompany singers who were being auditioned by an agent of Duke Alfonso of Ferrara. Merulo maintained a keen interest in instrument technology, and he owned shares in a company which appears to have produced parts used in building organs. During his later career in Parma, he personally constructed a small chamber organ, which is still used for recitals at the music conservatory there.

Merulo's first wife, Barbara Pellizoris (with whom he had a daughter, Antonia), died in mid-1583, and in early 1584 he married a woman named Anzola, the widow of an organ builder from the Friuli. Documents show that he left Venice shortly thereafter to serve at the court of

Duke Ottavio Farnese in Parma. Merulo may also have spent some time at the court of Mantua during this period, but in 1586 he was reconfirmed as Duke Ranuccio Farnese's court musician upon the death of Ottavio. In 1587 he added official duties at the Cathedral of Parma, and in 1591 he was made organist at the church of the Madonna della Steccata, posts he retained until his death. He was married a third time, in 1588, to the Parmesan noblewoman Amabile Banzola, and he lived prosperously for the rest of his life in a large house near the cathedral. Despite his many duties in Parma, he continued to travel to Rome and Venice and to collaborate on a number of printing projects.

Merulo was widely celebrated during and after his life (see illustration). Among the several portraits of him may be one attributed to a fellow Emilian, Annibale Carracci (Museo Capodimonte, Naples); his likeness was also included in a ceiling painting by his friend Palma Giovane for the Scuola di S Maria della Giustizia e S Girolamo in Venice. He was a renowned teacher of composition and performance, attracting students from Germany, Poland and the whole of the Italian peninsula. Among those who became well-known composers were G.B. Mosto, Florentio Maschera, Vincenzo Bonizzi, Ivo de Vento and Francesco Stivori.GIROLAMO DIRUTA, another distinguished student, attempted to codify Merulo's teaching in the synthesis of keyboard playing in his book, *Il transilvano* (Venice, 1593 and 1609). Diruta described Merulo's techniques for acquiring a legato touch, restricting the use of thumb and little finger to the ends of scales, and capitalizing upon the natural distribution of strength within the various fingers of the hand to control tone and accent. In his final years Merulo was celebrated and honoured with many tributes, not least of which was a knighthood conferred by Ranuccio Farnese, who superintended the details of his funeral. Merulo's body lay in state dressed in a Capuchin robe and laurel wreath; he was buried in a prominent spot in Parma Cathedral near the main crossing, marked by a portrait bust in a niche above the tomb. He was eulogized with dozens of poetic tributes, many calling him the greatest keyboard musician of his age.

Claudio Merulo: sketch by an anonymous artist, pencil (I-MOe Codici Campori)

2. WORKS. Merulo wrote successfully in almost every musical genre of his era. His toccatas are of historical and musical significance for their alternating sections of contrasting treatment, in which imitative sections of steady, well-worked counterpoint give way to more static, homophonic sections, across which flow brilliant, rhapsodic, semi-improvisatory melodies and ornaments. His flair for chromatic passages often leads to swerving and unexpected solutions with the assumed crossing of parts. Perhaps most importantly, Merulo's works avoid a repetitious, formulaic treatment of ornaments; even within freer forms, motives or memorable fragments return in a wide variety of guises while various ornaments undergo constant renewal. Everywhere there is a rejection of the sterotypical formulae which mar the works of lesser composers for the keyboard.

Merulo was the most prolific composer of ricercares in the history of the genre. His organ ricercares display moments of the same dazzling virtuosity evident in the toccatas, while those for four-part instrumental ensemble are characterized by clear part-writing and, in a few instances, unusual length. Merulo was perhaps the first to compose in the style later known as 'ricercar sopra quattro soggetti', a style which underwent elaboration in the hands of Ferrarese and Neapolitan composers. His canzonas offer further evidence of his variety of *passaggi* and other ornaments and an unprecedented degree of refinement and invention of figuration. They also serve as an argument for the use of the portative organ in secular settings in the later 16th century. Merulo's unadorned versions of the canzonas are stylistically close to the vocal originals from which they grew and provide a valuable guide to 16th-century methods of ornamentation. Many of his pieces are not adaptations of French tunes at all, however, but original compositions that spring from his fluency in keyboard traditions. Merulo's use of embellishment stems from a certain ebullience of creative force and, rather than pointing out structure, enhances surface features of a piece.

Madrigals occupied Merulo for the whole of his professional life and were his first and his last compositions. His frequent choice of texts by Italy's best poets – Ariosto, Bembo, Petrarch, Tasso, Guarini – was counterbalanced by the works of colleagues, friends and perhaps some of his own verses. The poetry ranges from encomiastic to spiritual to theatrical. The musical style of his five-voice madrigals, which account for more than half of his total output, is often in a serious vein similar to that of his predecessors at S Marco; yet Merulo loosened the dense polyphonic textures, exploring techniques which came to be associated with the lighter, more theatrical madrigal which he helped to pioneer. These techniques included varied and free manipulation of imitative procedures, more sectionalized forms, homophonic declamation, antiphonal effects, greater tonal clarity and clearly punctuated cadences. In his madrigals for seven

and eight voices Merulo explored the dialogue madrigal, and his predilection for a more tonal harmony apparently antedates analogous efforts by his colleague, Andrea Gabrieli, though the two composers appear to have benefitted mutually from one another's influence. Individual madrigals by Merulo found their way into most of the important collections of the later Cinquecento and his most popular works were often reprinted and widely circulated; a number of them appeared with religious contrafact texts.

Merulo's sacred music is centrally positioned in the Venetian polychoral tradition of the High Renaissance, while facing toward the burgeoning concertato style of the Baroque. In his mass cycles, Merulo paid homage to his models, often borrowing liberally in opening and closing sections, while skilfully camouflaging pre-existing material and, throughout a composition's central section, rearranging the order of themes. While maintaining a conservative care for his models, Merulo revealed an intent to recast older materials into a new and original language, especially avoiding the strict contrapuntal procedures of the past. In his masses for divided choirs, he placed emphasis on musical textures and upon the kaleidoscopic designs which result from the interplay of parts. The autonomy of each separate choir is maintained, while choirs are pitted against each other until the identity of each finally merges into a combined flow of sound. Of his motets, most seem to be intended for the Office, of which a quarter are antiphons predominantly for Vespers and another quarter are set to Psalm settings. In keeping with the fashions of his day, he took great care to set texts for clarity and proper declamation, maintaining spacious textures which, nevertheless, are permeated with imitative counterpoint. These he sometimes contrasted with homorhythmic, chordal sections, juxtaposing high timbres with low in varying combinations and giving extended treatments to refrains. Merulo's parody masses remain among the more conservative examples of his compositional style, while his motets explore new techniques of contrast and surprise, breaking new ground and pointing firmly to future developments.

3. Publishing and editing. Merulo's decision to enter the printing business in 1566 was a logical extension of his collaborations with writers and bookmen. Seven years after arriving in Venice, he borrowed money against his future salary at S Marco to open a printshop in joint partnership with Fausto Betanio. The venture initially included two others: Don Pellegrino Stellini, a priest from Ravenna whose participation was short-lived, and Bolognino Zaltieri, a prominent printer and retailer. The shop opened its doors in March 1566, but the partnership soon failed and an arbitration awarded Merulo sole proprietorship; Betanio received equipment and part of the stock. Zaltieri probably continued to function as the shop's main bookseller. The printer's mark of the Merulo shop is one of the more distinctive among Venetian printers' symbols, featuring Proserpina's golden bough with the motto 'Simili frondescet virga metallo' ('a bough of the same metal puts forth leaves') a paraphrase from the *Aeneid* (vi.144). Other classical elements, a tragedian's mask and a cameo portrait of Virgil, are included in the design.

In a five-year period, from 1566 to 1571, Merulo's shop issued 35 new volumes and reprints, the bulk of which were madrigals and secular songs. Merulo's ambitions for the printshop clearly envisioned a burgeoning market for keyboard music, however, for in his *Ricercari d'intavolatura d'organo, libro primo* (1567) he outlined the titles and contents of 12 prospective volumes of intabulated organ works, the ricercares being the first of the series. Proof of the seriousness of Merulo's intentions is provided by the privilege which the Venetian state granted to his scheme in early March 1568. The *Messe d'intavolatura d'organo, libro quarto* issued later that year, closely followed the plan. Unfortunately, the project, which would have included works by the major organists in Italy from 1523 to 1598, was eventually turned over to other shops when Merulo left the trade. The seventh book of the plan (toccatas) was released by Verovio (1598 and 1604), and books eight (canzonas) and 12 (ricercares of Andrea Gabrieli) were published by Gardano. Some of the promised works of lesser ranking or non-Venetian organists were eventually produced by Vincenti.

Exactly when and to whom Merulo sold his printshop is unknown, but he had already attempted to sell it by mid-1569. A book of four-voice madrigals by Aurelio Roccia, prepared in 1571, bears the words 'per Claudio Merulo da Correggio . . . corretti', but a small notice on the back page reads, 'in Venetia, Presso Giorgio Angelieri', confirming that the shop had changed hands, even though Merulo continued to edit and proofread some prints.

WORKS

Editions: *Claudii Meruli: Opera omnia*, ed. J. Bastian, CMM, li (1970–) [vols i-vi entitled *Musica sacra*] [B i–ix]

REBECCA EDWARDS

Merulo, Giacinto (*b* Parma, ? 13 Jan 1595; *d* Parma, 23 Feb 1650). Italian composer and organist, grandnephew and godson of CLAUDIO MERULO, who mentioned him in his testament of 1598. Giacinto was probably reared near Parma Cathedral in a large house on Borgo della Morte, which was divided between the Merulo family and the Confraternita della Morte. His name was associated with six posthumous publications of Claudio's works; the dedication of Claudio's third book of *Ricercari da cantare* (1608) has been thought to suggest that Giacinto was then ten years old, an interpretation difficult to reconcile with the baptismal record dated 1595 reported by Pelicelli. In either case, Giacinto would hardly have been more than a child; the addition of his name to his great-uncle's posthumously published works was most likely intended to attest the authenticity of the pieces. Giacinto succeeded Vincenzo Bonizzi as organist of Parma Cathedral on 1 July 1630 and served in that position until his death. His only publication, the *Madrigali a quattro voce in stile moderno, libro primo* (Venice, 1623), survives in an incomplete form.

Merulus, Alessandro [Alexander]. *See* MERLO, ALESSANDRO.

Merville, Nicolas de (*b* *c*1600; *d* after 1643). French lutenist and composer. He appears in documents from 1625 to 1644 as master lutenist in Paris and *musicien ordinaire du roi*. In 1632–3 he gave lessons to an English diplomat in Paris, Bullen Reymes (1613–72), who also took lessons from René Mesangeau, and whose manuscript lute collection (*F-Pcnrs*) is one of the most important sources for French lute music of that decade. In 1636 Mersenne mentioned Merville as one of the principal living lutenists.

Merville's works (in *CH-Bu*, *D-Bsb*, *DO*, *Kdma*, *Kl*, *ROu*, *F-Pcnrs*, *Pn*, *GB-En*, *Ob*, *WMl*) represent the period of new tunings (1620s–40s). It is regrettable that in the sources closest to him (i.e. Reymes's manuscript and a closely related source in *GB-En*) most pieces are unattributed, particularly some fine and original semi-measured preludes.

DAVID LEDBETTER

Merzhanov, Viktor (*b* Tambov, 15 Aug 1919). Russian pianist and teacher. He studied at the Moscow Conservatory from 1936 to 1941 with Feinberg (piano) and Goedike (organ), after which he served in the Soviet army until 1945. The following year he was awarded a joint first prize, with Sviatoslav Richter, in the All-Union Competition of Interpretative Musicians in Moscow. Merzhanov joined the staff of the Moscow Conservatory in 1947 and since 1964 has been a professor there, though he was also a visiting professor to the Warsaw Conservatory from 1973 to 1978. His career as a recitalist has extended over 50 years. Merzhanov is a noted exponent of Chopin, Grieg, Skryabin and Rachmaninoff, his style less quixotic than that of his teacher, Feinberg. His playing is nonetheless deeply poetic and gives priority to variety of tonal texture and absolute clarity in the delineation of phrasing. Among his several discs, accounts of Schubert's 'Wanderer' Fantasy, the Chopin Preludes and Brahms's Variations on a Theme of Paganini are widely admired.

JAMES METHUEN-CAMPBELL

Mesa, Sergio (*b* Medellín, 14 Nov 1943). Colombian composer. He first studied theology, mathematics and philosophy, initially in Medellín and subsequently in New York, at Fordham University, in Frankfurt (1969–73) and Heidelberg (1974–5). He studied piano with Harold Martina (1956–7) and, more recently, composition with Luis Torres Zuleta in Bogotá (1985–96). Respected for his solid humanistic foundation, he is also well known as a pianist and organist. He took up a post teaching music theory and composition at the Javeriana University in Bogotá in 1984 and lectures throughout Colombia.

Mesa has rapidly become one of Colombia's most promising composers. Acknowledging his indebtedness to the Germanic school, he insists that his music is not modelled on other schools or composers. His *Trazos* for orchestra (1991), commissioned by the Medellín PO, is based on tightly constructed and articulated rhythmic cells that undergo organic development; it was included in a three-CD set commemorating the quincentenary of Columbus's voyage to America. His *Medea* was performed in Bogotá in 1991 under the auspices of UNESCO by the progressive theatrical group Mapamundi, the lead role being sung by the Colombian contralto Marta Senn. Mesa was invited to Budapest in 1996, where his *Diferencias* for trumpet, piano and percussion as well as several songs were performed at the annual Mini Festival of 20th-century composers sponsored by the Hungarian Music Society.

SUSANA FRIEDMANN

Mesangeau [Mazagau, Merengeau, Mesangio, Meschanson, Mesengeot, Messangior, Mezanio, Mezengau etc.], **René** (*b* late 16th century; *d* Paris, ?early Jan 1638). French lutenist and composer, possibly of Italian origin. His presence in Germany is recorded for the first time in Besard's *Novus partus* (RISM 1617[26]). In 1619, when he had settled in France for good, he married Marguerite, daughter of the famous spinet maker Jean Jacquet, and he was described in his marriage contract as an equerry at the French court. Two years later he became *musicien ordinaire du roi*, but nothing is known about his activities at court. He enjoyed an enviable social position as a 'bourgeois de Paris', and was a popular master to whom the publisher Pierre Ballard gave considerable space in his two anthologies of tablatures issued in 1631 and 1638. A visit to England in late 1631 is documented by the correspondence and diary of his English pupil Bullen Reymes. His death inspired a famous *tombeau* by Ennemond Gaultier, and an anonymous *Tombeau de Mesangeau* (*F-Pn*, version for baryton in *D-Kl*). Only two of his seven children outlived him.

A much admired lutenist, Mesangeau won praise from both Mersenne and the author of Mary Burwell's lute tutor for the excellence of his compositions. His earliest pieces (which originate in Bavarian sources) are written in *vieil ton*, while his later pieces employ the *accords nouveaux*, which appeared about 1620–25 and of which he was one of the principal advocates. His work, comprising about 50 pieces, played a decisive part in determining the style and language adopted by lute music after 1630.

CLAUDE CHAUVEL

Mesens, Edouard Léon Théodore (*b* Brussels, 27 Nov 1903; *d* Brussels, 13 May 1971). Belgian composer, poet and collagist. He studied the piano and violin from 1909, and attended the Ecole de Musique de Saint-Josse-ten-Noode from 1917, receiving the *premier prix* for solfège in 1919. In the same year he enrolled at the Brussels Conservatoire, where his talent was soon recognized. In 1920 an article about him by Herman de Man was published, and the following year he met Satie, who was visiting Brussels for a series of lectures and concerts. Mesens became one of Satie's protégés, and accepted an invitation to Paris. There, he met Dadaists, including Philippe Soupault, Man Ray, Francis Picabia and Tristan Tzara, who delayed his involvement with the Surrealist movement. From 1926 Mesens felt unable to reconcile his Surrealist aspirations with musical composition. However, he edited and contributed to various reviews, including *Marie* and *Oesophage*, and managed the London Gallery between 1938 and 1952. He was co-organizer of the 1936 London International Surrealist Exhibition.

Although he claimed to have abandoned music in the 1920s, his subsequent musical activities, particularly during the war, suggest otherwise. While his 1920 setting of poetry by Rabindranath Tagore consists of static vocal writing and pianistic gestures reminiscent of Debussy's *Chansons de Bilitis*, his works from 1921 betray the influence of Satie and Les Six. In *Garage* (1921) he gives Soupault's Dada-inspired poem a ragtime quality; it is unambiguously tonal with prominent added 6ths and ostinato patterns. *Défence de pleurer* (1922), subtitled 'toujours dans l'esprit d'Erik Satie', is contrapuntal and mimics Satie's use of the tritone in *Vexations* (1893). The collage score *La partition complète complétée* (1946) combines traditional notation with pictorial symbols and can be compared to graphic scores by Sylvano Bussotti, John Cage and Barry Guy.

BARBARA KELLY and SILVANO LEVY

Meṣiltayim (Heb.). Ancient Jewish cymbals. *See* BIBLICAL INSTRUMENTS, §3(vi).

Mesomedes (*b* Crete; *fl* early 2nd century CE). Greek kitharode and lyric poet. He was a freedman and favourite of Emperor Hadrian, who made him his chief musician; he also served under Hadrian's successor, Antoninus Pius. It was probably Mesomedes whom the emperor Caracalla honoured with a cenotaph a century later and not a later poet who appropriated a famous name of the past.

Only 15 of his poems have come down to us, four of them with musical notation; information about the metre and musical settings of two other poems has also been preserved. Together they provide insight into the metrics and rhythmics of lyric poetry during the imperial period; until the discovery of the Epitaph of Seikilos (Pöhlmann, no.18) in the late 19th century, the poems with notation were the only authentic evidence of late classical vocal music.

Two poems from the *Palatine Anthology* (xiv.63; xvi.323) have been attributed to Mesomedes since antiquity. The first, *The Sphinx* (Heitsch, 1961, no.12), employs a special form of the anapestic dimeter (⏑ ⏑ – ⏑ ⏑ ⏑ – | ⏑ ⏑ – ⏑ –) and its catalectic form, the paroemiac. West (1982, p.172), following Aphthonius (H. Keil, ed.: *Grammatici latini*, vi, Leipzig, 1874/*R*, p.75.23), has described the metre used by Mesomedes as *apokroton* ('sonorous'). The second poem, *Glass* (Heitsch, 1961, no.13), employs trochaic dimeters with and without catalexis.

In 1581 Vicenzo Galilei, from a manuscript provided by Girolamo Mei, published three hymns with Greek musical notation which he attributed to one Dionysius (Pöhlmann, nos.1–5). Quotations from these hymns in secondary sources (Synesius; Ioannes Lydus; the *Suda*), and the use of the rare *apokrota*, make an ascription to Mesomedes possible. Recent scholarship has arranged these materials into three *proöimia* (Pöhlmann, no.1, *To the Muse*; no.2, *To Calliope*; no.3, *To Apollo*) and two hymns in *apokrota* (Pöhlmann, no.4, *To Helios*; no.5, *To Nemesis*). Where the setting has come down to us, it is the Lydian *tonos* that is used. *To the Muse* and *To Calliope* contain a transition to the chromatic Hypolydian with C♯. *To Apollo* consists of four spondaic catalectic dimeters followed by two hexameters, but except for a solitary note mark (C = *a*) the setting has been lost. *To Helios* is preceded by a metric and rhythmic *skolion*,

which makes no sense in this context, since it describes choriambic dimeters in twelve-time; a poem by Mesomedes in this verse metre has therefore been lost. *To Helios* and *To Nemesis* employ *apokrota*. In so far as they are catalectic, the omitted short element is usually replaced by a lengthening sign; in two cases (*To Helios*, lines 23 and 25) there is a three-note melisma at the catalexis. Line 25 repeats the melody of line 23 exactly, so that the hymn ends with a kind of refrain. All the poems with musical notation show imitation of the verbal accentuation in the melody, a feature that first appears in the Delphic hymns of 128 BCE (Pöhlmann, nos.19–20). In 1903 Horna discovered eight poems without notation (Heitsch, 1961, nos.4–11) in a 13th-century manuscript (*I-Rvat* Ottob.gr.59; reproduced in Merkelbach and van Thiel, 25–8) after Ariphron's hymn to Hygieia (Wilamowitz-Moellendorff, 494–5) dating from the 4th century BCE. These poems have been ascribed to Mesomedes on stylistic and metrical grounds.

Characteristic of Mesomedes are the arbitrary nature of his subject matter, evident even from the titles of the poems, his wish to vocalize his poems in the Dorian dialect (except for Pöhlmann, no.1), his preference for *apokrota*, and his confining himself to stichic lyric poetry. In the settings it is noticeable that he restricts himself to diatonics and the Lydian or Hypolydian *tonoi*. The rhythmical and musical *skolia* in two of the three sources suggest that a collection of Mesomedes' works with all the poems set to music existed in later classical times. A comparison of the style and metre of Mesomedes and Synesius shows the former's significance for the late literary hymn (Wilamowitz-Moellendorff, 606). Synesius prefigured the first evidence of Greek Christian community singing (Pöhlmann, no.34 and p.108).

EGERT PÖHLMANN

Mesopotamia. The land between the Rivers Tigris and Euphrates that was occupied by a number of different peoples and empires from the 5th millennium BCE until late antiquity; it now forms part of modern Iraq and Syria. The musical culture of these ancient peoples, in particular the Sumerians, Akkadians, Babylonians and Assyrians, is well attested from the 3rd millennium BCE in archaeological finds, iconographical representations and in the texts inscribed on hundreds of cuneiform tablets. Such evidence provides information on the various instruments used, the musicians who played them, and details of performing practice and music theory; the texts of poems and hymns together with directions for their musical performance are also preserved on many tablets.

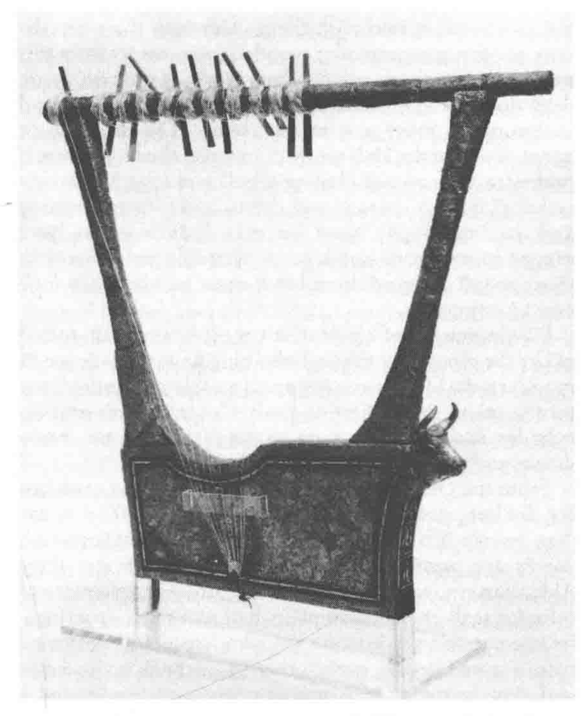
1. Historical background. 2. Pre- and Proto-literate periods. 3. Early Dynastic and Old Akkadian periods. 4. Neo-Sumerian period. 5. Old Babylonian period. 6. Middle and Late Babylonian and Assyrian periods. 7. Performances and performers. 8. Theory and practice: (i) Sumerian composition types (ii) Akkadian tuning systems (iii) Other aspects.

1. Historical background. The Sumerians settled Mesopotamia by about 4000 BCE and gradually established a number of independent city states, of which the most important were Uruk (Warka, Iraq), Nippur and Ur, whose Royal Cemetery (*c*2500) has produced many significant archaeological finds. The first signs of literacy appeared in about 3000 BCE and by 2500 a system of cuneiform writing had developed, which was subsequently used to transcribe the languages of later Mesopotamian peoples. In about 2350 Sumer was conquered by the Akkadians, a Semitic people led by Sargon I (*c*2350–2295), who united the city states into a single empire; from this time onwards written records in cuneiform script were preserved in both the Sumerian and Akkadian languages. With the decline of the Akkadian empire, Sumerian civilization and its language revived during the period 2150–1800 (the Neo-Sumerian period) until it was again conquered by other settlers, such as the Elamites (*see* Iran, §I, 2(i)) and Amorites. Among the important city states of the Amorites was Mari (modern Tell Hariri) on the Euphrates, which, between about 1900 and 1700, built up a library of thousands of cuneiform tablets in the Sumerian and Akkadian languages. The Amorites also expanded the city of Babylon, making it the most powerful centre in Mesopotamia, especially from the reign of Hammurabi (1792–1750).

In about 1200 BCE the Assyrians, a people of the upper Tigris, began to increase their territory and power, and by 1100 BCE had established their own empire in Mesopotamia, conquering even Babylon itself. Although

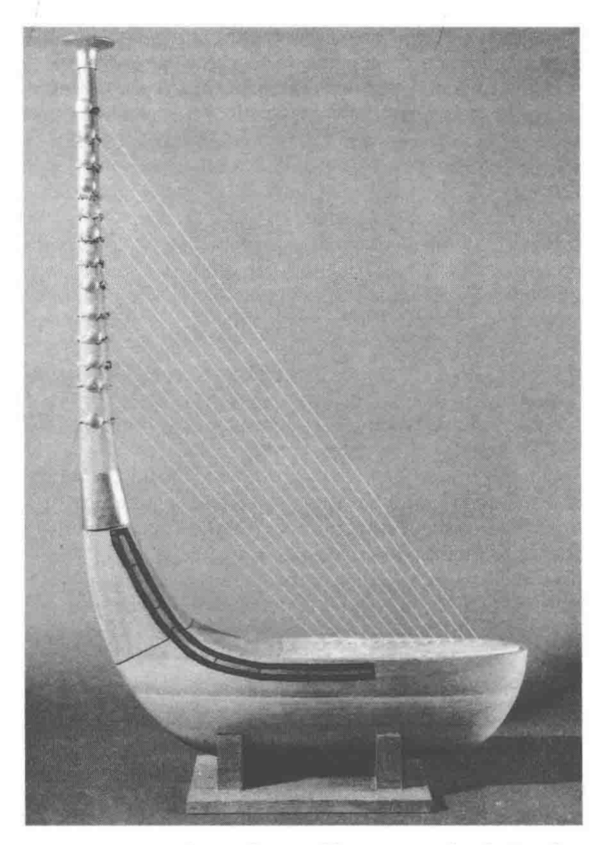
1. Early pictograms representing round harps, c3000 BCE *(Uruk IV period)*

Assyrian civilization went through a period of decline after about 1000, it was revived from the 9th century BCE during the reigns of Ashurnasirpal II (883–859) and his successors, who established their capital at Nineveh. Nineveh, however, was sacked by the Babylonians and Medes in 612 BCE under the leadership of Nebuchadnezzar II (604–562), during whose reign Babylon once again became the dominant city in Mesopotamia until it was conquered by the Persians in 539 BCE. When Babylon and the Persian Empire fell to Alexander the Great in 331, Seleucus, one of Alexander's generals, became satrap of Babylonia (321–281). His successors, the Seleucids, ruled over an increasingly Hellenized kingdom until the last king died in 64 BCE.



Mesopotamian history may be divided into periods with the following approximate dates (all BCE):

3300–3000	Pre-literate (Uruk VI–IV) period.
3000–2900	Proto-literate (Jemdet Nasr) period.
2900–2700	Early Dynastic I period.
2700–2350	Early Dynastic II–III (Ebla/Fara) period.
2350–2150	Old Akkadian period.
2150–1800	Neo-Sumerian (Ur III; Isin/Larsa) period.
1800–1600	Old Babylonian and Old Assyrian periods.
1600–1150	Middle Babylonian and Middle Assyrian periods.
1150–500	Neo-Babylonian and Neo-Assyrian periods.
500–65	Late Babylonian-Seleucid period.



2. PRE- AND PROTO-LITERATE PERIODS. The earliest evidence of musical performance in Mesopotamia dates from the 5th millennium BCE, to which period belong a complete bone wind instrument and two fragments of the same type found at Tepe Gawra in northern Iraq. From the 4th millennium dates a stone from Megiddo (modern Tel Megiddo, Israel; *c*3700–3000 BCE) on which are carved a musician and a string instrument; the latter has been interpreted as resembling either a harp with a pillar (see Kilmer and Lawergren, *MGG2*) or an asymmetrical nine-string box lyre with one arm 'strongly curved' (see Norborg, 1995, pp.30–31).

An impression from a carved stone cylinder seal found at Chogha Mish in south-west Iran (*c*3200 BCE) depicts a feasting scene with a singer and musicians playing a round harp and a hand-beaten drum; the two horn-shaped objects on the seal are more likely to be food preparation tools than double *shofar*-like horns (*see* IRAN, §I, fig.2*a*). To the same period belongs a fragment of a clay flute from Uruk. The earliest clay tablets with writing use a round harp as a pictogram (fig.1). The rich evidence of instruments and texts from the subsequent Early Dynastic period indicates that a variety of string, wind and percussion ensembles were already active in the Proto-literate period.

3. EARLY DYNASTIC AND OLD AKKADIAN PERIODS. By the time of the first Sumerian dynasties in the early 3rd millennium BCE, music clearly played an important role in life at the royal palaces, and instrument makers had mastered the art of costly ornamentation. The most spectacular evidence from this period comes from the Royal Cemetery at Ur (*c*2600 BCE) where the remains of eight symmetrical and asymmetrical bull lyres (fig.2), one round-bottomed (or 'boat') lyre and two round harps (fig.3) have been excavated, together with the bodies of

2. Reconstruction of a wooden Sumerian bull lyre (overlaid with silver) from the Royal Cemetery at Ur, c2500 BCE (Bitish Museum, London)

3. Reconstruction of a wooden round harp excavated at the Royal Cemetery at Ur, c2500 BCE (British Museum, London)

the musicians buried with them. Although these are the only surviving examples of wooden instruments from this period, the existence of other types is known from depictions on cylinder seals, shell and stone inlays, and sculptures in relief and in the round. The inlaid front panel of one of the Ur lyres, for example, shows an animal orchestra with an ass playing a bull lyre together with a jackal playing a sistrum and drum, and a bear clapping and dancing (fig.4). Such evidence indicates that lyres ranged in size from small, easily portable instruments to those as tall as an adult and that most had between four and 13 strings.

Five fragments of a pair of silver pipes were also found at Ur; the pipes have finger-holes but show no evidence of mouth reeds. Idiophones (clappers and sistra) are depicted on the inlaid decoration of Early Dynastic lyres and on cylinder seals; drawings on pottery show small frame drums and women clapping their hands.

From the Old Akkadian period dates the first evidence for the long-necked lute (Sumerian GIŠ.GÙ.DÉ = Akkadian *inu*; see Eichmann; in the following account Sumerian words are represented by upper case letters and their Akkadian equivalents by italics). According to two carved cylinder seals these instruments had two or three strings. In one carving the lutenist sits on a stool and performs before seated deities; in the other he sits back on his heels and plays to two deities (one standing, one seated) and a scorpion-man. An inscription on the latter cylinder seal in the Sumerian language records that it belonged to a male lutenist named 'Ur-ur the musician' (LÚ.NAR).

The earliest lexical texts (lists of Sumerian and Akkadian words and phrases) of the second and third Early Dynasties contain many Sumerian terms for musical instruments and their parts, for a great variety of vocal and instrumental performers and other types of entertainer (cult and lay), and for musical compositions and their sections; also evident is a specialized technical vocabulary for tuning procedures and performing techniques (vocal and instrumental). While there is no single word for 'music' in either language, common words associated with music-making are NAM.NAR = *nārūtu* ('musicianship'), GÙ.DÉ = *nagû* ('to exult', 'sing joyously'), I.LU = *nigûtu* ('merry-making'), ŠÌR = *zamāru* ('to sing', 'play'; used for voice, strings and drums) and ŠU.TAG or TUKU = *mahāṣu* ('to hit', 'beat', 'tap'; referring to percussion and reed pipes). Dozens of Sumerian and Akkadian terms designate various types of song, lament and hymn.

The name of one composer-musician from the Old Akkadian period has come down to us: Enheduanna (*fl* *c*2300 BCE), Sargon I's daughter, who composed sophisticated and complex hymns in her role as high priestess in the temple of the Sumerian moon god NANNA (Akkadian Sîn) at Ur and as sponsor of the cult of the goddess INANNA (Ishtar). The texts of several of Enheduanna's hymns, including 'The Exaltation of Inanna', are known from cuneiform tablets (see Hallo and van Dijk, 1968).

4. NEO-SUMERIAN PERIOD. In about 2120 BCE Gudea, ruler of the southern city of Lagash (modern El-Hiba), named a year of his reign in honour of the construction of a BALAG = *balaggu*, an instrument that appears to have functioned as both a harp and a drum (see below, §5). This instrument's personal name, 'Great Dragon of the Land', was also the title of one of Gudea's temple musicians. Another BALAG commissioned by Gudea was

4. Detail of inlay work on the front panel of another bull lyre from the Ur graves (University Museum, Philadelpia)

named 'Lady as Exalted as Heaven'. Large stone *stelae* of this period show giant drums lying on their sides, with heads as tall as a man. Played by two men in alternating strokes with their hands or with drumsticks, these drums accompanied the dedication ceremonies of royal buildings and other rituals; singers and cymbal players also took part, together with men and women who clapped their hands.

Many Sumerian technical terms known from the lexical lists are set in context by a self-laudatory hymn composed by Shulgi (*c*2070 BCE), the second king of the third dynasty of Ur (Shulgi Hymn B; see Krispijn, 1990). The precise meaning of these terms, however, remains unclear. The king boasted that he understood how to play the novel instrument, the lute, the moment it was placed in his hands. On the harp and the lyre he was adept at 'tuning up' (ZI.ZI) and 'tuning down' (ŠÚ.ŠÚ), and he knew how to 'set' the mode (GÁ.GÁ) for performing a particular piece of music. He had mastered the tuning procedures of 'tightening' (GÍD.I), 'loosening' (TU.LU) and 'perfecting' or 'testing' (GE.EN) the intervals, as well as the performing techniques of 'fingertip' (AGA.ŠU.SI) and 'fingerstring' (SA.ŠU.SI). On the lute he knew how to 'adjust the frets' (SI.AK) and to manipulate the 'knots' (KAM.MA) that loosened and tightened the strings. Shulgi also claimed the ability to conduct a musical ensemble with a reed baton.

By the end of the Neo-Sumerian period and the beginning of the 19th century BCE, the foundations were laid for the full blossoming of Mesopotamian music, evidence for which may be seen in the considerable written documentation concerning different scale types and 'Pythagorean' tuning procedures (see below, §8), together with the development of a standardized musical vocabulary in the Akkadian language.

5. OLD BABYLONIAN PERIOD. While the earliest Sumerian and Akkadian musicians appear to have transmitted their musical knowledge orally, from the early 19th century BCE scholars in the Old Babylonian Tablet House (É.DUB.BA = *edubbû*) began to record it in writing and taught their students about instruments and their parts, musical genres and their sections, and performing techniques and procedures, along with mathematics, 'classical' Sumerian, accounting and other subjects.

This period has yielded the largest number of Sumerian (and bilingual Sumerian-Akkadian) literary texts (epics, myths and other poetry), hymns (divine and royal) and solo or choral laments sung to instrumental accompaniment. Nearly 100 different song types or genres are mentioned in lexical and literary texts. Sumerian hymn 'rubrics' or section labels serve to divide pieces, indicate modal changes and signal antiphons, cadences and doxologies. Proverbs often refer to 'good' and 'bad' singing and to vocal techniques such as improvisation and tremolo. One text describes a men's chorus that called upon the goddess GESHTINANNA to set the mode and rhythm for their singing; in another text she is invoked as the muse of expert singing 'like one' as opposed to 'teamwork' singing; these terms may be interpreted as indicating unison and part singing respectively (see below, §8(i)). A Sumerian hymn text records a syllabic 'descant' to be sung simultaneously with the words of the main song.

Royal correspondence from the city of Mari on the Euphrates reveals that musicians travelled with the army, that captives were trained to sing in a variety of musical styles and that orders were issued concerning the manufacture and delivery of musical instruments. A variety of musical performances are depicted on clay plaques: lute, harp and lyre players alone or accompanying other instrumentalists (e.g. frame drum players, pipers etc.), as well as dancers and acrobat-musicians (human and simian). Many plaques also show explicitly sexual scenes.

The oldest music theory texts using the standard Akkadian corpus of terms (probably based on earlier Sumerian practice) come from the southern Babylonian cities of Nippur and Ur. Verbs of playing include *ragāmu* ('to make noise'), *lapātu* ('to touch' or 'play'), *šutēšuru* ('to set [the strings] in order') and *tarāku* ('to beat'). There are hundreds of Sumerian and Akkadian terms for string, wind and percussion instruments (membranophones as well as idiophones), although some cannot be identified beyond their classification according to general type or the materials from which they were made.

ZÀ.MÍ = *sammû* was probably the lyre, the model instrument of music theory texts (fig.5). The instrument called ÁB.HI.NUN ('abundant cow') in a Sumerian hymn was most likely the bull lyre; prominent in earlier periods, it disappeared around the turn of the 2nd millennium. A text from Ugarit (now Ras Shamra, Syria) of the Middle Babylonian period uses the Ugaritic term *rimt* for a lyre, perhaps related to the Akkadian *rīmtu* ('wild cow'). A text from Mari (see Durand, 1989) refers to two ibex heads sculpted on the yoke or crossbar of a *sammû*; these lyres had wooden frames, sometimes with a skin stretched over the open side of the soundbox, and were richly decorated with lapis lazuli, shell inlay, silver, gold and other precious metals. The strings were adjusted by means of tuning sticks or rods.

5. Assyrian musicians playing double pipes (partially shown at far left), angular harp and asymmetrical lyre; they face royal officials holding their staffs of office; stone relief from the palace of Ashurbanipal at Nineveh, 7th century BCE *(British Museum, London)*

The round harp also disappeared around the turn of the 2nd millennium BCE and was replaced by the angular harp (fig.5). The BALAG = *balaggu*, which served as both harp and drum, had a broad soundbox serving as a resonator. The *kippatu* ('hoop') may refer to a clasp or hoop that held the drumhead in place (for a discussion of the construction of the BALAG, see Arndt-Jeamart, 1992).

Wind instruments were made of reed, wood, bone, metal and animal horn. Common terms are GI.GÍD = *embūbu* and *GI.DI* = *malīlu* or *šulpu* (both reed pipes) and SI.AM.MA ('bull horn'). The reed pipes made the piping sound *halīlu*, and the bull horn sounded *gum-ga*. Double pipes are known from the 2nd millennium onwards; a term for them may be *ṣinnatu*, an instrument whose voice was said to 'surge' (*šapû*; fig.5).

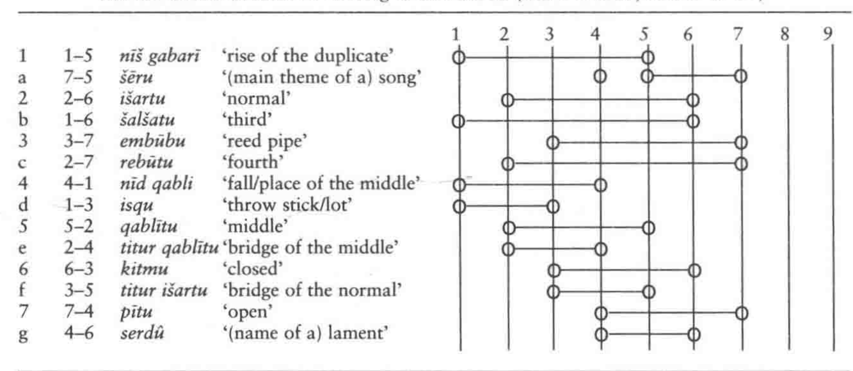
Wood and metal drums with skin heads include the ÙB = *uppu*, the frame drum (round and rectangular) and the BALAG = *balaggu*. Common words for drums are Á.LÁ = *alû*, A.DA.AB = *adapu*, TIGI = *tigû* and ŠÈM = *halhallatu*. The big drums were said to sound like thunder while the small ones issued the soothing (?brushing) sound A.MÚŠ = *ahulap*. Some drums were decorated with rings or ring-jangles (*kamkammatu*). The copper or bronze LILIS = *lilissu* and the MEZE = *manzû* may have had metal heads in as much as the term KUŠ = *mašku* ('skin' or 'hide') is never used to describe them. If so, they may be classified as idiophones or gong drums (see below, §6).

Although several representations exist of idiophones – sistra, cymbals, clay rattles, clappers and bells made of several different materials – knowledge of the Sumerian and Akkadian terms for them is limited. Literary texts from this period identify sickle shaped clappers called URUDU.GUR$_{10}$.TUR ('small copper sickles'); the URUDU.KIN.TUR ('copper frog instrument') may have made a croaking sound. GIŠ.PA.PA.É.PA.NA = *tāpalu* ('pair of wood sticks') probably refers to a crotalum-like instrument; other clappers are called *kiskilātu*.

6. MIDDLE AND LATE BABYLONIAN AND ASSYRIAN PERIODS. An Akkadian text from the northern city of Ashur (now Qal'at Shirqāṭ, Iraq) catalogues at least 360 Sumerian and Akkadian song titles from 31 or more genres ranging from sacred hymns to love songs. This list appears to record the memorized repertory of an Akkadian *zammāru* (celebratory singer). The *zammāru* usually rehearsed each 'set' of songs in groups of five or six. At the end of each set he invoked Ea (Sumerian ENKI), god of water and of wisdom, skill and music, exclaiming 'May Ea command thy life!' (*Ea balāṭka liqbi*) by way of thanking the god for his accomplishment. The GALA = *kalû* (lamentation singer) and his apprentice, the GALA.TUR = *kalaturru*, collected and rehearsed musical compositions in the temples.

The Babylonian musical system spread as far as the Mediterranean coast; tablets found at Ugarit contain hymns in Hurrian (an ethno-linguistic group different from Sumerian and Akkadian). Song repertory collectors hired scribes to record the hymns together with their performance or tuning system instructions, which employed the standard Akkadian musical terminology. Late Babylonian hymn texts use 'shorthand' instructions that seem to have developed directly from the older Sumerian-Akkadian vocabulary. These abbreviated terms, inserted into the texts or placed in the margins of the hymns, are not yet understood by modern scholars.

The 1st millennium BCE saw the introduction of a psaltery-like instrument, whose name is unknown, of the ivory oliphant, and panpipes with more than two pipes. Conical and cylindrical drums appear for the first time on Neo-Assyrian reliefs (see Rashid, 1971, and 1984), and a terracotta sculpture may depict a unique example of a friction drum, played by a monkey (see Rimmer, 1969). Metal gong drums (*lilissu* and *manzû*) with more than one pitch hammered into their metal drumheads may have been introduced towards the middle of the 1st millennium, or at least by the Late Babylonian-Seleucid period; the instruments are described as having 'eyes', possibly referring to tuning or pitch spots (see Kilmer, 1995, p.466).



7. PERFORMANCES AND PERFORMERS. Music-making in ancient Mesopotamian cultures took place in a wide range of formal and informal settings. Unaccompanied singing was heard in the nursery, in shepherds' and farmers' animal enclosures, fields and threshing floors, and probably in every workplace. Shepherds played reed pipes, and lutenists performed in taverns and in explicitly sexual settings together with other instrumentalists and dancers. Metal and ceramic bells and jangles were attached to priests' ceremonial clothes as well as to horse trappings (see Calmeyer, 1969). Singing and dancing took place at weddings and there was lamentation music at funerals.

Music was no doubt heard frequently in city quarters where instrument makers, repairers and performers resided. At religious processions and cult festivals musicians, magicians, jugglers, and costumed and transvestite performers provided colourful, often carnivalesque street entertainment. Musicians were also attached to military camps. Traditional compositions were learnt and practised in the schoolrooms of the Old Babylonian Tablet House; in later periods apprentices were trained in the private homes of musicians and temple singers.

Royalty and their retainers were entertained in the palaces by dancers and small ensembles of string, wind and percussion instruments. Ceremonies for the dedication of important buildings required the performance of music and religious rites. Epics, myths and other kinds of poetry were sung to instrumental accompaniment; some compositions probably had both solo and choral parts. Love poetry associated with the cult of the Sumerian love goddess INANNA (Ishtar) and her consort DUMUZI (Tammuz) was sung responsorially. The great temples had elaborate musical facilities, with special halls where large orchestras of harps, lyres, wind and percussion instruments performed sacred music. The location of certain instruments was sometimes prescribed, in relation either to other instruments or to sacrificial animals and cult objects. Musicians such as the GALA = *kalû* (lamentation priest-singers; see above, §6) collected and rehearsed musical compositions. Some male cult musicians were often depicted with effeminate bodies and non-masculine coiffures, suggesting that they may have been castratos.

8. THEORY AND PRACTICE. Mesopotamian music theory and practice were passed down from the Early Sumerian dynasties in an uninterrupted stream of tradition. Many technical terms for stringing, tuning and playing string instruments were collected in Sumerian lexical lists beginning in the second half of the 3rd millennium, and texts devoted exclusively to music appeared after 2000

TABLE 1: Interval names according to CBS 10996 (col. 1 obverse, lines 1' to 14')

1	1–5	*nīš gabarî*	'rise of the duplicate'
a	7–5	*šēru*	'(main theme of a) song'
2	2–6	*išartu*	'normal'
b	1–6	*šalšatu*	'third'
3	3–7	*embūbu*	'reed pipe'
c	2–7	*rebūtu*	'fourth'
4	4–1	*nīd qabli*	'fall/place of the middle'
d	1–3	*isqu*	'throw stick/lot'
5	5–2	*qablītu*	'middle'
e	2–4	*titur qablītu*	'bridge of the middle'
6	6–3	*kitmu*	'closed'
f	3–5	*titur išartu*	'bridge of the normal'
7	7–4	*pītu*	'open'
g	4–6	*serdû*	'(name of a) lament'

TABLE 2

išartu (Dorian)	'normal'	E F G A B C D
kitmu (Hypodorian)	'closed'	E F♯ G A B C D
embūbu (Phrygian)	'reed pipe'	E F♯ G A B C♯ D
pūtu (Hypophrygian)	'open'	E F♯ G♯ A B C♯ D
nīd qabli (Lydian)	'fall of the middle'	E F♯ G♯ A B C♯ D♯
nīš gabarî (Hypolydian)	'rise of the duplicate'	E F♯ G♯ A♯ B C♯ D♯
qablītu (Mixolydian)	'middle'	E♯ F♯ G♯ A♯ B C♯ D♯

BCE. The technical vocabulary specifically relating to heptatonic diatonic scales is recorded in Akkadian (and bilingual Sumerian-Akkadian) lexical lists, but was probably based on earlier unrecorded Sumerian traditions, as many of the later Akkadian terms have Sumerian logographic equivalents. Nevertheless, it is possible to isolate a Sumerian musical system that equated composition type with prescribed performing style and used special rubrics also related to detailed aspects of performing practice (see Wilcke, 1975).

(i) Sumerian composition types. Sumerian music may be divided into three general composition types, each of which probably had its own set of melodic and rhythmic patterns (see Hartmann, 1960) and used special rubrics. (1) Hymns derived their nomenclature from the names of specific percussion instruments: ADAB; BALAG; TIGI; and ÉR.ŠÈM.MA. (2) Five types of song are distinguished by names beginning with the word ŠÌR ('song'), for example, ŠÌR.NAM.UR.SAG.GÁ ('heroism song'). (3) There are also three composition types of uncertain meaning: BAL.BAL.E (perhaps indicating multi-modalism within a single song); Ù.LU.LU.MA.MA (perhaps a cowherd's song); and Ù.LÍL.LÁ (meaning unclear). For a description of the Sumerian rubrics and technical terms describing instrumental and vocal performance see Kilmer (1995).

A bilingual text gives us the Sumerian terms TÉŠ.BI ('their oneness'; Akkadian *ištēniš šutešmû*: 'made to be heard like one'), which is said of unison singing, and NÍG.KI.LÁ.A AN.TAG.GE.NE ('they are playing in balance'; Akkadian *ṣimdassunu šaqlat*: 'their joining/teamwork is balanced'), which is said of many voices and possibly means 'in harmony' or part singing.

(ii) Akkadian tuning systems. From the Old Babylonian to the Seleucid periods a standard corpus of Akkadian terms was used to describe seven heptatonic diatonic tuning sets or 'scales'. Knowledge of Mesopotamian tuning systems derives from nearly 100 cuneiform tablets, some well preserved, others fragmentary. The tablets can be classified according to the type of text they contain: lexical lists; a mathematical text; tuning instructions relating to string instruments; song catalogues; and hymnodic instructions. A key term derived from these texts is SA = *pitnu*, which denotes the individual string as well as 'dichord/interval' and 'mode/tuning' (for a detailed discussion of these various Sumerian and Akkadian texts see Kilmer, 1995).

The mathematical text CBS 10996, which contains a section dealing with musical strings, was the document that led to the recovery of ancient Mesopotamian tuning systems. Table 1 displays the arrangement on that tablet of the names of 14 string pairs or dichords together with the names of specific strings. The progression of numbers from one to seven and the substitution of string 8 by 1 and string 9 by 2 may indicate that heptatonic scales were involved, that the dichords represented intervals of 5ths, 4ths, 3rds and 6ths, and that the concept of the octave was known.

This portion of the text may represent a kind of verbal tablature for a string instrument (lyre or harp) telling the player how to tune seven strings for each of the seven sets of tunings by using the cyclical pattern set forth as a model. It is also possible that the 3rds and 6ths were used as checks on the pitches in the just-tuned intervals, indicating that some kind of temperament may have been involved (see diagrams in Smith and Kilmer, forthcoming; see also West, 1993–4).

The most complicated text is the tuning instruction U.7/80 dating from about 1800 BCE or earlier; it convinced scholars that heptatonic diatonic scales must be the correct interpretation of this material (see Gurney, 1968, and 1994; Wulstan, 1968; Kümmel, 1970; and Crocker, 1997). It also demonstrates that the cycle of 5ths was known, and that the scales were named after the interval of a 5th or a 4th that initiated each of the seven tuning procedures (see Kümmel). The procedures may be carried out by going up or down the scale: Table 2 shows the seven ancient Greek octave species matched with the Mesopotamian seven (assuming that string 1 is the lower pitch and string 7 the higher, and that string 8 is the octave of string 1 and string 9 the octave of string 2). It

also shows the Greek equivalents assuming a downwards-moving scale.

Among the hymnic instruction texts only one (h.6 from Ras Shamra) is complete. It affords the opportunity to match the Hurrian words of a hymn to the moon goddess with the Akkadian musical instruction terms ('notation') and the number signs that follow them (fig.6). On this tablet the Hurrian words of the hymn are above the division line with the Akkadian musical instructions below; the latter consist of interval names followed by number signs (Kilmer, 1995, describes the various interpretations of this text, including the suggestion that the instructions constitute a tablature for the instrumentalist). The only mode or tuning name provided by the extant hymn fragments is *nīd qabli* ('fall of the middle'). The lack of reference to the interval *pītu* may suggest that both elements of the dichord were played simultaneously, and that a major scale is correct for *nīd qabli* tuning since the *pītu* interval/dichord is the tritone in that scale.

(iii) Other aspects. Wulstan (forthcoming) uses the term 'periodic metre' (based on the length of time needed to exclaim words or sounds in a single breath) to describe the universal four beats to a line of verse. The line may contain any number of syllables (four to 12 being common) in addition to unvocalized beats. Much Sumerian and Akkadian poetry appears to operate in this manner. All lines end trochaically (i.e. on a short unaccented beat); introductory lines, invoking a divine name, and what may be modulation lines in musically performed poetry (whether myth, lyric or sacred music) often have syllable counts much greater than the norm for the piece. Although the Sumerian texts do not refer specifically to tempo or rhythm, it can be assumed that they were prescribed by the performance styles of the different song categories. In musical instructions accompanying the Hurrian hymn h.6, the Akkadian term *uštamarri* ('I do slowly') possibly refers to tempo (see Kilmer, 1971, p.145).

With regard to the 'notation' on the Hurrian hymn tablet, scholars disagree as to whether more than one note was sounded at the same time. However, most of the evidence – the presence of dichords in tuning systems, the use of instruments with many strings, depictions of orchestral performances with vocalists, and observations relating to hand positions on strings – strongly suggests that ancient Mesopotamian music included not only monophony but also polyphony or heterophony (see Plato, *Laws*, 812d, as read by Handschin, 1948, p.61; see also Görgemanns and Neubecker, 1966).

ANNE DRAFFKORN KILMER

Mesplé, Mady (*b* Toulouse, 7 March 1931). French soprano. She studied at the Toulouse Conservatoire, and in 1953 joined the Walloon Opera, Liège, making her début as Lakmé. After three seasons she was engaged by La Monnaie, Brussels, playing Lucia and the Queen of Night. In 1956 she first appeared at the Opéra-Comique and in 1958 at the Opéra, in such roles as Sister Constance (Poulenc's *Les dialogues des Carmélites*), Oscar, Gilda, Sophie, and the Fire, Princess and Shepherdess in Ravel's *L'enfant et les sortilèges*. She sang throughout Europe and the USA in roles such as Mireille, Philine (*Mignon*) and Ophelia. A high soprano of unusual distinction, with an individuality of timbre and a refinement of phrase beyond the usual coloratura singer, she was also a noted concert performer and recitalist, including in her adventurous 20th-century repertory Webern's cantatas.

Mesplé has made delightful recordings of many French operettas; her other recordings include Satie's *Socrate*, Madame Herz in Mozart's *Der Schauspieldirektor*, Lakmé and Auber's Manon, in addition to several discs of *mélodies*.

MAX LOPPERT

Mesquita, Henrique Alves de (*b* Rio de Janeiro, 15 March 1836; *d* Rio de Janeiro, 12 July 1906). Brazilian composer. He acquired his training at the Imperial Conservatory of Music where he received the gold medal in 1856 on completion of the counterpoint course under Gioacchino Giannini. He was granted a government scholarship for further studies in Europe; at the Paris Conservatoire he studied harmony with Bazin. His symphonic overture *L'étoile du Brésil* was performed in Paris (1861), as was his comic opera *Une nuit au château* (Portuguese version *Noivado em Paquetá*). His most important work was the opera *O vagabundo* produced on 24 October 1863 at the Teatro Lírico Fluminense (Rio). This was the last work by a Brazilian composer to be presented by the Imperial Academia de Música e Ópera Nacional, founded in 1857. In 1869 Mesquita became the regular conductor of the Teatro Fénix Dramática, which specialized in operettas, and for which he wrote some successful pieces including *Ali Babá* and *Coroa de Carlos Magno*. He also composed salon music. In 1891 he was appointed professor of brass instruments at the Instituto Nacional de Música.

GERARD BÉHAGUE

Mesquita, José Joaquim Emerico Lobo de. *See* LOBO DE MESQUITA, JOSÉ JOACHIM EMERICO.

Messa (It.). *See* MASS.

Messa di voce (It.: 'placing of the voice'). The singing or playing of a long note so that it begins quietly, swells to full volume, and then diminishes to the original quiet tone. The *messa di voce* is one of the most important techniques of 17th- and 18th-century Italian singing style, first as an ornament and then as a pedagogic tool.

Descriptions of the practice are far more prevalent than the term itself. Caccini (*Le nuove musiche*, 1601/2/*R*) considered the swelling and abating of the voice 'the foundation of Passion', but does not use the term. Christoph Bernhard (*Von der Singe-Kunst, oder Maniera*, *c*1649) also described the effect without assigning it a name: 'On whole and half notes it is customary to employ a *piano* at the beginning, a *forte* in the middle, and a *piano* once more at the end'. It is only in the 18th century that *messa di voce* is consistently used as a term to describe this practice. Tosi (1723) advised that the ornament be used sparingly. Mancini (1774) devoted a short chapter to the subject and suggested that 'a truly accomplished singer will use it on every long note that occurs in a cantilena'. Farinelli was particularly known for his exquisite *messa di voce*. Burney (*BurneyFI*) wrote that in 'the famous air *Son qual Nave* [1734], which was composed by his [Farinelli's] brother [Riccardo Broschi], the first note he sung was taken with such delicacy, swelled by minute degrees to such an amazing volume, and afterwards diminished in the same manner, that it was applauded for full five minutes'. By 1810, Domenico

Corri described the *messa di voce* as the 'soul of music' and offered it as a pedagogic exercise to be performed on all chromatic notes of the scale. García (1840–47) listed *messa di voce* as one of four methods of sustaining a tone (*see* SON FILÉ) and advises the singer to practise it throughout the range in order to unite the registers. The term is also found in 19th-century scores, for example, in Act 1 scene vi of Bellini's *Norma* (1831), where the first note of Adalgisa's phrase, 'Lo, l'obbliai', is to be sung 'con messa di voce assai lunga'.

With its establishment in vocal music, the *messa di voce* was taken over into instrumental music. The effect is described as early as 1638 in Fantini's trumpet method, though without using the term itself. In 1658, Christopher Simpson did the same for the viola da gamba. Roger North associated the effect specifically with Italian violinists and called it the '*arcata* or long bow'. As with vocal tutors, the term *messa di voce* appears regularly only in the 18th century, for example, in treatises by Geminiani for the violin (1751) and Quantz for the flute (1752). Although the *messa di voce* is obviously appropriate only for instruments capable of dynamic change on a single note, C.P.E. Bach (*Versuch*, 1762) also advised keyboard players that 'when the solo part has a long sustained note which by the conventions of good performance should begin pianissimo, increase by degrees to a fortissimo, and return in the same way to a pianissimo, the accompanist must follow with the greatest exactitude. Every means available to him must be employed to attain a *forte* and *piano*. His increase and decrease must coincide with that of the principal part: nothing more, nothing less'. It seems likely that Mozart had such an effect in mind in, for example, the sustained piano trills at the soloist's entry (bars 80–83) in the first movement of his Piano Concerto in C K467, which is analogous to the implied *messa di voce* at the soloist's entry (bars 72–3) in the Sinfonia Concertante K364 for violin and viola as well as to many passages within the violin and wind concertos (for example, the Violin Concerto K218, Andante, bars 15–16).

ELLEN T. HARRIS

Messager, André (Charles Prosper) (*b* Montluçon, 30 Dec 1853; *d* Paris, 24 Feb 1929). French composer. Following his formal musical education at the Ecole Niedermeyer, and lessons with Saint-Saëns, he succeeded Fauré as *organiste de choeur* at St Sulpice before beginning a career as a stage composer at the Folies-Bergère in the late 1870s. He had by this time already composed a symphony, been awarded a prize by the Société des Auteurs, Compositeurs et Editeurs de Musique in 1875, and two cantatas, one of which (*Don Juan et Haydée*) brought him to the attention of Auguste Vaucorbeil, the director of the Paris Opéra, who subsequently commissioned (May 1884) Messager's ballet *Les deux pigeons*. Messager's interest in Wagner also seems to date from the 1870s, probably under the influence of Saint-Saëns and Fauré, with whom he improvised the skittish *Souvenirs de Bayreuth*, regularly performed as a party piece by the two composers, but probably first conceived around 1880. Messager left the Folies-Bergère at the end of the 1870s, and was engaged for a season as conductor at the Eden Théâtre in Brussels. An important opportunity to have his work performed in Paris presented itself in 1883, when William Enoch (who had already published a number of Messager's songs) asked him to complete Firmin Bernicat's *opéra comique* *François les bas-bleus*, left unfinished at Bernicat's death. Messager completely orchestrated the work, and composed about 12 numbers for it.

After further praise for his ballet *Les deux pigeons* in October 1886, Messager wrote a number of stage works until the end of the 1880s as well as vocal and piano compositions. His first attempt to write in a more serious vein was the unsuccessful nationalist work, *Le bourgeois de Calais* (1887). Three subsequent projects also ended in failure: *Isoline* (Christmas 1888); incidental music for *Colibri*, a one-act comedy (June 1889); and *Le mari de la reine* (December 1889), which Gauthier-Villars ('Willy') noted had fallen completely flat (*La paix*, 20 December 1889), and which Messager at the time called 'the best of my failures'.

The 1890s began to bring success both in France and England, beginning with *La Basoche*. *Mirette* (1894) was written for London, and Messager later resisted attempts to have it performed in France. *Madame Chrysanthème* (1893, the earliest musical setting of the story by Pierre Loti later set by Puccini as *Madama Butterfly*) was another attempt to write a less lightweight work, but it met with little success, as did *Le chevalier d'Harmental* (1896), another serious piece, whose failure led Messager to consider retirement from the stage. He moved to Maidenhead, Berkshire, and lived there with his second wife, Alice Maude Davis (known professionally as the composer Hope Temple). This self-imposed exile was brought to an end by the brilliant success of *Les p'tites Michu* in 1897, and by his being appointed (by Albert Carré) musical director of the Opéra-Comique, a position Messager held until 1904. This meant that he composed fewer works during the period 1898–1904, concentrating instead on bringing the works of others to the stage. He is particularly remembered for encouraging Debussy with *Pelléas et Mélisande* and eventually conducting its first performance at the Opéra-Comique in 1902. He also introduced Charpentier's *Louise* and Massenet's *Grisélidis*.

From 1901 to 1907 he was employed at Covent Garden, where much of his time seems to have been spent on administration. His first seasons (1901–3) were somewhat undistinguished, and he himself appeared as conductor only for the world première of Herbert Bunning's *Princesse Orsa* (1902); but from 1904 he conducted *Carmen*, *Faust*, *Roméo et Juliette*, *Don Giovanni* (with Caruso), *Orphée* and *Armide*, British premières of Saint-Saëns's *Hélène* (with Melba) and Massenet's *Le jongleur de Notre-Dame* and the world première of Franco Leoni's *L'oracolo*. In 1906 he also introduced to Covent Garden his ballet *Les deux pigeons*.

Messager's next dramatic work, *Fortunio* (1907), was performed by the Opéra-Comique with great success, and he was then named director, with Frederick Broussan, of the Opéra. The partnership lasted until 1914 but was only moderately successful, owing to shortage of funds and disputes with staff. Highlights of the period included Fauré's *Pénélope*, Rameau's *Hippolyte et Aricie* (1908), Ravel's *L'heure espagnole* and Musorgsky's *Boris Godunov*. Wagner was also popular, and on the strength of his experience in this area Messager was appointed conductor of the Société des Concerts du Conservatoire in 1908. During World War I he took the orchestra on a number of foreign propaganda tours, including an expedition to Argentina (1916), where his performances of Wagner made him some enemies at home. Further trips followed,

to Switzerland (1917) and the USA (1918–19), at the end of which Messager resigned his post because of disputes with members of the orchestra, especially with his deputy conductor Philippe Gaubert.

Messager's most significant stage work from the war years was *Béatrice* (1914), a quasi-Wagnerian piece, whose première was moved from Paris to Monte Carlo at the outbreak of war; it received no French performances until 1917 and was not successful, much to Messager's disappointment. April 1919 saw the première of *Monsieur Beaucaire*, although Messager was suffering from sciatica and was unable to attend the first nights in either Birmingham or London. He took on the musical directorship of the Opéra-Comique for the 1919–20 season, conducting among other items the first complete French performance of *Così fan tutte*. Six stage works followed, two of them for Sacha Guitry and his wife, Yvonne Printemps; the second of these, *Deburau*, is dedicated to Fauré's memory.

He was elected president of the Société des Auteurs et Compositeurs Dramatiques in 1926, the first composer to hold this office, and in 1927 was made a Commandeur of the Légion d'honneur. His health began to decline steadily (a serious illness in 1921 had led to his being reported dead at that time) and he died in February 1929.

In spite of the fact that his greatest successes were stage works of a lightweight character, Messager claimed in his memoirs that his intention had always been to write *opéra comique* in the tradition of composers such as Boieldieu. Albert Carré also considered Messager to have had higher aspirations; he also thought that by the time Messager had made enough money to fulfil his ambitions, the public expected nothing but operetta from him.

Fame as a composer of light music has tended to obscure Messager's considerable standing in contemporary serious musical circles. His friendship and advice were prized by the leading composers of the time, and Fauré himself acknowledged his comprehensive ability: 'familiar with everything, knowing it all, fascinated by anything new ... one of the first pilgrims to Bayreuth and [able] to play Wagner by heart at a time when the latter was still unknown in Paris'. He was also noted for his performances of Mozart's operas, and in the concert hall for his performances of Russian works. As a music critic he wrote for several papers, including *Le Figaro*. As an orchestrator he was called on by Saint-Saëns to orchestrate the first act of *Phryné* (1892), and for Marguerite Long he reorchestrated Chopin's Piano Concerto in F minor.

Messager's style is characterized by fine orchestration (evident also in the ballet music), a gift for easy-flowing melody, often in a waltz rhythm, and a skill in writing music of a dance-like character. His own experience of operetta came through the works of Offenbach, Hervé and Lecocq, and he was regarded by some as the last of this line. His biographer and pupil Henry Février claimed that *La Basoche* was the last great French *opéra comique* of the 19th century, and Messager's next *opérettes*, especially *Les p'tites Michu* and *Véronique*, certainly show a difference in style from the earlier works, bringing an altogether fresher approach to the genre. Messager's contribution to French music, both through his own works and as conductor and promoter of opera, is undeniable, and was recognized as such by his musical contemporaries in many countries.

WORKS

STAGE

first performed in Paris unless otherwise stated

BP – *Bouffes-Parisiens*
FB – *Folies-Bergère*
FD – *Folies-Dramatiques*
OC – *Opéra Comique*

operas, opéras comiques, operettas and comédies musicales published in vocal score, in Paris unless otherwise stated

Les païens (opérette, H. Meilhac), *c*1876, collab. G. Serpette, Widor, Massenet and Delibes, lost

François les bas-bleus (oc, 3, E. Dubreuil, E. Humbert and P. Burani), FD, 8 Nov 1883 (1883); completion of work begun by F. Bernicat

Gisèle, *c*1884–5 (opérette, 3, F. Oswald and M. Boucheron), lost

La fauvette du temple (oc, 3, Humbert and Burani), FD, 17 Nov 1885 (1885)

La Béarnaise (oc, 3, E. Leterrier and A. Vanloo), BP, 12 Dec 1885 (1886)

Le bourgeois de Calais (oc, 3, Dubreuil and Burani), FD, 6 April 1887 (1887)

Les premières armes de Louis XV (oc, 3, A. Carré), Menus-Plaisirs, 16 Feb 1888, unpubd; enlarged version of F. Bernicat: Les beignets du roi, 1882, addl music by Messager

Isoline (conte des fées, 3, C. Mendès), Renaissance, 26 Dec 1888 (1888)

Le mari de la reine (opérette, 3, E. Grenet-Dancourt and O. Pradels), BP, 18 Dec 1889 (1890)

La Basoche (oc, 3, A. Carré), OC (Lyrique), 30 May 1890 (1890)

Hélène (drame lyrique, 4 [5 tableaux], P. Delair), Vaudeville, 15 Sept 1891 (1891)

Miss Dollar (opérette, 3, Clairville (L. Lhérie) and A. Vallin), Nouveau, 22 Dec 1893 (1894)

Madame Chrysanthème (comédie-lyrique, prol., 4, epilogue, G. Hartmann and A. Alexandre, after P. Loti), Renaissance, 30 Jan 1893 (1893)

Mirette (3, M. Carré, Eng. lyrics by F.E. Weatherley, H. Greenbank and A. Ross), London, Savoy, 3 July 1894 (London, 1894); ?collab. H. Temple

La fiancée en loterie (opérette, 3, C. de Roddaz and A. Douane), FD, 13 Feb 1896 (1896), collab. P. Lacome

Le chevalier d'Harmental (oc, 5, P. Ferrier, after A. Dumas *père* and A. Maquet), OC (Sarah Bernhardt), 5 May 1896 (1896)

La montagne enchantée (pièce fantastique, 5 [12 tableaux], A. Carré and E. Moreau), Porte-St-Martin, 12 April 1897 (1897), ?collab. X. Leroux

Les p'tites Michu (opérette, 3, G. Duval and Vanloo), BP, 16 Nov 1897 (1897); as The Little Michus, rev. H. Hamilton and P. Greenbank, London, Daly's, 29 April 1905

Véronique (oc, 3, Duval and Vanloo), BP, 10 Dec 1898 (1898)

Les dragons de l'impératrice (oc, 3, Duval and Vanloo), Variétés, 13 Feb 1905 (1905)

Fortunio (comédie lyrique, 4 [5 tableaux], G.-A. de Caillavet and R. de Flers, after A. de Musset: *Le chandelier*), OC (Favart), 5 June 1907 (1907)

Béatrice (légende lyrique, 4, Caillavet and Flers, after C. Nodier), Monte Carlo, 21 March 1914 (1914)

Cyprien, ôte ta main de là! (fantaisie, 1, M. Hennequin), 1916 (1920)

Monsieur Beaucaire (romantic op, 3, A. Rivoire and P. Veber, after B. Tarkington), Eng. version by F. Lonsdale and A. Ross, Birmingham, Prince of Wales, 7 April 1919 (London, 1918); in Fr., Paris, Marigny, 21 Nov 1925

La petite fonctionnaire (comédie musicale, 3, A. Capus and X. Roux), Mogador, 14 May 1921 (1921)

L'amour masqué (comédie musicale, 3, S. Guitry), Edouard VII, 15 Feb 1923 (1923)

Passionnément (comédie musicale, 3, Hennequin and A. Willemetz), Michodière, 16 Jan 1926, fs (1926)

Coups de roulis (opérette, 3, Willemetz, after M. Larrouy), Marigny, 29 Sept 1928 (1928)

Music in: Miousic, 1914, ?lost

incidental music

Le Petit Poucet (E. Mortier, Leterrier and Vanloo), Gaîte, 28 Oct 1885, selections pubd

Colibri (L. Legendre), Vaudeville, 12 June 1889, 1 serenade

Hélène (P. Delair), Vaudeville, 15 Sept 1891

La montagne enchantée (A. Carré and E. Moreau), Porte-Saint-Martin, 12 April 1897; collab. X. Leroux
Deburau (Guitry), Sarah Bernhardt, 9 Oct 1926

ballets

in 1 act unless otherwise stated

Fleur d'oranger (Dreyfous), FB, 1878
Les vins de France (Dreyfous), FB, 1879
Mignons et vilains (Dreyfous), FB, 1879
Les deux pigeons (2, H. Régnier and L. Mérante), Opéra, 8 Oct 1886
Les bleuets (?after Hugo), 1889, unpubd, lost
Scaramouche (2, M. Lefèvre and H. Viragneux), Nouveau, 17 Oct 1891; collab. G. Street
Amants éternels (Corneau and Gerbault), Théâtre Libre, 26 Dec 1893
Le procès des roses (Mendès), Marigny, 6 June 1896, unpubd, lost
Le chevalier aux fleurs (A. Silvestre), Marigny, 15 May 1897, choruses pubd; collab. R. Pugno
Une aventure de la guimard (H. Cain), OC, 8 Nov 1900

OTHER WORKS

instrumental

Symphony, A, 1875, perf. Concerts Colonne, 1878 (1948)
Loreley, ballade, orch, *c*1880
Trois pièces, vn, pf (1897): Barcarolle, Mazurka, Sérénade
Solo de concours, cl, pf (1899)
3 valses, pf 4 hands (1884)
Souvenirs de Bayreuth, pf 4 hands, collab. G. Fauré, *c*1880–99 (1930)
Impromptu, op.10; Habañera, op.11; Menuet, op.12; Mazurka, op.13; Caprice polka, op.14; Valse, op.15; Pavane des fées: all pf (1889)
Many pf arrs., 2–4 hands, incl. Chabrier's España and Gwendoline, Charpentier's Impressions d'Italie, Holmès' Au pays bleu, Lalo's Namouna, Saint-Saëns's Etienne Marcel, Phryné, Requiem and Symphony no.2
Messager also orchd Act I of Saint-Saëns's Phryné

vocal

Don Juan et Haydée (Byron), cant., 3vv, *c*1875
Prométhée enchaîné (G. Clerc), cant., solo vv, 4vv, orch, *c*1877
Nouveau printemps (Clerc, after Heine), 5 songs, 1v, pf acc. (1885)
Amour d'hiver (A. Silvestre), 6 songs, 1v, pf acc. (1911)
20 singly pubd songs, 1v, pf acc.: (1882–9): À une fiancée (V. Hugo); Chanson de ma mie (T. de Banville); Chanson mélancolique (C. Mendès); Gavotte, danse chantée (de Banville); La chanson des cerises (Silvestre); Mimosa (Silvestre); Neige rose (Silvestre); Regret d'avril (Silvestre) (1890–*c*1922): Chanson d'automne (P. Delair); Chant d'amour (Silvestre); Curly Locks (F.E. Weatherly); Douce chanson (E. Blémont); Fleurs d'hiver (Silvestre); La paix de blanc vêtue (Lahovary); Le bateau rose (J. Richepin); Notre amour (Silvestre); Pour la patrie (Hugo); Ritournelle (H. Gauthier-Villars); Si j'avais vos ailes, valse chantée (Grenet-Dancourt, O. Pradels); Va chercher quelques fleurs (L. Aufauvre)

JOHN WAGSTAFF (with ANDREW LAMB)

Messangior, René. *See* MESANGEAU, RENÉ.

Messaus [Messaulx, Missau etc.], **Guilielmus (van)** (*b* Antwerp, bap. 2 July 1589; *d* Antwerp, 8 March 1640). Flemish composer. He spent his life in Antwerp. In 1609–10 he was sacristan of St Joris and in 1613 became schoolmaster and sacristan at St Willibrordus. From 1614 to 1618 he taught at St Walburgis and St Andries, but was dismissed for bad behaviour. Before 1620, however, he became a singer and choirmaster at St Walburgis, a post he held until his death. In 1620 he was suspended for a time after refusing to perform a plainchant mass instead of a polyphonic 'missa de angelis' for a dead child. He wrote at least 14 masses, including the unpublished *Missa Victorius Fernandus*, which was found in his estate and was also in the library of King João IV of Portugal. In addition, 57 motets (including four canons) and Flemish and Latin carols, and three secular Flemish madrigals by him are known. It is possible that a number of partbooks listed under his name in inventories of St Jacobs, Antwerp (1677), St Michael, Ghent (1730–42), and St Salvator, Ghent (1754), can be traced back to his printed collections of 1633 and 1635. He was possibly the editor of *Cantiones natalitiae* (RISM 1629²), almost half the contents of which are by himself, and he was also active as a copyist. As well as numerous motets, he copied three books of harpsichord music by John Bull and others which were once owned by J.C. Pepusch; one of these survives (*GB-Lbl* Add.23623).

In 1613 or 1614 Messaus married Magdalena de Masereth; they had five children, including Guilielmus (*b* 1619) who in 1649–54 sang tenor at St Joris. After the death of Magdalena, Messaus married Clara Loycx in 1639.

WORKS

all printed works published in Antwerp

[16] Missae, 5, 6, 8, 10, 12vv [bc (org)] … quibus inserta sunt moteta aliquot, 10, 12vv (1633)

GODELIEVE SPIESSENS

Messchaert, Johannes (Martinus) (*b* Hoorn, 22 Aug 1857; *d* Zürich, 9 Sept 1922). Dutch baritone and singing

teacher. He studied with Karl Schneider at Cologne, Franz Wüllner at Munich and Julius Stockhausen at Frankfurt. A celebrated concert and oratorio singer, he specialized in lieder and the music of Bach, and was a noted interpreter of Jesus in the *St Matthew Passion*. As a teacher he held posts in Amsterdam, Wiesbaden, Frankfurt and Berlin, where in 1911 he was appointed professor of singing at the Königliche Hochschule für Musik. In 1920 he moved to Zürich, where he taught at the conservatory.

Messiaen, Claire. *See* DELBOS, CLAIRE.

Messiaen, Olivier (Eugène Prosper Charles) (*b* Avignon, 10 Dec 1908; *d* Paris, 28 April 1992). French composer, organist and teacher. He was a musician apart. The sources of his music may be traced on the one hand to the French organ tradition and on the other to the innovations of Debussy, Stravinsky and Bartók, but right at the start of his career he found a modal system that has a completely individual sound, and to this he remained true, even when he vastly extended the possibilities of his style after World War II. He was alone, too, among major 20th-century composers in his joyously held Catholic faith, which again was unswerving, however much he came to value non-European cultures, especially Indian and Japanese. As a teacher he instructed many of the most prominent composers of the next two generations.

1. Life. 2. Theology. 3. Musical elements. 4. Works to 1950. 5. Works after 1950.

1. LIFE. In a sense his life as an artist began before he was born, for his mother, Cécile Sauvage, wrote during her pregnancy a cycle of poems, *L'âme en bourgeon*, in which her future child is of course referred to. He was proud of this, and in his sixties recorded a sequence of organ improvisations on the poems; he also wrote the preface for a republication of them in 1991. His father was Pierre Messiaen, an English teacher and translator of Shakespeare, from whom he inherited less the language skills (he was a monoglot) than an admiration for Shakespeare's plays, which as a boy of eight to ten he presented in toy theatres of his own devising, with coloured lighting coming through cellophane sweet wrappers, for his younger brother Alain. Between the ages of seven and nine he also began to compose and to play the piano. By this time the family was in Grenoble – except for Pierre, who was on war service in the army – and the young Messiaen gained a lasting love for the mountains of that region. According to his own account, he started in music without a teacher, and he was similarly independent of any prompting in the religious devotion he felt from an early age.

After the war the family was reunited in Nantes. They were there only for six months, but during that time Messiaen met his first teachers: Véron and Gontran Arcouët for piano and Jehan de Gibon for harmony. He was already musically sophisticated: as Christmas presents he had been demanding operatic vocal scores, and was thus familiar with works by Mozart, Gluck, Berlioz and Wagner, as well as with piano pieces by Debussy and Ravel. But de Gibon gave him *Pelléas et Mélisande*, and that astonished him. In 1919 the family moved to Paris, and he entered the Conservatoire at a remarkably early age: a photograph of Jean Gallon's harmony class of 1923 shows a child in the company of young men and women.

Besides Jean Gallon, and the latter's brother Noël, with whom he had private lessons throughout his Conservatoire years, his teachers included Georges Falkenberg for piano, Georges Caussade for counterpoint and fugue (*premier prix* 1926), César Abel Estyle for piano accompaniment (*premier prix* 1927), Marcel Dupré for organ and improvisation (*premier prix* 1928), Maurice Emmanuel for music history (*premier prix* 1928), Paul Dukas for composition (*premier prix* 1929) and Joseph Baggers for timpani and percussion, this last an unusual study, suggesting that he was already—perhaps prompted by Stravinsky's *Les noces*, which he saw at this time – looking beyond Western norms. Certainly his other teachers might have given him some encouragement in that direction. Emmanuel was an expert on the metres of Greek verse (later a Messiaen speciality) and on the modes of ancient Greece, of folk music and of Christian liturgies; Messiaen recalled how after hearing this teacher's *30 chansons bourguignonnes* he was 'at once converted to modal music'. Dupré and Dukas also pointed towards modality and they were models for their pupil in other ways: Dupré showed that the organ, to which Messiaen would have been attracted as a Catholic composer, could be a virtuoso instrument; Dukas provided an example of artistic conscience.

New music in Paris at this time was represented principally by Stravinsky and by the more prominent ex-members of Les Six: Honegger, Milhaud and Poulenc. Messiaen admired some works of all these composers, and *Le sacre du printemps* was vital to him. But he had no time for Cocteau-esque urbanity and knew, at this point, almost nothing but *Pierrot lunaire* of the alternative represented by the new Viennese school. Not surprisingly, he began by staying close to Debussy, whose influence is strong on the set of eight piano preludes he composed in 1928–9. Even here, though – and more so in his first published organ composition, *Le banquet céleste* (1928) – he was moving within his own modal universe. The organ piece is also unusual in its extreme slowness.

In 1930 he left the Conservatoire and in September 1931 took the post of organist at La Trinité in Paris, where for more than 60 years he had charge of one of the great Cavaillé-Coll instruments. His major works of the next few years were all for his own instrument or for the orchestra—or for both, since *L'Ascension* (1932–4) was made available in the two forms. Whatever the genre, the declared purpose of his music was the same, and remained the same until his death: it was to manifest the doctrines of the Christian faith. His biggest work of the period was the organ cycle *La Nativité du Seigneur* (1935); *L'Ascension* had been preceded by orchestral pieces concerned with sin and redemption (*Les offrandes oubliées*, 1930; *Le tombeau resplendissant*, 1931; *Hymne au Saint-Sacrement*, 1932).

Another theme, after his marriage in June 1932 to the violinist and composer Claire Delbos, was the Christian family. His wedding present to her was one of his very

few non-illustrative compositions, the Theme and Variations for violin and piano (1932); he also expressed much more forthrightly, indeed passionately, the bliss of marital love in the *Poèmes pour Mi* for soprano with piano or orchestra (1936–7), 'Mi' being his pet name for his wife. After the birth of their son Pascal (his only child) in 1937 came another song cycle, *Chants de terre et de ciel* (1938), in which all three members of the family are portrayed. For both cycles Messiaen wrote his own texts as he did for most of his vocal works, exceptions being Prix de Rome competition pieces, an early song to one of his mother's poems, a couple of liturgical settings (so few because he felt that plainsong was the only proper music for the liturgy) and *La Transfiguration*, for which he compiled an anthology of texts on the subject from the Bible, the Missal and St Thomas Aquinas.

The *Poèmes pour Mi*, frankly self-expressive and exuberant in their orchestral colouring, make a creative demonstration of Messiaen's opposition to the neo-classicism prevailing in Paris, and in the year of their composition as piano songs he founded a group with André Jolivet, Daniel-Lesur and Yves Baudrier: La Jeune France. Their aim was to re-emphasize passion and sensuality in music, and they presented several concerts of their works in Paris between 1936 and 1939. No doubt they influenced one another. Messiaen could, for example, have picked up from Jolivet the use of irrational values to loosen his rhythm, and he may have been stimulated too by the visits made to Paris in the 1930s by Varèse and Villa-Lobos. In 1936 he began teaching, at the Ecole Normale de Musique and the Schola Cantorum. The next year he wrote *Fête des belles eaux* for six ondes martenot (his first use of this electronic instrument), to accompany a display of fountains on the Seine at the 1937 Paris Exposition.

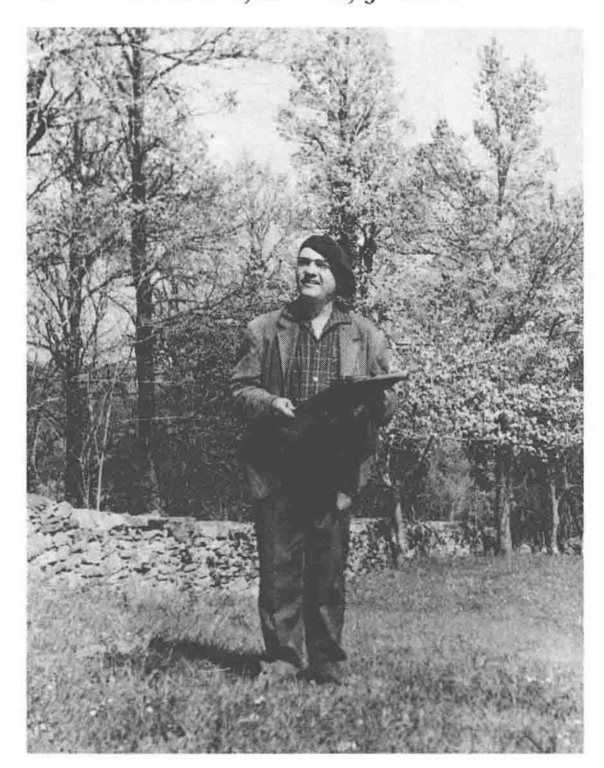
Soon after the outbreak of World War II he was called up for military service, and in May 1940 was captured and taken to a prisoner-of-war camp at Görlitz in Silesia. There, during the winter of 1940–41, he completed the *Quatuor pour la fin du temps* for himself to play with a violinist, a cellist and a clarinettist he had found among his fellow inmates. It was his most ambitious work so far, a sequence of eight movements in which 'the end of time' – meaning the end of orderly progressive time – is conveyed sometimes by non-developing textures of ostinatos, sometimes by very slow music, sometimes by sudden interruptions, sometimes by dances in irregular rhythm. The first performance took place at the camp, before a huge audience of prisoners in the depth of winter.

After his release in the spring of 1941 he was appointed to teach harmony at the Conservatoire. Paris was now an occupied city, and perhaps the becalmed condition of musical life there had a part in rendering him musically silent for almost two years. Other factors would have been his work on an outline of his composition methods, *Technique de mon langage musical*, and the extraordinarily gifted circle of students that was gathering around him, among them Boulez, Serge Nigg and Yvonne Loriod. His wife had by now succumbed to illness and entered a sanatorium, where she remained in steadily diminishing health until her death in April 1959. During this difficult period Loriod, an outstanding pianist, became the focus of a love that could be expressed only in music: in the *Visions de l'Amen* (1943) he wrote for the two of them to play, in the *Trois petites liturgies* (1943–4) where she had the solo part, in the recital-length *Vingt regards sur l'Enfant-Jésus* (1944) and in a third song cycle, *Harawi* (1945), which itself became the first 'act' in a trilogy of works on the Tristan legend, the others being the ten-movement *Turangalîla-symphonie* (1946–8) and the *Cinq rechants* for 12 mixed voices (1948).

Turangalîla – his biggest work so far, scored for a large orchestra with abundant percussion and solo piano (again a Loriod part) and ondes martenot—was commissioned for the Boston SO by Koussevitzky, who, being ill, had to yield the first performance to Bernstein. Despite the difficulties in presenting a work on such a scale, *Turangalîla* was soon being widely played and making Messiaen known to a large international audience. Reactions to it were divided. Its rapturous love music, exultant dances, scintillating colouring and extraordinary images appealed to many; others were appalled by what they considered its vulgarity. Boulez, who had followed rehearsals for the first performance of the *Trois petites liturgies* with keen enthusiasm, was dismissive of the new piece, and for a while there was a breach in the friendship between master and pupil.

Messiaen had Boulez in his class for part of the time when, between 1943 and 1947, he had given private lessons in composition and analysis outside the Conservatoire, introducing his pupils not only to his own methods but to those of the Second Viennese School (Berg's *Lyric Suite* had been among the scores in the portable library he took with him to Görlitz). The atmosphere was that of a revolutionary cadre, consciously opposed to the Conservatoire's academic rigidity, and the pupils called themselves 'les flèches' (the arrows) to indicate their determination. Boulez and Nigg produced the first French serial compositions, and Messiaen began in parts of *Turangalîla* to apply 12-note methods to rhythmic values. (These sections, 'Turangalîla' I, II and III, were perhaps the only movements of which Boulez approved; certainly they were the only ones he ever conducted.) Teacher and pupils stimulated one another, and for a short time it seemed that Messiaen was about to join his younger colleagues on the road to and through total serialism. His piano piece *Mode de valeurs et d'intensités*, which he wrote while teaching at the Darmstadt summer course in 1949, allots a particular duration and a particular dynamic level to each of the just 36 notes in play; it had a crucial impact on both Boulez and Stockhausen (fig.1). He also used abstract numerical procedures in a tape-music project, *Timbres-durées* (1952), and in some movements of the *Livre d'orgue* (1951), in other movements of which, as in the whole of the *Messe de la Pentecôte*, he formalized what he had learnt in two decades of improvising at La Trinité. With the exception of a Conservatoire test piece, *Verset pour la Fête de la Dédicace* (1960) and the only posthumously published *Monodie* (1963), he wrote nothing more for his own instrument until the end of the 1960s.

The note-by-note procedures of the *Mode de valeurs* and a few other works of this immediate period did not fit well with his urge to write illustrative music, and after 1952 he combined them with broader kinds of material or else used them, though only rarely, to evoke a bleak or menacing atmosphere (as in the owl portrait 'La chouette hulotte' or the stigmata scene in *Saint François d'Assise*). The other effect of his abstract phase was to leave him suspicious for a while of melodic-harmonic invention, for



1. Olivier Messiaen and students, 1952, including Karlheinz Stockhausen (back row, fourth from right)

which he found an alternative in listening to birds. His interest in ornithology dated back to his student years, and he had imitated birdsong in a generalized way in *La Nativité*, the *Quatuor* and *Visions de l'Amen*. Now, starting with the Conservatoire test piece *Le merle noir* for flute and piano (1951), he devoted himself to copying the songs of particular species he had heard in nature, and from this point on he journeyed throughout France – and later throughout much of the world – collecting birdsongs by ear (fig.2). In adapting the songs and calls to traditional instruments, to 12-note temperament and to a human timescale, he had to adjust them, and often a greater or lesser hint of his modal practice would creep in, if only in the favouring of the tritone. His birds are recognizably his, but they are also recognizably themselves, and his efforts to reproduce nature, maintained for 40 years, brought from him music of great variety and often dazzling brilliance. It is not just the songs of birds that are projected through this music but also the intense colours of avian plumage, and the awe Messiaen felt for birds as being, like angels or resurrected souls, free in flight and at one with God.

Only the first of his larger birdsong compositions, *Réveil des oiseaux* (1953), was based on this material exclusively, presenting a speeded-up picture of the period from midnight (with nightingales alone) through the dawn chorus to mid-morning silence. By now he was doing much of his composing during summer holidays spent at his own property in Petichet, near Grenoble, amid the birds and the mountains, though for the immense *Catalogue d'oiseaux* for solo piano (1956–8) he travelled all over France so that he could portray his chosen birds in their native habitats, in compositions that last up to half an hour and are patterned in typical verse-refrain forms. *Oiseaux exotiques* (1955–6) is based largely on the loud cries of tropical birds from the Americas and Asia, recreated in the same kind of block-built structure and by what became a characteristic ensemble of solo piano with a small group consisting mostly of wind and percussion. The culmination to this birdsong period arrived in *Chronochromie* for large orchestra (1959–60), where songs and shrieks appear alongside impressions of the rocks and streams of high mountains, and sometimes also with abstract quasi-serial formulations. *Chronochromie* was commissioned by the Donaueschingen Festival, the principal showcase for the international avant garde, while *Oiseaux exotiques* and its two successors for similar formations, *Sept haïkaï* (1962) and *Couleurs de la Cité Céleste* (1963), were composed for Boulez's Domaine Musical concerts. (In 1955 the Domaine had decamped to La Trinité to hear the composer play his *Livre d'orgue*.)

Sept haïkaï was the souvenir of a first visit to Japan that Messiaen had made in 1962 with Loriod, whom he had recently married. *Couleurs* marked a return to Catholic subject matter after a dozen years of celebrating God almost exclusively as the creator of the natural

2. *Olivier Messiaen at Rocamadour, 1961*

world, the only exception having been the little organ *Verset*. Next came *Et exspecto resurrectionem mortuorum* for symphonic wind and percussion (1964), commissioned by the French government for performances in the Ste Chapelle and Chartres Cathedral, lit by the medieval stained-glass which Messiaen adored and took as his highest example of art: an art of pattern and colour, in which figures and narratives are irradiated by light. He often spoke of seeing colours internally when he heard or imagined sounds, and he was consistent in the correspondences he described or tried to create: the A major chord with added 6th, for example, was always bright blue, the blue of Chartres, of the Mediterranean and of heaven.

After *Et exspecto* he gave himself largely to the composition of huge works, each a concert in itself, drawing on everything he had discovered hitherto: the modal melodies, sumptuous harmonies and driving or static rhythms of his pre-war music, the abstract speculations of the period around 1950, the birdsongs and the colours. The first of these grand summations was *La Transfiguration de notre Seigneur Jésus-Christ* (1965–9), for seven instrumental soloists, choir and large orchestra. *Des canyons aux étoiles...* for piano and orchestra (1971–4) was commissioned by Miss Alice Tully of New York, and Messiaen used the occasion of his first American commission to render the canyons and birds of Utah. *Saint François d'Assise* (1975–83), his unexpected single exercise in music theatre, was written for the Paris Opéra and followed swiftly by the *Livre du Saint Sacrement* (1984), a last organ work (commissioned by the city of Detroit and the American Guild of Organists). Finally, after several small pieces, came *Eclairs sur l'Au-delà . . .* (1988–92), scored for an enormous orchestra, a commission from the New York PO.

In 1978 he was obliged by the Conservatoire's age rules to retire. He had been teaching analysis since 1947 and composition since 1966, and his pupils had included Barraqué, Stockhausen, Xenakis, Goehr, Murail and George Benjamin. He loved teaching, loved his pupils and kept in contact with many of them. But retirement gave him more opportunity to travel the world in pursuit of performances and of birds, and he became a familiar figure in concert halls: benign, gently smiling, accompanied always by Loriod, attentive and courteous to any who came to ask him questions or request an autograph, habitually tieless except when evening clothes were required (fig.3). Among the many honours bestowed on him during his last quarter century was the naming of a Utah mountain Mount Messiaen.

2. THEOLOGY. Except during the period between 1945 and 1962 Messiaen devoted himself almost exclusively to religious subject matter, and there would be virtually no exception at all if his themes of love (in the Tristan trilogy of 1945–8), number (1949–52) and birdsong (1951–60) could be subsumed within the religious category. He was not, he said, a mystic. He claimed no special access or wisdom, only that he faithfully illuminated the teachings of the Church. But his choice from those teachings was particular. Of Christ's Passion and Crucifixion, treated in so much Christian music, he had little to say, and though the arduousness and inevitable sinfulness of earthly life was a topic that recurred from *Les offrandes oubliées* to *Eclairs sur l'Au-delà . . .*, it did so only occasionally and would always be contradicted by hope and the expectation

3. *Olivier Messiaen in Westminster Cathedral, 1986*

of salvation. His was a theology of glory. He was attracted by those moments in the Gospel stories when Christ's divinity stood apparent: the Nativity, the Transfiguration, the Resurrection and the Ascension. He dealt many times, as he had to in church most Sundays, with the mystery of the holy sacrament (*Le banquet céleste*, *O sacrum convivium!*, *Livre du Saint Sacrement*), and he was drawn also to the mystery to which his own church was dedicated, that of the Trinity (*Les corps glorieux*, *Méditations sur le mystère de la Sainte Trinité*). But most of all he fixed his imagination on the life to come, as described in the last book of the New Testament: on the nature of resurrected existence, on the pronouncements of angels and on the heavenly city.

These were all stories, ideas and images with strong musical possibilities. St John's description of the New Jerusalem, for instance, seems to demand music of brilliance, strength and colour. More generally, Messiaen's way of composing block by block, usually without a through line of continuity, creates a spatial effect: it is as if we were viewing different aspects of a rotating object, or shifting our gaze suddenly from one place to another. We, as listeners, gain the elevated, gravitation-free viewpoint of the resurrected. The abyss is evoked not only by deep bass sounds but also by the place its symbolization has within this quasi-three-dimensional perspective: as an interruption, the abyss is so much the more abysmal. (The abyss is the most frequent negative image in Messiaen, but in a sense its appearances are not negative at all. Though it represents, of course, the gulf that separates us from God, Messiaen's treatment suggests not shame – for his music is never subjective – but rather fear, and from fear it is a short step to awe, and hence to an appreciation of divine glory much more than of the depths from which that glory is being perceived.)

Nevertheless, as a musician-theologian Messiaen found himself concerned much less with space than with time. His favourite themes all hinge on the meeting of the divine and the human (in the life of Christ, in the continuing presence of Christ in the eucharist, in the celestial life intended for humanity), and therefore on the meeting of the eternal and the temporal. He developed many ways of handling this encounter: by decelerating tempo (*Le banquet céleste*, the string adagios of the *Quatuor pour la fin du temps*, *Turangalîla* and *Eclairs sur l'Au-delà . . .*), by inserting values to unsettle regular metres, by projecting ostinato machines that are, potentially, virtually endless (*Quatuor pour la fin du temps*), by turning events backwards (*Turangalîla*) and, everywhere, by jumping from one kind of motion to another.

By such means and others he created his arrays of extraordinary objects, but there is not, as already mentioned, a subjective personality at work here and Messiaen's creative intentions, other than to reveal, barely arise. His faith was naive. He said he had no doubts, and though he was fascinated by what astronomers and geologists were learning of the history and nature of the cosmos, he was untroubled by any rational objection to the items of his creed. In a sceptical age, such faith from a man of high culture must either encourage or bewilder.

3. Musical elements. Messiaen was the first front-rank composer to work after, and to a large degree quite separately from, the great Western tradition. For though he spoke warmly of composers central to that tradition – especially Mozart, to whom he referred in two late orchestral pieces, *Un sourire* and the *Concert à quatre* – and though such composers figured prominently in his teaching, his music goes another way. If diatonic chords still constitute a large part of his harmonic vocabulary, their normal functions are weakened or annulled by their use within the framework of his 'modes of limited transpositions' – modes in which a pattern of intervals is repeated through the octave (e.g. his 'second mode', B-C♯-D-E-E♯-G-G♯-A♯-B, where the repeating unit is a whole tone plus a semitone). So his music is generally deprived of normal harmonic impetus and hence of the necessary force for long-range continuity. (Nothing shows this better than his few early attempts at sonata form, such as the last of the Preludes for piano.) Continuity tends therefore to be asserted rather than supported by the music: large-scale forms usually consist of numerous distinct panels, often arranged in repetitive or mirroring sequences, and abrupt change, or change back, is essential to the effect. Where a longer unity is required, it is achieved either by means of an emphatic rhythmic pulsation enlivened by syncopation ('Joie du sang des étoiles' in *Turangalîla*) or else by stasis ('Jardin du sommeil d'amour' from the same work). Often the discontinuity from moment to moment is matched by a heterogeneity within each moment, again in perfect defiance of what had been counted good musical practice in the West for centuries. Indeed, as Messiaen was well aware, one has to go back to Machaut to find an earlier composer who treated pitch and duration so much as separate elements.

Among nearer ancestors, Stravinsky provided his outstanding model of rhythmic propulsion and formal discontinuity – especially the Stravinsky of *Le sacre*, a work he closely analysed and loved to teach. (His 1939 article reveals how he was much less enamoured of the neo-classical Stravinsky.) As for his harmony, and particularly its unresolved diatonic discords, its origin was in Debussy, and to a lesser extent Ravel and Dukas, along with jazz of the inter-war period for the added 6th chord. But his combination of these strands was entirely original and opened his music to a third influence, that of non-Western music. In 1931 he heard Balinese music at the Exposition Coloniale in Paris, and though there was no immediate effect, the sound of the gamelan prompted the tuned percussion ensembles characteristic of his orchestra from the *Trois petites liturgies* (1943–4) onwards. Other Asian music he heard on record or (during his later travels) in situ, though the repercussions within his own music were temporary, a clear example being the 'Gagaku' movement of the *Sept haïkaï*. Much more central to him was Indian music, as mediated by the Lavignac encyclopedia. There he discovered the *jātis* and *deçi-tâlas* (melodic shapes and rhythmic formulae) catalogued in Sanskrit treatises, and these he used in most of his works, beginning with *La Nativité* (1935).

Another correspondence with Eastern music is in quality of mind. Abandoning the logic and continuity most characteristic of the Western tradition, Messiaen's music does not so much elaborate a proposition as create conditions for mental excitation or reflection. Narrative thrust is replaced by liturgical order and ritual. The music is structured in self-contained blocks, and proceeds as statement followed by new statement, restatement or altered statement. Where a conventional Western composition will seem to unfold as a thread through time,

Messiaen's discontinuous music rather provides an environment within which time itself can be observed, 'coloured', as he would say, by rhythm: time suspended, in his slow movements, or time racing forwards, in his scherzos and dances, or, most frequently, time changing its rhythmic colour from moment to moment. Instead of affirming the orderly flow of everyday existence, this is music which acknowledges only two essences: the instantaneous and the eternal.

Many of these particularities of Messiaen's music are shown in his first published composition, written when he was 19: the organ piece *Le banquet céleste*. This is only 25 bars long, but according to the metronome mark Messiaen added for the second edition (1960), because he found organists were playing the work too quickly, the duration should be six minutes. Lasting for seven seconds, the first chord in ex.1 becomes less an element in a musical discourse than an event all by itself, a harmonic atmosphere. At this speed there can be no sensation of metre, even though the phrasing is so square (a mark of the young Messiaen, soon to be alleviated). Similarly, there can be no sensation of tonal movement. This music is not going anywhere, and to make sure of that Messiaen uses what he was later to codify as his second mode.

Le banquet céleste suggests how he might have arrived at his modal conception by improvising at the keyboard with chords based on symmetrical divisions of the octave: the diminished 7th chord in the case of the second mode, the augmented triad in that of the third, where the repeating unit is semitone-semitone-tone, as in F♯-G-A♭-B♭-B-C-D-E♭-E-F♯. Messiaen described his modes as being 'of limited transposition' because, unlike major or minor scales or church modes, they can only be transposed a small number of times before the same notes are generated. Mode 1, the whole-tone scale (little used by Messiaen, perhaps in deference to Debussy) has just one alternative transposed form; mode 2 has two and mode 3 three. However, the basic defining feature is the symmetry, which is responsible both for the repetition of forms on transposition and for the modes' harmonic peculiarities. The second mode makes available just four triads, on the notes of a diminished 7th. There is no easy possibility, therefore, of dominant harmony, and in the second and third modes, which were his favourites, Messiaen habitually used the falling tritone to make a cadence. However, a sense of key persists. *Le banquet céleste* is much concerned with diminished 7th areas, but the F♯ major chord at the start of the second bar is a definite point of arrival and the piece maintains F♯ as its goal – or rather as the place where it really always is, since there is no striving for resolution.

Ex.1

Très lent, extatique (♪ = 52)

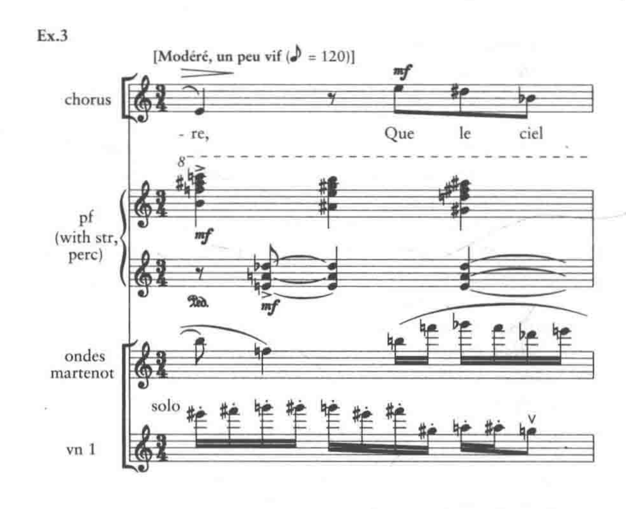
(lointain, mystérieux)

pp legatissimo

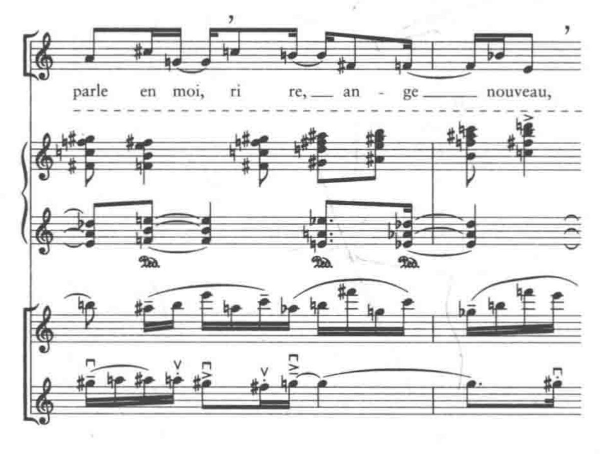
If *Le banquet céleste* is fundamentally and blissfully static, a contrary example of rhythmic dynamism — still in F♯, but now in the third mode — is provided by the 'Danse de la fureur' from the *Quatuor pour la fin du temps*, a vigorous melody played by the four instruments in unison or at the octave below (ex.2). The emphatic

Ex.2

Décidé, vigoureux, granitique, un peu vif (♪ = 176 env.)



ff



tritone cadence may be noted. Also, quite by contrast with ex.1, there is a hectic energy that comes not only from the rudeness of the scoring but also from the rhythm, and in particular from the insertion of what Messiaen called 'added values' into the regular crotchet pulse, the first instance being the semiquaver in the opening bar. The example also shows early and simple cases of 'non-retrogradable rhythms', Messiaen's term for patterns which are the same whether read forwards or backwards (e.g. the first seven values of the opening bar).

Exx.1 and 2, being purely homophonic and purely melodic respectively, represent extremes in Messiaen's music, though extremes that kept recurring: even in his last major work, *Eclairs sur l'Au-delà . . .*, there are movements or passages that repeat these ideals. Much more common throughout his output, though, is polyphony of an unusual sort: polyphony in which the strands are quite independent, moving perhaps at different speeds and in different modalities. The first of the *Trois petites liturgies* (ex.3) is typical. The vocal line shows again, within a smoother style than that of the 'Danse de la fureur', some common traits of Messiaen's melody: rhythmic regularity occasionally dislocated, the modes of limited transpositions (the first phrase is in a 'truncated' form of the second mode, G-A-B♭-(C)-C♯-D♯-E-(F♯)-G, while the second is in the fifth mode, E-F-F♯-B♭-B-C-E, both modes being replete with tritones), tritone cadencing. In the piano meanwhile there is what Messiaen termed a 'rhythmic canon': the left hand, doubled by strings and maracas, plays the rhythmic sequence of the right hand, doubled by vibraphone, in a 3:2 ratio. Also highly characteristic is the chordal colouring of these durational lines. The right hand fits a sequence of 13 chords in the sixth mode (B-C-D-E-F-F♯-G♯-A♯-B) on to a sequence of 18 values, while the left hand clothes its similar rhythmic sequence in repetitions of nine chords in the third mode. There is no logic in this, only a delight in regularities and irregularities, as in an Ars Nova motet. Similarly, in the vertical dimension, there is no logic in the placement together of the choral chant, the orchestral canon and the brilliant solos for violin and ondes martenot: these are different things which happen to be in the same place at the same time. In creating his textures, as in building his forms, Messiaen smiled on incongruity.

4. Works to 1950. The elements described above can be found all through Messiaen's music, which did not so much develop as come to include a greater diversity, especially with the arrival around 1950 both of more

Ex.3

complex number games and of closely observed birdsongs. Such stylistic jumps and shifts make it possible to identify five broad chronological phases in his creative life, of which the first took him up to the age of 30 – the age at which he wrote *Les corps glorieux*. Typical of this period, which is dominated more than any other by organ music, is a growing sophistication in essentially homophonic movements that have their origin in *Le banquet céleste*, coupled with a contrasting rhythmic exuberance that came partly out of *Le sacre du printemps*, partly out of Dupré's toccatas and, from 1935 onwards, partly out of the Indian rhythms discovered in Lavignac. (The orchestral *tâla* of ex.3 is constructed from these rhythms.) The second phase, covering the great works of the 1940s from the *Quatuor* to *Turangalîla*, did not add much but brought everything in Messiaen's early style to a climax of achievement. He was no longer an organist-composer within a recognizable French tradition. Indeed, there were no organ works at all, but instead works of sacred – or, later, erotic (just as shocking) – intent designed for the orchestral auditorium or the recital room. Then, between 1949 and 1952, came the brief period when he worked with new techniques: electronic music, systematic process and the use of sets of pitches, durations, dynamic levels and (on the piano) varieties of touch. Out of this came the years of birdsong re-creation, blending from 1963 onwards into a late period when he produced almost exclusively works of monumental character and all-embracing scope.

The early organ works – *Le banquet céleste*, the *Diptyque*, *L'Ascension*, *La Nativité du Seigneur* and *Les corps glorieux* – established basic features of Messiaen's style and subject matter, the two being of course related. Very slow speed and immobile harmony (*Le banquet*, the finale of *L'Ascension*, much of *Les corps glorieux*) were responses to the awesomeness of the divine presence, whether in the person of Jesus or in the eucharist, and to the wonder of resurrected existence. Bounding exuberance ('Transports de joie' from *L'Ascension*, 'Dieu parmi nous' from *La Nativité*, 'Joie et clarté des corps glorieux' from *Les corps*) was an alternative possibility. Moreover, as Messiaen took possession of his distinctive language, so he moved away from chromatically inflected regular tonality and from an associated fixation on sinfulness and penitence, as reflected in the *Diptyque* or in *Les offrandes oubliées*, which was the culmination to a sequence of bold and colourful orchestral meditations. The similarity of organ and orchestral pieces, in language, form and subject, was characteristic of him at both ends of his life, and the two versions of *L'Ascension* differ only in their third movements, where virtuosity demands a form of expression specific to the means.

His more private music, whether concerned with marriage (*Poèmes pour Mi*), family life (*Chants de terre et de ciel*) or death (the *Pièce* in memory of Dukas), has a spiritual dimension that comes partly from the texts, in the case of the songs, and partly from the fact that these works too use the same musical language. For both the song cycles he wrote his own words, which gloss marital and parental relationships with a mixture of biblical imagery and language derived from the surrealist poets he admired at the time, especially Pierre Reverdy. But formally there is hardly any change from the organ works, both cycles containing diverse, strongly individualized movements set side by side. This is particularly true of the later cycle, with its range from the pentatonic to the virtually atonal, and with its imaginative variety of keyboard textures, contrasting with the pianistically simpler and more uniform *Poèmes pour Mi*, a work which only attains its full splendour and strangeness in the later orchestral transcription.

In *Chants de terre et de ciel*, more than in any earlier composition, number games begin to contribute to the substance of the music, but Messiaen had shown himself a numerologist before in packaging movements in multiples of three, for the Trinity (*La Nativité*, *Poèmes*, *Chants*), or in sevens, for perfection (*Les corps glorieux*). Many later works show this too, beginning with the *Quatuor pour la fin du temps*, in which, according to the composer, an eighth movement is added to extend the perfect seven 'into infinity'.

The *Quatuor* is a special case in Messiaen's music. That it was his only important chamber composition was due to the circumstances of its composition; in its emphatic rhetoric it is an orchestral work on a small scale, while in form and subject it carries on from the great organ cycles of the previous decade. The subject, the end of time, is not so much evoked as symbolized and even embodied in the music. The first movement, 'Liturgie de cristal', is a polyphony of unmatching rhythms more complex than that illustrated in ex.3; here the process that is set up would take vast eons to complete itself. Other movements have recourse once more to almost immobile tempos (the solos for cello and for violin with piano) or, contrastingly,

to violent irregularity (ex.2). All these techniques had appeared before, but they are handled with a new decisiveness. For the first time, in the preface to the score, Messiaen wrote of 'dazzlement' as his musical objective, the effect to be achieved by the brilliant colours of his harmony and instrumentation and also by the astonishment of surprise.

The works that then took Messiaen up to *Turangalîla* are all (an unimportant piano *Rondeau* excepted) on an ample scale. The *Visions de l'Amen* and the *Trois petites liturgies* share a grounding in pentatonic A major, which was for Messiaen a key of serene, naive joy, as well as of blueness. Pentatony also suggests exotic models, and the suggestion is reinforced by other aspects of these works – by the percussion effects and quasi-Balinese simultaneous different speeds of the *Visions*, and by the ostinatos and metal percussion of the *Liturgies*. The virtuosity of their piano writing, stimulated by Loriod, is also central to the *Vingt regards*, which circle around Messiaen's much-favoured F♯ major. There is room here for a complete survey of the composer's manners, including massive, pounding fugato ('Par lui tout a été fait'), warm, sweet stillness ('Le baiser de l'Enfant-Jésus'), severe automatic system ('L'échange') and surrealist vision ('Regard de l'onction terrible').

Just as the spiritual in these three works of 1943–4 welcomes the sensual, so the sensual subject matter of the next three – the Tristan trilogy of 1945–8 – is a mirror of divine love. The three compositions are quite separate in most respects but that of subject, and there is no narrative continuity in any of them: Messiaen's style effectively precludes such continuity, lending itself instead to sectional forms and thereby to fragmented stories. *Harawi*, for example, presents moments from a story of erotic passion and death – a Tristan in an exotic setting, both music and text alluding to Peruvian love songs. *Turangalîla* uses a large orchestra, with solo ondes martenot often used as a 'vox humana' stop above the strings and solo piano leading a tuned percussion ensemble, in a sequence of movements where flamboyant love music is interleaved with alarming images and abstract rhythmic speculations. *Cinq rechants*, more compact than the other two, is a succession of verse-refrain forms in which meaningful phrases are delivered in a forest of onomatopoeic noises and freshly imagined choral textures. Neither here nor in *Harawi* (both works have words by the composer) is there any explicit mention of God, but the love that both celebrate is seen on a cosmic scale. It can be represented in the symphony by gentle caressing gestures and by virtual stasis ('Jardin du sommeil d'amour'), but it can be represented too by the energy of strongly pulsed fast rhythm, the energy that the work's great central dance, 'Joie du sang des étoiles', projects as streaming through the universe. *Turangalîla* itself is a Sanskrit word, the name of one of the rhythmic formulae in Lavignac, with connotations approximating to those of Bergson's 'élan vital'. Whether in the bodies of lovers, in the rotations of stars and galaxies or in the movement of musical time and tone, it was for Messiaen the same, and his symphony celebrating it centres on, again, F♯ major, his key of ecstatic adoration and exultation.

Some of the melodic themes that link the Tristan works are carried over into their immediate successor, the piano piece with another Sanskrit title, *Cantéyodjayâ* (1949), whose mosaic form also includes elements that look forward to Messiaen's next phase – especially the section marked 'mode de durées, de hauteurs et d'intensités', which is a three-part counterpoint of lines using 12-note sets not only of pitches but also of durational values. Messiaen had been thinking about serializing rhythm since the early 1940s, and had begun to explore the possibilities in parts of *Turangalîla*, where unpitched percussion patter out sequences of arithmetical values (demisemiquaver, semiquaver, dotted semiquaver, quaver etc., representing one, two, three, four units and so on). In *Cantéyodjayâ* his 12-note rhythmic sets are permutations of values from demisemiquaver (one unit of time) to crotchet (12 units), and in another piano piece – the *Mode de valeurs et d'intensités* (also 1949), composed entirely in the austere three-line style of the earlier work's episode – he applied a similar categorization to loudness and attack.

This piece was a powerful stimulus to younger composers: Boulez based his first book of *Structures* on a 12-note series from it, and Stockhausen was immediately set on the road to the abstract note manipulation of his *Kreuzspiel*. However, the *Mode* is, as its title declares, a modal and not a serial composition. It works not with defined sequences but with repertories of notes, and the sets of values for duration, loudness and attack are used not to increase variability, as in Boulez or Stockhausen, but rather to identify the relatively small number of sounds in play, since each pitch has the same duration, loudness and attack throughout. When Messiaen wanted to vary his material in ordered fashion – as he did, for example, in another piano piece of this period, *Ile de feu II*, or later in *Chronochromie* he used, instead of serial procedures, his own technique of 'interversion', which conserves the repertory of elements but not the intervals between adjacent pairs. From an original set 1-2-3-4-5-6-7-8-9-10-11-12 one may make a first interversion at random and so obtain, say, 9-3-8-4-1-11-7-5-2-6-10-12. The second interversion is obtained by applying the same exchanges a second time over. For instance, 9 in the original set gives way to 2 in the first interversion, 3 gives way to 8, and so on. Thus the second interversion is 2-8-5-4-9-10-7-1-3-11-6-12. (In this case three positions will always maintain the same value, because they did so in the first interversion, but of course this need not be so. Similarly, there can be different numbers of interversions in the cycle before the original set recurs.)

5. WORKS AFTER 1950. The high degree of systematization in the *Quatre études de rythme* – to which both the *Mode de valeurs* and *Ile de feu II* belong – was maintained in parts of the *Livre d'orgue*, though Messiaen's association here of highly constructed with seemingly improvised movements is suggestive of his acceptance and even enjoyment of contrast. Unity of style had not been a consideration with him since at least the time of *Chants de terre et de ciel*. In the last piece of the *Livre d'orgue*, 'Soixante-quatre durées', the strict and the free blithely coexist in flights of birdsongs through a monumental musical architecture. Here, as in many of his works, it may be difficult to say quite what binds a work together, or even what unifies a movement. The formal principle seems to be rather that of a catalogue, as Messiaen perhaps acknowledged in the title of his biggest piano collection, *Catalogue d'oiseaux*. And indeed, since this is not music that moulds a line through time, discontinuity of form is only the most outward manifestation of its

essential nature. Its disorder is, moreover, not the kind of broken order by which a composer's will might be asserted; it is, rather, a disorder conveying absence of will.

To Messiaen no natural phenomenon was alien, whether a sound (though he had a definite preference for clear harmonies, closely relatable to triads or to natural resonance) or something that could be represented by sound: not only birdsongs but the colours and shapes of landscapes. As he moved into the second half of his life, so the range of phenomena he encountered – through his travels, through reading and listening, and through the music of his pupils – grew, and so did the diversity of his catalogue forms. Meanwhile, on the smallest scale, his modes of pitches, durations and other musical qualities were also catalogues; there need be no logic in how the composer chooses from them – and the computed choices resulting from his interversions produce, not entirely paradoxically, the most irrational effect.

In the birdsong pieces that continued to the end of his life, he would sometimes again place his avian transcriptions on an organized rhythmic armature, as he had in 'Soixante-quatre durées': such armatures are openly disclosed in, for example, *Oiseaux exotiques* (durational interpretations of Greek metres) and *Chronochromie* (interversions of duration sets), as well as in several of the pieces in the *Catalogue d'oiseaux*. The pursuit of birdsong seems to have been partly responsible for his penchant during this period for formations consisting of solo piano with a wind group and a percussion ensemble in which keyed instruments (often a trio of vibraphone, xylorimba and marimba) are prominent. The piano, Loriod's instrument, had to be there: *Chronochromie* and *Et exspecto resurrectionem mortuorum* are his only important works between the *Livre d'orgue* (1951) and the *Méditations sur le mystère de la Sainte Trinité* (1969) in which there is no solo part for Loriod, and his whole way of imitating birdsong might have been different if he had not had her incisive playing in mind. As for his characteristic birdsong orchestra, the tuned percussion instruments functioned as coloured pianos, while the wind instruments, especially the woodwinds, could most closely approach birdsong timbres (though this was not an essential: the 'Epôde' of *Chronochromie* is a bird chorus for solo strings; fig.4).

At the same time, wind and percussion provided Messiaen with the means to project impressions of colour with clarity and power. These impressions depended principally on harmony, on particular combinations of mode and key, but they could certainly be intensified by brilliance and variety of scoring. In two consecutive works of this period – *Sept haïkaï* (1962) and *Couleurs de la Cité Céleste* (1963), both for the favoured combination of piano, winds and percussion (with the addition of eight violins in the former) – Messiaen marked in the score the colours at which he was aiming: real colours that he had experienced in the case of the seven musical images from Japan, jewel colours as described by St John in the case of the later work. In *Sept haïkaï* he worked with complex irrational rhythms nearer to Boulez or Stockhausen than to anything else in his own music, whereas *Couleurs* generally restores his norms of insistent pulse or stasis.

Couleurs is unusual in another respect, though: its formal elaborateness. Hitherto, since *Turangalîla*, Messiaen had preferred small forms or catalogue-like sequences of small forms, except in those works – *Réveil des oiseaux* and the *Catalogue d'oiseaux* – where form is given by a speeded-up progress through the hours of the day. In *Couleurs* the principle is instead that of a mosaic, or, better, of a stained-glass window, in which coloured chords, birdsongs and pictorial elements (an image of the abyss, plainsong alleluias) are tumbled together in repetitions, interchanges, decorations and new departures. This was, however, a unique moment. The movements of later works are often on a grand scale – up to three quarters of an hour in the case of the Bird Sermon scene in *Saint François* – but they generally return to the concatenation or verse-refrain forms of earlier Messiaen.

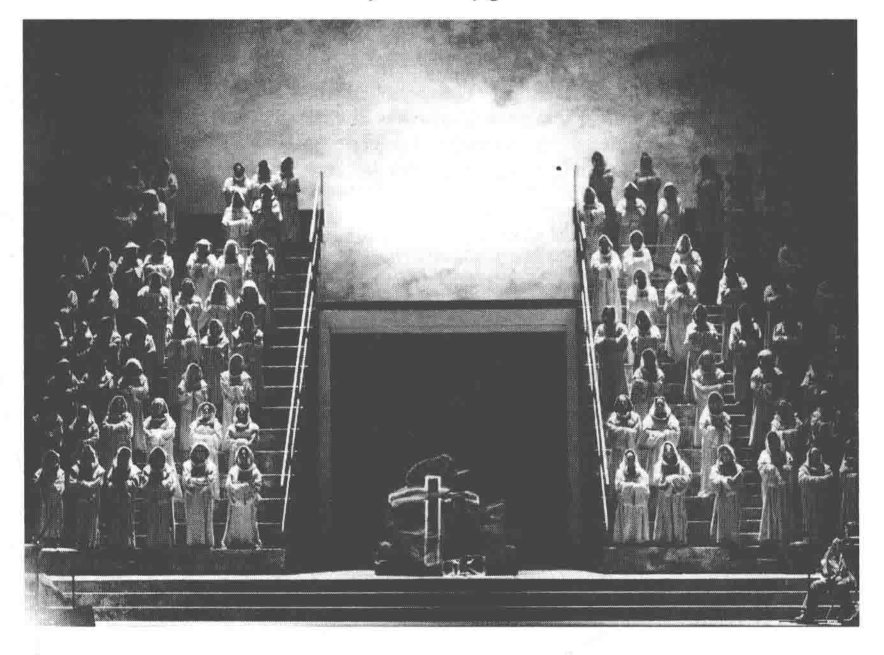
4. Part of the autograph MS of Messiaen's 'Chronochromie', 1960

The first of these massive later works was *La Transfiguration de Notre Seigneur Jésus-Christ* (1965–9), a concert-length ceremonial based on the story of Christ's Transfiguration. In each of the work's two 'septenaries' the Gospel narrative is intoned by a large chorus in two relatively short sections, each followed by a pair of meditations for chorus and orchestra, with seven instrumental soloists often splashing over the surface in birdsong figuration. Each part then ends with a huge chorale. With invitations both in the story and in St Thomas Aquinas's commentary on it to revisit some of his central themes – the irruption of the eternal into the everyday, cascading light, a mountain scene – Messiaen created a review of his entire musical world, from modal melody (as his first vocal piece since the *Cinq rechants*, the work was perhaps inevitably a throwback) to the more recent abstract constructions, colossal sonorities and, of course, birdsongs.

At the time it appeared, *La Transfiguration* was greeted as Messiaen's *summa*, but he was still in his early 60s and had much further to go. Each of his big subsequent works

is similarly resumatory, but in each he was careful to add at least one new item to his repertory of techniques. First, in the *Méditations sur la Sainte Trinité* for organ, he introduced a 'communicable language' of letters and words coded by notes. This he used again in *Des canyons aux étoiles*. . ., where the novelties include representations of desert sounds by means of a wind machine, an 'earth machine' and a horn mouthpiece played by itself. In other respects this work caps the sequence of birdsong-colour pieces for piano, wind and percussion, though in this case a small string complement also plays.

From here Messiaen went directly into his largest work, *Saint François d'Assise* (1975–83), an opera on a Wagnerian time scale, though of course quite un-Wagnerian in how it shapes its time in blocks. He created his libretto out of the saint's own writings (notably the *Cantico delle creature*, of which he quoted a stanza in each of the eight scenes) together with memoirs and lives dating from soon after Francis's time, as well as a modern study, Louis Antoine's *Lire François d'Assise*, and passages in the Bible. Crucial decisions concerned what to leave out. There was to be no conversion (because, he said, 'sin is not interesting'), no dispute between Francis and his father (for this was not to be a psychological opera), no meetings with pope or bishops and no St Clare. With two vital exceptions – the Angel and the Leper – the people onstage are all monks, which means not only that the opera has a strong dramatic homogeneity but that, dealing with people who have left the world behind, it can leave behind the worldliness of conventional drama and show, as Messiaen put it, 'the progress of grace in St Francis's soul'.



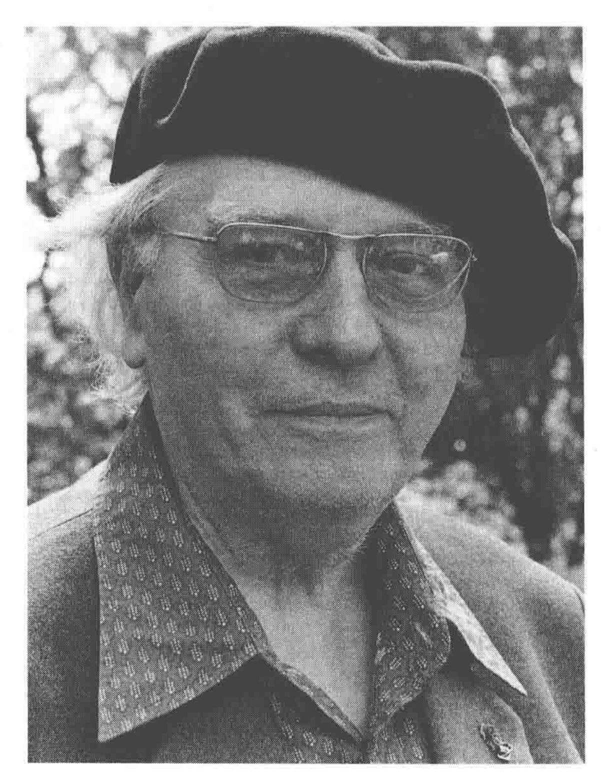
To this portrayal the colossal choral-orchestral forces (150 singers and 120 instrumentalists) contribute as much as the long central role, which combines, according to the composer, the 'vigour' of Golaud with the 'declamatory solemnity' of Boris Godunov. (The reference is to two of the operas he most admired, along with those of Mozart and Wagner.) Typically the work proceeds by alternating a solo voice with the orchestra. This makes it possible for the soloists to sing without strain, for them to be heralded and answered by distinctive orchestral themes, and for the opera to resemble a medieval manuscript in sound, the orchestra providing great initials, pages of pattern and images of the supernatural while the plain black characters of the modal chant continue.

Even more than in *La Transfiguration*, the orchestral writing in *Saint François* reviews Messiaen's whole career: the cured Leper has an exuberant dance of the kind he had not written since *Turangalîla*, which is recalled too in the use of three ondes martenot for the heavenly music the Angel plays to Francis. But much of the score is composed of birdsongs. These include some which Messiaen, faithful to reality, notated around Assisi, but there are others which he, with fidelity to a different sort of reality, took from far-flung locations. Most notably, in the Bird Sermon scene, Francis reveals his spiritual advance by hearing and naming birds from a place unknown in the saint's time: New Caledonia, which Messiaen visited specificially to collect material for this moment. This scene also contains a new technical device: the use of independent tempos for certain instruments within the orchestra, so that their birdsongs can fly freely. Characteristically, Messiaen enjoyed a simple pride in this innovation, which he used again in *Un vitrail et des oiseaux* and the *Concert à quatre*, a work completed after his death by Loriod in consultation with Heinz Holliger, one of its intended soloists, and Benjamin.

In discussing his birdsongs, whether in *Saint François* or elsewhere in his output, Messiaen habitually elided the difference between the birds that sing in the natural world and those that sing in his works. For example, in the context of the opera he wrote of 'a long skylark solo entrusted to the three xylophones', or of 'a mistle thrush [which] strikes off on the solo clarinet', or of 'the second ondes which does the Japanese Uguisu', or of 'a chaffinch on three solo violins, reco-reco and three trumpets playing in the third mode with Harmon mutes'. Indeed, one of the attractions of birdsong for Messiaen may have been that it allowed him to diminish or ignore the distinction between reality and representation. He spoke of 'trying to trace as exact as possible a musical portrait' of a bird, but his portraits are perhaps better understood as icons, in which the reality is metaphysically present. And in *Saint François* the monks too, who have their own songs, are iconically present.

The great paradox of Messiaen's music – and most spectacularly of his largest work – is that there is no conflict between the icon-maker's selfless transcription of what is given (and thereby insertion of it into the icon) and the artist's assertion of an unmistakably individual world, an assertion that depends in Messiaen's case on, most particularly, the modes of limited transposition. In *Saint François* these underlie the birdsongs as usual and, much more directly, the solo and choral chant. There is no conflict because the music is emphatically not about its composer's individuality: the modes are its means, and are of themselves inexpressive. The intention is always to display something else (images from nature and sacred history) to the fullest. Among the consequences of this were that Messiaen left very little non-illustrative music and that, because his vocabulary was idiosyncratic at a fundamental level (that of the modes and of his rhythmic practices), he could range far and wide in his choice of techniques or models. No other composer could imitate both a mistle thrush and Mozart without stylistic incongruity – or, rather, with the same stylistic incongruity, since Messiaen was impervious to Western music's demand for consistency, as he demonstrated in his block forms, heterogeneous textures and deliberately uncoordinated application of different rules to the handling of pitch and rhythm. 'Messiaen does not compose: he juxtaposes', was Boulez's complaint. Only a 'juxtaposer', though, could have composed as Messiaen did.

Saint François was followed a year later by a last organ collection, the *Livre du Saint Sacrement*, which presumably gathers together ideas developed at La Trinité over many years and so does not represent a new large adventure. Messiaen's next projects were all small, having the aspect of postscripts to earlier achievements: *Petites esquisses d'oiseaux* (1985) is a pendant to the *Catalogue*, *Un vitrail et des oiseaux* (1986) a reminiscence of the 1950s and 60s pieces for piano and small orchestra, and *La Ville d'En-haut* (1987) another such memory, though with a wind and percussion ensemble more on the scale of *Et exspecto*. His contribution to the Mozart bicentenary, *Un sourire* (1989), came as another brief monument, and the Piece for piano and string quartet (1991) was a greetings telegram for the 90th birthday of Alfred Schlee,



5.'Saint François d'Assise' (Messiaen), Act 3 scene i, from the original production at the Opéra, Paris, 28 November 1983; St. Francis prays among the rocks to receive the wounds of Christ

who, as director of Universal Edition, had published *Oiseaux exotiques* and *Cantéyodjayâ*.

By this time, though, he had embarked on another immense work, *Eclairs sur l'Au-delà . . .* (1988–92). Life after death had been his greatest subject since the 1930s, and this last completed work revisits much of the musical imagery he had found for it: the dazzling woodwind and percussion jewels of *Couleurs de la Cité Céleste*, the string adagio song of *Les offrandes oubliées* and *L'Ascension*, the wind-orchestra chanting of *L'Ascension* and *Et exspecto resurrectionem mortuorum*, the birdsongs as harbingers of the brilliance and agility of the angels, the potentially endless rhythmic mechanisms as fragments of eternity. Above all, the contrasts from movement to movement – and the depictions of scenes from Revelation, and the presence of two slow movements for strings – point back towards the *Quatuor pour la fin du temps*.

And yet the sense is less one of culmination than of continuing, as if everything Messiaen had ever created were still permanently attainable. The ending of time is conveyed not only inside each piece, but across the output as a whole, in that Messiaen was able, in his 80s, to achieve again what he had achieved as a young man, without any dimming, and certainly without any nostalgia. The only signs of age in this last piece are in its orchestral virtuosity, its breadth of reference, and perhaps also its audacity, not least its audacity in bringing together an ensemble of a 128 players only to leave many of them silent for long periods: the ten double basses, for instance, play nothing until the eighth of the 11 movements, the coda of which provides the single tutti in a composition otherwise for smaller, if majestic, groupings.

New to Messiaen's handling of these groupings is a sophistication of instrumental blends. Whereas before he had generally used the orchestra in families, blockwise, *Eclairs sur l'Au-delà . . .* has gentle swerves of colour within phrases – though these are still rare. Another change is in the increased richness and delicacy of timbre and harmony in the big string adagios. Long melodies became increasingly important again in Messiaen's last works. In the second movement of the *Concert à quatre* he orchestrated the early *Vocalise-étude*; both *La Ville d'En-haut* and *Un sourire* extend a melody in phases marked off by contrasting episodes; and *Eclairs sur l'Au-delà . . .* ends with a vision of 'Le Christ, Lumière du Paradis', an immensely slow movement with a muted violin melody couched on chords from other strings and lit by three high-trilling triangles. There are places where that melody comes to rest, but these are not partitionings of a form so much as pauses for breath along an endless

6. Olivier Messiaen, 1986

path, around an endless circuit. Nor is there any striving into the uppermost register, as there was in the work's earlier slow movement for strings. The echo of the ultimate treble – the light of Christ, perhaps – is always there in the metal shimmer of the triangles, projecting a reverberation which does not die away but stays, because time has stopped.

WORKS

Principal publishers: Leduc, Durand, Universal

Recordings by the composer: Messiaen recorded all his pubd org works to date at La Trinité for Ducretet-Thomson in 1956; these recordings have been released on CD by EMI. For Erato in the 1970s, again at La Trinité, he recorded the *Méditations sur le mystère de la Sainte Trinité* and improvisations on his mother's *L'âme en bourgeon*; only the former has been re-released by the company on CD.

PAUL GRIFFITHS

Messina. City in Italy, on the island of Sicily. The city dates from about 2169 BCE when it was called Zancle. A musical tradition noted in Greek times did not survive in the Roman period; Byzantine liturgical music flourished during the Middle Ages. The most important monastery was S Salvatore, a cultural centre which reached its peak in the 12th century. Its flourishing musical activity was closely linked to that of the *scriptorium* of the monastery, as is indicated by the 27 manuscripts with Byzantine notation (in *I-ME*) and other manuscripts from Messina surviving elsewhere. The activity of the *scriptoria* encouraged the importation of troubadour songs, such as the *chansons courtoises* and the *chansons de geste*. During the 15th century there was renewed interest in humanistic studies in Messina; a public Greek school was founded and in 1473 Arrigo Alding introduced printing. From 1551 the Jesuits presented tragedies, comedies and sacred dramas with an ever increasing number of sung parts in the Teatro del Collegio Mamertino. Most of the works staged up to the end of the 16th century had texts written by Stefano Tuccio, Bartolomeo Petraccio and Girolamo Cariddi. Local performers seem to have been unsatisfactory; in 1549 and 1552 the senate engaged foreign musicians to perform at all religious and secular occasions, both in the cathedral and in the piazzas. The Messina Cathedral *cappella* was established in 1558; it was employed by the senate and soon attained fame throughout Italy, attracting musicians from elsewhere in Italy to become *maestri di cappella*: Heliseo Ghibel (1558–61), Bartolomeo Lombardo (1561–4 and 1567–95), Filippo Bonaffino and Gerolamo Lombardo (1614). Bartolomeo Lombardo's compositions were performed with notable success in Italy and in the royal chapel of Spain. Later *maestri* included Ottavio Catalani (1621–*c*1644), Vincenzo Tozzi (1653–74), Paolo Lorenzani (1675–8) and Domenico Scorpione (1680–81). Between the mid-16th century and the mid-17th the choir's numbers increased from eight (in 1564) to over 20.

In the same period polyphonic music was developed in Messina and throughout Sicily. Most of the *maestri di cappella* published religious and secular polyphonic music, as did Vincenzo Gallo, G.P. Flaccomio and P.M. Marsolo, all of whom were madrigal composers. This activity had a great impact on music publishing; the printing firms of Fausto Bufalini (1589–93) and of Pietro Brea ed Eredi (1594–1671) achieved a standard of production which could compete with that of their Venetian counterparts. The elder Antonio Ruffo was an important 17th-century patron of the arts; his collection became the most important in southern Italy. He had transformed his palazzo in Regio Campo into an academy,

and between about 1662 and 1725 scholars gathered there, and devoted much of their time to music: musicians were invited from outside the town and several members of the Ruffo family were accomplished instrumentalists and composers.

Other academies flourished in the 17th century and became famous throughout Italy: the 'Radicati', or 'Abbarbicati' (1653–78), one held in the house of the La Rocca family (where the first comedy was staged in Messina in 1575) and, most outstanding, the Accademia della Fucina (1639–78), the centre of the intellectual and political life of the city. Many of its members wrote texts for music, others were musicians, but the most famous were the poets Errico Scipione (1592–1670), author of the music drama *Deidamia*, performed in Venice in 1644, and Carlo Musarra, who probably introduced the melodrama to Messina several years before it reached other Sicilian cities. His dramatic poem *Eneidem*, or *Eneide di Virgilio*, with music by either Ottavio Catalani or Vincenzo Tozzi, was performed before the Prince of Castile and Viceroy of Sicily, probably in January 1652. The heroic drama *Il ratto d'Elena*, by Bernardo Morando with music by Tozzi, dates from 1657; it was performed by musicians hired by the city *cappella* who had formed a society which had an oratory in the church of S Gioacchino. In 1716 the society obtained the church of S Cecilia, transferring in the mid-19th century to that adjoining the former convent of S Agostino, where it remained until the earthquake of 1908, after which it moved to the church of S Antonio Abate.

Both before and after the rise of the melodrama, other forms of music and music drama such as miracle plays, sacred dramas, oratorios, serenades, cantatas and musical intermezzos were popular, particularly for use at special occasions. Performances were given in the theatres and churches of the religious orders, on parade floats, in the Teatro alla Marina built by the clergy, but especially in the theatre of the royal palace and of the senate. Messina acquired a proper theatre only in 1724 with the conversion of a large 14th-century warehouse known as the 'Munizione'; it had already been used for theatrical performances, including opera.

The cultural development of the 16th and 17th centuries was halted after the failure of the anti-Spanish revolt of 1674–8. The senate, the university (founded 1596), the order of the Cavalieri della Stella (1595) and the Academy of Letters (whose members were sent into exile) were all abolished. Later, the plague of 1743 and the 1783 earthquake had disastrous effects on the cultural life of the city, which had seen the foundation of several new academies: that of the Clizia (1701), the Accorti (1725) and, the most important and long-lasting, the Peloritana dei Pericolanti, founded in 1728. In the 18th century the Teatro della Munizione had engaged as designers Filippo Juvarra, Pietro Cirino and Quagliata, and Neapolitan opera had gained a strong hold, stimulated by the presence of the *opera buffa* composer Nicola Logroscino. The theatre was restored many times (1747–54, 1777, 1876, 1895), and engaged such outstanding singers as Luigi Lablache and Teresa Brambilla; it was destroyed in the earthquake of 1908.

Cultural life was renewed by the middle of the 19th century: the Accademia Peloritana enjoyed a period of great distinction (1827–47), the university was reinstated in 1838 and new libraries were opened – the Gabinetto Letterario (1839–47) and the Gabinetto di Lettura (from 1860). In 1852 the spacious Teatro S Elisabetta (renamed Teatro Vittorio Emanuele II in 1860) was officially inaugurated with Donizetti's *Marino Faliero* under the title *Il pascià di Scutari*. The theatre attracted many famous singers and conductors. Antonio Laudamo (1813–84), the most important local musician during the 19th century, was conductor at the theatre, *maestro di cappella* at the cathedral and a composer of operas and sacred music. A second theatre, the Arena Peloro, was inaugurated in 1878. Concerts also became popular and several concert societies were founded: the Accademia Filo-Armonica di Messina (1833), which merged in 1840 with the Reale Accademia Filodrammatica to become the Accademia Filodrammatica e Filo-Armonica (later Filodrammatica Pietro Cossa); the Melopea Accademia Filarmonico-Drammatica (1868); the Società del Quartetto (1880); the Filarmonica Verdi (1880); the Società Orchestrale l'Avvenire (1886); and the Società del Circolo Musicale. Their concerts presented works by Haydn, Mozart, Beethoven, Mendelssohn, Schubert and Liszt, as well as arrangements of chamber and symphonic music for piano (or other instruments) and for brass band. The concerts were given in the Teatro della Munizione, the Teatro Vittorio Emanuele, the Arena Peloro, the Sala Comunale, Coglitore, Sala Mola and elsewhere. The Banda Cittadina, the Banda Militare and the Banda della Società Operaia also gave concerts.

The earthquake of 28 December 1908 destroyed all of the city's cultural institutions. The void was only partly filled by the establishment of the Sezione di Messina della Federazione Orchestrale Italiana (1921) and the Filarmonica Antonio Laudamo (1922). The Accademia Filarmonica e Filodrammatica was re-established in 1948, and in the same year two new institutions were established in anticipation of the reopening of the Teatro Vittorio Emanuele: the Scuola di Danza Classica, and the Istituto Musicale A. Corelli. From 1936 the Sala Laudamo, part of the restoration project of the Teatro Vittorio Emanuele, was the venue for the most important musical events in the city. The Arena Peloro was demolished in 1969. The new Teatro Vittorio Emanuele opened in 1986; in 1995 the Sicilian legislature established the Teatro di Messina authority, which administers the Sala Laudamo and the Teatro in Fiera as well as the Teatro Vittorio Emanuele. The latter theatre does not have its own chorus and orchestra; short opera seasons are organized with companies from other theatres in Italy and abroad.

GIUSEPPE DONATO/GIUSEPPE FERRARO

Messner, Joseph (*b* Schwaz, Tyrol, 27 Feb 1893; *d* Salzburg, 23 Feb 1969). Austrian organist, conductor and composer. After studies at Innsbruck University and his ordination in 1918, he studied the organ and composition at the Akademie der Tonkunst in Munich. In 1922 he returned to Salzburg Cathedral, where he had been a choirboy, and assumed the duties of organist. Messner became Kapellmeister in 1926 and for many years conducted concerts in the cathedral as a part of the Salzburg Festival. He also led the seminar on church music at the Mozarteum. His honours included election to the Académie des Beaux-Arts (1931), Austrian honorary professorship (1932) and the Austrian State Prize (1936). He was distinguished both as an improviser on the organ and as a composer. His compositions, particularly his numerous church works, are in the tradition of Bruckner, although his songs show the influence of Mahler.

WORKS
(*selective list*)

VOCAL

Stage: Hadassa (op, after Bible), op.6, Aachen, 27 March 1925; Letztes Recht (dramatische Legende, E. von Handel-Mazzetti), op.31, *c*1931–2; Ines, op, op.35, *c*1932–3; Agnes Bernauer (op, after F. Hebbel), op.39, *c*1933–5

Vocal: Mass, D, op.4, solo vv, chorus, wind, org (1920); Wechselgesänge für Peter und Paul, op.7, solo vv, chorus, wind, org (1921); 2 Marienlegenden, op.8, A, chbr orch (1922); Missa poetica (von Stach), op.9, 1v, org (1923); Das Leben (after Novalis), op.13, S, female chorus, str orch, hp, pf (1925); 5 symphonischer Gesänge (after W. Hendel), op.24, S, orch (1927); Fronleichnamshymn, op.25, choir, wind (1928); Osterresponsarien, op.26, choir, wind (1930); Die vier letzten Dinge (after A. Silesius), op.27, solo vv, chorus, orch (1928–31); Mass, B♭, op.29, S, chorus, wind, org ad lib (1931); TeD, op.38, S, chorus, wind, org ad lib (1935); Marienmesse, op.40, female chorus, org/str orch (1935); Festlische Messe, C, op.42, 5vv, chorus (1935); 3 Songs (L. Maasfeld), op.43, Bar, orch (1936); Mass, G, op.46, chorus, orch/org (1937); Ps cxvi, op.47, chorus, wind, org (1937); Der Himmel hängt voller Geigen (Das Knaben Wunderhorn), op.48, boys' chorus, orch (1939); Fröliche Weisheit (W. Busch), op.49, Mez, male chorus (*c*1941); Da pacem, motet, op.50, T, chorus, str (1941); Proprium für Osterfest, op.52, S, Bar, chorus, orch (1940); Schicksal der Deutschen (H. Lersch), op.56, Bar, male chorus 4vv, orch (1943); Deutschlands Ehre, cant., op.59, chorus, wind, org (1943); Erfüllung, song cycle, op.64, S, str qt (1948–9); Mass, A, op.66, chorus, str, *c*1949; Lieder (Busch), op.70, T, pf (1952); Stabat Mater, op.74, S, orch/org (1953); Mass in E, soloists, chorus, orch (1959)

INSTRUMENTAL

Orch: Sym. no.1, c, op.5, *c*1919; Sinfonietta, op.10, pf, orch, *c*1922; Sym no.2 'Savonarola', f, op.25, perf. 1926; Symphonische Festmusik, op.45, perf. 1937; Salzburger Suite, op.51, perf. 1942; Rondo giocoso, op.54, perf. 1942; Sym. no.3, A, op.58 (1943–5); Vn Conc., op.61, perf. 1948

Chbr: Wind Qnt, op.57 (1942); Hn Qt, op.67 (1949); Str Qt (1953)

Solo inst: Phantasie-Fuge, op.14, pf (1924); Romance, op.15, pf (1924); Improvisation on a theme of Anton Bruckner, op.19, org (1925); Paraphrase über Deutschlandslied, op.28, org (1931); Suite, op.33, org (1932)

Principal publishers: Böhm, Doblinger, Leuckart, Salzburger Musikverlag, Tischer & Jagenberg, Universal, Voggenreiter

WILLIAM D. GUDGER/ERIK LEVI

Mester, Jorge (*b* Mexico City, 10 April 1935). American conductor of Hungarian parentage and Mexican birth. As a student at the Juilliard School of Music, he concentrated on conducting, principally with Morel; he also worked with Bernstein (Berkshire Music Center, 1955) and Albert Wolff. He made his début in 1955 with the National SO of Mexico, and his operatic début with *Salome* at the 1960 Spoleto Festival. In 1961–2 he was music director of the Greenwich Village SO in New York. Since then he has conducted numerous leading orchestras, including the Boston SO, Philadelphia Orchestra, BBC SO and the RPO, and has also worked in opera. In 1967 he became music director of the Louisville Orchestra, and in 12 years there made 72 première recordings, among them works by Bruch, Cowell, Crumb, Dallapiccola, Ginastera, Granados, Koechlin, Penderecki, Petrassi, Schuller and Shostakovich. In 1969 he became music director of the Aspen Festival, holding that position until 1990. Mester taught conducting and literature at the Juilliard School (1958–68, 1976–8, 1980–88), and there directed the American premières of Hindemith's *Long Christmas Dinner*, Henze's *Elegy for Young Lovers* and Cavalli's *Ormindo*. From 1972 to 1975 he was music director in Kansas City, and from 1979 to 1985 reorganized and directed the Casals Festival in Puerto Rico. In 1983 Mester accepted an appointment as music director of the Pasadena Symphony in southern California. He was named music director of the Mexico City PO in 1998, the same year he organized a new concert series at the Getty Center in Los Angeles. Avowedly modelling himself on Carlos Kleiber, he is essentially an intuitive rather than an intellectual musician, although he has successfully conducted works as difficult as Sessions's *The Trial of Lucullus*.

MICHAEL STEINBERG/CHARLES BARBER

Mesto (It.: 'sad', 'sorrowful', 'dejected'). A tempo or mood designation used primarily in the 19th century. The word itself was used in musical contexts by Zarlino (1558) and by Bernardino Bottazzi (1614), as well as by Monteverdi in a celebrated direction in *Il ritorno d'Ulisse*: 'Finita sinfonia in *tempo allegro*, si incomincia la seguente *mesta*, alla bassa sin che Penelope sarà gionta in scena per dar principio al canto'. But this did not bring the word into current musical vocabulary. The most famous uses are

probably by Beethoven, who marked the slow movement of his Piano Sonata op.10 no.3 *largo e mesto* and that of his String Quartet op.59 no.1 *adagio molto e mesto*. Bartók's Sixth Quartet opens *mesto*.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

Mestre de capela (Port.). The musician in charge of a CHAPEL.

Mestres (i Oñós), Apel·les (*b* Barcelona, 29 Oct 1854; *d* Barcelona, 19 July 1936). Catalan composer, librettist and writer on music. He worked as a professional magazine illustrator, but in 1914 he had to relinquish his career because of poor eyesight. He wrote numerous books of poetry, several plays, and many essays in which he advocated the unity of the arts. He is the author of a biography of the composer and conductor Anselm Clavé (Barcelona, 1876); his musical criticism was collected in *Volves musicals* (Barcelona, 1926).

He began composing in 1913 and gave his first public performance in 1922. His music consists mostly of songs. He dictated his music to professional musicians who would then transcribe it and write a piano accompaniment. (Frederic Lliurat and Joan Massià were among his transcribers.) His songs are characterized by a popular and traditional bent; they are generally cast in strophic form (or its Spanish variant, the copla) and, rather than imitate or mimic the lyrics, they attempt to be a psychological impression of them. Because of his role as a poet-musician, Mestres's music has often been identified with that of the medieval Catalan troubadours, but contemporary witnesses report that he felt affinities with the music of Mozart, Haydn and Gluck.

Mestres's musical output must be understood within the context of his whole production as an artist. As a critic he exerted great influence on a whole generation of composers, writers and artists. Innumerable composers were influenced by his writings and many wrote music on his poems and librettos, including Granados, Vives, Joan Borràs de Palau, Cassià Casademont, Enric Morera, Celestí Sadurní, Lamote de Grignon, and Samper, as well as modern songwriters such as Xavier Ribalta.

ANTONI PIZÀ

Mestres Quadreny, Josep M(aria) (*b* Manresa, Barcelona, 4 March 1929). Catalan composer. He studied the piano privately with Leonor Sigg and Rosa Maria Kucharsky and composition with Taltabull. His first acknowledged works showed a fascination with Webern that gave way to an involvement with aleatory techniques and mobile forms. Partly because of his university background (he holds a degree in chemistry) he has been largely interested in the integration of scientific thinking into musical composition. He participated in the setting up of the Phonos Foundation, devoted to electronic and computer music. His language is permeated by the surrealist tendencies common to a number of the Barcelona artists and writers of his generation, with whom he has worked on many joint projects. His recent music sometimes includes elements of musical tradition such as tonal chords or popular songs, not found in his former works. They act rather as out-of-context quotations, but make his music (or, at least, its surface) eventually depart from the more radical gestures of his production of the 1960s and 1970s. Nevertheless his main concern continues to be the expression of the laws of probability in the musical structure.

VÍCTOR ESTAPÉ

Mestrino, Nicola [Nicolò] (*b* Milan, 1748; *d* Paris, July 1789). Italian violinist and composer. He entered the service of Prince Esterházy in November 1780 and played in the orchestra under Haydn. In 1785 he became chamber musician of Count Erdődy in Pressburg (now Bratislava). The following year he travelled to Brussels and proceeded from there to Paris. There he made his début at the Concert Spirituel during the Christmas season 1786 and his style was warmly acclaimed as 'new, full of expression and sensitivity' (*Mercure de France*). Soon he became one of the city's most popular performers. Viotti thought highly of him and engaged him as leader of the Théâtre de Monsieur from its opening in January 1789.

Mestrino's compositions bear traces of his years in Austria and his association with Haydn. His concertos, however, are modelled on those of Viotti and his early followers. All 12 of Mestrino's concertos first appeared in Paris, and it is likely that most of them were written for

performance there. Despite his success in adapting his style and virtuosity to the high level of the French school his compositions were soon forgotten, except for the *Caprices*, which are still used for study purposes.

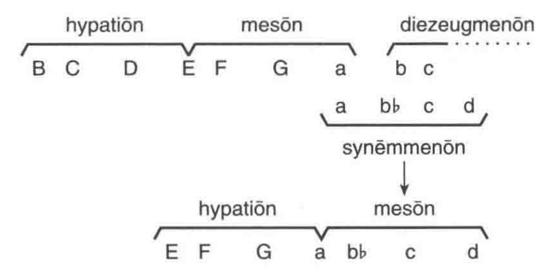
BORIS SCHWARZ/CHAPPELL WHITE

Mesuré (Fr.: 'measured'). In time. Couperin (1716) described it as an instruction to play regularly, not freely, and thus as the equivalent of *tempo giusto*. For Rousseau (1768), however, it was the French equivalent of *a tempo* or *a battuta*, an indication to return to the correct tempo after a deviation or specifically at the end of a recitative. Both uses are found in French music of the 18th century, and 'mesuré' is frequently used in orchestrally accompanied recitative to distinguish passages which are to be performed *a tempo*.

For bibliography *see* TEMPO AND EXPRESSION MARKS.

DAVID FALLOWS

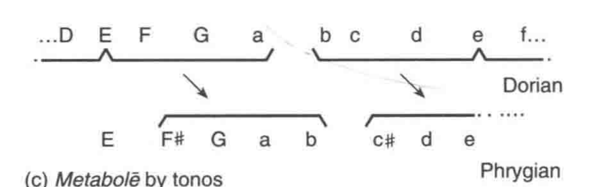
Metabolē (Gk.: 'change' or 'exchange'). A term used in ancient Greek writings to indicate a tonal or rhythmic change in music, or one of *ēthos*. There is no better translation of *metabolē* than 'modulation', although the latter term most commonly refers to change of key, whereas the ancient Greek term was used in more varied ways.



Metabolē denotes change from one state to another – most often a change of note function or pitch – while an underlying entity remains the same. Bacchius, a music theorist from late antiquity, defined *metabolē* as 'an alteration of the substratum, or the transposition of something similar into a dissimilar place' (*Introduction to the Art of Music*, ed. Jan, 305.5–6). The underlying entity may be the musical composition itself, but often the change is musically very precise, just as modulation in tonal music of the 18th and 19th centuries often entails change of tonal centre while other musical characteristics such as mode remain constant.

Cleonides, a disciple of Aristoxenus, described four kinds of *metabolē* (*Introduction to Harmonics*, xiii, ed. Jan, 204.19–206.18): by genus, system, *tonos* and melodic composition. *Metabolē* by genus is the change from one of the three genera (diatonic, chromatic, enharmonic) to another (see fig.1*a*).

Metabolē by melodic composition is a change of character or *ēthos*, for example, from grandeur and heroism to melancholy. The other two kinds of *metabolē*, by system and *tonos*, are more complicated. Aristoxenus, an early author upon whom Cleonides relies, distinguished between simple and modulating melodies, and said of the latter that they undergo a change of their order (*On Harmonics*, xxxviii). Later writers such as Ptolemy and Aristides Quintilianus help clarify Cleonides' meaning to



a G F E E F G♭ a

(a) *Metabolē* by genus diatonic → chromatic

(b) *Metabolē* by system

by convention, let mesē = a, and assume the diatonic genus

(c) *Metabolē* by tonos

1. Diagram showing three kinds of metabolē

some degree. *Metabolē* by system most often entails use of the *synēmmenōn* or conjunct system as a way of changing the names (and possibly function) of the notes lying within a specified range (Ptolemy, *Harmonics*, ii.6). The note *mesē* is shared by the *mesōn* and *synēmmenōn* tetrachords (see fig.1*b*); *metabolē* is effected by reinterpreting the old *synēmmenōn* tetrachord as the new *mesōn* tetrachord.

Thus the functional notes of the *hypatōn* and *mesōn* tetrachords have modulated from *B*–*a* to *E*–*d*. Examples of this kind of *metabolē* as well as *metabolē* by genus occur in the Delphic paeans attributed to Athenaeus and Limenius (Pöhlmann, nos.19–20).

Metabolē by *tonos* can be considered a variant of *metabolē* by system. The latter is confined to making the change by means of a system, that is, by an interval of a 4th, 5th or octave, whereas the former can be effected by retuning the immutable two-octave system so as to bring into the central octave (by convention, *E*–*e*) a sequence of intervals characteristic of a different octave species (*harmonia*, *tonos* or *tropos* – ancient theorists use a variety of terms). In fig.1*c*, according to the dual nomenclature posited by Ptolemy to indicate systemically absolute ('thetic') and functional ('dynamic') positions, the functional Dorian *tonos* is replaced by the functional Phrygian.

Another kind of *metabolē* by *tonos* may be approximately equivalent to a change of key but with retention of mode. Ptolemy addressed such a change (*Harmonics*, ii.7–8), as did other later theorists. In music of the 18th

and 19th centuries this kind of modulation requires a relocation of the tonic and may convey as well a change of pitch and range, although the latter changes are hardly necessary. The presentation and discussion by the late Aristoxenian writers Cleonides, Bacchius and Alypius (*Introduction to Music*), seem to allow for this kind of modulation; Ptolemy, however, disparaged it (*Harmonics*, ii.9).

Both Ptolemy (*Harmonics*, iii.7) and Aristides Quintilianus (*On Music*, iii.26) drew analogies between tonal *metabolē* and changes in the soul, not only in the short term but also over a lifetime. The 'higher' *tonoi* such as the Mixolydian tend to excite the listener and are comparable to similar stages in life such as war; the 'lower' *tonoi* such as the Hypodorian tend to calm the listener and may accord with times of scarcity and thrift.

That ancient Greek music contained various kinds of tonal changes is evident not only from theoretical writings but also from extant musical fragments. Furthermore, the degree to which music modulated was debated from at least the late 5th century BCE. In addition to well-known criticisms by Aristophanes (*Clouds*, 961–72) and Plato (*Republic*, iii, 399c7, d1, d4, 404d12), there is a passage by Pherecrates, quoted by Pseudo-Plutarch (*On Music*, xxx) in which Music bewails the tonal mistreatment she has received at the hands of the contemporary musicians Melanippides, Cinesias, Phrynis and Timotheus, which included 'exharmonic' bends in the music.

In addition to tonal *metabolē*, ancient Greek theorists recognized rhythmic *metabolē*, in both tempo and meter (Aristides Quintilianus, *On Music*, i.13, 19; Bacchius, *Introduction to the Art of Music*, ed. Jan, 304.6–305.6).

ANDRÉ BARBERA

Metacrusis. *See* FEMININE ENDING.

Metallica. American heavy metal band. Formed in 1981, it consisted of James Alan Hetfield (*b* Los Angeles, 3 Aug 1963; vocals and guitar), Kirk Hammett (*b* San Francisco, 18 Nov 1962; guitar), Lars Ulrich (*b* Copenhagen, 26 Dec 1963; drums) and Cliff Burton (*b* San Francisco, 10 Feb 1962; *d* Ljungloy, Sweden, 27 Sept 1986; bass). Dave Mustaine (*b* La Mesa, CA, 13 Sept 1961) initially belonged to the group but was replaced by Hammett in 1983; Mustaine went on to found Megadeth. Jason Newsted (*b* Battle Creek, MI, 4 March 1963) replaced Burton on bass. Metallica combined the influences of the 'new wave of British heavy metal' with the speed and raw sound of Motörhead; it was the main pioneer of speed metal, a gritty fusion of heavy metal and hardcore that gained underground popularity throughout the 1980s as an alternative to more pop-oriented styles of metal. Albums such as *Master of Puppets* (Elek., 1986) made them arguably the most influential hard-rock band of the decade, and Metallica eventually crossed over to mainstream success with *Metallica* (Elek., 1991), which sold more than seven million copies. Hetfield's growled vocal style was much admired and imitated, and Ulrich was considered one of rock's best drummers. Their songs tended to be constructed sectionally, with independent riffs played at high speed, sometimes in odd metres, and always with great ensemble precision. Much of speed metal's distinctively grim affect resulted from its reliance on extreme guitar distortion, tritone relationships and the Phrygian mode. Metallica often used contrasting, slow-tempo, undistorted sections within more aggressive songs. Their lyrics expressed feelings of anger, despair and fear, avoided references to sex and gender and often addressed questions of justice and political violence. (C. Crocker: *Metallica: the Frayed Ends of Metal*, New York, 1993)

ROBERT WALSER

Metallo, Grammatio [Grammatico, Graminazio] (*b* Bisaccia, nr Naples, 1539 or 1540; *d* ?Venice, after 1615). Italian composer. His birthplace is known from the dedication of his second book of *Canzoni* (1577), and he was probably a pupil of Giovanthomaso Cimello in Naples. In 1582 he competed unsuccessfully for the position of *maestro di cappella* of Aquileia Cathedral. According to Fétis, the title-page of his now lost *Canzoni alla napolitana* (1594) stated that he was then *maestro di cappella* of Bassano Cathedral. Some time before 1602 he journeyed to the Holy Land, Crete and Egypt. As he recorded in his later publications, he composed many of his motets during his travels. He was imprisoned for a time in Crete; and in Egypt, to quote the dedication of his *Primo libro de motetti* (signed from Alexandria on 15 September 1601), he was 'stripped of his clothes, tortured and ruined'.

On 2 February 1602 he completed his volume of *Magnificat* settings in Cairo and returned to Venice the same year to assume the post of *maestro di cappella* at S Marcuola, which he still held in 1610. His portrait in the 1614 edition of his *Ricercari* gives his age as 74, and according to Romano Micheli's *Musica vaga et artificiosa* he was still living in Venice in 1615.

Metallo composed mainly lighter music and instrumental works during his early years; only later did he turn exclusively to sacred music. Judging from the number of reprints, his *Ricercari* was his most popular publication. Each ricercare carries a text incipit; the title-page states that the pieces are 'to sing and play', and these opening words are those of proverbs to be completed by the performers. Metallo was particularly adept at the composition of canons, and Micheli admired his skill sufficiently to add parts to 15 of them in his *Musica vaga et artificiosa*, a compendium of contrapuntal dexterity. His sacred music is rather conservative and recalls the stylistic trends current in Rome at the time rather than the more progressive Venetian church music.

WORKS

Il secondo libro de canzoni . . . con una moresca, 3, 4vv (Naples, 1577[9]), inc.
Villanelle alla napolitana con una moresca, 3vv (Venice, 1592[19])
Canzoni alla napolitana con 2 canzoni alla francese per sonare, 4, 5vv (Venice, 1594); lost, 13 pieces transcr. org in *CH-Bu*
Messe comodissime, libro sesto, 4 equal vv (Venice, 1602)
Il primo libro di motetti . . . con una messa, 3, 4vv (Venice, 1602)
Ricercari per sonare et cantare, 2vv (Venice, 1603)
Magnificat con le 4 antifone, hymno et un motetto con diversi canoni, 4, 5vv (Venice, 1603)

Motetti, 6vv, con una Magnificat, messa e motetti, 8vv, libro secondo (Venice, 1604), inc.
Messe con 2 motetti, 5vv, bc, org, op.17 (Venice, 1610), inc.
Motetti con una Magnificat, 5, 10vv, bc, org, op.18 (Venice, 1610), inc.
Motetti, per tutte le solennità dell'anno con una Regina coeli, 4, 8vv, opp.19, 20 (Venice, 1610)
Messa, motetti et un Magnificat . . . et un circolo musicale, 5, 6vv, op.21 (Venice, 1611), inc.
Epistola, introiti, offertorii, passii, improperii, et messa per la settimana santa, 4vv, op.24 (Venice, 1613), inc.
Motetti, Magnificat et madrigali spirituali, 3vv, bc, op.25 (Venice, 1613)
Motet: Sanctus Dominus, canon, 3vv, *D-Bsb*
19 villanelle, 3vv, in 1590[24]; 15 canons in 1615[3], with addl parts by Micheli; 1 canon in Cerone: El melopeo y maestro (Naples, 1613)

Metallophone. A generic term for percussion instruments that consist of a series of tuned metal bars arranged in a single or double row (for details of the Hornbostel-Sachs classification *see* IDIOPHONE). Instruments made of metal slabs were known in China by 700 CE. An instrument of Turkish origin consisting of 16 slabs of metal suspended in an upright frame is said to have been introduced into China in the 7th century. Bronze slabs came two centuries later in the form of the Javanese *saron*. This bronze metallophone differs from the earliest instruments in that the slabs are suspended horizontally over a cradle of wood similar to the trough xylophone. The *saron* and a similar instrument, the *gender* (*see* GENDÈR), have distinctive roles in the GAMELAN ensemble. In the *gender* the tone of each bar is enriched by means of bamboo tubes which are placed in the framework in a vertical position under the slabs. Each bar is tuned by adjusting its length to sound in unison with its corresponding slab.

The East Asian metallophones have influenced certain Western orchestral percussion instruments such as the GLOCKENSPIEL and VIBRAPHONE. In modern compositions the term 'metallophone' is applied to a series of alloy bars suspended over a resonance box. The bars are arranged in a single row or in keyboard fashion. A damping mechanism is incorporated in certain models. In some cases the sustaining power is controlled by a magnetized strip of metal which is moved towards or away from the nodal points. Carl Orff scored for metallophones in a number of his compositions. A simple form of metallophones are included in 'school percussion'.

JAMES BLADES

Metallov, Vasily Mikhaylovich (*b* Saratov province, 1/13 March 1862; *d* Moscow, 1 June 1926). Russian musicologist and composer. He studied theology in Moscow, and taught at the Synodal School there from 1894. In 1901 he was appointed professor of the history of church music at the Moscow Conservatory, and he also lectured at the Institute of Archaeology. He was for many years an active member of the Russian Academy of Sciences. Metallov made a study of the neumatic notation of the early Russian Church, and transcribed pieces from service books dating from the 11th to the 14th centuries. He published two useful textbooks on notation, and also wrote books and articles dealing with the history of the Russian Church and with the development of early Russian music in general. He also composed some sacred music.

Metaphor aria. *See* SIMILE ARIA.

Metastasio [Trapassi], **Pietro** (**Antonio Domenico Bonaventura**) (*b* Rome, 3 Jan 1698; *d* Vienna, 12 April 1782). Italian poet, librettist and moralist. Although his fame rests chiefly on his 27 *opera seria* librettos, his works intended for musical setting also include a comic intermezzo, close to 40 occasional pieces (ranging from elaborately staged *feste teatrale* to simple *complimenti* for two participants), 8 oratorios, 37 cantatas, 8 solo *complimenti*, 7 canzonettas, 33 *strofe per musica* and other lyrical stanzas. This broad spectrum, widened further by settings of some of the 32 sonnets, has brought over 400 composers in contact with Metastasian texts, which, along with the music they prompted, were known across Europe, Britain, Scandinavia and imperial Russia during the period from about 1720 to about 1835, and even reached pockets of the New World. To understand these poetic works is a challenge. It demands a thinking back past the movements in realism and naturalism that

were so much a part of the latter 19th century and which, in the 20th century, became so photographically and psychologically exact. It also demands a peeling away of 20th-century cynicism. In his writings Metastasio was much more concerned with what humanity might be than with what it actually is.

1. Life to 1730. 2. Life after 1730. 3. Purpose. 4. Poetic style.

1. LIFE TO 1730. Born to Felice and Francesca Trapassi, of modest means, Pietro was destined to attain imperial recognition and patronage through talent and learning coupled with appropriate and timely connections, the first of which was Cardinal Pietro Ottoboni, a man of wealth and influence and a beneficiary of Pietro Ottoboni the elder. Elected Pope Alexander VIII in 1689, the older Ottoboni elevated his two nephews, Marco and Antonio, to princely positions and named both as cardinals along with Antonio's son Pietro. The younger Pietro was a devotee of music and theatre and a generous patron; he was also a librettist, and as Pietro Trapssi's godfather he facilitated the boy's early schooling, along with that of his younger brother, Leopoldo. Later, in 1727, he commissioned the writing and staging of Metastasio's first oratorio, *Per la festività del santo natale*, given in Rome at his own residence, the Cancelleria Apostolica, with music by Giovanni Costanzi, another of his protégés. The distinguished jurist Gianvincenzo Gravina was Pietro Trapassi's next important connection. Impressed by the boy's intelligence and precocious ability at verse improvisation, Gravina adopted him in 1708, the year in which he published his most significant literary treatise, *Della ragion poetica libri due*. Gravina set in place the boy's classical education, contemplating a career in law. He also introduced him to influential members of society and encouraged his public displays of poetic improvisation as long as the boy's delicate health permitted. In 1712, when Gravina supervised the writing of the 14-year-old Pietro's only tragedy, *Giustino*, he took him to Scalea in Calabria to study with Gregorio Calroprese, Gravina's cousin and a scholar of Cartesian philosophy. Back in Rome, in 1714, Pietro took minor orders at the Lateran Basilica. The following year, Gravina arranged the name change from 'Trapassi' to its Greek equivalent, 'Metastasio', and in 1717 *Giustino* appeared in an edition of *Poesie di Pietro Metastasio Romano* published in Naples. This volume, in its dedication to Aurelia Gambacorta d'Este, contains a passing compliment to Filippo di Gallas, Austrian Ambassador in Rome, and the tragedy is preceded by the idyll *Il convito degli dei* a more recent work written on the confinement of the Empress Elizabeth, consort to Charles VI of Austria. Similar tributes to the Austrian court via its representation in Italy were to follow.

Gravina died in 1718, leaving Metastasio well educated, well connected and well provided for. He initially worked in a law office in Naples, where he also continued to build his career as a poet. In 1720 he wrote the *azione teatrale Endimione*, which was on hand the following year for the wedding of Antonio Pignatelli, Prince of Belmonte, and Anna Pinelli di Sangro. Set by Domenico Sarro, this work was dedicated to the groom's sister, Marianna Pignatelli, a lady-in-waiting to the Empress Elizabeth and wife of Michael Johann d'Althan, a private counsellor, to Charles VI. Michael Johann's brother, Cardinal Michael Friedrich d'Althan, became viceroy of Naples in 1722, the year in which Metastasio wrote *La Galatea*, another *azione* which, set by Gioseffo Comito, served another Pignatelli occasion: the birth of a child to Margherita, sister of Antonio and Marianna. Meanwhile, two more *azioni*, *Angelica* and *Gli orti esperidi*, both with music by Nicola Porpora, were written for performance in Naples in 1720 and 1721 as birthday celebrations to honour the Empress Elizabeth. In 1722 Marianna d'Althan in Vienna, became a widow, but she remained close to the throne and was well positioned to add her voice to that of Apostolo Zeno in praise of Metastasio when, in 1729, Zeno announced his intention of returning to Venice, thus leaving open a position for an Italian court poet. That Metastasio was appointed in 1730 by invitation rather than by application, that his salary of 3000 florins was higher than that of the *Kapellmeister*, J.J. Fux, and that the appointment was made without the knowledge of Siegmund Rudolf Sinzendorf, the Obersthofmeister, under whose jurisdiction the position fell, testifies to the strength of the connections that had been forged. The salary was in fact augmented by an additional 1000 florins annually from the emperor's privy purse and 400 florins for personal accommodation.

Connections aside, however, by August 1729, when he was offered the court position, Metastasio had also established himself as a poetic dramatist with six successful operas and an oratorio. Further, still in Rome in November 1729, he was to add *La contesa de' numi*, a *festa teatrale* in honour of a son born to Louis XV of France and, before leaving for Vienna, the two operas destined to become his most popular, *Artaserse* and *Alessandro nell'Indie*, all three in settings by Leonardo Vinci. His first opera, *Siface rè di Numidia*, by Francesco Feo, had its première in Naples in 1723. It was successful, but Metastasio tended to discount it, as it was largely a reworking of Domenico David's *La forza del virtù*. The first fully original opera text therefore, was *Didone abbandonata*, set for Naples by Sarro in 1724 and dedicated to the viceroy. While writing this libretto, Metastasio lived in the home of Giuseppe Bulgarelli and his wife, the singer-actress Maria Anna Benti ('La Romanina'), for whom the title role was created. She had sung Venus in *Gli Orti esperidi* and the friendship between poet and singer led to his regular presence in her salon, where he met the composers of his early works and began his lifelong friendship with the castrato Farinelli. Vinci was to set the next opera, *Siroe rè Persia*, for Venice in February 1726, just a month after his setting of *Didone* was given in Rome. *Catone in Utica* (1728, Rome) and *Semiramide riconosciuta* (1729, Rome) were both Vinci operas, with *Ezio* (1728, Venice) first set by Porpora. Thus, by the time Metastasio left for Vienna, his dramas had not only succeeded, but had also triumphed in the three major opera centres of Italy, and in settings by the major composers.

2. LIFE AFTER 1730. Opera and oratorio had reached Vienna early in the 17th century and the regular performance of theatrical pieces for imperial birthdays, namedays, weddings etc. became standard from the middle of the century, with Lenten and Advent oratorios (or their equivalent) following from about 1661. Metastasio's first work for Vienna was the oratorio *La passione di Gesù Cristo*, performed at the Hofkapelle on 4 April 1730, before he actually arrived in the city. The following year, he complied fully with the existing tradition by providing texts for an Easter oratorio (*Sant' Elena al*

Pietro Metastasio: engraving by Paolo Caronni after Johann Nepomuk Steiner

Calvario), a *festa teatrale* (*Il tempio dell'Eternità*) for the birthday of the Empress (28 August) and an opera (*Demetrio*) for the nameday of the emperor (4 November). In all, between 1730 and the death of Charles VI in 1740, he wrote 11 of his opera librettos, another 11 occasional pieces, and the last seven of his eight oratorios, not to mention cantatas, canzonettas, sonnets and other lyrical poetry for which the dates are uncertain. *L'olimpiade*, *Demofoonte* and *La clemenza di Tito* all date from the first half of this decade and by early 1736, with four *azioni* and an oratorio written the previous year, with *Achille in Sciro* just completed for the wedding of Maria Theresia and Francis of Lorraine, and with *Ciro riconosciuto* and *Temistocle* yet to emerge for August and November, Metastasio was struggling to maintain the pace. Musical settings of most of the major works were by Antonio Caldara, the *vice-Kapellmeister*, with smaller works generally allotted to the court composers Georg Reutter and Luca Antonio Predieri, both of whom rose to greater prominence after Caldara's death in December 1736. Yet even as he strove to fulfil imperial demands, changes in Vienna's material circumstances were imperceptibly bringing about cultural changes that would render Metastasio's creative life after 1740 quite anticlimactic by comparison with what he experienced under Charles's patronage.

Austria began to suffer territorial losses as from the mid-1730s, and further pressure was placed on an already strained economy with the wars that followed the accession of Maria Theresia in 1740; the bonds between politics and religion that had brought Counter-Reformation Austria to its height under Charles began to loosen, and reform eventually altered Viennese society, from the structures of church and state down to the bill of fare at the theatres, now given over to private management. The Austro-Italian Baroque of which Metastasio had become a part gave way to a form of early classicism, a movement considerably bolstered by the new alliances between France and Austria as already made manifest in the union of Maria Theresia and Francis of Lorraine and further affirmed in 1744 with the marriage of Maria's sister to Francis's brother.

Although between 1741 and 1782 Metastasio wrote about 20 texts tailored to Habsburg court occasions and eight solo *complimenti*, he wrote no new oratorios and only a few new *opera seria* librettos. Some of the Metastasian operas performed in the early 1740s were adaptations for Vienna of works previously written for Italy, with new settings of existing texts common by the end of the decade. With the support of the imperial rulers and, in 1752–3, the new chancellor, Wenzel Kaunitz, French theatre and its offshoots reduced productions of Metastasian opera in Vienna to nothing by 1765. Joseph II's preference for Italian *opera buffa* over *opera seria* then became evident after his accession to power in the mid-1760s. When, in 1776, Joseph established the German National theater and then the National Singspiel, Metastasian theatre took another setback, and its continuance into the 1830s was outside the imperial capital.

Of the operas written after 1740, *Antigono* (1743) and *Nitteti* (1756) had their premières outside Vienna (in Dresden and Madrid respectively), as did *Romolo ed Ersilia* (1765) and *Ruggiero* (1771), albeit for Habsburg weddings (in Innsbruck and Milan). Other wedding pieces included the opera *Ipermestra* (1744) and the elaborately staged *feste teatrali Alcide al bivio* (1760) and *Partenope* (1767). Another *festa*, *Egeria* (1764), celebrated Joseph's coronation. Of the remaining three operas, *Il trionfo di Clelia* (1762) was written to celebrate the birth of a daughter to Archduke Joseph and Isabella of Parma, while *Il re pastore* (1751) and *L'eroe cinese* (1752) were vehicles for amateur performance by court personnel. Nearly 20 occasional pieces, including the solo *complimenti*, were prepared for performances by the young royals. Four others, however, were written for Madrid, including *L'isola disabitata*, an *azione teatrale* that was to attract the attention of such composers as Jommelli, Paisiello, Perez, Traetta and Joseph Haydn. Further, although Metastasian productions came to grace the stage in Vienna only as formal accompaniments to special court occasions (or as 'in house' events), several were set by one of the poet's favourite composers, J.A. Hasse. Other first composers included Reutter, Giuseppe Bonno, Nicola Conforto, C.W. Von Gluck and Georg Wagenseil. Long after Metastasio's death, extracts from his works continued to serve such composers as Leopold Kozeluch, Giovanni Liverati and Antonio Salieri as texts for compilations of solo songs and arias, duets and ensembles, grouped together under such titles as *ariette*, *canzonette*, *divertimenti vocali* or *notturni*, and published as vocal pieces with keyboard accompaniment.

3. Purpose. Metastasio's entire literary career flourished within the milieu of the Arcadian movement. Both Pietro Ottoboni and Gravina were Arcadians, as was Michael Friedrich d'Althan and the whole line of court poets in Vienna from Donato Cupeda (who followed Nicolò Minato) to Pietro Bernadoni, Silvio Stampiglia, Pietro Pariati, Apostolo Zeno and Giovani Pasquini. Poets such as Marco Coltellini and Ranieri de' Calzabigi, later to have associations with Vienna, were also Arcadians. For dramatic poets, the fundamental Arcadian aim was a

moral one: to render virtue appealing and vice distasteful. At least, such an aim is articulated along with other literary principles in the treatises of Gravina, Giovanni Crescimbeni and Lodovico Muratori, all published in the first decade of the 18th century. Like Metastasio, these writers were familiar with Cartesian moral philosophy by which virtue was best revealed in an individual's mental and spiritual ability to control actions that may be incited by human passion. Indeed, the human passions – their identity and their understanding – form the very substance of Descartes' discourse (*Les passions de l'âme*), the moral code that served Arcadian writers as a veritable guide book. It was particularly relevant to the Arcadian dictum, drawn from antiquity, that dramatic poets should teach moral principles under the guise of giving pleasure, and should move the emotions of audiences and readers in favour of the moral stance; the Arcadian librettist, as a writer of moral drama, thus became a preacher in the theatre. For Metastasio, with his first-hand knowledge of ancient tragedy and his capacity to blend Arcadian ideals with the observations of Aristotle and Horace, these moral dramas took on a highly developed literary quality. Complete as they are in text alone, they were also capable of performance as spoken dramas. In musical setting, however, they were constantly modified throughout the 18th century to suit local performance requirements, to accommodate the increased use of duets, ensembles and scene-complex finales and new musical forms, and to reflect changes in the pace and intensity of dramatic expression.

In addition to the Arcadian treatises published at the beginning of the 18th century, there were also three important treatises on pulpit oratory (those of Blaise Gisbert, Jean Gaichiès and François Fénelon), all of which show a remarkable similarity with the Arcadian works in their emphasis on morality, their assumed knowledge of Descartes, their insistence on the principles of teaching, moving (or persuading) and pleasing, and their desire for lofty ideas to be expressed in simple and economical language. The preacher in the chapel, therefore, had much the same demands upon him as the preacher in the theatre. Thus, provided dramatic poets, like the *abbe* Metastasio, were as informed about matters of church doctrine, the writings of the church fathers, bible stories and the lives of the saints as they were about matters of mythology and ancient history, their task of preaching could be readily moved from theatre to chapel – from opera libretto to oratorio text. In emphasizing the emotional predicaments of the personages in their oratorios, poets automatically aligned themselves with a general trend in pulpit oratory of the day. Indeed, Metastasio, more than being a mere poet and librettist, was also a preacher and, as that term implies, a moral philosopher and a theologian. Unlike the opera texts, those for the oratorios often remained remarkably intact during the 18th century. Oratorios with action plots, however, were frequently reworked during the second half of the 18th century to serve as librettos for operas. Thus such oratorios as *Betulia liberata* and *Isacco figura del redentore* were transformed into sacred operas, particularly appropriate for the Lenten season.

4. Poetic style. When the first Arcadian Academy was founded in 1690, it gave impetus to a movement in Italian literature that Muratori believed to have surfaced as early as 1650. Thus the Arcadians endorsed an already existing call for poets to return to the models of antiquity – to the didactic and moral function of ancient Greek drama and to the simplicity, directness and economy of its language. Metastasio obeyed. Not only was his youthful *Giustino* based entirely on Greek models, but he was later to provide some observations on several Greek dramas and to attempt a justification of *opera seria* in terms of Aristotle's *Poetics* in his *Estratto dell' Arte poetica d'Aristotle* (1772, published 1782). Ancient Rome also gained representation in his plots and in his annotated translation of Horace's *Ars poetica* (1749). For Metastasio, however, the moral and technical principles of antiquity had to be reconciled with those of Arcadia, founded on the more recent more philosophy of Descartes and requiring the manipulation of the Italian language as first exemplified by Petrach. Beyond Petrarch, Metastasio also found models in Tasso, Ariosto, Guarini, and even in Marini, the poet most condemned by Arcadia for having corrupted the moral integrity and clear expression of Italian poetry. Out of this background, Metastasio created dramas based upon characters in action (as Aristotle suggests) to which he later assigned names. These characters, however, are engaged in moral action, and their varying degrees of success in subjugating to their wills the deeds to which their emotions may incite them follow the probable outcomes as outlined by Descartes. In this way, Metastasio demonstrated moral aspiration and its universal benefit within the bounds of Aristotelian probability and in line with Aristotle's notion that poets, unlike historians, should demonstrate what might be rather than simply record historical truth. Further, Aristotle's suggestion that characters should be 'better than average' and made better looking than in real life was reflected by Metastasio in his depiction of consummate moral heroes and heroines who, if not themselves gods, saints or biblical characters, were of the highest ruling class. Metastasio successfully blended this fusion of Aristotle and Descartes with the external and internal 'beauties' of poetry demanded by Arcadia. External beauties included choice of words, versification, figures of speech and eloquence of style, while internal beauties included profundity, hidden mysteries, philosophy and theology. Uniquely Metastasian in the result is the sensitivity to the emotive nuances of words and the moulding of them into mellifluous yet simply stated poetry that in itself could turn both heart and mind in the direction of the noble aspirations expressed. As in the texts of Zeno, there was no place here for comic elements, all of which were expunged.

While satisfying the demands of his literary environment, Metastasio also accommodated genre expectations and the requirements of musical setting. The operas are conceived in three acts, the oratorios in two parts, the *feste* and *azioni* in one or two parts and the dramatic cantatas and *componimenti* in one. Scenes change in the operas according to the entry or exit of a character. Such scene divisions, however, are present in only a few of the *feste* and *azioni*, and are completely absent from the oratorios. Often a series of scenes or events will be linked by a character common to all of them (the *liaison de scène* technique), at the end of which, in the larger theatrical works, a change of location may occur. All the dramatic works, whether for theatre, chapel or salon, begin with the action already in progress, from which the emotional weight of subsequent events, regulated according to genre,

builds to climactic points of internal conflict for the central characters. For musical setting, the action of most scenes or events is laid out in dialogue (for *recitativo semplice*), occasional monologue (for *recitativo obbligato*) and final exit aria, with the character's state of mind usually set before the aria begins. The individual lines of verse are all musically conceived and are generally cast in two stanzas to accommodate the prevailing *da capo* settings, with vowel placement appropriate, to vocal rendition. In the operas, the ends of the first two acts are high points of tension, with either a scena for a principal character or a duet for the two principals. In all except three of the operas (*Attilio Regio*, *Catone in Utica* and *Didone abbandonata*) a happy ending (*lieto fine*), celebrated in the work's final lyrical number, is standard. Typical though these characteristics may be, however, they are generalities around which much variation is woven.

The notion of scenes ending with *da capo* arias is occasionally broken, even in the operas, with the inclusion of short arias that do not conclude the scenes in which they occur. Beyond the operas, the absence of scene divisions in other genres loosens the convention even further. Almost half of the the operas contain act-ending duets with medial duets occuring in almost a quarter of them. Both types of duet are found in the *azioni* and *componimenti*, while in the *feste* medial duets dominate, matched by an equal number of act-ending and medial ensembles, which often occur in combination with choruses of gods, muses, virtues and the like. In the *feste*, three to four numbers usually require chorus, including the final *tutti*. *Egeria*, for example, is a *festa* in one part. It opens with a quartet and chorus, has another at its centre, and concludes with a quintet and chorus. All 7 of the Vienna oratorios call for a chorus at the end of each of their two parts, often with at least one other medial entry. In the operas, the quartet written for the second version of the *Catone in Utica* conclusion represents the only medial ensemble. Act-ending ensembles, however, occur in 5 other operas, and include the final sextet in *Antigono*. A chorus is required for half the operas and is thus available to join with or replace the principal singers in the final *cori*. In most of the remaining operas, 'extras' who may or may not contribute to the vocal conclusions, are at least assembled for them. Indeed, *Ruggiero* and *Zenobia* may be the only operas with final *cori* that have to be sung by the soloists alone. Such *cori* simply do not occur in either *Didone* or *Catone*, but are typical of the *azioni*, where they usually occur as numbers for the solo ensemble. The *componimenti* and dramatic cantatas tend to end in duets or genuine trios according to the number of *dramatis personae* involved.

Along with an awareness of this tremendous variety within the librettos, it is also important to bear in mind that nearly all of Metastasio's works, and certainly all the *opera seria* texts, were written after the publication of Benedetto Marcello's *Il teatro alla moda*. Indeed, the content of the poet's only comic intermezzo, *L'impresario delle Canarie*, written as a companion piece to *Didone abbandonata*, suggests his acquaintance with Marcello's work and the operatic foibles that it satirizes right from the outset of his career. Further, although the tradition that Metastasio upheld during his first ten years inVienna may represent the final flowering of the Austro-Italian Baroque, his earlier works for Rome, Naples and Venice had already attracted the attention of a new generation of composers more associated with an early Classical style than with the passing Baroque. Apart from Caldara, as much an early Classicist as a master of counterpoint in the Fux tradition, Metastasian texts served hundreds of later composers, including Mozart, and it must be remembered that Gluck set far more Metastasio than he did Calzabigi. Beyond Vienna, Metastasian texts remained in vogue until well into the 19th century, a longevity not easily understood if acquaintance with these works is limited to skeletal synopses, occasional arias, or translations that distort the works beyond recognition, such as those of the well-intentioned John Hoole.

Although Metastasian drama, while still popular elsewhere, fell from fashion in Vienna by 1765, the lyricism and the moral tone that permeated it did not. From the stage, Metastasio's dramatic poetry retired to private libraries where it could be read in unaltered versions. Copies of Metastasio volumes were given as gifts, for example to the young Carl Zinzendorf in Vienna in1762 and Mozart in Milan in 1770. Later, in North America, Thomas Jefferson, keen to amass works of the highest quality for his personal library, obtained a 12-volume *Opere del Metastasio*. Editions of Metastasio's works, beginning with the first publication of 1717, number over 200, the most significant of which remain the Hérissant edition edited by Giuseppe Pezzana (Paris, and dedicated to Marie Antoinette, the Zatta edition (Venice, 1782–4), dedicated to Catherine the Great, and the Brunelli edition (Milan and Verona, 1943–54). Other early editions contain important critical commentaries, and texual annotations have accompanied editions of selected works published in Italy since the 1960s. The tercentenary of Metastasio's birth in 1998 lent further momentum to research.

WORKS

each libretto is followed by a list of composers who set it, with dates of first performances of first settings only, except where subsequent revisions provide alternate titles

OPERAS

Achille in Sciro

Caldara, 1736; Sarri, 1737; G. Arena, 1738; Chiarini, 1739; Leo, 1740; Courcelle, 1744; Manna, 1745; G. Verocai, 1746; Meyer, ?1747 (as Il trionfo della gloria); G.B. Runcher, 1747; Jommelli, 1749; ?Sciroli, 1751; Mazzoni, 1754; Hasse, 1759; Sarti, 1759; Bertoni, 1764; Monza, 1764; Agricola, 1765; Gassmann, 1766; Naumann, 1767; A. Amicone, 1772; Anfossi, 1774; Sales, 1774; Paisiello, 1778; Pugnani, 1785; Bernardini, 1794; Coppola, 1828

Adriano in Siria

Caldara, 1732; Giacomelli, 1733; Pergolesi, 1734; Sandoni, 1734; Broschi, 1735; Duni, 1735; Veracini (rev. Corri), 1735; Ferrandini, 1737; Hasse, 1737; Nebra, 1737 (rev. Bazano as Más gloria es triunfar de si); Porta, 1737; Ristori, 1739; Galuppi, 1740; Giai, 1740; Lampugnani, 1740; Giaino, 1741; ?Logroscino, 1742; Verocai, 1745 (as Die getreue Emirena); Abos, 1746; Graun, 1746; Latilla, 1747; V. Ciampi, 1748; Scalabrini, 1749; Pampini, 1750; Pescetti, 1750 (as Farnaspe); Adolfati, 1751; Perez, 1752; G. Scarlatti, 1752; Valentini, 1753; Conforto, 1754; Scolari, 1754; Bernasconi, 1755; Brusa, 1757; Uttini, 1757; Rinaldo di Capua, 1758; Borghi, 1759; Mazzoni, 1760; Colla, 1762; Schwanenberger, 1762; M. Wimmer, 1764; J.C. Bach, 1765; Guglielmi, 1765; Holzbauer, 1768; Mango, 1768; Majo, 1769; Monza, 1769; Tozzi, 1770; Sacchini, 1771; Insanguine, 1773; Monti, 1775; Mysliveček, 1776; Anfossi, 1777; Sarti, 1778; Alessandri, 1779; Rust, 1781; Cherubini, 1782; Nasolini, 1789; Méhul, comp. 1790–91 (rev. F.-B. Hoffman as Adrien, empéreur de Rome; rev. and perf. 1799); Zingarelli, *c*1790; Mayr, 1798; ? V. Migliorucci, 1811; P. Airoldi, ?1821; Mirecki, 1826 (inc.); Mercadante (rev. A. Profumo), 1828

Alessandro nell'Indie

Vinci, 1729; Handel, 1731 (as Poro, re dell'Indie); Hasse, 1731 (as Cleofide); Porpora, 1731 (as Poro); Predieri, 1731; Mancini, 1732; Pescetti, 1732; Bioni, 1733; Lucchini, 1734; Schiassi, 1734; Courcelle, 1738; Galuppi, 1738; Brivio, 1742; Sarri, 1743; Uttini, 1743; Gluck, 1744; Graun, 1744 (as Alessandro e Poro); Jommelli, 1744; Perez, 1744; Chiarini, 1745; Pelegrini, 1746; Abos, 1747; Wagenseil, 1748; Scalabrini, 1749; Scolari, 1749; Rutini, 1750; Fiorillo, 1752; Latilla, 1753; G. Scarlatti, 1753; Agricola, 1754 (as Cleofide); Araja, 1755; Perez, 1755; Piccinni, 1758; Holzbauer, 1759; Cocchi, 1761; Dal Barba, 1761; Sarti, 1761; J.C. Bach, 1762; Traetta, 1762; G.G. Brunetti, 1763; Sacchini, 1763; Fischietti, 1764; Sciroli, 1764; Majo, 1766; Gatti, 1768; Naumann, 1768; Bertoni, 1769; J. Kozeluch, 1769; ?Felici, 1771; Anfossi, 1772; Paisiello, 1773; Corri, 1774; Piccinni, 1774; Monza, 1775; Rust, 1775; Marescalchi, 1778; Mortellari, 1778; Vincenti, 1778; A. Calegari, 1779; Cimarosa, 1781; Cherubini, 1784; Bianchi, 1785; Chiavacci, 1785; Caruso, 1787; Tarchi, 1788 (rev. C.F. Badini as Le generosità di Alessandro, 1789); Guglielmi, 1789; Zingarelli, *c*1790; Gnecco, 1800; Ritter, 1811 (as Alexander in Indien); Pacini (rev. A.L. Tottola), 1824

Antigono

Hasse, 1743 (rev. 1752 as Alessandro, re d'Epiro); Scalabrini, 1744; Bernasconi, 1745; Galuppi, 1746; Jommelli, 1746; Conforto, 1750; Wagenseil, 1750; Bertoni, 1752; ?Cocchi, 1754; Sarti, 1754; Mazzoni, 1755; Gluck, 1756; Pampani, 1756; Re, 1757; Ferradini, 1758; Duran, 1760; Piccinni, 1762; Traetta, 1764; Zannetti, 1765; Scolari, 1766; Guglielmi, 1767; Majo, 1767; Schwanenberger, 1768; A. Felici, 1769; Sales, 1769; Cafaro, 1770; Monza, 1772; Alessandri, 1773; Anfossi, 1773; Latilla, 1775; Mortellari, 1777; Bachschmidt, 1778; Gazzaniga, 1779; ?Parenti, comp. 1780s; Mysliveček, 1780; Gatti, 1781; Paisiello, 1785; Zingarelli, 1786; Caruso, 1788; ?Rossi, 1788; Ceracchini, 1794; A. De Santis, 1798; Poissl, 1808; Ant. Gandini, 1824

Artaserse

Vinci, 1730; ?Chiocchetti, 1730; Hasse, 1730; D. Zamparelli, 1731; Bambini, 1733; Bioni, 1733; Corradini, 1736 (as Dal er ser el hijo all padre); Paganelli, 1737; Poncini Zilioli, 1737; Schiassi, 1737; Araja, 1738; Brivio, 1738; Ferrandini, 1739; Adolfati, 1741; Arena, 1741; Chiarini, 1741; Gluck, 1741; Graun, 1743; Manna, 1743; Scalabrini, 1743; Duni, 1744; Terradellas, 1744; Abos, 1746; Bernasconi, 1746; V. Ciampi, 1747; Maggiore, 1747; G. Scarlatti, 1747; Carcani, 1748; Perez, 1748; Galuppi, 1749; Jommelli, 1749; Lampugnani, 1749; Mele, 1749; Smith, 1749 (inc.); Fiorillo, 1750s; G. Bollano, 1750; Pampani, 1750; Dal Barba, 1751; Pescetti, 1751; Fischietti, 1754; Cocchi, 1755; Gasparini, 1756; Pampani, 1756; ?G. Quagliattini, 1757; Scolari, 1757; J.C. Bach, 1760; Sarti, 1760; Arne, 1762; Majo, 1762; Piccinni, 1762; Sertori, 1765; Ponzo, 1766; Boroni, 1767; Sacchini, 1768; Paisiello, 1771; Vento, 1771; Manfredini, 1772; Caruso, 1774; Mysliveček, 1774; Borghi, 1775; Bertoni, 1776; Guglielmi, 1777; Re, 1777; Ullinger, 1777–81; ?Parenti, comp. 1780s; Rust, 1781; Schacht, 1781; Zannetti, 1782; Alessandri, 1783; Cimarosa, 1784; Bianchi, 1787; Anfossi, 1788; Tarchi, 1788; Andreozzi, 1789; Zingarelli, 1789; Isouard, 1794; Ceracchini, 1795; Nicolini, 1795; Portugal, 1806; Lucas, 1840 (as The Regicide)

Attilio Regolo

Hasse, 1750; Jommelli, 1753; Monza, comp. 1777; Beltrami, 1780; Zingarelli, *c*1790

Catone in Utica

Vinci, 1728; Leo, 1729; Hasse, 1731; Marchi, 1733; Torri, 1736; Vivaldi, 1737; Duni, 1740; Rinaldo di Capua, 1740; Verocai, 1743 (as Cato); Graun, 1744; Scalabrini, 1744; Latilla, 1747; Ferrandini, 1753; Höpken, 1753; Jommelli, 1754; G. Ballabene, 1755; V. Ciampi, 1756; Poncini Zilioli, 1756; J.C. Bach, 1761; Gassmann, 1761; Majo, 1762; Piccinni, 1770; Ottani, 1777; F. Antonelli Torres, 1784; Andreozzi, 1786; Nasolini, 1789; Paisiello, 1789; Zingarelli, *c*1790; Winter, 1791

Ciro riconosciuto

Caldara, 1736; Galuppi, 1737; Rinaldo di Capua, 1737; Leo, 1739; Chiarini, 1743; Jommelli, 1744; Smith, comp. 1745 (unperf.); Verocai, 1746; Duni, 1748; Hasse, 1751; Fiorillo, 1753; Sarti, 1754; G. Meneghetti, 1758; Cocchi, 1759; Piccinni, 1759; Petrucchi, 1765; Puppi, 1765; Mango, 1767; P. Persichini, 1779; Zingarelli, *c*1790; Tarchi, 1796; Capotorti, 1805 (as Il Ciro); Mosel, 1818 (rev. M. von Collin as Cyrus und Astyages)

Demetrio

Caldara, 1731; Bioni, 1732; Giai, 1732; Hasse, 1732 (rev. 1734 as Cleonice); Leo, 1732; Peschetti, 1732; Schiassi, 1732; Araja, 1734; Mele, 1736 (rev. D.V. de Camacho as Por amor y por lealtad recobrar la majestad); Giacomelli, 1737; Perez, 1741; Carcani, 1742; Caroli, 1742; Gluck, 1742; Lampugnani, 1744 (rev. P.A. Rolli as Alceste); Wagenseil, 1746; Galuppi, 1748; D. Naselli (Lasnel), 1748; Jommelli, 1749; Pulli, 1749; Piazza, 1750; Gibelli, 1751; Pallavicini, 1751; G. Scarlatti, 1752; Fiorillo, 1753; Ferrandini, 1758; Perillo, 1758; Insanguine, 1759; Ponzo, 1759; Eberlin,1760; Sala, 1762; Perez, 1766; Pampani, 1768; Monza, 1769; Piccinni, 1769; Paisiello, 1771; Bernasconi, 1772; Guglielmi, 1772; Mysliveček, 1773; Bianchi, 1774; Bachschmidt, 1777; Mysliveček, 1779; Paisiello, 1779; G. Giordani, 1780; Gresnick, 1786 (rev. Badini as Alceste); Tarchi, 1787; Caruso, 1790; Zingarelli, *c*1790; P.C. Guglielmi, 1793; Mayr, 1824; Aless. Gandini, 1828; Saldoni, 1840 (as Cleonice, regina di Siria)

Demofoonte

Caldara, 1733; Chiochetti, 1735; F. Ciampi, 1735; Sarri, Mancini, Sellitto and Leo, 1735; Schiassi, 1735; Duni, 1737 (as Demophontes, King of Thrace); Ferrandini, 1737; Brivio, 1738; Latilla, 1738; Reina, 1739; Bernasconi, 1741; Verocai, 1741; L. Vinci, 1741; Gluck, 1742; Jommelli, 1743; Graun, 1746; Hasse, 1748; Smith, 1748 (inc.); Galuppi, 1749; Fiorillo, 1750; Uttini, 1750; Perez, 1752; Cocchi, 1754; Manna, 1754; Mazzoni, 1754; Sarti, 1755; Pampani, 1757; Ferradini, 1758; Traetta, 1758; P. Vinci, 1758; Eberlin, 1759; Gius. Brunetti, 1760; Piccinni, 1761; Majo, 1763; Petrucci, 1765; Vento, 1765; Guglielmi, 1766; Mysliveček, 1769; Vanhal, 1770; J. Kozeluch, 1771; Anfossi, 1773; Berezovsky, 1773; Mysliveček, 1775; Paisiello, 1775; Monza, 1776; Schuster, 1776; Rust, 1780; Bianchi, 1781; Pio, 1782; Alessandri, 1783; Prati, 1786; Tarchi, 1786; Gatti, 1787; Pugnani, 1787; Cherubini, 1788 (rev. Marmontel as Démophoon); Vogel, 1789 (rev. Desriaux as Démophon); Federici, 1790 (as L'usurpatore innocente); Trento, 1791; Portugal, 1794; Lindpainter, 1811 (rev. I.F. Castelli as Demophoon), 1820 (rev. F.K. Heimer as Timantes); Horn, 1821 (as Dirce, or The Fatal Urn); G.M. Sborgi, 1836

Didone abbandonata

Sarri, 1724; Albinoni, 1725; Porpora, 1725; Vinci, 1726; Schiassi, 1735; Brivio, 1739; Duni, 1739; Lampugnani, 1739; Galuppi, 1740; Bernasconi, 1741; Rinaldo di Capua, 1741; Hasse, 1742; Scalabrini, 1744; Adolfati, 1747; Jommelli, 1747; Bertoni, 1748; Chiarini, 1748; Terradellas, 1750; Fiorillo, 1751; Manna, 1751; Perez, 1751; Bonno, comp. 1752 (?unperf.); Mazzoni, 1752; Poncini Zilioli, 1752; Scolari, 1752; V. Ciampi, 1754; Fioroni, 1755; Traetta, 1757; F. Zoppis, 1758; Auletta, 1759; Gius. Brunetti, 1759; Ferradini, 1760; Sarti, 1762; Schwanenberger, 1765; Zanetti, 1766; Boroni, 1768; Celoniati, 1769; Majo, 1769; Insanguine, 1770; Piccinni, 1770; Mortellari, 1772; Colla, 1773; Anfossi, 1775; Mombelli, 1776; Schuster, 1776; Hozbauer, 1779 (as La morte di Didone, rev. 1780 as Der Tod der Dido); Ottani, 1779; Astaritia, 1780; Piticchio, 1780; Sarti, 1782; Andreozzi, 1784; Gazzaniga, 1787; Paisiello, 1794; L. Kozeluch, 1795; Marino, 1799; Fioravanti, 1810; Paer, 1810; Klein, 1823 (rev. L. Rellstab as Dido); Mercadante, 1823; Reissiger, 1824

Ezio

Porpora, 1728; Auletta, 1728; Hasse, 1730; ?Predieri, 1730; Broschi, 1731; Handel, 1732; Lampugnani, 1737; Cortona, 1740; Jommelli, 1741; Sarri, 1741; Contini, 1742; G. Scarlatti, 1744; Pescetti, 1747; Bernasconi, 1749; Bonno, comp. 1749 (unperf.); Gluck, 1750; Perez, 1751; Ferradini, 1752; Conforto, 1754; Traetta, ?1754; Graun, 1755; Galuppi, 1756; Latilla, 1758; Gassmann, 1761; Rutini, 1763; Schwanenberger, 1763; Alessandri, 1767; Bertoni, 1767; ?Majo, 1769; Guglielmi, 1770; Mango, 1770; Sacchini, 1771; Gazzaniga, 1772; Mysliveček, 1775; Mortellari, 1777; Anfossi, 1778; Bachschmidt, 1780; Levis, 1782; Calvi, 1784; Gabriele Prota, 1784; Pio 1785; Tarchi, 1789; Celli, ?1824; Mercadante, 1827

Il re pastore

Bonno, 1751; Höpken, 1752; Sarti, 1752; Hasse, 1755; Uttini, 1755; Agnesi, ?1756; Gluck, 1756; Perez, 1756; Mazzoni, 1757; Galuppi, 1758; Lampugnani, 1758; Piccinni, 1760; Zonca, 1760; Richter, 1762; Jommelli, 1764; Rush, 1764 (rev. R. Rolt as The

Royal Shepherd); Giardini, 1765; Tozzi, 1766; Guglielmi, 1767; Sarti, 1771; Schmittbauer, c1772; Bachschmidt, 1774; Mozart, 1775; T. Giordani, 1778; Platania, 1778; ?Parenti, Comp. 1780s; Sales, 1780s; M. Rauzzini, 1784; Zingarelli, c1790; Santos, 1797

Il trionfo di Clelia

Hasse, 1762; Gluck, 1763; Mysliveček, 1767; Bertoni, 1769; Vanhal, 1770; Borghi, 1773;
Jommelli, 1774; Michl, 1776; Urbani, 1784–5; Tarchi, 1786

Zenobia

Predieri, 1740; Porpora, 1740 (as Tiridate); G. Sbacci, 1740; Pellegrini, 1741; Poncini Zilioli, 1741; Latilla, 1742 (as Zenobia und Radamistus); Verocai, 1742; Michieli, 1746; Pulli, 1748; Perez, 1751; Uttini, 1754; Piccinni, 1756; Cocchi, 1758; G.B. Zingoni, 1760; Hasse, 1761; Pescetti, 1761; Sala, 1761; Traetta, 1761; Schwanenberger, 1765; Tozzi, 1773; G. Calegari, 1779; F. Sirotti, 1783; Mount Edgcumbe, 1800

Ipermestra

Hasse, 1744; Gluck, 1744; Bertoni, 1748; Duni, 1748; Jommelli, 1751; Adolfati, 1752; Perez, 1754; Re, 1755; Galuppi, 1758; Fiorillo, 1759; Cafaro, 1761; Eberlin, 1761; Sarti, 1766; Majo, 1768; Mysliveček, 1769; Piccinni, 1772; Fortunati, 1773; Naumann, 1774; ?R. Mei, 1778; Martín y Soler, 1780; Millico, 1783; Rispoli, 1785; Astarita, 1789; Zingarelli, c1790; Paisiello, 1791; Morlacchi, 1810 (rev. S. Scatizzi as Le danaidi); Mercadante, 1828; Saldoni, 1838; Carnicer, 1843

Issipile

F. Conti, 1732; Bione, 1732; Hasse, 1732; Porta, 1732; Feo, 1733; Porpora, 1733; Sandoni, 1735; Galuppi, 1737; Chiarini, 1740; K. Bellermann, ?1741; Smith, comp. 1743 (unperf.); Verocai, 1743 (as Hissifile); Mazzoni, 1748; Gluck, 1752; Errichelli, 1754; Holzbauer, 1754; Cocchi, 1758; Gassmann, 1758; G. DON NEVILLE

Metcalf, John (*b* Swansea, 13 Aug 1946). Welsh composer. He studied at University College, Cardiff, with Alun Hoddinott and others, at Goldsmiths College, London, and privately with Don Banks. In 1969 he founded the Vale of Glamorgan Festival which from 1991 has only featured works by living composers. He has taught at Atlantic College (1971–81), and served as artistic director of St Donats Arts Centre (1975–86) and composer-in-residence at the Banff School of Fine Arts, Alberta, Canada (1986–91). In 1996 he was appointed artistic director of the Swansea Festival. He has been closely involved in educational projects throughout Wales, many in collaboration with the BBC National Orchestra of Wales.

The most characteristic of Metcalf's early music is found in his first three operas. *The Journey* is a Tippettian modern myth based on the *I Ching*, while *The Crossing* relates an incident in the life of the painter George Grosz. *Tornrak* uses Inuit throat singing techniques to contrast Inuit and Western 19th-century cultures. In 1992 Metcalf began to evolve a largely diatonic style. This simplification of pitch material led to a richly lyrical vein of writing employed in an impressive series of chamber pieces and expanded in the opera *Kafka's Chimp*.

GERAINT LEWIS

Meters. *See* NEVILLE BROTHERS.

Metheny, Pat(rick Bruce) (*b* Lee's Summit, MO, 12 Aug 1954). American jazz-fusion guitarist, composer and bandleader. He started on the trumpet, but at the age of 14 took up the guitar. In his late teens he enrolled at the University of Miami but was so proficient that he was appointed as a guitar instructor in his second semester. In 1973 he began teaching the guitar at the Berklee College of Music and in 1974 he joined Gary Burton's group, at which point he took up the 12-string electric guitar to differentiate his sound from that of Burton's other guitarist, Mick Goodrick. He left Burton in 1977 and formed a quartet that included the keyboard player and composer Lyle Mays, who has remained as Metheny's longstanding associate into the 1990s. Away from the quartet, Metheny and Mays joined Joni Mitchell (1979), and Metheny spent two months in 1980 performing with the tenor saxophonist Dewey Redman, the double bass player Charlie Haden and Paul Motian. In 1981 he established a quintet that included Michael Brecker. In these settings Metheny has toured almost unceasingly, establishing a large and wide audience for his music. In the early 1990s he also toured and recorded in a quartet with Herbie Hancock, Dave Holland and Jack DeJohnette, worked on other projects with Haden, Jim Hall and John Scofield, and with Holland and Roy Haynes.

Metheny is the central figure in a transformation of the basic instrumentation of jazz from the mid-1970s onwards, in which the guitar has attained a stature in jazz equal to that of the tenor saxophone. In 1977 he created a new and now widely imitated sound, in which a warm, smooth, full-bodied guitar timbre is modified via a quivering digital delay produced by overlapping signals projected through different speakers. The character of the sound contrasts dramatically with both the nearly monochromatic timbres which have dominated jazz guitar from the days of Charlie Christian onward, and the diverse ostentatious and aggressive timbres which John McLaughlin and others brought to jazz-rock. Metheny also plays acoustic guitars (6- and 12-string) and a guitar synthesizer.

From his teenage years Metheny has loved Ornette Coleman's free-jazz style, and the success of his own endeavours has given him the artistic freedom to embark on special free-jazz projects involving Coleman and Coleman's associates, most often Haden. However this is not always Metheny's greatest strength; his finest work is in a fusion style that shows great tolerance for silence, space and restraint. Many of these are his own pieces, sometimes composed in collaboration with Mays. In such settings (for example much of *80/81*, 1980, ECM, and *Still Life (Talking)*, 1987, Geffen), Metheny brings together elements of bop, free jazz, jazz rock, country music, the folk revival and Brazilian music in a manner that is consistently accessible and yet often maintains emotional and intellectual depth. Few others in fusion have managed such a feat.

BARRY KERNFELD

Methodist church music. Methodism refers to a group of Protestant churches whose origins may be traced to a religious society organized by JOHN WESLEY (1703–91), which was aimed not so much at theological or liturgical reform but rather at restoring Christianity in its fullest sense, that is, as guide to life on earth and as means to salvation. It acquired its nickname, which was eventually accepted by Wesley, from its emphasis on order and method in daily life, and its strong organization by classes, circuits and conferences. In course of time there have been many splits and reunions within Methodism, due to theological, social and national differences; only the most significant ones are mentioned in this article.

1. John Wesley and Methodism. 2. Wesleyan Methodism after 1791. 3. Calvinistic Methodism. 4. The 'Old Methodist' hymn tune. 5. Popular revivalism. 6. The 20th century. 7. Missions and world Methodism.

1. JOHN WESLEY AND METHODISM. Although it was really the great preacher George Whitefield (1714–70) who initiated the Methodist Revival in both England and America, John Wesley soon came to dominate it. His strong personality and organizing skills made it a formidable movement that overcame the immense resistance it encountered, while the poetic gifts of his brother Charles (*see* WESLEY, (2)) provided the basis for its most effective weapon: hymnody. All three men were ordained Anglican priests. They promoted Methodism as a movement to supplement and heighten the work of the Church of England, not as an alternative denomination. When allowed to do so, they preached in parish churches; when excluded by mounting opposition within the Establishment, they conducted meetings in other buildings or in the open air, but they always avoided the times of church services and urged their hearers to go to church and to take communion regularly.

For this reason the early development of Methodist music did not take place in a context of liturgical worship, despite the founders' staunch devotion to the Anglican liturgy. Singing occurred primarily in two types of Methodist meeting: the popular 'preaching service', which always included two hymns, one before and one after the sermon, and the 'love feast' (borrowed from the Moravians; *see* MORAVIANS, MUSIC OF THE, §2), which ended with the singing of several hymns. Even 'class meetings', the small cells of up to 11 members which were the building blocks of Wesley's organization, often included singing, and Methodists were encouraged to sing hymns in private family devotions. Both Whitefield and Charles Wesley led their followers in hymn singing in the public roads as they travelled from town to town. Sunday schools, introduced in 1780, were yet another context for singing.

Hymns were thus the typical, and indeed the only, form of music in the early stages of the movement. They might be sung anywhere – ideally by all those present. Hence they were monophonic and unaccompanied. John Wesley immediately grasped the supreme efficacy of hymn singing to stir up feelings and hopes, to bind a group of disparate people into a worshipping community and, most importantly from his point of view, to instruct his flock in the truths of Christianity as he interpreted them. Therefore, Wesley paid great attention to controlling the texts, tunes and performing practices of hymnody and devoted much thought to the proper use of music in religious observances.

In the choice of texts Wesley was at liberty to depart from the strict metrical psalm translations to which Anglican parish worship was largely confined. He made use of Isaac Watts's free paraphrases of psalms (*see* CONGREGATIONAL CHURCH, MUSIC OF THE, §3), as well as hymns by Watts and other authors both Anglican and Dissenting, translations of German Pietist and Moravian hymns (the parallels between Pietism and Methodism have often been pointed out), and, above all, newly written hymns, principally by his brother Charles. Here he was in a position to guide the theology of his followers directly, and he included many hymns of 'high' doctrine, especially with regard to the sacraments, as well as more immediate appeals to the emotions, using a graphic imagery and a poetic fancy that were new to public worship.

The early hymns used a wide variety of metres, some based on German originals, others on secular poetry; in particular, trochaic and anapaestic metres, hitherto mostly unknown to Anglican psalmody but familiar enough in popular songs, were favoured. Wesley's final selection, which became the standard Methodist hymn book, was *A Collection of Hymns for the Use of the People Called Methodists* dating from 1780. In the following year Robert Spence, a York bookseller, published *A Pocket Hymn Book*; it included many Wesleyan hymns but also a number of popular revival hymns with emotional appeal though little meaningful content, which quickly caught on in Methodist societies. Wesley summarily dismissed these as 'grievous doggerel' and brought out his own revision of Spence's book, with 37 hymns expunged. But the popularity of Spence's collection, especially in America, exposed a gulf between Wesley's high tastes and doctrines and the spiritual needs of his people.

His first tunebook, *A Collection of Tunes, Set to Music, as They are Commonly Sung at the Foundery* (1742), known as the 'Foundry Collection', was boldly innovative in its choice of musical material. The 43 tunes were printed monophonically. Those taken from English sources included many that were unfamiliar; others were German (some, but not all, borrowed from the Moravians), and some were completely new. Prophetically, for the first time in any English printed collection of hymns or metrical psalms, one tune was taken from opera (a march from Handel's *Riccardo Primo*). But the book was incompetently edited and printed and did not succeed.

The Wesleys next turned to a professional musician, Johann Friedrich Lampe, for assistance. Lampe was a member of a theatrical circle which formed close associations with the Wesleys despite their suspicion of dramatic

entertainments. (Handel was another, but his three tunes for Wesleyan hymns were not published until 1826.) At Charles Wesley's request Lampe set 24 of his hymns to music and published them anonymously as *Hymns on the Great Festivals, and Other Occasions* (1746). The tunes are in an ornate style typical of theatre songs of the time, with melismas, trills, dotted rhythms and figured basses. Nevertheless, they were approved by the Wesleys and quite widely used for several decades. All 24 tunes recurred in *Harmonia-Sacra* (*c*1754), a set of 162 tunes compiled and published by Thomas Butts, set mostly for three voices, with figured basses for domestic use. Butts greatly expanded the use of religious parodies of English urban popular songs, some from the theatre.

John Wesley went out of his way to praise *Harmonia-Sacra* in the preface to *Select Hymns with Tunes Annext* (1761). But, he explained, 'I want the people called Methodists to sing true, the tunes which are in *common use* among them'. To this end he now provided a tune supplement 'annext' to the hymnbook, which in later editions gained the title *Sacred Melody*. He said it had taken him more than 20 years to complete the book. The tunes were once again monophonic, each underlaid with one verse of a hymn. They included selections from both Lampe's and Butts's books, plus some from the Foundry Collection and a few from new sources. A second edition, with 12 new tunes, appeared in 1765.

Wesley's last tunebook was *Sacred Harmony* (1781), a companion to his 1780 hymnbook. It added figured basses (with, in five cases, a second treble part) and 11 new tunes. Each tune was set to a particular hymn, set out in full with the first verse underlaid. There were also two longer pieces in three vocal parts, *The voice of my beloved sounds* (from Butts, adapted from a popular song by Henry Holcombe) and *Before Jehovah's awful throne* (Martin Madan's well-known setting of Watts's Psalm c, elsewhere called 'Denmark'). In a revised edition, published about 1790, the tune selection was changed slightly, subsequent verses of the hymns were omitted, and Edward Harwood's popular setting of Pope's *The Dying Christian* ('Vital spark') and another 'anthem' were added. This remained the standard selection of music for British Wesleyan Methodists until the mid-19th century, and it was also influential in North America.

Wesley had no objection to melismas or ornaments, but he criticized long hallelujahs and 'the repeating the same word so often (but especially while another repeats different words – the horrid abuse which runs through the modern church-music)'. This would seem to imply the rejection of counterpoint in both anthems and fuging-tunes (*see* PSALMODY (ii)), and it is true that Wesley gave little encouragement to either form; the explicit ban on fuging-tunes remained in the Methodist minutes in both Britain and America until the mid-19th century. But the repetition of an entire line of text, or pair of lines, is common to many tunes in Wesley's books and became, indeed, a recognizable characteristic of Methodist hymn tunes (see §4 below). These 'repeating' tunes sometimes had a line marked *piano*, to be sung by women alone, and the textual repeat marked *forte*, to be sung by everyone. (Men and women sat on opposite sides of the aisle in most Wesleyan congregations.) According to some sources the last line of each tune was always repeated, whether a repeat was marked or not.

Wesley's choice of texts and music was a personal one, but because of his unique authority and tireless journeyings it prevailed far and wide for a long time. As in the matter of maintaining the Anglican liturgy, however, there was an acute conflict between his own cultivated tastes and his passionate desire to spread the Word to all classes of people. Many of the ornate tunes that he admired, by Lampe among others, were not really suited to congregational singing by a mass of unschooled people without musical leadership. In spite of this the Methodists soon gained a reputation for the excellence of their singing, which was singled out for praise by John Scott as early as 1744. Vincent in 1787 considered that 'for one who has been drawn away from the Established Church by preaching, ten have been induced by music'. How did this come about?

The explanation is that the Wesleys, unlike the ordinary Anglican clergy of the day, took an intense interest in the singing of their followers and constantly challenged assistants, class leaders and congregations everywhere to maintain its vitality and elevate its meaning. In 1746 John was already asking 'How shall we guard more effectually against formality in public singing'? The preface to *Select Hymns with Tunes Annext* contained his famous 'Directions for Singing' repeated in countless Methodist hymnals to this day. In brief, they are: 'Learn *these* tunes before any others; sing them exactly as printed; let all sing; sing lustily; sing modestly; sing in time; above all sing spiritually, with an eye to God in every word'. He returned to these matters repeatedly in later conferences. He championed singing by women; he interrupted hymns to ask the people whether they meant what they sang; he condemned 'complex tunes which it is impossible to sing with devotion', long hallelujahs and anthems, even though these features were to be found here and there in his own books. He accepted organs, but he was suspicious of their effect in Methodist meetings. Three are known to have been erected during his lifetime, at Bristol, Newark and Keighley.

With more and more conversions to Methodism among Dissenters and those who had no previous religious allegiance, the link with the Church of England, although Wesley would not give it up, became more tenuous. What he still called 'preaching houses' others were beginning to call 'chapels', and for most Methodists the Sunday morning 'preaching service' was the main weekly worship service. Even Wesley could not prevent it from becoming more dignified and formal. Choirs formed, often supported by a bass viol, and would begin to sing anthems and set pieces instead of merely leading the singing.

Wesley's main English centres were London, Bristol and Newcastle upon Tyne. He was also active in Scotland and Ireland: as early as 1749 a Wesleyan hymnbook with 22 tunes was published in Dublin (*A Collection of Hymns and Sacred Poems*). Two of his Irish converts, Robert Strawbridge and Philip Embury, carried the movement to North America in the 1760s. In 1784 Wesley was compelled to recognize the independence of the United States (which he had opposed) and to ordain ministers to serve American Methodism (despite his lifelong belief that only bishops could ordain). The result was the formation of the Methodist Episcopal Church (MEC), which translated Wesley's 'superintendents' into 'bishops' – to his great dismay. The founding bishops of American Methodism were Thomas Coke and Francis Asbury, English-

men appointed by Wesley. He tried to retain control of the worship practice of the American church by sending out an abridged version of the Book of Common Prayer and ordering the use of his 1780 hymnbook. But although the 1784 American Conference loyally accepted his dictates, the liturgy was soon a dead letter. The hymnbook and its tunes had a much longer life in America, but chiefly in settled, urban churches, where organs and paid choirs soon emerged to provide a staid and dignified form of worship. On the ever-expanding frontier very different conditions applied (see §5 below).

2. Wesleyan Methodism after 1791. In England Wesley's death was soon followed by departures from his ideas. The decisive split with the Church of England came in 1795, when the Conference allowed unordained preachers to administer the sacraments. Methodism gradually came to regard itself as a church as well as a society. In 1797 the New Methodist Connexion, led by Alexander Kilman, split off from the main body of Wesleyans. It allowed far more power to the laity than the Conference was prepared to give, introducing an effectively Congregationalist form of government.

Mainstream Wesleyanism now moved more clearly in the direction of bourgeois affluence and political conservatism, which tended to be expressed in more formal music. Although Conference at first tried to limit the use of elaborate choir music (1805) and the introduction and use of organs (1808), in 1820 it allowed organs. There was a test case at Brunswick Chapel, Leeds (1828). The trustees of the chapel, mostly successful Leeds businessmen, had decided to put in a large organ. Most of the congregation and local preachers were against it, but they were overruled by the national Conference, now dominated by the conservative Jabez Bunting (1779–1858). It was on this issue that a society of Protestant Methodists split off from the main body, later joining James Everett to form the United Methodist Free Churches (1857).

But Bunting led the main Wesleyan society consistently in the direction of greater formality and paternalistic rule. Large, imposing chapels were built in every town, with a towering pulpit in the centre and an organ and choir stalls behind. Four-part choirs, often reaching a high artistic standard, sang set pieces, anthems and even Anglican chants. The congregation still sang the hymns, often lined out by the minister and led by the choir and organ (or harmonium). In village chapels unaccompanied congregational singing survived much longer, of course. In some places a small instrumental band accompanied the singing, as in Anglican country churches.

A long series of privately compiled tunebooks appeared for the use of Wesleyan societies: some of the most influential were those of James Leach (1789, *c*1794, *c*1798), John Beaumont (1801) and William Edward Miller (1803). After the introduction of John Curwen's tonic sol-fa notation (1842), inexpensive music for Methodist choirs proliferated. It was not until 1877 that the Conference sponsored an official tunebook, *The Methodist Hymn Tune Book*, edited by George Cooper and E.J. Hopkins.

The development of American Methodism, though entirely independent of that in England, was strikingly similar in its outlines. The itinerancy of ministers, a cardinal feature of Wesley's organization, gained new significance in the vast spaces of the New World as Methodist 'circuit riders' travelled regularly to preach in remote outposts. Almost alone among American denominations, Methodism succeeded in keeping up with the expanding frontier. The MEC grew at an astounding rate, but it too showed signs of the split between high culture and populism. In hymnological terms the issue was whether to allow or outlaw the folk hymns associated with revivals (treated in §5 below). The General Conference banned organs, instruments and choirs in 1804, but many churches had a violin or flute to lead the singing; one Boston church had both an organ and a paid choir. In 1815 the Conference gave instructions for the use of the organ, strictly to assist congregational singing, including (curiously) a direction to continue the bass of the last chord until the next verse of a hymn began.

James Evans, an English Methodist musician recently settled in New York, founded a choir at the John St. church in 1806, and brought out two versions of a tunebook called *David's Companion*, one (1808) to go with 'the Methodist Pocket Hymn-Book' (i.e. *A Pocket Hymn Book: Designed as a Constant Companion for the Pious*, Philadelphia, 1790, an American revision of Spence's 'popular' book) and another (1810) for the 'Large Hymn Book', probably Wesley's 1780 Collection, which was still in use in some congregations. In 1821 *The Methodist Harmonist* appeared, specifically for 'worshipping assemblies', as opposed to social or singing societies or revival meetings: its tunes were distinctly 'classical', mostly of English origin, with a few anthems at the back. It was commissioned by the General Conference and linked with the official hymnal of the same year, and it pointedly excluded revival hymns. By 1830 choirs existed in many urban churches and they were beginning to sing anthems and other purely choral music.

Methodists, from Wesley onwards, were generally opposed to racial segregation. African Americans were admitted to full standing in their churches. Nevertheless, a group of them seceded to form the African Methodist Episcopal Church in 1794. Their leader, Richard Allen, compiled *A Collection of Spiritual Songs and Hymns* (1801), but without tunes. In the 1840s there were further splits over the issue of slavery: the MEC, South, was separated from its northern counterpart in 1846, while three black Methodist denominations were formed in the Southern states. Other secessions, such as that of the Methodist Protestant Church (1830–1939), were generally concerned, as in England, with greater representation for the laity in matters of policy, but each had its own series of hymnals (see Deschner, 1987). The Free Methodist Church, which split off from the MEC in 1859, maintained a ban on choirs and organs until 1943.

The main-line MEC continued to grow phenomenally in size and wealth, reaching ten million by 1860. The 1853 preface to *Family and Social Melodies* noted that 'well-instructed, powerful choirs' were in place in the churches in and around New York but that congregational singing was failing. The same was true of urban churches in the South and West, but in rural communities fuging-tunes (despite the official ban) and folk hymns were used in worship, sung from shape-note books. A new official *Hymnal of the Methodist Episcopal Church* (1878), with tunes in four-part harmony, was produced under the direction of the General Conference. Its preface said that it was intended 'for all classes, from the elite of metropolitan society, to the emancipates of the rice swamps and cotton plantations', but in fact folk and

gospel hymns were thinly represented. The MEC, South, followed suit in 1889. By the end of the century a solid, rich, thoroughly 'Victorian' sound of four-part harmony with organ or harmonium prevailed in middle-class Wesleyan circles, one that is most fully represented in *The Methodist Hymnal* of 1905, prepared jointly by the Northern and Southern conferences.

3. Calvinistic Methodism. At an early stage in its history Methodism was split in half on a purely theological issue. Wesley, with his high-church background, held to the Arminian view that Christ died for all believers and that it was open to anyone to accept Christ's offering of forgiveness and then, certain of ultimate salvation, to strive for perfection on earth. But Whitefield took the Calvinist position of predestined salvation for the elect only, despite its seeming inconsistency with the notion of conversion and revival.

Many Calvinistic Methodists, such as Augustus Toplady and John Newton (both distinguished hymn writers), remained in the Church of England as leaders of its Evangelical wing. Whitefield's Tabernacle in London had its own collection, *Hymns for Social Worship* (1753), and tunebook, *The Divine Musical Miscellany* (1754), and the tunebooks of Thomas Knibb were also designed for the use of this sect. Wesley's hymns were often emended to reflect Calvinistic theology.

Whitefield gained a powerful patron in Selina, Countess of Huntingdon, who as a peer's wife was entitled to maintain nominally 'private' chapels. But she seceded officially from the Church in 1781 and formed the Countess of Huntingdon's Connexion. Perhaps because of its upper-class converts, this group had greater musical influence than its numbers might have warranted; three books of hymn tunes by Benjamin Milgrove (1768, 1771, 1781), composed for the Countess's chapel in Bath, were very widely adopted, as was that of Thomas Haweis (*c*1791), one of Lady Huntingdon's chaplains.

The Lock Hospital, London, was a centre for Calvinistic Methodism, and its chaplain, Martin Madan, compiled for its use both a hymnbook and a tunebook which were widely influential. He commissioned leading musicians such as Felice Giardini, Charles Burney and Samuel Arnold to provide tunes, and wrote some highly successful ones himself. The tunebook, *A Collection of Psalm and Hymn Tunes ... to be had at the Lock Hospital* (generally known as 'The Lock Hospital Collection'), came out in numbers between 1762 and 1792. It introduced a new style of church music based on the elegant, treble-led *galant* idiom of contemporary *opera seria*; and yet there is evidence that in the Lock chapel, at least, congregations were able to master these ornate tunes (see Temperley, 1993). The Surrey Chapel, London, where Rowland Hill was minister and Benjamin Jacobs organist, was another important musical centre. Later, in 1847, James Sherman described 'the union of nearly three thousand voices rapturously and harmoniously singing the praise of their Saviour and God' at the Surrey Chapel, in chants and set pieces as well as hymn tunes.

There was bitter strife between Wesleyan and Calvinist leaders in the later 18th century, conducted in pamphlets and in the journals of the two sects (*The Arminian Magazine* and *The Gospel Magazine* respectively). With the decline of predestinarian doctrine, however, the Calvinist branch gradually became a set of licensed, independent dissenting societies hardly distinguishable from Congregationalists. Their liturgy was generally that of the Church of England, or something very close to it, but with greater emphasis on sermons and congregational singing.

Wales was a country which Wesley had tacitly left to the Calvinists to evangelize. Howel Harris (1714–73), backed by Lady Huntingdon, founded a college at Trevecca, and the preachers trained there (in both English and Welsh) were so successful that Calvinistic Methodism soon became the leading denomination. It remains so today, although its name is now the Presbyterian Church of Wales. Because in the 19th century this was the only vital church that embraced the Welsh language, it became the chief repository for the outpouring of hymns and choral singing for which the Welsh are famous. In contrast to an austere, puritanical way of life, a bare style of church architecture and an uncompromising form of service, the Welsh Calvinistic Methodists seem to have released their emotions only in hymn singing. Whole congregations often sang in four parts unaccompanied, with the help of tonic sol-fa notation and frequent musical meetings and festivals. William Williams (1717–91) and Ann Griffiths (1776–1805) were the best known of a long series of Welsh hymn writers whose verses in translated form have since spread over much of English-speaking Christianity. Welsh folksongs were often adapted as hymn tunes in the earlier days, and this is the probable origin of the splendid anapaestic tune 'St Denio'. The great period for composed Welsh hymn tunes was the 19th century, which yielded such longtime favourites as Edward Jones's 'Gwalchmai', Joseph Parry's 'Aberystwyth' and Thomas John Williams's 'Ton-y-Botel'.

4. The 'Old Methodist' hymn tune. A very characteristic type of tune was cultivated in British Methodism between about 1780 and 1850. Percy Scholes (1955) gave a description of it, while rightly pointing out that it was not an exclusively Methodist product. Maurice Frost (1957) even denied that there was any such thing as a Methodist hymn tune. The truth is that the type originated in Methodist circles and spread to other Dissenting groups, but was generally avoided in the Church of England.

It seems to have come into being as a result of the particular conditions under which Methodism arose. There was the influence of mid-18th-century secular music, through theatre musicians such as Lampe and Giardini, which catered to Lady Huntingdon's aristocratic converts and the patrons of the Lock Hospital. There were Wesley's own, very decided opinions, more particularly his desire for lively singing by all, including women, and his hostility to counterpoint and the vain repetition of single words. There was the need to appeal to the masses without departing from Wesley's canons of good taste. And there was the idiom of the texts, with their unusual metres and sometimes almost amorous appeals to personal emotion.

The typical tune that emerged was melodious, even pretty, and in the major mode. It often had a second, equally tuneful subordinate part, moving mostly in parallel 3rds or 6ths, either of similar compass or in a treble-tenor relationship; the bass was inclined to be static. In other words, the texture was that of the 'galant' or early classic style, and for the most part the compositional rules of that style were well observed; but it long outlived the departure of *galanterie* in secular music. The

melody was often ornate, with two or three notes to many of the syllables, and could easily take ornaments such as the turn, appoggiatura or trill. Uneven syllable lengths were normal, whether in triple time or by unequal division of common-time bars. Dynamic contrasts between phrases were sometimes a feature, probably implying sections for women alone (and so marked in W.E. Miller's *David's Harp ... Adapted to Mr Wesley's Selection of Hymns*, London, *c*1803). Usually there would be repetition of some lines of the text, delaying or reconfirming a cadence or half-cadence. Sometimes fuging entries crept in, despite Wesley. But the most typical feature of all was the final cadence, of a very definite, foursquare kind, consisting of three chords: tonic 6-4, dominant 7th, tonic.

Prototypes can be found in the collections of Butts and Knibb and in the Lock Hospital Collection. Madan was perhaps the originator of the type: his most durable composition, 'Helmsley', and the tune he most successfully popularized, 'Hotham', both exemplify most of the characteristics listed above. But the heyday of the 'Old Methodist' tune came later. It was developed by composers such as James Leach, John Beaumont and Samuel Stanley around the turn of the century. The tune in ex.1, though composed by a Baptist, Gabriel Davis of Portsea, and published by him about 1802, was quickly adopted in Methodist sources such as William Green's *Companion to the Countess of Huntingdon's Hymns* (London, *c*1808), from which this two-voice version is taken; and it was still in the *Methodist Hymn Book* of 1933. (For a later example – Richard Boggett's 'Eccles', *c*1840 – see Rainbow, 1981, p.163.) A more widely familiar specimen is 'Antioch', generally sung to the Christmas carol 'Joy to the world': it is regarded as American and is often ascribed to Lowell Mason, but it actually originated in an English Methodist source of the early 1830s (see Wilson, 1986).

5. Popular revivalism. Mass religious meetings in the open air often allowed for a free expression of spiritual feelings that was hardly possible in a church or meeting-house under the direct control of a minister. Wesley strove to limit such undisciplined outpourings, but in the frontier lands of North America they had begun to flourish long before Methodism was formally organized. Whitefield began outdoor preaching in Georgia in the 1730s. Jonathan Edwards's 'Great Awakening' in New England in the 1740s and 50s, and Henry Alline's revival movement in Nova Scotia after 1776, drew mainly on Congregationalists and Presbyterians.

The 'Second Great Awakening' (1800 onwards), though started by a Presbyterian, was soon dominated by Methodists, because they alone had a well-developed frontier network. Families would travel by waggon over large distances to an agreed meeting place, usually a rectangular field or clearing of several acres, where they would lodge in tents for a weekend or even a whole week. For many living in remote settlements these 'camp meetings' were their sole experience of religion in a large public setting. In the space surrounded by the tents and waggons, several meetings might be carried on simultaneously, with preaching, discourse and singing. At night, singing and extempore prayer continued by candlelight. Emotion was unrestrained at these meetings, while the intellectual message of Methodism was diluted or stripped away, giving place to simple-minded, subjective texts sung to catchy tunes with strong rhythms. The MEC Conference disapproved of camp meetings and was suspicious of the violent physical tremblings and convulsions that were almost a conventional part of the scene. Some of the splits in the Methodist movement were brought on by these issues.

As most participants had no books, the singing depended at first on Lining out by the preachers, but a natural development was the 'spiritual song'. A succession of verses was improvised by a preacher or other leader and the congregation responded by repeating each line, echoing the last few words, responding in a predictable way or singing a repeated refrain such as 'Glory hallelujah'. As there was no possibility of musical instruction, leadership or accompaniment, the tunes had to be either well known (as with 'folk hymns') or very easily learned (as with 'spirituals'). There was little reason to write down, still less to print, these orally transmitted songs, until they began to be adopted in more settled worship situations or in singing schools.

Ex.1 G. Davis: 'Monmouth' (L.M.) (*c*1802)

The folk hymn, as Tallmadge pointed out, is more properly a 'hymn set to a folk tune'. The text was often by Charles Wesley (*Jesu, lover of my soul*), Toplady (*Rock of ages*), Newton (*Amazing grace*) or another classic Methodist author. But the tune was derived from Anglo-Celtic folksong, often using gapped or modal scales. Many of these have been identified in American published tunebooks, such as Amos Pilsbury's *The United States' Sacred Harmony* (Boston, 1799), Jeremiah Ingalls's *Christian Harmony* (Exeter, NH, 1805), John Wyeth's *Repository of Sacred Music, Part Second* (Harrisburgh, PA, 1813/*R*), Ananias Davisson's *Kentucky Harmony* (Harrisonburg, VA, 1816), Allen D. Carden's *Missouri Harmony* (St Louis, 1820), William Walker's *The Southern Harmony* (Philadelphia, 1835), and the many shape-note books that followed in southern and western states.

An extraordinary style of harmony was evolved for these tunes, based on 4ths and 5ths more than 3rds, with much incidental dissonance and parallelism, preserving the modal flat 7th at cadences, and ending on bare 5ths rather than full triads. One of the most famous of these tunes, 'Idumea', was probably adapted by Davisson from a folksong. The version of the tune given in ex.2 follows his corrections to the subordinate parts made for the 2nd edition of *Kentucky Harmony* (1817). The tune is carried in the tenor, which may have been doubled at the upper octave by women's voices. Some tunes were newly composed in a similar style, notably by the Methodist minister Elkanah Kelsay Dare (1782–1826), who contributed nine to Wyeth's book. Of course, the folk hymn was never an exclusively Methodist phenomenon, but it exemplifies the Methodists' unabashed adoption of secular songs.

The other type of revival hymn was the spiritual song or, simply, spiritual. Instead of relying on previous knowledge of the tune, it traded on easy accessibility of both text and music. The text was deliberately popular in diction, avoided complexity of thought or the type of self-questioning severity that the Wesleys had stressed, and appealed directly to feeling. Its message of hope in the future life as consolation for present misery was to become quite general to Methodism in the 19th century. Some spirituals made use of call-and-reponse structures, and also of refrains, which were often transferred from one hymn to another. Texts of this type are already found in *A Pocket Hymn Book* (1781). Stith Mead, a MEC preacher in Virginia, printed *Shout old Satan's kingdom down* in *A General Selection of the Newest and Most Admired Hymns and Spiritual Songs Now in Use* (Richmond, VA, 1807). It begins thus:

> This day my soul has caught on fire, Hallelujah!
> I feel that Heaven is coming nigher, O glory Hallelujah!
>
> *Chorus*
> Shout, shout, we're gaining ground, Hallelujah!
> We'll shout old Satan's kingdom down, Hallelujah!

The tunes of spirituals remained unprinted for some time. Some early examples are found in *The Wesleyan Harp* (1834), with rudimentary basses. In the preface the compilers, Abraham D. Merrill and William C. Brown, defended their choice of tunes to please the 'pious heart' rather than the 'scientific ear'. Other tunes appear in Moses L. Scudder's *The Wesleyan Psalmist* (1842), which is mostly monophonic. Some were gathered retrospectively in Marshall W. Taylor's *Collection of Revival Hymns and Plantation Melodies* (1883). Harmonization of spirituals in simple, 'correct' block chords was a comparatively late development, a result of their gradual adoption in Sunday schools and then in the regular worship of urban churches.

Tunes of this kind are found in Isaac B. Woodbury's *The Lute of Zion ... Designed for the Use of the Methodist Episcopal Church* (New York, 1853). They were an ancestor of both GOSPEL MUSIC and the late-19th-century SPIRITUAL. They were certainly cultivated in both white and black Methodist churches, although often opposed by the authorities, including the African MEC. They may have appealed to blacks, in part, because of chance similarities to African music. Certainly, the negro spiritual added lively rhythms and a style of vocalization that were uniquely African-American.

In England the first camp meeting was led by the American evangelist Lorenzo Dow at Mow Cop, Staffordshire, in 1807. It precipitated the formation of the Primitive Methodist Connexion in 1810. This organiza-

Ex.2 A. Davisson: 'Idumea' (S.M.) (1816)

tion was closely linked to radical politics and in the course of the 19th century won a large following among the urban working classes. Primitive Methodists were nicknamed 'Ranters'. The term was probably due in part to the harsh mode of vocal production used in their singing; this can also be heard in present-day Sacred Harp singing in the southern USA.

The Ranters carried the Methodist practice of religious parody to its extreme, picking up drinking-songs and lewd ballads and adapting them as hymns. Many joined them initially because they were attracted by the lively singing and wanted to participate. A Manchester Primitive Methodist recalled that at camp meetings in about 1820 'people, chiefly young ones, used to run up to hear us, thinking we were singing a favourite song. But they were disappointed therein; nevertheless, they were arrested and often charmed by the hymn, which at times went with power to their hearts' (Kendall, *c*1906, ii, 33). Hymn singing overflowed from chapel and camp meeting into everyday working life.

> From the powerloom days onward, we hear a great deal about singing in the factories, with the women in particular lifting their voices above the clatter of the looms in exuberant Methodist hymns such as Perronet's 'All hail the power', to the handsome hexatonic tune called 'Diadem' in the hymnbooks, though country people know it better as 'The ploughman's dream'. (Lloyd, 1967, p.327)

In the United States, revivalism gained middle-class support after 1850 with the setting up of permanent Methodist camp-meeting sites such as Ocean Grove, New Jersey, and Round Lake, New York, and the introduction of revival services in local churches and Sunday schools. Simple texts and music characterized the Sunday-school songs of Isaac Woodbury, William Bradbury, George F. Root and Phebe Palmer Knapp, and it was from such sources that gospel songs arose. Both Ira D. Sankey and Fanny Crosby were Methodists, but the Moody-Sankey revival movement which swept both Britain and America in the 1870s was not embraced by the established Methodist churches in either country. Instead, it relied on a broader, interdenominational appeal. So do most of the revivals of more recent times, such as those of Billy Graham and the 'televangelists'. As often as not, modern revivals have taken place in large public halls or stadiums rather than open spaces. The resulting acoustical change has facilitated the coordinated mass singing of hymns by thousands, with accompaniment by organ or brass band, while loudspeakers have enabled a leading singer to dominate the crowd.

6. THE 20TH CENTURY. British and American Methodists continued to follow parallel though independent courses during the 20th century. In Britain the Wesleyans were reunited in 1932 with the United Methodists (formed by an earlier union of 1907 between the New Connexion, the United Methodist Free Churches and the Bible Christians) and the Primitive Methodists. In the USA the MEC, the MEC South, and the Methodist Protestant Church reunited in 1939 as The Methodist Church, which in 1968 was joined by two Evangelical churches of German background to become the United Methodist Church. In Australia, Canada and other predominantly Anglo-Saxon countries, similar reunions have taken place, and in all there has been a steady progression in the direction of social reform and ecumenical experiment. In Canada the Methodists joined with Presbyterians and Congregationalists in 1925 to form the United Church of Canada, established by Act of Parliament; in Australia, the same combination (delayed by several decades of Presbyterian opposition) formed the Uniting Church in Australia in 1977.

However, formal reunion has not brought an end to the wide divergence of tastes and traditions in Methodist worship music. The rich heritage of four-part choir singing in 'mainstream' churches reached its apogee before World War I and continued to flourish for several more decades; there was an increase in liturgical forms, including Anglican-style chanting, anthems and responses, and a revival of emphasis on the sacrament of Communion, which was made the main Sunday service by the British Conference in 1975. The Methodist Church Music Society was formed in 1936; the *Choir and Musical Journal* was published from 1910 to 1964. In the USA the National Fellowship of Methodist Musicians (later the Fellowship of United Methodist Musicians) was founded in 1956 and published *Music Ministry* (1959–75). Many American city churches continue to practice elaborate choral music with organ accompaniment, often supported by a professional music staff including a 'music minister'. Several seminaries run courses in music, and in 1959 the Perkins School of Theology at Southern Methodist University, Dallas, introduced a master's degree in sacred music. In Britain there has been a relative decline in choir music, but the organ has remained the preferred accompanying instrument and was still found in 95% of British Methodist churches in a 1996 survey, although only 50% of these were pipe organs.

At the same time, many Methodist churches (and new, offshoot denominations) have been receptive to gospel songs and to the continuing influence of various forms of popular music. The charismatic movement has made considerable impact, often replacing hymns with 'songs', organs with bands, and hymnbooks with projection screens. This is especially the case in African-American Methodism, where bands based on the electric guitar, supported in some cases by piano, string bass, or wind instruments, accompany a freewheeling and relaxed type of singing by large choirs led by soloists with microphones. Swaying, clapping and other body movements play a part in this music, and in some churches dancing is also encouraged.

A few gospel songs were included in the 1935 edition of *The Methodist Hymnal* (USA), but it was the 1964 edition that first made a serious attempt to reflect the musical pluralism of the Church by including negro spirituals, folk hymns and gospel hymns, while at the same time broadening the 'classical' repertory with hymns from German, French, Latin and Greek sources, and even plainchant. The effort was further extended in the 1989 *United Methodist Hymnal* edited by Carlton Young, which also reflects the desire to recover the practice of psalm singing, both in prose and metre. At the same time there have been many unofficial hymnals representing divergent cultures, such as *Songs of Zion* (1981), devoted to the black American religious tradition.

In Britain the relatively conventional 1933 *Methodist Hymn Book* was supplemented by *Hymns and Songs* (1969), containing some popular hymnody, and by the ecumenical *Partners in Praise* (1979). The later official book, *Hymns and Songs* (1983), is more restrained than its American counterpart in the effort towards catholicity of taste; it is supplemented in the majority of churches by

Mission Praise or one of several other collections giving space to popular or 'happy-clappy' materials. The *Methodist Service Book* provides orders of service with music, borrowing freely from the traditions of other denominations but including the Covenant Service, the only one that is still distinctive and unique to Methodism.

7. MISSIONS AND WORLD METHODISM. The Methodists were a missionary body from the start. In 1786 Thomas Coke preached to 1000 negroes in Antigua and was appointed by the British Conference as their 'agent' in the West Indies and later as General Superintendent of Foreign Missions. From the first the missionaries opposed slavery, arousing the bitter resentment of the Dutch and British traders in the West Indies; emancipation in 1834 brought negroes in their thousands to Methodist services.

In 1813 the Wesleyan Methodist Missionary Society was set up and began activities in Ceylon, Java, the Cape of Good Hope, Sierra Leone and Canada. More than Anglican missionaries, the Methodists concentrated their efforts on the indigenous peoples; white settlers were drawn in only incidentally. By 1881 they were so well established in South Africa that a separate Conference was set up there: and by 1946 there were over a million non-white Methodists in the Union of South Africa. Methodists were active all over Africa, although their work formed only a part of the immense Christian effort in that continent throughout the 19th and early 20th centuries. In Asia they were, naturally, much less successful in the face of the ancient, developed religions of the region. In the Indian subcontinent the Methodists formed unions with other Protestant churches to form the Church of South India (1947) and similarly united churches in North India and Ceylon.

American Methodists have also undertaken worldwide missions, concentrating their efforts more especially among Amerindians and in Latin America: the MEC Missionary Society was set up in 1819. American Methodist missions have been extensive in East Asia, with a particularly notable thrust in China, and also in Continental Europe, where there are vigorous minority churches in Germany, Switzerland and the Scandinavian countries. The (American) African MEC established an effective mission for black South Africans, which by 1950 had spread to many other anglophone African countries. Autonomous Methodist churches have been established in most countries around the world.

Everywhere, participatory singing has been one of the chief attractions of Methodism. How far the English and American tunes have been modified or replaced to reflect indigenous culture has varied greatly from region to region. In continental Europe each country's traditional hymn tunes have been increasingly substituted for those of Anglo-Saxon origin. Amerindians have been encouraged to use their own music: as early as 1845 Thomas Connuck, a Narragansett Indian, collaborated with Thomas Hastings in compiling *Indian Melodies*, a set of Methodist hymns with Amerindian tunes.

But Latin American and Asian Methodist churches have continued to use predominantly 'Western' music for their singing – American gospel hymns or more classical styles, according to the social level of the congregations. In Korea, for instance, where there is a very large Methodist community, there have been some experimental Christian adaptations of the traditional *p'ansori* (a form of sung and spoken drama accompanied by a drum), but Western music remains overwhelmingly the norm. In Mexico, where the MEC began operations in 1873, several hymnals in Spanish had been published before 1900: by 1962 there were 33,000 Methodists, and there are many more today. The Mexican Conference's *Himnario especial* (1956) had about 270 hymns with harmonized tunes. The majority were gospel songs; a few were based on popular 'Spanish songs', and some newly composed ones in a similar style, notably by Vicente Mendoza, pastor of the Iglesia Metodista de la Trinidad, Mexico City. Nevertheless, the two favourite hymns were *Santo, santo, santo, Señor omnipotente* ('Holy, holy, holy', with Dykes's 'Nicaea') and *Firmes y adelante* ('Onward, Christian soldiers', with Sullivan's 'St Gertrude'). Popular *coritos* and *estrebillos* with religious texts were used for youth meetings, but the marachi-type bands used by Pentecostals were strictly excluded by the Methodists.

Undoubtedly, Africa is the region in which indigenization has gone farthest and deepest. The British Methodist missionaries, by comparison with Anglicans, were less closely associated with the colonial establishment and were historically identified with the poor and oppressed. For these reasons they were more readily accepted by indigenous peoples and, in turn, paid greater respect to their culture. For instance, in Ghana, where the first Methodist church was formed in 1835, a new type of music called the Fante Lyric developed in the later 19th century; it was unique at the time in drawing entirely on native musical resources. The Fante songs used translated biblical texts but in a verse-chorus pattern based on Asafo. Methodist missionaries wisely allowed them to flourish alongside Western hymns, and 15 of them were printed (Debrunner, 1967; for an example see Warnock, 1983, pp.137–9). Since the songs were improvised, the missionaries took steps to see that the soloists were familiar with Christian doctrine and scripture. This was 'the first mass movement towards an Africanized hymnody' (Warnock) and has continued to the present.

Another reason for the success of Methodist missions in Africa was their use of simple gospel hymns, which also had a call-and-response or verse-chorus pattern that made them easily imitable by African converts. The brass and percussion bands they used to accompany the music also proved an attraction. Instead of staff notation British Methodist leaders used TONIC SOL-FA, which was a much easier medium for training African musicians who, in turn, would teach the music orally to a choir or congregation. They were often the pioneers in the general movement towards indigenization of Christian music that has accompanied the independence of former African colonies since 1957 (*see* ANGLICAN AND EPISCOPALIAN CHURCH MUSIC, §11).

Robert Kauffman, a missionary of the United Methodist Church (USA), founded the All Africa Church Music Association in 1961 and has been a leader in stimulating church music with an African identity. This includes the 'composition' of new music, often in fact growing out of improvised group experiences. Some African music originates in English hymns, but these have been so altered and elaborated by Africans that the result sounds almost purely African in style. In other cases, African secular songs were either adapted to Christian texts or used as a model for new songs in similar style (Axelsson, 1974, p.99).

After World War II efforts were made to bring together the leaders of Methodism from around the world. A World Methodist Council, founded at Oxford in 1951 and meeting every few years since then, has been politically fruitful. In 1993 a General Board of Global Ministries was formed 'to gather, receive, and share' music from all cultures, and has produced *Global Praise 1* (New York, 1997). However, as each country's Methodists adopt local forms, musical disparity must inevitably increase. Little now remains of the music that Wesley personally admired and promoted. But his exhortations to sing all together 'lustily' and 'spiritually' are still the backbone of Methodist music throughout the world.

NICHOLAS TEMPERLEY

Methven, Simpson & Co. Scottish firm of music publishers. It was established in Dundee in 1851 by William Methven (*d* 1886) and Alexander Simpson. In 1887 they took over the Edinburgh firm founded by ROBERT PURDIE and continued by his son John.

Meţianu, Lucian (*b* Cluj, 3 June 1937). Romanian composer, active in Switzerland. He cut short his studies in electronics at the Polytechnic Institute in Bucharest (1954–7) to attend the Bucharest Academy (1957–63), where his composition teachers included Mendelsohn and Olah. Meţianu received an award to study electronic music with Eimert at the Hochschule für Musik in Cologne. Becoming musical secretary of the Ploieşti Philharmonica, he began to compose for films and animations. After settling in Switzerland he gained posts teaching electronic music at Lausanne Conservatory and composition at the Ribaupierre Institute in Lausanne. Applying a rigorous control to his highly expressive music, Meţianu introduces an unpredictability through

his exploration of textural and spacial elements. Mathematical operations play their part in his extremely precise positioning. Further details are given in F. Popovici: 'Lucian Meţianu: portrait', *Muzica*, xxxii/7 (1982), 39–48 [in Fr.].

OCTAVIAN COSMA

Metohija. *See under* YUGOSLAVIA.

Métoyen, Jean-Baptiste(-Jacques) (*b* Paris, 28 July 1733; *d* Paris, 14 Aug 1822). French composer, bassoonist and serpent player. According to A. de La Fage he was also 'graveur de lettres et d'ornements'. He played the bassoon at the Chapelle Royale from 1760 to 1792, and was also 'secrétaire des atours' to Madame Sophie for seven years. After the Revolution, he became treasurer in the administration of the Institution Quinze-Vingt. This carried a pension which enabled him to retire, in 1811, to the Institution de Sainte-Perrine, rue de Chaillot, in Paris. With the Restoration he was made honorary music librarian to Louis XVIII, an office granted by the Duke of Rohan.

In 1773 he painted two watercolour plans illustrating the layout of the king's music in the grand theatre and in the gallery of the chapel at Versailles. His compositions, mainly religious, were mostly written between 1802 and 1819 for Notre Dame, St Eustache, St Denis and St Merri in Paris. According to A. de La Fage his *Recueil de chants d'église* was the first published collection of harmonized plainsong. His manuscript tutor for the serpent, written for a Notre Dame chorister, was bought by the Conservatoire, but was not published. Among his manuscripts Métoyen left a text, signed with the pseudonym Mélophile, entitled *Parallèle entre la peinture et la musique*, in which he criticized the fact that Paris had no concert organization dedicated to religious music, and proposed the institution of concerts along the lines of the old Concert Spirituel.

WORKS

PUBLISHED

Démonstrations des principes de musique, ou Méthode nouvelle réduite en douze cartes (Paris, n.d.)
Recueil de chants d'église (?Paris, n.d.; antiphons repr. in A. de La Fage)

UNPUBLISHED
MSS in F-Pn unless otherwise stated

30 masses, incl. 4 for 4vv and bc, 26 written in counterpoint
10 grands motets, incl.: Dixit dominus, 1806; In exitu Israel, 1814; Coeli enarrant, 1814; Super flumina, 1817; Dominus regnavit, 1818; Deus judicium, *c*1819
Cantate faite pour les aveugles lors de la venue du Pape aux Quinze-Vingt, 1805
Office des fêtes solennelles de la Chapelle royale en plain-chant, 1766
Office de Saint Germain
Numerous short motets, hymns, responses, antiphons, psalms and several arrs. of Dumont's Credo

2 choruses to the glory of the emperor, incl. Choeur de guerrier, 1806
Opera numbers
Ouvrage complet pour L'éducation du serpent

HERVÉ AUDÉON

Métra, (Jules Louis) Olivier (*b* Reims, 2 June 1830; *d* Paris, 22 Oct 1889). French composer. He was the son of an actor and appeared in his father's touring company as a child. At the age of 11 he joined the company of the Théâtre Comte in Paris, where he received his initial musical training from Edmond Roche. He played the violin, the cello and the double bass in various theatre orchestras. In January 1849 he entered Elwart's harmony class at the Conservatoire (gaining first prize in harmony in 1854) and also attended the composition classes of Ambroise Thomas. He became conductor at the Théâtre Beaumarchais and at various dance halls and music halls, including the Athénée Musical and the Elysée-Montmartre. His waltzes, quadrilles, polkas and other dance music enjoyed considerable vogue and established him in the line of leading French dance composers represented by Musard, Isaac Strauss and, later, Waldteufel. From 1871 he conducted the masked balls at the Opéra-Comique, in 1874 and 1876 the balls at the Théâtre de la Monnaie in Brussels, and then those at the Paris Opéra, where his Japanese ballet *Yedda* was given in 1879. From 1872 to 1877 he was conductor at the Folies-Bergère, for which he composed a number of operettas and ballets. One of these ballets, *Les volontaires*, contains the *Marche des volontaires*, which became one of his most popular compositions. During the last years of his life Métra worked very little, but was always ready to perform for charity. His last work was an operetta, *Le mariage avant la lettre*, for the Bouffes-Parisiens (1888). He and his most celebrated waltz, *Les roses*, are featured in Hahn's operetta *Ciboulette*.

STAGE
first performed at the Folies-Bergère unless otherwise stated

Operettas (published in Paris at time of first performance, mostly pf/vs, unless otherwise stated): Le valet de chambre de Madame (1, Liorat), Nov 1872; Un soir d'orage (1, J. de Marthold), 21 April 1874; La fée aux perles (D'Ennery and Burani), Bouffes-Parisiens, 1880 (?unpubd); Le mariage avant la lettre (3, A. Jaime and G. Duval), Bouffes-Parisiens, 5 Dec 1888
Ballets and divertissements: Robinson Crusoe (ballet-pantomime, 1), Folies Nouvelles, 1857; Le baptême des tropiques (1), 1873; Champagne, 1873; Clown (ballet-divertissement, 1), 1873; Les femmes du feu (1), 1874; Les faunes (1), 1876; Les fiancés du Béarn (1), 1876; La noce bohème (1), 1876; Possada (1), 1876; Les Almés (1), Cirque d'été, 1877; Aux porcherons (1), 1877; Échec et mat (1), 1877; Fouchtra (1), 1877; Une nuit venetienne (1), 1877; Yedda (légende japonaise, 3, P. Gille, A. Mortier, L. Mérante), Opéra, 17 Jan 1879; Les volontaires [incl. Marche des volontaires]

DANCE MUSIC

Many waltzes, orch 1856–89, incl. Ésperance; Les faunes; Gambrinus; L'orient; Les roses; La sérénade, valse espagnole; Le tour du monde; La vague; over 100 others, many on themes from contemporary stage works by composers incl. Audran, Lecocq, Offenbach, Planquette and Saint-Saëns

Several hundred polkas, galops, quadrilles and mazurkas, often on themes from contemporary stage works by composers incl. Audran, Lecocq, Offenbach, Planquette and Serpette

Metre. (1) A synonym for TIME SIGNATURE as in '6/8 metre'.

(2) More generally, the temporal hierarchy of subdivisions, beats and bars that is maintained by performers and inferred by listeners which functions as a dynamic temporal framework for the production and comprehension of musical durations. In this sense, metre is more an aspect of the behaviour of performers and listeners than an aspect of the music itself.

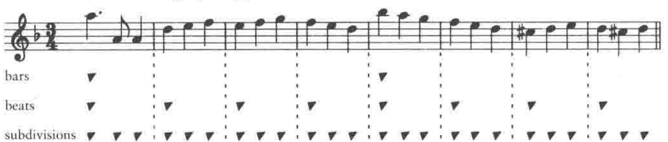
Metres may be categorized as duple or triple (according to whether the BEAT (i) or PULSE is organized in twos or threes) and as simple or compound (whether those beats are subdivided into duplets or triplets). The four basic metric categories are shown in Table 1.

Note that compound metres are 'compounded' as a result of the binary orthography of Western durational notation; in order to use a standard note form for the ternary subdivision, one must use a dotted value for the beats themselves.

The basic metric categories reflect the hierarchic structure of metre, as each defines the organization of three temporal levels – subdivisions, beats and bars. There may also be additional subordinate and super-ordinate levels of metric structure (*see* RHYTHM, §I, 4). While the notated time signature usually corresponds to the perceived metre, at times it does not. For example, in the Scherzo of Beethoven's Ninth Symphony the notated measures correspond to beats and subdivisions, but not to the perceived bar; here a simple triple time signature is used as a means of notating an extremely rapid compound duple metre (ex.1).

Metre is usually stable over the course of a piece, but it may change, either explicitly through a change of time signature or other marking (as in the 'ritmo di tre battute' of the aforementioned Scherzo), or through a regular patterning of durations, *sforzandi* and articulations which force a shifted sense of metre contrary to the indicated time signature.

More complex metres are also possible. In the basic metres the articulations on every level are equally spaced, but in both Western and non-Western music one finds metric patterns that involve unequally spaced beats or bars (for examples and discussion of these so-called additive metres *see* RHYTHM, §1, 7–8). Conventional metres may also be used as a convenient way of notating complex, irregular rhythms. In these cases, performers may engage in metric counting, but listeners are not able to infer any pattern of beats, bars and so forth, in which case it is doubtful if any metre is truly present.



See also NOTATION. For bibliography *see* RHYTHM.

Metrical psalm. *See* PSALMS, METRICAL and PSALM, §IV.

Metronome (i) (from Gk. *metron*: 'a measure' and *nomos*: 'law'; Fr. *métronome*; Ger. *Metronom*, *Taktmesser*; It. *metronomo*). An apparatus for establishing musical tempo. More specifically, it is the clockwork-driven double-pendulum device perhaps invented about 1812 by DIEDERICH NIKOLAUS WINKEL but refined and patented by JOHANN NEPOMUK MAELZEL in 1815. The name seems to have entered the English and French languages specifically on Maelzel's patents filed in London and Paris; and there is no apparent evidence of its earlier use in any European language.

1. Uses. 2. The 'chronomètre' and other pendulum time-keepers. 3. The metronome and other clockwork devices. 4. Electric and electronic devices. 5. Attitudes to the metronome and to metronome numbers.

1. USES. Traditionally the metronome has had two main purposes, which should be considered quite separately.

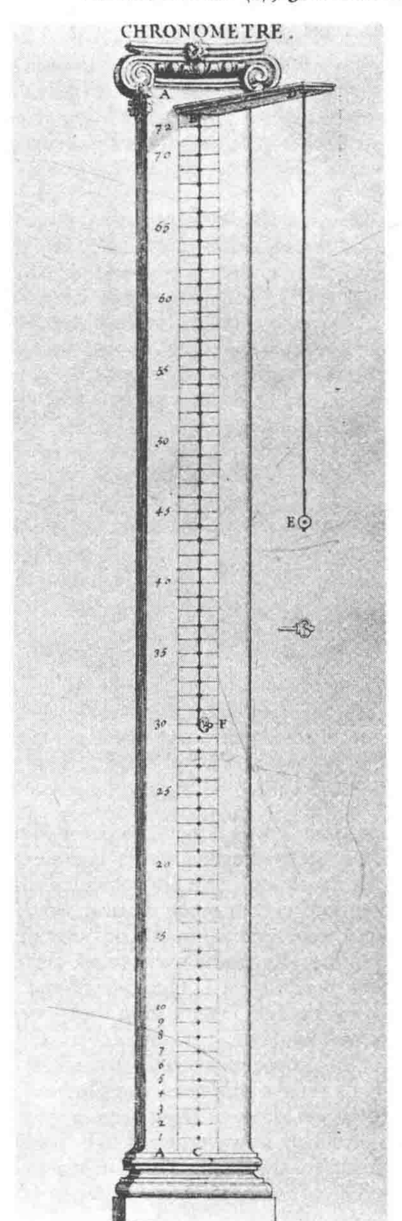
(i) To establish an appropriate tempo. Nearly all the main developments have been driven by the need for composers and editors to fix the tempo they considered appropriate for a particular work (but *see* TEMPO AND EXPRESSION MARKS, §4). This began to seem necessary for the first time in the late 17th century, when the music of different nationalities evolved markedly different styles and performance conventions but was internationally available. Thus Etienne Loulié (1696) justified his *chronomètre* – the earliest calibrated pendulum for music – by stating with heavy sarcasm that it was of no use to those who knew both French and foreign music intimately, to those who considered only music in the style of Lully to be worth performing, or to those who felt that it did not matter at what speed a work was performed; and he asserted that a composer had managed to send works to Italy with considerable success by attaching such arithmetical tempo indications to them. The need was felt even more strongly at the end of the 18th century when music moved away from the TEMPO GIUSTO that had hitherto governed most music in any particular tradition. The years around 1700 and shortly after 1800 therefore produced the main advances in the history of musical time-keepers. But it may well be true that the metronome

would never have become ubiquitous without Beethoven's brief flirtation with it, resulting from his relatively short friendship with Maelzel; this is so even though Beethoven's markings for his own works have often been ignored or assumed to be wrong. Many would still subscribe to Rousseau's view (1768) that the best metronome for these purposes is a sufficiently sensitive musician who has studied the music carefully.

(ii) To establish consistency of tempo through a work or an exercise. On this practice there have been marked trends of approval and disapproval, with many fine teachers asserting that it is antimusical and promotes only wooden performance. The earliest writer to suggest such a device was Thomas Mace (1676), who proposed a bullet 'or any *Round Piece*, or what *weighty thing you please*, to the weight of *half a Pound*, or a *Pound*, (more or less)' suspended from the ceiling. He pointed out that the shorter string will have a quicker motion and that 'therefore a *Long String is Best* to *Practice* with, at *first*'. Mace was particularly concerned with the habit of changing speed as the music became more complex, as in a set of variations, something that can still be heard in the performances of many first-rate musicians. Related to this use is the practice of taking a technically difficult piece, or more particularly an exercise, at various different tempos as regulated by a metronome. Czerny has exercises to be taken at crotchet = 60 and then by gradual increments up to crotchet = 120; and several teachers have advocated practising a work at speeds faster and slower than seem musically correct (and therefore necessarily requiring a metronome to keep them steady) in order to produce more relaxed and controlled playing at a musical tempo. In 1804 J.F. Reichardt observed that even the finest musicians had been unable to play more than a few bars against the clockwork time-keeper devised by J.-A.-C. Charles (see §3); and other writers (among them Mersenne, 1636–7) had similarly implied a preference for flexible tempo.

In the 20th century two further uses have brought with them the need for more sophisticated and adaptable mechanisms.

(iii) Synchronization. Film composers must almost invariably calculate their music to a fully edited film. Advertising jingles must be judged to a specific 'slot' measured in seconds. In both cases absolute precision is clearly essential, even though the advent of digital recording makes it easy to adjust the length of recorded material. The recording of a commercial lyric in several superimposed layers is often done against a metronomic pulse (normally transferred through earphones) rather than against a recording of the previously recorded track or tracks: obviously, if the first recorded track is in any way metrically irregular the synchronization of further tracks will be extremely difficult. Stockhausen's *Gruppen* (1955–7), for three orchestras, calls for 12 different tempos evenly distributed between crotchet = 60 and crotchet = 120: only three of his 12 tempos appear on the traditional metronome. Examples of this kind of use could be multiplied.



(iv) Comparison of recorded performances. A precise documentation of tempos can help define the style or characteristics of a particular performer or conductor. This can be hard to exploit with any great rigour, if only because it is rarely possible to define any single movement with a single metronome mark.

(v) As an instrument. Finally, the metronome considered largely as an objet trouvé (with a heavy inbuilt symbolism) appears as a musical instrument in its own right. Examples include the opening of Ravel's *L'heure espagnole* (1907–9), the third movement ('Cloche-pied au flic') of Villa-Lobos's *Suite sugestiva* (1929) and Ligeti's *Poème symphonique* (1962) for 100 metronomes.

2. THE 'CHRONOMÈTRE' AND OTHER PENDULUM TIME-KEEPERS. At the ends of the long multi-section works in his *Polyhymnia caduceatrix* (1619) and his *Puericinium* (1621) Michael Praetorius gave their length in *tempora*; and in his *Syntagma musicum* (iii, 88) he stated that 160 *tempora* would last a quarter of an hour. This tempo (minim = 42·5) seems improbably slow; but evidently for him and his contemporaries the *tempus* was at least thought not to vary significantly. Similarly Johannes Vetulus de Anagnia 250 years earlier could say that the *brevis* in a trecento *novenaria* lasted 2½ seconds (if Gullo, 1964, has interpreted him correctly, though see Segerman, 1996). So it is perhaps not surprising that Galileo Galilei's investigations into the workings of a pendulum had no immediate impact on music, whereas they were quickly used in medicine for calculating pulse, following a technique attributed to Santorio Santorio (1561–1636). Mersenne (1636–7) gave an elaborate description of the workings of a pendulum, establishing 3½ *pieds* (approximately feet, or *c*1.06 metres) as the length that would beat once a second (*Mouvement des corps*, ii, §§14–16; *De la composition*, v, §11); and he even suggested that a composer wishing to send his music to Constantinople, Persia or China might like to indicate its tempo by means of pendulum lengths (*Des instruments a cordes*, iii, §18). But his scattered and repetitive discussion had no apparent influence in a world that felt little need to communicate music to China; and he implied that the current flexibility of performance tempos would require several different pendulums in the course of a single piece. Mace, though applying the pendulum to music, used it merely to establish stability of tempo (see §1 (b)); the writings of Robert Boyle (1627–91) refer to a 'skilled musician of my acquaintance' doing the same (see Kassler, 1979).

Loulié's famous *chronomètre* was the first device for defining tempo, made necessary simply by the difference between French and Italian music in his time (fig.1). It was a pendulum mounted on a frame 72 *pouces* (approximately inches) high. The frame was calibrated, and a peg on the fixed end of the cord could be plugged in at various points on the frame, thereby adjusting the length of the hanging part of the cord which formed the pendulum. Its main disadvantage was that the calibrations on the frame were in *pouces* without any intrinsic musical significance and were therefore meaningless to anybody who did not possess a *chronomètre* of Loulié's design. There is no further evidence of its use, though it was to be mentioned and described by many subsequent writers as the first attempt at a musical time-keeper.

Joseph Sauveur (1701) refined Loulié's idea by devising for his *chronomètre* a calibration that made more general sense: the length of each beat was calculated in units of a *tierce* (1/60 of a second). His system of *tierces* became standard in the 18th century, and was first used for printed music by L'Affilard soon afterwards in the fifth edition (1705) of his *Principes* where many songs are

1. *'Chronomètre': engraving from Loulié's 'Elements ou principes de musique' (1696)*

given such tempo marks – with the added refinement of signs to indicate how many such beats appear in each bar. (It should be mentioned here that Sauveur's *échomètre* was not a time-keeping device at all but a comparative scale that related Loulié's figures to his own *chronomètre* figures as well as to the vibrations of particular pitches).

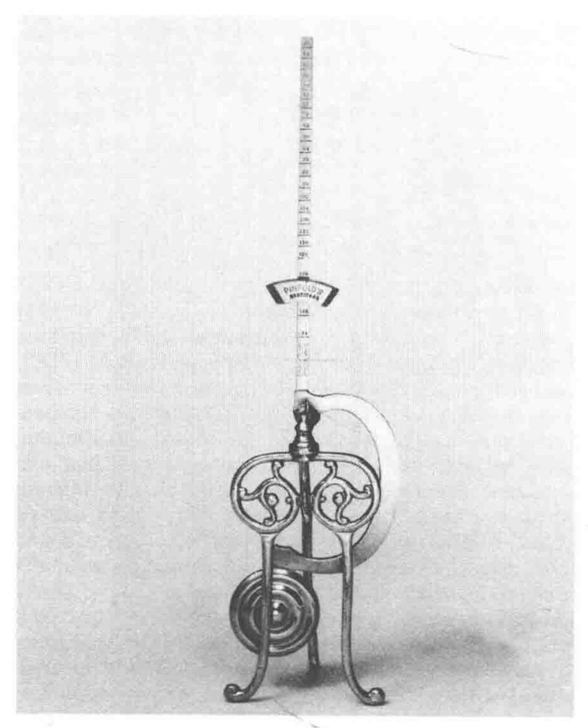
If Sauveur had improved the conceptual basis of Loulié's invention, D'Onsembray (1732) improved on it mechanically. By means of a highly sophisticated set of pulleys and a dial, his *métromètre* could measure Sauveur's *tierces* with considerable precision, giving beats from 30 to 68 *tierces* in length, divided into 76 steps each of a half-*tierce*; and a click identified the beginning of each swing. (An example of D'Onsembray's *métromètre* survives in the Conservatoire des Arts et Métiers, Paris, Inv. 1396.)

Further inventions followed, though the exact nature of their novelty is often no longer clear. Fougeau de Moralec attempted to perfect a device that established tempo by means of dripping water (Hellouin, 1900). Godefroi de Viltaneuse produced a *métromètre* in 1779 (mentioned in Grétry, 1797). The composer Jean-Baptiste Davaux devised a *chronomètre* that was manufactured for him by Bréguet (one survives in the Conservatoire des Arts et Métiers, Paris, Inv. 1394); and he included its numbers for his symphonies op.11 of 1784. Almost simultaneously another system was launched, the *plexichronomètre* of Renaudin, which had the blessing of the Ecole Royale de Chant. This (like that of D'Onsembray) included an audible click, and seems from his own description to have worked like a small musical box, its main virtue being its small size ($4\frac{1}{2} \times 3\frac{1}{2} \times 3\frac{1}{2}$ *pouces*). A vitriolic correspondence on the relative merits of the two new machines followed in the *Journal de France* (ed. in *BrookSF*, i, 502ff). The firm of Renaudin also marketed a simple pendulum at a much lower price (see Jefferson, 1786).

The *rhythmomètre* of Dubos (given in *FétisB* – perhaps following Weber, 1830 – as 'Duclos' and with the date 1782 for 1787) was rejected by the Académie Royale des Sciences on 30 March 1787 (see Cohen, 1981, 70) but presented to the king and queen on 13 January and eagerly accepted by the Ecole Royale de Chant headed by Gossec (see *BrookSF*, i, 314) for its accuracy and flexibility; no details of its construction seem to survive.

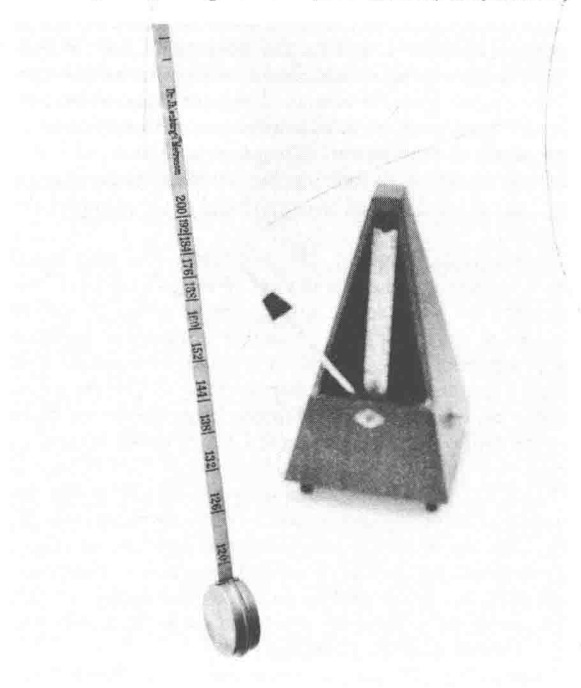
A remarkable early survival from England is the 'chronometer' built by the clockmaker William Pridgin in York, some time before 1793 (when he left for Hull) and now in Fairfax House, York (see Martin, 1988). In a wooden box seven inches high and four inches square, there is an elaborate series of gears that function on a clockwork mechanism and produce not only a regular tapping but also a bell for the downbeats. 14 different tempos are offered, all associated with both a tempo mark and a time-signature engraved on the brass frontplate. Inside the front is a set of printed instructions 'for using the musical time-beater'. This stands right outside the known traditions of such machines both in its use of gears and in its avoidance of any numerical designation for the tempos.

Meanwhile, however, the pendulum was also being used for infinitely simpler devices. William Tans'ur (1746) devoted six pages to the subject, but in terms of specific advice to the musician he found it sufficient to mention that a pendulum 39·2 inches (99·6 cm) long would beat once a second. Similarly Robert Bremner (1756) proposed that a pendulum 8′ 8″ (2·64 metres) long should be 'hung at the End of all Schools where Church music is taught'. And on a slightly more refined level Henry-Louis Choquel (1759, 2/1762) even applied tempo marks by giving the length of the pendulum needed for each piece, for example (p.176): 'on en aura le mouvement en donnant 18 pouces de longueur au cordon'. (Evidently this was an independent idea, for in the preface to the second edition (1762) he stated, in a different context, that he had only just come across Loulié's *Elements*.)



Gabory (1770) had found a simple pendulum sufficient, and Mason (1801) described one in some detail. Thomas Wright used a highly ingenious system in his keyboard concerto of *c*1795, defining in a preface the length of the pendulum as 'the breadth of [a certain number of]

Harpsichord and Piano Forte keys, in preference to inches, the former being always at hand, and the difference in Instruments in this respect, so trifling, as to occasion little or no alteration'. Wright seems also to have marketed a simple pendulum working in this way (*see* WRIGHT, THOMAS; see also *Grove3* ('Wright, Thomas'; F. Kidson)). Other such devices in England include James Peck's Pendulum or Pocket Metrometer of *c*1803, as well as Rudolph Ackermann's Regulator (a calibrated cord with a weight) and Balance Regulator (the same on a 28 cm frame) of *c*1812 (see Kassler, 1979).



Indeed even after the invention of Maelzel's metronome had quickly made most other systems obsolete, Gottfried Weber continued to recommend the simplicity of the ordinary hand-held pendulum, with its length as the information that should be carried in musical scores: several works by Spohr survive with such measurements in Rhenish inches. Zmeskall followed this by suggesting that the pendulum be calibrated with Maelzel's numbers. It is difficult to say how soon his advice was followed; but such devices are available to this day in the form of suitably calibrated tape-measures with the tape-container serving as the weight (fig.2).

In the later 19th century other gravity metronomes were devised, among them those of Ihlenburg, Chiappani, Mahagoni (according to Barbacci, 1969) and in particular the highly successful device patented by A. Pinfold of Bradford (fig.3), a balanced weight over a horizontal bar: its mechanics owed much to the Maelzel/Winkel invention (see §3), but its devastating simplicity, coupled with its considerable elegance and its silence, ensured wide sales.

Concerning the more elaborate and sophisticated pendulum devices, in the years around 1800 various disadvantages seemed important. First, their size, that of Thiémé (1801) being some 9′ (2·75 metres) tall; second, their silence, since it was difficult to perceive the precise moment of change by eye (and several later developments boasted their audibility as an advantage); and third, the lack of a calibration that made musical sense. All these disadvantages were rectified in one or other of the 18th-century inventions: Renaudin's was small, as were several of the simple pendulums; D'Onsembray and Renaudin had audible clicks; and Thiémé even mentioned calculations of tempo in beats per minute (as did Thomas Jefferson, 1786), though his actual machine evidently used Sauveur's system of *tierces*. But Guthmann (1806–7) defined all these ideals as being necessary for his 'New time machine which, however, is yet to be invented'. And it seems that one of the major factors in Maelzel's success was his system of counting tempo in terms of beats per minute.

3. Gravity metronome by A. Pinfold, Bradford, c1890 (Metropolitan Museum of Art, New York)

2. The hand-held metronome that Bartók used in his later years, marked on the stem 'Dr. Ihlenburg's Metronom'; note that the metronome should properly be held between the two lines near the top of the stem (Bartók Archives, Budapest).

3. THE METRONOME AND OTHER CLOCKWORK DEVICES. Zacconi (1592, f.20*v*) had associated the movements of a clock with musical movement, though purely as a way of illustrating how various note values move at their own speeds (just as do the differently sized wheels in a clock). But mechanical clocks had been common in Europe from the 13th century, with their invention reputedly going back to the 10th century. Apparently the first writer to suggest setting tempos in terms of a clock was William Turner (1724), who described the speed of crotchets in reversed ¢ mensuration as 'counted as fast as the regular Motions of a *Watch*'. Similarly Robert Bremner in the second (1763) edition of his *Rudiments* lamented that his earlier (1756) suggestion of a ubiquitous pendulum (see §2) had not been well received, so he now proposed the use of a clock 'and count the *seconds*, or motions of the pendulum in fours'. Tans'ur (1746) seems to be suggesting the same device.

The theory that Christoph Semmler of Halle (1669–1740) invented a metronome in the 1720s seems to derive only from a statement in Kandler (1817) in an article that is otherwise largely taken straight from Maelzel's publicity leaflet. As already mentioned, Renaudin's *plexichronomètre* of 1784 apparently worked like a musical box. In 1786 the French physician Jacques-Alexandre-César Charles devised a clockwork *chronomètre musical* some two metres high (Conservatoire des Arts et Métiers, Paris, Inv. 1435) and he apparently continued to modify it until 1802 when it was seen in action by J.F. Reichardt (1804). In 1798 Anthony George Eckhardt patented in London a clockwork time-keeper calibrated in 'moments' (ten per second) in degrees from five to 100 moments: a barrel drove three interlocking toothed wheels that operated hammers to beat at the required interval of moments. There is no trace of this actually having been manufactured. In 1800 G.E. Stöckel invited subscriptions for his 'Chronometer', built like a large wall-clock with a 2′ (61 cm) pendulum and clearly audible hammers and bells. In spite of written support from J.F. Reichardt, Stöckel had little success; at least, in 1803 he advertised a smaller 'improved model', again inviting subscriptions but this time being more cautious about the terms under which he would actually manufacture the *Zeitmesser*. This time too he had a longer list of famous supporters, including Reichardt, Türk and Rochlitz, but there is again no evidence that the device was ever manufactured.

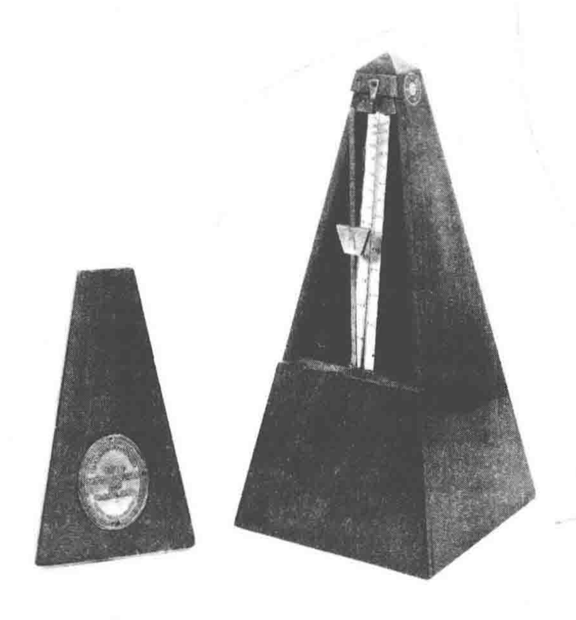
Among several other new machines of those years, most of which are known only from a brief reference or description, are: a time-keeper by John Chancellor (Coggins, *c*1822); a chronometer by Henry Smart, brother of Sir George Smart (Coggins, illustrated in Harding, 1938, pl.18), built after the manner of a barrel organ and probably deriving from Eckhardt's machine; a machine in the shape of a pocket-watch made by Sparrevogn of Copenhagen (1817); a new pendulum by Despréaux (described by Fétis as representing no advance on Loulié's original invention of 125 years earlier); a machine for beating time by Charles Claggett (*c*1793), the Timonicon (*c*1825) of Mr Galbreath and a 'musical timekeeper' (*c*1829) by J.B. Barnard (all documented in Kassler, 1979); and other devices by Siegmund Neukomm (1815) and perhaps by Charles Neate in London (mentioned in Lichtenthal, 1826, as 'Neath', though this may refer simply to Neate's description of the Wright pendulum).

This quantity of new machines and of literature describing them was to some extent symptomatic of a general feeling that the time was ripe for a machine that would gain universal acceptance. But it also had two direct consequences. It stimulated considerable interest, so that many leading musicians were concerned with the question of precise tempo even if (or perhaps because) they were dissatisfied with the chronometers that were by then available. And it brought with it a substantial body of expertise and experiment. In short it prepared the ground for Maelzel, a man with relatively little technical or scientific knowledge but considerable musical skill, mechanical experience and business sense.

None of the earlier attempts had achieved any wide or lasting success. Maelzel came to the chronometer about 1808, having spent some years making and demonstrating mechanical instruments of various kinds, both musical and non-musical; and he then devoted over 15 years to refining and promoting his device. The result was a metronome of such perfection that modern metronomes (in the strict sense) differ little from his final model.

To judge from descriptions, his prototype (first mentioned in *AMZ*, 1 Dec 1813) was an ungainly pendulum machine somewhat like that of Stöckel; and its only significant characteristic was that it calculated tempo in terms of beats per minute. It had a range from 48 beats per minute to 160. The story of Beethoven's having composed his canon in honour of Maelzel, *Ta ta ta*, in 1813, must now be discarded as a fiction of Schindler's (partly because it includes the word 'Metronom', not otherwise known before 1815; see Howell, 1979), but the *AMZ* report of 1813 states that both Beethoven and Salieri were interested in the new machine. And that is a clue to Maelzel's flair for publicity, one of the qualities without which he would probably have had no more success than the many other makers and inventors mentioned in this article.

On a promotional journey in 1815 Maelzel demonstrated his prototype to Winkel in Amsterdam. Winkel had created something similar, though the small scale of his operation and his general lack of promotion meant that he would never have achieved international success (an example of his 1814 machine is in the Gemeentemuseum, The Hague, with the inscription 'Erfunden von D.N. Winkel in 1814 den 27 November in Amsterdam'; it is reproduced in Kolneder, 1980, and van Tiggelen, 1997). On the other hand, Winkel had the clue to reducing the size of the machine, namely a double-ended pendulum which effectively quartered the necessary length of the stem. (This in turn probably owed much to the investigations of the English scientist Henry Kater (1777– 1835), who is famous for having brought the understanding of the pendulum to such a point that it could be used to define the exact length of a foot.)



There can be little doubt that Maelzel treated Winkel unscrupulously. According to a later inquiry (reported in de Vos Willems, 1829), Maelzel offered to buy the invention from Winkel. When his offer was refused he simply went to London and Paris, patenting in both cities a new machine – for which he devised the name 'metronome' – incorporating Winkel's crucial insight.

Kolneder (1980) has shown that Maelzel had in fact planned to set up the London factory some years previously, as noted in the *AMZ* article of 1813; and when he met Winkel he was on his way to London with his financial support organized, so Winkel's contribution may have been only a refinement. But Maelzel must nevertheless have worked quickly. The patents were ratified on 1 June 1815 in London and on 14 September 1815 in Paris. By the end of 1816 he had issued a short guide to its use in French (1816); and his letters to Breitkopf & Härtel state that he had also published a *Metronomic Tutor* in English. Further to that, he sent metronomes to 200 composers all over Europe (see Haupt, 1927, p.130, letter of 8 April 1817) – a further example of his commercial initiative. On 18 July 1816 the Leipzig *AMZ* was able to announce that the new metronome was being manufactured in London and in Paris, to regret that Maelzel had not seen fit to entrust his work to German manufacturers, and to state that metronomes from Paris were already on sale at Breitkopf & Härtel's shop.

This new 1815–16 metronome – the one on which all the surviving Beethoven markings were made – was a

metal box some 31 cm high; and although the pendulum worked like the later one its calibrations were only from 50 to 160 – in twos from 50 to 60, in threes from 60 to 72, in fours from 72 to 120, in sixes from 120 to 144 and in eights from 144 to 160. (Examples survive in the Gesellschaft der Musikfreunde, Vienna (fig.4); the private collection of Paul Badura-Skoda, Vienna; and at the Brussels Conservatory, Inv. 639). Within a few years several major composers had issued Maelzel Metronome (MM) numbers for works by themselves and others; and even though many composers soon concluded that the supposed accuracy of metronome indications was musically speaking a chimera, Beethoven's acceptance of it was in itself enough to ensure survival for Maelzel's system.

Over the following years Maelzel continued to change and refine his metronomes. Already in 1817 he was making silent gravity-driven metronomes (fig.5) which he abandoned in 1821 as being unpopular. From 1821 he started making all his metronomes in mahogany rather than metal. In 1828 a clock maker in Amiens named Bienaimé-Fournier had evolved a machine (an example is in the Conservatoire des Arts et Métiers, Paris) with three 'improvements' on that of Maelzel: ability to remain regular even when not on a horizontal surface; the possibility of changing tempo without stopping the machine; and the addition of a device to strike every two, three, four or six beats. Fétis enthusiastically endorsed this as the successor to Maelzel's machine. But Maelzel, with a characteristic sense for the difference between important and unimportant matters, incorporated only the striking device into his subsequent metronomes. At some stage in the 1820s he also reduced the height to 20 cm; and later expanded the calibrations: they now ran from 40 to 208, in twos from 40 to 50 and in eights from 160 to 208, otherwise precisely as on the earlier metronome. These numbers and these limits have become standard for nearly all musical time-measurers since then, to such an extent that a figure such as crotchet = 130 has been described as 'irrational' simply because it does not appear on Maelzel's system.

4. Prototype of the modern metronome, made by Maelzel in 1815 (Gesellschaft der Musikfreunde, Vienna)

5. Silent gravity metronome in mahogany by Maelzel, probably made between January and June 1821 (Metropolitan Museum of Art, New York)

Since then the clockwork metronome has remained practically unchanged. Slightly smaller models in a plastic case have been developed; but they usually retain many of the original Maelzel features: a double-ended clockwork-driven pendulum; a stem with ridges for positioning the upper weight, which is trapezium-shaped and has a small spring to hold it in position; calibrations written on a scale mounted behind the stem; relatively meaningless tempo-words added to the calibrations; a bell arrangement for downbeats activated by a little slider at the side; and a triangular (or obelisk-like) shape with a cover on the front that must be taken off before the metronome is operated.

Attempted refinements have been few and mostly short-lived. Hellouin (1900) mentioned French patents by Fayermann (1853, no.17880), Lesfauris (1854, no.20531), Janniard (1859, no.43290), Carden (1865, no.69207) and Metzger (1868, no.80809) as well as what may have been the earliest electric device by Gaiffe (1892); there were certainly many more in other countries. In response to Saint-Saëns's complaints that most metronomes were inaccurate Léon Roques devised a *métronome normal* which was cheap, easy to make, silent, and calibrated with 90 gradations from 30 to 236 (Brussels Conservatory, Inv. 1691 and 1697). In 1893 J. Treadway Hanson proposed (but probably did not execute) an extension that could actually beat time. More successful has been the Swiss-made pocket metronome: built like a

pocket-watch, it has one hand that swings and clicks at the correct pace and another hand that can be moved through all degrees from 40 to 200.

4. ELECTRIC AND ELECTRONIC DEVICES. Such is the range of techniques made available by electronic technology that it may never be possible (or interesting) to detail the various 'metronomes' that have been developed along these lines. The number of new devices far exceeds that known from the years 1780–1830, but few have aroused much interest; and the advent of the synthesizer perhaps made most of them all but obsolete.

For most mid-20th-century teaching purposes an electric box is used with a light on top that flashes the beats but can be supported by an audible click (such as the model by Franz); again the tempo numbers tend to follow Maelzel's last system. More recently smaller versions have been made, often equipped with an earphone (such as the model by Seiko). More elaborate devices have been made to cope with complex cross-rhythms, 'irrational' tempos and gradual change (see Henck, 1979 and 1980), as demanded by avant-garde scores. There have also been machines that can calculate the tempo of a received signal.

But it may well be true that the metronome still to some extent carries with it the stigma of being meaningless and unmusical in its aims (as in uses (*i*) and (*ii*) outlined in §1 above); and this could hamper the success of new inventions to cope with uses (*iii*) and (*iv*).

5. ATTITUDES TO THE METRONOME AND TO METRONOME NUMBERS. For many years it was normal to ignore the metronome marks of 19th-century composers, usually on the basis that many of them could not be made to work and probably reflected inaccurate metronomes. Those attitudes changed considerably in the 1980s when the performance practice movement began to take a greater interest in the music of the 19th century: following original or early metronome markings became one of the most tangible ways of making a performance 'authentic'. Older theories that Schumann's metronome, for example, did not function correctly were shown to be based on flawed reasoning (Kämper, 1964); and more attention was paid to the long-term campaign of Rudolf Kolisch to have Beethoven's metronome markings taken more seriously. It had been shown by physical experimentation (Talbot, 1971) that it is almost impossible for a metronome to change its beat by more than 5% and still function at all. Moreover, the magic of the system of counting beats per minute (a system that took so long to emerge) is that most musicians know roughly what a particular metronome number means without reference to a machine: that should have been almost as easy for Beethoven or Schumann as for any musician today.

But these considerations may not justify a fundamentalist view of metronome numbers. That the surviving numbers could contain misprints in an otherwise rigorously proofread edition seems also not merely possible but probable. No composer (with a few recent exceptions) has used metronome numbers as part of the initial compositional material for a work; they are most often added at the last moment. There has been some discussion (Gleich, 1988, and elsewhere) of the possibility that some composers of the 19th century occasionally read the double-beat of a metronome as reflecting a single beat in the music: while this counter-intuitive notion plausibly explains certain cases, most such cases may be better explained by suggesting a crotchet misprinted as a minim.

Somfai's important analysis (1996) of Bartók's metronome marks and timings throws the focus on various matters that help us to understand many of the more perplexing markings by Bartók and others. First, that Bartók revised his metronome numbers, often substantially, when he changed from the traditional clockwork-driven device to a simple tape-and-pendulum (fig.2): it should perhaps be obvious that it can be very hard to establish a tempo with the Maelzel machine, which must be stopped and adjusted several times before it matches the tempo desired (this despite André Gertler's remark that Bartók had an uncanny sense of 'absolute tempo'). Second, that Bartók's own recordings are often rather different from any of his markings for a particular piece – and it is a common enough phenomenon that composers are more unpredictable in conducting their own works than those of others (as has been remarked of Mendelssohn and Elgar among others). Third, that Bartók's additional indications of the length of particular sections (given to the nearest second, and usually conflicting with the metronome mark) were simply the report of one performance but given as an indication of matters that were not susceptible to strict metronomization, partly because almost any music needs flexibility of tempo. Fourth, that Bartók routinely added his metronome marks only at the last proof stage of publication, so several of them have misprints, particularly the confusion of a minim for a crotchet.

Since few composers like to play with the metronome ticking alongside, it must be considered inevitable that most metronome numbers are established at the desk, sometimes with results that are wildly faster than would be appropriate with, for example, a full orchestra playing (for further considerations, *see* TEMPO AND EXPRESSION MARKS). This may well explain the divergencies noted by Reidemeister (1997) between metronome markings and performances played or conducted by their composers in the 20th century.

DAVID FALLOWS

Metronome (ii). Swedish-owned record company. It was established in Sweden in 1949 by Lars and Anders Burman and Börje Ekberg and acquired in 1950 by the Danish jazz musician and composer Bent Fabricius-Bjerre (Bent Fabric) (*b* Copenhagen, 7 December 1924), in whose hands it concentrated on jazz (Stan Getz, Kjeld Bonfils, Charles Norman) and classical music (Emil Gilels). The first sound engineer for Metronome's own productions was Peter Willemoes (*b* 1927), who issued many LP and 45 r.p.m. recordings in all categories, including the series Meisterwerke der Musik vor 1750 (ed. Mogens Wøldike), designed to accompany C. Parrish and J.F. Ohl's printed anthology *Masterpieces of Music before 1750* (New York, 1951). After a fire in 1967 the recording studios were not rebuilt, and later the company diversified into films and video. (B. Fabricius-Bjerre: *Klaver med mer*, Copenhagen, 1994)

GEORGE BROCK-NANNESTAD

Metropolitan College of Music. London conservatory founded in 1889 and amalgamated with the London Academy of Music in 1904. *See* LONDON (i), §VII, 3.

Metropolitan Opera House. The most important New York opera house, opened in 1883. A new house opened in Lincoln Center in 1966. *See* NEW YORK, §4.

Métru, Nicolas (*b* Bar-sur-Aube, ?*c*1610; *d* after 1663). French composer, organist, teacher and music publisher. He was living in Paris by 1631, when he was referred to as a 'maître compositeur de musique'. In 1642 he was organist of St Nicolas-des-Champs. He was highly thought of as a teacher: in 1643 Gantez spoke of 'Vincent, Métru and Massé, the three most celebrated teachers in Paris'; he also stated that Métru was *maître de musique* to the Jesuits. A document of 1692 (*Mémoire des compositeurs*), corroborated by La Borde, states that, together with Roberday and Gigault, he was one of Lully's teachers. He also tried his hand at music publishing: on 21 June 1633 he obtained official permission 'to print, sell and distribute, through any printer or bookseller he may choose, every kind of music he has produced or may produce in the future'. To this end he took on a printer from Pierre Ballard, who at the time had a monopoly of music publishing and now used his influence in high places to suppress his rival. On 7 April 1635 Ballard managed to get Métru's privilege withdrawn; however, a judgment of 3 July 1635 obliged him to print all of Métru's works from then on and 'to provide him with 100 copies' of each.

Métru's earliest known music, which appeared in 1628, just after the capture of La Rochelle, was composed to celebrate this event and was sung before Louis XIII. In 1632 he was well enough known for the author of *La*

Philomèle séraphique to convert some of his *airs*, together with some by Guédron and other composers, into sacred songs. His two-part fantasies for viols are in a lively, rhythmic chanson style, with a strong sense of key. The third book of *airs* contains works to celebrate the marriage of Louis XIV, which had taken place a few months before the publication. While, in general, the books of *airs* and the mass are notable for their precise word-setting and melodic grace, the works in the third book lack these qualities; the abundance of dotted rhythms and short rhythmic values is suggestive of instrumental music.

WORKS

Recueil des vers du Sr. G. de Baïf, mis en musique par N. Métru, chantez en l'alégresse de l'heureux retour du roy, 4–5vv (Paris, 1628) [Quinta pars pubd Fontainebleau]
Fantaisies, 2 viols (Paris, 1642)
Premier livre d'airs, ?4vv (Paris, ?1646), lost
Deuxième livre d'airs, 4–5vv (Paris, 1646)
Troisième livre d'airs, 4vv (Paris, 1661)
Missa ad imitationem moduli Brevis oratio, 4vv (Paris, 1663)
Contrafacta, 1632[3]

Metrum (Lat.). In Latin monophonic psalmody, the principal break, or mediation (median cadence), in a simple psalm tone; *see* INFLECTION, (1). *See also* PSALM, §II, 7(iii).

Mettenleiter. German family of church musicians.

(1) **Johann Georg Mettenleiter** (*b* St Ulrich, Lohntal, Württemberg, 6 April 1812; *d* Regensburg, 6 Oct 1858). Organist and composer. Intended by his father for the teaching profession, he went in 1824 to his uncle, choirmaster in Wallerstein, who instructed him in practical music, among other subjects. In 1837 he was appointed choirmaster of the parish church of Oettingen and two years later choirmaster and organist at Regensburg.

Mettenleiter's most extensive work is the *Enchiridion chorale, sive Selectus locupletissimus cantionum liturgicarum* (Regensburg, 1853; org acc., 1854–69), along with the *Manuale breve cantionum ac precum liturgicarum* (Regensburg, 1852), adapted for student use. At the recommendation of the Regensburg bishop, Riedel, the *Enchiridion* came to be a foundation of the sacred music restoration movement, its harmonic practice becoming a model for Cecilian chant harmonizations. As a conductor, Mettenleiter performed early polyphonic works in services of the Alte Kapelle, carrying out the church music reform plans of Proske. Most of his own compositions, sacred choral works, remain in manuscript (*D-Rp*).

(2) **Dominicus Mettenleiter** (*b* Thannhausen, 20 May 1822; *d* Regensburg, 2 May 1868). Writer on music, brother of (1) Johann Georg Mettenleiter. He was also educated and taught music by his uncle in Wallerstein. In 1835 he went to Regensburg, where in 1846 he was ordained. Four years later he was appointed vicar of the collegiate monastery of the Alte Kapelle. Through his association with Proske, active at the same institution, he acquired a broad musicological knowledge. A member of many learned societies and a contributor to numerous German and foreign music journals, he is perhaps best known for his music histories of Regensburg and the Upper Palatinate.

(3) **Bernhard Mettenleiter** (*b* Wallerstein, 25 April 1822; *d* Marktheidenfeld,14 Jan 1901). Teacher, choirmaster and composer, cousin of (1) Johann Georg and (2) Dominicus Mettenleiter. The son of the prince's secretary and choirmaster Johann Michael Mettenleiter in Wallerstein, he took up the post of teacher and choirmaster at Memmingen in 1848 and in 1856 became choirmaster and music teacher at the royal Gymnasium in Kempten. From 1871 to 1894 he was president of the Cecilian society of the Augsburg diocese, and he was a member of the Referentenkollegium of the Allgemeiner Deutscher Cäcilienverein.

Among the earliest and most ardent members of the German Cecilian movement, Mettenleiter was also known as an organist and music pedagogue. His church compositions are distinguished by their aptness to the solemnity of the sacred service; those published include eight masses, a requiem, a *Te Deum*, five Vespers, four *Pange lingua* settings, Marian antiphons and two Good Friday settings. He also wrote *Die Behandlung der Orgel* (Regensburg, 1869, 3/1886) and *Das Harmoniumspiel*, i (Kempten, 1880, 5/1904), ii (1882, 2/1892), iii (1899).

AUGUST SCHARNAGL

Metzger, Ambrosius (*b* Nuremberg, 31 Jan 1573; *d* Nuremberg, 1632). German composer and Meistersinger. His family came from Swabia. He attended the grammar school of St Sebaldus at Nuremberg for five years from 1586. After travels which took him to Regensburg and Linz he completed his education at Steyr and stayed there for a year and a half as a teacher and finally as tutor to an aristocratic Austrian family. After his father's death he

returned to Nuremberg and in 1600 went to the university at nearby Altdorf to study theology. In 1604 at the latest he took his master's degree. As there was no position as a priest available to him he obtained a post, which he held until his death, as a teacher at the school of the Egidienkirche, Nuremberg. His only known music from these years is *Venusblümlein: 1. Theil Neuer, lustiger, weltlicher Liedlein* for four voices and *Ander Theil Neuer, lustiger, weltlicher Liedlein* for five voices (Nuremberg, 1611–12); a third part was never printed. This work was probably modelled on Hans Leo Hassler's *Lustgarten neuer teutscher Gesäng* (1601).

An ailment of the eyes, which eventually led to blindness, prevented Metzger from continuing with composition; he devoted himself instead to the art of the Meistersinger. Of his works from his later years only *Der Psalter David, in der gebräuchlichsten Kirchengesänge Melodeyen gebracht, mit hundert neuen Melodeyen geziert* (Nuremberg, 1630) was printed; everything else remained in manuscript. In a manuscript curriculum vitae of 1620 (*D-Nst*), which is a valuable source of information about the later Meistersinger, he prided himself on having composed more than 3000 poems and 340 melodies in less than seven years. In the Nuremberg Stadtbibliothek there is also a paraphrase of Ovid's *Metamorphoses* 'in Meister Tönen' and other Meistergesang poetry by him, together with a careful list of his poetry, including both sacred and secular songs (which he did not, however, compile himself). The phrase 'in Meister Tönen' refers to the melodies that he took over as well as to those of his own composition, which can be ascertained with the help of the psalter of 1630. He certainly appears to be an interesting figure among later Meistersinger.

WALTER BLANKENBURG/DOROTHEA SCHRÖDER

Metzger, Heinz-Klaus (*b* Konstanz, 6 Feb 1932). German writer on music and music theorist. He studied at the Staatliche Musikhochschule in Freiburg (1949–52) and then studied composition with Max Deutsch in Paris and musicology in Tübingen (1952–4). He qualified in 1956 at the Akademie für Tonkunst, Darmstadt. He also received a lasting stimulus from the Darmstadt summer courses and, starting with Webern's music, was a champion of serial and electronic music. As a writer on music he has adhered to Hegelian and Marxist philosophy; stylistically he was influenced by Adorno, who was quick to recognize his talents. Together with Rainer Riehn, he has been co-editor of the series Musik-Konzepte since it began in 1978, and he has prepared editions of Adorno's music. His articles deal with 12-note music, Webern, Varèse, Cage, Hans-Joachim Hespos and theoretical, aesthetic and philosophical problems in avant-garde music.

HANSPETER KRELLMANN/R

Metzger(-Lattermann), Ottilie (*b* Frankfurt, 15 July 1878; *d* Auschwitz, ?Feb 1943). German contralto. She was a pupil of Selma Nicklass-Kempner in Berlin, and made her début at Halle in 1898. After three years at Cologne she became the leading contralto at the Hamburg Opera, and when Caruso appeared as guest artist she sang with him in *Carmen* and *Aida*. In 1901 she appeared for the first time at Bayreuth, where she was heard last in 1912, her great roles being Erda and Waltraute in *Götterdämmerung*. She also sang at Hamburg in the premières of Siegfried Wagner's *Bruder Lustig* (1905), Leo Blech's *Versiegelt* (1908) and d'Albert's *Izegl* (1909). From 1916 to 1921 she sang with the Dresden Staatsoper. Although her career centred on Germany, she was also heard in Vienna, St Petersburg and New York, where she sang under Blech with the German Opera Company which toured the USA in 1922 and 1923. At Covent Garden she made her début in 1902, singing in *Die Meistersinger*, *Siegfried* and *Tristan*. In 1910 she appeared as Clytemnestra in *Elektra* and later that year as the first London Herodias in *Salome*; she also made a strong impression as Carmen. Following her second marriage, to the bass-baritone Theodor Lattermann, she used the composite name of Metzger-Lattermann and developed a distinguished career as a concert singer, her accompanists including Richard Strauss and Pfitzner. She later taught in Berlin until the Nazis came to power when, as she was Jewish, she took refuge in Brussels, only to be deported to Auschwitz in 1942. Her recordings, made between 1904 and 1910, show a strong, deep tone, ideally suited to Erda's scene in *Siegfried*.

J.B. STEANE

Metzler. English firm of instrument dealers and music publishers. The founder was Valentin Metzler, a native of Bingen am Rhein who opened a shop in London for the sale of instruments in 1788. The name Metzler first appears in the London directories in 1812, and about four years later, when the publishing side of the business was apparently started, Metzler was joined by his son George Richard Metzler (1797–1867) to form the firm Metzler & Son. In 1833, presumably the year of the elder Metzler's death, the firm became G. Metzler & Co.; by 1838 they were dealing in early forms of the reed organ. George Richard Metzler retired in 1866 in favour of his son George Thomas (1835–79), a well-known writer of song lyrics. In 1867 a partnership was established with Frank Chappell, who remained with the company until his death in 1886 and who formed a connection with the firm of Mason & Hamlin of Boston, Massachusetts, through which they effectively introduced the American organ into Britain. Their publishing activities covered all fields; many of the songs of Sullivan and Goring Thomas were published by the firm, and keyboard music was especially prominent in its catalogue. Among its operatic successes were Sullivan's *The Sorcerer* and *HMS Pinafore*, and it held the British rights for Bizet's *Carmen* and French songs and piano music by Gounod, Bizet, Godard and others. The firm became a limited company in 1893, and was taken over by J.B. Cramer in 1931.

PETER WARD JONES

Metzler Orgelbau. Swiss firm of organ builders, formerly Metzler & Söhne. It was founded in 1890 in Graubünden by Jakob Metzler. In 1930 his son Oscar moved the company to Dietikon (Zurich). In 1968 the direction was taken over jointly by his sons, Oskar and Hansueli. Since 1990 the company has been managed by a fourth generation of Metzlers: Andreas (planning and voicing) and Matthias (business and technical).

Although always craftsmanlike, the work of the firm was not especially distinctive until the mid-1950s when, on the insistence of the family's younger generation, it became more closely allied with the European organ reform movement. It achieved notable success, with its instruments in Schaffhausen and the Grossmünster, Zürich, built in consultation with the distinguished Danish organ builder and designer Poul-Gerhard Andersen. An enlightened tonal design and 'reformed' voicing techniques joined with the firm's traditional precision of workmanship to produce a general excellence which established it as Switzerland's most important builder. A new organ in 1965 for the Cathedral of St Pierre in Geneva (also with Andersen) reinforced the firm's position of leadership and its international reputation dates from the completion of that instrument. The first Metzler organ in England was installed at Trinity College, Cambridge, in 1975–6 when the firm was building in a severe, neo-classical style more reminiscent of the north German style than is generally typical of Swiss builders, with both stop and key action mechanical (Geneva's St Pierre organ being the last with electric stop action) and all casework designed on strictly Baroque lines. Unlike most modern builders, the organs are without electric or electronic playing aids, such as combination pistons or crescendo pedal. In the last decades of the 20th century, the firm responded to a perceived renaissance of romantic organ music with greater flexibility, notably in its warmer foundation stops and the inclusion of Swell divisions, widening the organs' range without diminishing their suitability for earlier music. Examples are the instruments at Bremgarten (St Nikolaus, 1988), Salzburg (Cathedral, 1988, Franciscan church, 1989), and Basle (St Clara, 1993).

Metzler organs are noted for their traditional stop-lists, cohesive and well-balanced ensembles, responsive key action and perfection of construction. Fine examples are those at Netstal (1967), Frauenfeld (Stadtkirche, 1970) and Brugg (Evangelische Kirche, 1967). Metzler is also known for its meticulous restoration and reconstruction of historical instruments, as at Muri (Aargau), where the two choir organs dating from 1743–4 were restored (1962) and the 1628 organ rebuilt; the reconstruction of the Silbermann organ at Basle (Predigerkirche) was completed in 1978. Also noteworthy are the organ of St Pölten Cathedral, Lower Austria, in the old Egedacher case (1973), that of St Michael in the Augustinian priory at Reichersberg, Upper Austria, in the Rococo case (1981), and that for the Jesuit church in Lucerne, also in the old case but with a new *Rückpositiv* (1982). Recent new organs based on historical models are Porrentruy (1984, after Callinet), Antwerp Cathedral (1993; a synthesis of French and German Baroque), Biel (Stadtkirche, 1994, in Gothic style, and Braunau (St Stephen, 1995).

GILLIAN WEIR

Meulemans, Arthur (*b* Aarschot, 19 May 1884; *d* Etterbeek, Brussels, 29 June 1966). Belgian conductor and composer. He studied under Edgar Tinel at the Lemmens Institute, Mechelen (1900–06), where he was a professor until 1914. From 1916 to 1930 he was director of the organ and song school at Hasselt; he then left for Brussels, where he was made conductor, and later director, of Belgian radio. He left this position in 1942 to devote his time to composition. The numerous awards made to him include the Flemish Academy's Boury Prize for his songs, the prize for a symphony awarded by the SABAM (the Belgian composers' union) in 1947, the Noordstar-Boerhave Prize in 1950 and the Jef Denijn Prize (1950) for his Serenata for carillon. The Arthur Meulemans Foundation was established in Antwerp in 1956 for the publication of scores and discs of his music. Meulemans's most important work was for the orchestra. He wrote a great deal and demonstrated a brilliant orchestral technique considerably influenced by French Impressionism, although there is individuality in the descriptive nature of some of the symphonic poems that were stimulated by the naturalism of Flemish Renaissance painters. He wrote the music for a play, *Sanguis Christi*, which is given every five years before the Belfry of Bruges.

CORNEEL MERTENS/DIANA VON VOLBORTH-DANYS

Meuschel. *See* NEUSCHEL family.

Mewton-Wood, Noel (*b* Melbourne, 20 Nov 1922; *d* London, 5 Dec 1953). Australian pianist and composer. After studying the piano in Melbourne with Seidel, he entered the RAM in London in 1937 and the following year studied with Schnabel in Italy. He also took composition lessons with Bridge. In 1938 he made his London début (with Beecham) in Beethoven's Third Piano Concerto. His Wigmore Hall début (1940) included music by Weber, whose music he championed and recorded. A keen exponent of rare and modern repertory, he performed Busoni's Piano Concerto and *Fantasia contrappuntistica* to great plaudits, and gave the British première of the Bliss Piano Concerto (1949). Hindemith regarded him as the leading performer of his *Ludus tonalis*. Mewton-Wood's playing was characterized by its wide emotional range, dramatic fervour and richness of tone. He also gave duo recitals with Ida Haendel, Peter Pears (with whom he recorded Tippett's *Boyhood's End* and *The Heart's Assurance*) and Max Rostal, including a recording of Busoni's Second Violin Sonata. His other recordings include concertos by Beethoven, Chopin, Schumann, Tchaikovsky, Shostakovich, Stravinsky and Bliss, and solo works by Weber and Hindemith. Mewton-Wood composed a piano concerto, chamber music, piano pieces, songs, ballet music and music for the film *Tawny Pippit* (1944). He committed suicide at the age of 31. (J. Amis: 'Noel Mewton-Wood: Love under the Shadow of Death', *Soundscapes*, iv/6, 1997–8)

CYRUS MEHER-HOMJI

Mexico, United States of (Sp. Estados Unidos Mexicanos). North American country. Situated at the southern tip of the continent between the Gulf of Mexico and the Pacific Ocean, it is bordered by the USA to the north and Guatemala and Belize to the south-east. It is the third largest country in Latin America (area *c*1,967, 000 km²). Previously the site of several indigenous cultures, notably the Olmec, Maya, Teotihuacán, Zapotec, Toltec and Aztec, the territory of Mexico was colonized by Spain after 1519. It became independent in 1821 and a republic in 1824. The majority of the population is Mestizo (of mixed European and Amerindian descent).

I. Art music

1. COLONIAL PERIOD, 1521–1821. There were remarkable achievements in the organization of musical life around the church and in the repertories performed, as the large number of extant works in Mexican archives confirms. At the outset of the Spanish Conquest church officials emphasized music in worship. Missionaries were instructed by Juan de Zumárraga, first Bishop of Mexico, to use and teach music as 'an indispensable aid in the process of conversion', and the aptitude and talent of the Amerindians in learning the European musical system was constantly discussed in 16th-century missionary chronicles. In 1523 the first three Franciscan missionaries arrived in Mexico, of whom one, Pedro de Gante (1480–1572), a member of Charles V's private chapel, opened the first music school where Amerindians were taught plainchant and instrument making. Gante's pupils spread his instruction through the colony; Franciscans and missionaries of other orders, as well as the secular clergy who came later, adopted his educational methods. Missionary work continued throughout the colonial period.

Documentary evidence (e.g. Juan de Torquemada's *Monarquía indiana*, Seville, 1615) points to considerable musical accomplishment among Amerindian populations, including the foundation of libraries of church music by copying materials brought from Europe. As early as 1539 there was a printing press in Mexico; it produced 13 liturgical books with music during the 16th century. An *Ordinarium* of 1556 is the first book with music printed in the New World; the other 12, published between 1560 and 1589, contain portions of the Ordinary and Proper of the Mass, hymns, antiphons, psalms and Passion music. Amerindian choirs did not limit their repertory to these books. They also learnt non-liturgical music, such as villancicos and *coplas*, as well as Spanish religious plays with music about the Nativity and Passion.

Polyphony in the best Spanish tradition was practised early in Mexico, at first in the form of villancicos, motets and psalms and then as settings of the Mass, *Magnificat* and *Te Deum* and Passions. Works of the Spanish polyphonists Morales, Guerrero and Victoria were sent to New Spain soon after their publication. The Mexico City and Puebla cathedrals received copies from the Seville and Toledo cathedral archives, which indicates the importance attached to partsinging. The most substantial Mexican archives are those of the Mexico City and Puebla cathedrals, Tepotzotlán and Morelia, which contain many copies and originals of European and Mexican music from the 16th to 19th centuries.

The first *maestro de capilla* of Mexico City Cathedral was Canon Juan Xuárez (appointed 1539); Hernando Franco (1532–85) occupied the post during the last ten years of his life. His seven settings of the *Magnificat*, the Franco Codex, are considered the most important examples of Mexican 16th-century polyphony. Other works by Franco are contained in various manuscripts (Valdés MS, Carmen MS and the six volumes of Mexican and

Spanish polyphony in *US-Cn*), which also include the extant compositions of Juan de Lienas (*fl* early 17th century) and those of Pedro Bermúdez, *maestro de capilla* at Puebla during the first decade of the 17th century.

The musical development of Puebla in the 17th century was remarkable, particularly during the reign (1639–53) of Bishop Juan de Palafox y Mendoza (1600–59), because of his devotion to music and the city's considerable wealth. Puebla Cathedral's large choir stalls made possible the performance of polychoral music, as is evident in the extant works of Bernardo de Peralta Escudero, and especially of Juan Gutiérrez de Padilla (*maestro de capilla*, 1629–64), the most important 17th-century composer working in Mexico. In his music for double choir, including masses, motets, hymns and Lamentations, he used imitative techniques and antiphonal effects with considerable diversity; his villancico cycles also deserve special attention. Other renowned composers active at Puebla by the middle and late 17th century were Francisco López Capillas and Miguel Matheo de Dallo y Lana, who made polyphonic settings of Sor Juana Inés de la Cruz's villancicos (Mexico City, 1689–90).

The growth of music in the province of Michoacán was due to the Cathedral of Morelia (formerly Valladolid) and the convent of S Rosa de S María de Valladolid, where the Franciscan monk Juan Navarro wrote his *Quatuor Passiones* (Mexico City, 1604). The convent established a music school for orphan girls by the mid-18th century which became the most famous conservatory of music in the colony, known as Las Rosas Conservatory. The archives of Morelia Cathedral and the conservatory contain an impressive number of Gregorian choirbooks, sacred and secular polyphonic works and instrumental pieces, from the 16th century to the 19th.

Several composers active at Mexico City Cathedral as *maestros de capilla* during the 18th century contributed greatly to the city's musical life. Antonio de Salazar, *maestro de capilla* from 1688 to 1715, wrote Latin hymns and villancicos. Manuel de Zumaya (*fl* 1715), a native of Mexico, composed the second opera known to have been produced in the New World, *La Parténope* (1711). Some of José de Torres's works are in the cathedral archive but there is no definite evidence that he held the post. The Italian composer Ignacio Jerusalem, *maestro de capilla* 1750–69, introduced the prevailing operatic style; he was succeeded by Matheo Tollis de la Roca. During Antonio de Juanas's appointment José Manuel Aldana (1758–1810) was considered the most prominent musician of the time, but his liturgical and instrumental works clearly indicate the decline of neo-Hispanic music in Mexico. The fact that Manuel Arenzana, an opera composer, was *maestro de capilla* at Puebla at the turn of the 19th century similarly indicates the secularization of sacred music, a phenomenon that follows the concurrent European tendency.

2. 19TH AND 20TH CENTURIES. During the 19th century Italian opera dominated the Mexican musical scene. At first the cultivated genres were of Spanish origin: zarzuela, *tonadilla escénica*, *sainete*. But the Coliseo Nuevo theatre, which had been functioning from 1735, became bankrupt during the revolutionary period, and Mexican operas began to be produced only after independence. In the meantime José Mariano Elízaga (1786–1842) exerted an important influence in music education. He founded a conservatory of music in 1825 which flourished briefly, and wrote two influential theoretical treatises, the second, *Principios de la harmonía y de la melodía* (1835), being an introduction to four-part harmony. His compositions are mostly sacred and adhere to the Classical style. Later attempts to create a regular school of music in Mexico City resulted in the foundation of a privately maintained conservatory (1866), which eventually became the government-subsidized Conservatorio Nacional de Música (1877).

The better-known Mexican opera composers of the 19th century were Luis Baca (1826–55), Cenobio Paniagua y Vasques (1821–82) and Melesio Morales (1838–1908). The opera *Guatimotzin* by Aniceto Ortega del Villar (1825–75), first performed in 1871 with the Mexican soprano Angela Peralta, is considered the first serious attempt to incorporate some elements of indigenous music within the framework of prevailing Italian models.

A large number of pianist-composers who cultivated salon music genres and European Romantic piano music were active during the last three decades of the 19th century. The most popular composer of salon music was Juventino Rosas (1868–94), who wrote a set of waltzes in the purest Austrian tradition, *Sobre las olas*, which became famous throughout the world. The piano virtuosos of the time included Tomás León (1826–93), Julio Ituarte (1845–1905), Ernesto Elorduy (1853–1913) and Felipe Villanueva (1862–93). The last two cultivated the *danza mexicana*, following the model of Ignacio Cervantes's Cuban *contradanzas*. Ricardo Castro Herrera (1864–1907), who had some success in Europe, wrote piano and orchestral works and two operas, *Atzimba* (1901) and *La légende de Rudel* (1906). Gustavo E. Campa (1863–1934) wrote piano music and an opera *Le roi poète* (1901), strongly influenced by Saint-Saëns and Massenet.

An exceptional case in Mexican music history is the prophetic theoretical work of the composer Julián Carrillo (1875–1965), who from 1895 elaborated a microtonal system known as *sonido trece* ('13th-tone'), using up to 16th-tones. He wrote orchestral and chamber works according to this system and also in more conventional genres.

The Mexican Revolution (1910) made a deep impression on the country's artistic life. Musicians gave expression to their patriotic fervour in nationalist music which drew on Amerindian and Mestizo cultures. The composer Manuel Ponce (1882–1948), considered the pioneer of nationalism in Mexico, systematically investigated and used all types of mestizo folk music (*corrido*, *jarabe*, *huapango*, *son* etc.). His large output reveals a nationalist orientation which implies a greater autonomy of the popular elements integrated within a generally neo-Romantic or neo-classical style. This tendency was followed by most composers of Ponce's generation, such as José Rolón (1886–1945) and Candelario Huízar (1883–1970).

In the so-called 'Aztec Renaissance' of the post-revolutionary period the attempted return to pre-Conquest Amerindian musical practices was less an authentic reconstruction of those practices than a subjective evocation of the remote past, or of the character and physical setting of ancient and contemporary Indian culture. Carlos Chávez (1899–1978), the most influential early 20th-century Mexican composer, was particularly successful in assimilating elements of Amerindian music. In his works

of Amerindian character, such as *Los cuatro soles*, *Sinfonía india*, or in his most abstract compositions, such as his last three symphonies, his highly personal style and Mexican identity appear so intimately connected that his music has been described as 'profoundly non-European'. Chávez also had a brilliant career as a conductor; he founded the Orquesta Sinfónica de México in 1928, and directed it for over 18 years. The orchestra has given the first performances of many 20th-century Mexican symphonic works.

Silvestre Revueltas (1899–1940), another nationalist composer of international fame, drew on contemporary Mexican popular and folk music to evolve his own style. Many of his works, such as *Ocho por radio* (1933) and *Sensemayá* (1938), reveal his spontaneous and good-humoured temperament.

Nationalist feeling is also evident in the works of Daniel Ayala Pérez (1906–75), Salvador Contreras (1910–82), José Pablo Moncayo (1912–58), Blas Galindo Dimas (1910–93) (all pupils of Chávez and at one time known as El Grupo de los Cuatro), Luis Sandi and Miguel Bernal Jiménez. While they attempted to integrate Mexican subjects and musical elements within traditional large forms (operas, symphonies), these composers were not exclusively nationalist.

As a teacher of composition at the Conservatorio Nacional the Spanish-born Rodolfo Halffter (1900–87) exerted a decisive influence on the younger generation of Mexican composers. His style, at first a form of neo-classical nationalism, gradually evolved towards atonality and serialism. Musical nationalism began to decline in Mexico only in the 1960s, largely through the work of a dynamic group of avant-garde composers that included Manuel Enriquez, Héctor Quintanar and Mario Kuri-Aldana. In subsequent decades the major figures in Mexican composition were Manuel de Elías (*b* 1939), Eduardo Mata (1942–95), Julio Estrada (*b* 1943), Mario Lavista (*b* 1943), Federico Ibarra (*b* 1946), Arturo Márquez (*b* 1950) and Gabriela Ortíz (*b* 1964).

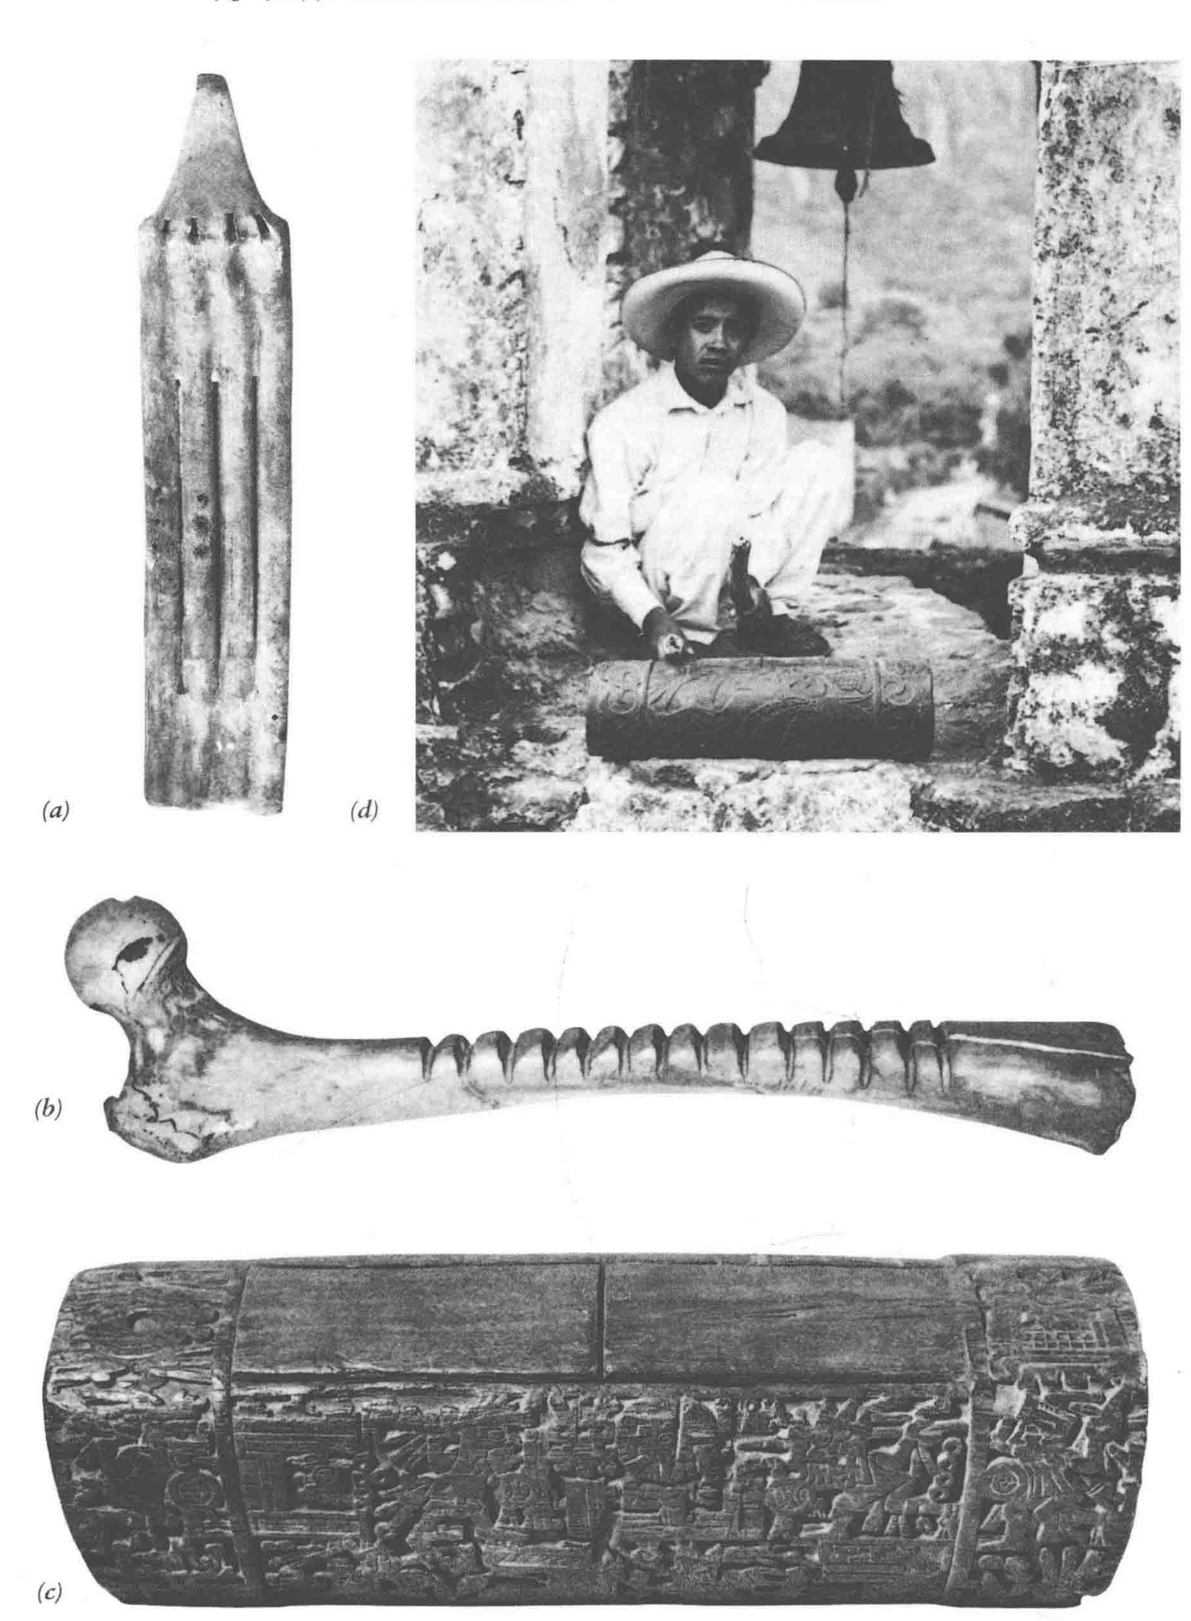
II. Traditional music

1. History: (i) Pre-Columbian cultures (ii) Cultural transition (iii) The colonial period. 2. Mestizo forms: (i) The *son* (ii) The *jarabe* (iii) The *corrido* (iv) The canción (v) 19th-century dance forms and *música norteña* (vi) Bands and regional orchestras. 3. Indigenous forms: (i) Ceremonial dances (ii) Conquest dances (iii) *Chirimía* music and Holy Week processions (iv) Personal music.



1. HISTORY.

(i) Pre-Columbian cultures. Knowledge of music before the Conquest derives from three main sources: archaeology, testimony of observers during the initial period of contact, and analysis of vocabularies and grammars of Indian languages. These allow a detailed reconstruction of the instrumentation of Amerindian music.

There were many types of wind instrument, including duct flutes and end-blown flutes made of clay, jadeite, reed, bone and metal, conch trumpets (sometimes of clay, and often with inserted clay mouthpieces) and perhaps double-reed wind instruments. There is no evidence of indigenous string instruments, and when they were introduced by the Spaniards, the Amerindians classified them as drums – a reflection both on the Amerindian classification system and on the contemporary Spanish style of guitar playing.

Maracas and *omichicahuaztli* (a long serrated stick or bone scraped with a smaller stick; fig.1*b*) were widely used instruments, the latter especially for funeral music. Conch shells and their clay replicas (exactly reproduced in all internal and external detail) were greatly esteemed, and ceremonially associated with the god of rain. Among the many types of flutes two were distinctive. The triple and quadruple flutes of the Teotihuacán culture, dating from the period 400–600 CE (fig.1*a*), were tuned to play untempered triads and 6-3 chords, which suggests that their music incorporated a concept of harmony. A second type, dating from the period just preceding the Conquest, is a double flute, with similar placement of finger-holes on both tubes; it was apparently tuned to produce a beating effect between the near-unison pitches of the two tubes. It was also frequently perforated as if to be hung on a string and might have been used for signalling in combat, especially as it produces a tremendous volume of sound.

The two most important instruments were the drums *huéhuetl* and *teponaztli*, named after demigods of Aztec legend. *Huéhuetl* incorporated the name of the tree *ahuehuete* that supplies the wood from which the instrument was made; it normally grows near water, and ceremonial sites, town markets and plazas were (and are) found in its shade. Moreover *huehue* is the root of several words with connotations of esteem and value ('town elder', 'ancient' etc.). The instrument is a single-headed three-footed drum, with a jaguar skin or deerskin fixed to its upright end; it was tuned by heating the interior with live coals which dried and tautened the head (for illustration *see* AZTEC MUSIC).

*1. (a) Quadruple flute made of clay (*CE *c500) of the Teotihuacán culture, in the Museo Nacional de Antropología e Historia, Mexico City; (b) omichicahuaztli (serrated bone scraper), Aztec culture (*CE *c1350–1521), in the Museum of the American Indian, New York; (c) teponaztli (slit-drum) of the Mixtec culture (*CE *c12th-15th century), in the British Museum, London; (d) modern copy of a teponaztli, played by a Mexican boy on the roof of La Santísima church*

The *teponaztli*, a slit-drum, was made of a section of tree-trunk, as thick as the body of a man and about a metre long, hollowed out through a rectangular opening in its side (fig.1*c* and *d*). Opposite this opening, on the other side of the cavity, an H-shaped incision formed two tongues of wood which were tuned to harmonics of the resonant pitch of the drum cavity – most commonly an interval of a minor 3rd or major 2nd. According to 16th-century writers the sound of this instrument was doleful and carried a great distance.

At pre-Columbian festivities the *teponaztli* and *huéhuetl* were usually placed on a grass mat at the centre of the dancing area, the dancers – often hundreds – moving round them in concentric circles. The nobility danced in the inner circles, and, to synchronize with the dancers in the outer circles, abbreviated their steps, while those in the outermost circles danced at twice the speed; thus all the circles completed a revolution in the dance at the same time. Choreography, melodic shape and drum rhythms were so coordinated that the rise and fall of the dancers' arms and feet matched the rise and fall of the melody in the song and the pitches of the drums. A drum terminology based on four syllables and a suffix (*ti, to, ki, ko*, and *-n*) must therefore, besides indicating drum rhythms, have related to choreography and song pitch. A noteworthy feature of this system is its duality of consonant and vowel (*t* versus *k*, *i* versus *o*), which possibly relate to the high or low drum pitch, positions of arms and feet in the dance, the two pitch levels of the Náhuatl language, or to the left as opposed to the right hand. Most instruments found at archaeological sites – flutes, whistles, ocarinas, conch shells – produce only two notes (usually a minor 3rd or major 2nd, like the *teponaztli*).

High-pitched and metallic timbres were highly esteemed by Mexican Indians in festivities, a fact reflected in the roots of their words. *Náhuatl*, as well as being the name of the language of the Aztecs, means 'sonorous, audible, council, law, to dance embraced at the neck'. In Mixtec, *huij* means 'agreeable, polished, gentle, clear, high, clean, pretty'; and the radical *kaa* or *saa* means 'to roar' (especially a jaguar, one of the forms of a principal native god), 'to sound high, clear, loud and metallic', to whistle, to sigh, to jump in dance, to throw a certain clay piece in a ceremonial game', 'metal' (especially gold, metal of the sun god), 'to cast metal'. According to one 16th-century chronicle the vocal quality of the Mexican Indians when singing amused the Spaniards, sounding somewhat out of tune and thin. However, an analysis of Mexican Indian musical terminology suggests that this thinness was a preferred musical quality, associated with gold, the metal of the sun god (the principal Mexican Indian deity), and the roar of the jaguar. In festivities the dances gradually progressed from a low pitch and slow tempo to a higher pitch and much faster tempo at the culmination of the celebration; this is reflected in the Mixtec word *saa-nino* (literally 'high-low', meaning 'a festivity, to celebrate').

To err in the dance was expressed with the words *tlakoa* ('to sin, to lie') and *tlako'tli* ('slave'); dancers who so 'sinned' were summarily executed. Cortés was so impressed with the precision and beauty of Aztec dance that he returned to the court of Charles V in 1527 with Mexican Indian entertainers who later performed for the pope.

Before the Conquest music was closely related to the dance, ceremonial, drama and poetry; there was no abstract music. Songs were probably differentiated more by text than by melody. The *cuicacalli* ('house of song') was described in Spanish as 'school of dance'. A high regard for song, however, is revealed in Aztec literature, which continually reiterates that the two most precious things in life are flowers and song. Musicians were members of the élite and enjoyed considerable social prestige.

At least four types of dance and song were taught and practised in the schools of dance attended by all Amerindian youths, male and female, as well as at the courts of the nobility, for whom there were separate schools. The first type, possibly generic and still encountered among the Yaquis, Mayos, Tarahumaras and other tribes in northern Mexico, was called *mitote* (from *itotia*: 'to dance'), a large communal celebration. The second, which also survives, was a penitential which subsequently merged with Catholic tradition and gave rise to the modern *concheros* (dance depicting Amerindian converts on a religious pilgrimage). The term for this type of dance, *macehua*, also means 'to obtain, to be meritorious, merit, to do penitence, humble person, peon'. A third type, practised in the schools of dance during the morning and early afternoon before the youths arrived for their classes, was by all accounts high-pitched and lascivious, associated with certain 'public' women allotted to principal warriors in reward for their valour. This type, too, has survived as a bar-room song form. For the fourth type, practised by musicians at the courts of the nobility, singers with deep bass voices were particularly prized. Ceremonial wailing for dead relatives, chiefs or friends, a widespread pre-Conquest tradition, may not have been considered song at all as the same word is used for singing and crying. It has survived in some parts of southern Mexico and is noteworthy for its relaxed vocal quality – a unique trait in the indigenous repertory.

See also AZTEC MUSIC and MAYA MUSIC.

(ii) Cultural transition. The social prestige of the musician in native society greatly encouraged the considerable growth of musical activities during the 16th century. Spanish friars began giving formal instruction in music to Mexican Indians in 1527, with such success that the first pupils from influential families immediately began teaching others. This process of dissemination, which probably employed an established method, resulted in the rapid and widespread assimilation of Spanish songs by the Amerindian populace. This response initially led the Spaniards to encourage Amerindian involvement in musical activities, as they felt that music, more than anything else, attracted them to Christianity. Subsequently, however, they decided that Mexico was overpopulated with musicians.

Mid-16th-century decrees attempting to limit musical activity ordered that no church should have more than one orchestra; the use of most instruments except the organ was restricted, the size of Amerindian choirs was reduced, and the qualifications necessary for natives involved in musical activities were made more stringent. Within 20 years of the Conquest, however, Mexican Indians were already composing in the European idiom, copying manuscripts and manufacturing their own instruments (except organs, which were built under Spanish supervision). There were said to be more flutes, sackbuts, trumpets and drums in Mexico than in all the rest of Christendom.

The first known Amerindian composition is a mass by a singer from the city of Tlaxcala (1540). Following missionary practices of the time, a local liturgical repertory was created employing indigenous melodies. However, the only identified Amerindian compositions (dating from the last quarter of the 16th century) are two hymns by an Indian namesake of the Mexico City Cathedral *maestro de capilla*, Hernando Franco. It is not known if these two pieces make use of native melodies; indeed no pre-Columbian melodies are identifiable, even if they have survived in 16th-century manuscript.

(iii) The colonial period. Catholic priests built churches on the ruins of pagan temples. They also instituted Christian celebrations on the dates of pre-Conquest ceremonies: for example, the celebration of Corpus Christi in Mexico City was a substitute for the pagan celebration dedicated to the god of music, Huitzilopochtli. As most Amerindian celebrations were associated with the agricultural calendar before the Conquest, so most of the Christian celebrations are connected with the blessing of crops.

Mexican Indian music changed rapidly during the 16th century to conform with Catholic dogma and adjust to changes in function, but it did not completely lose its native identity in the process. Certain elements conspicious at the time of the Conquest have been retained: the blackening of the dancers' faces; the predominance of flutes and drums; propitiation ceremonies connected with crops and penance; street decorations of paper; bonfires and general public drunkenness after the observances; the use of high-pitched falsetto in ceremonial song; the prominent use of feathers in headdresses (a stock way of portraying Indians); dancers costumed as tigers, deer, coyotes (or dogs) and other animals, as well as men dressed as women, soldiers, hunters and savages (in costumes made of paper, feathers and leather); and the use of masks, props (including stuffed animals), jingles, rattles (seashells, gourds, cocoons, metal etc.) and canes.

The villancico is an important source of information on 17th-century rural dance. The form represents an emulation of peasant music by contemporary *maestros de capilla* and professional musicians, whose manuscripts are the most direct evidence of the peasant tradition of that period. Varying types of this form that have contributed to the development of Mexican popular music include the *negrilla* (blackface minstrelsy), the *jácara* (especially with *corrido* guitar accompaniment) and the *tocotín*, an Aztec villancico usually sung in Náhuatl. The *tocotín* was thought to have developed from pre-Conquest traditions, as linguistic evidence would also suggest (its name derives from the drum terminology referred to above).

Touring theatre groups popularized music and dance forms during the 18th century. The *son*, which appeared during the 17th century as a generic type of all popular song and dance forms (including the villancico), continued to contribute new variants; those considered native were called *sones de la tierra*, one of particular significance being the *jarabe* (see below).

Colonial dance-dramas usually included processions, elaborate costumes, armies of soldiers (Christians and infidels – frequently blacks), elaborate props such as firework castles ('burnt' at nightfall), papier mâché figures, etc. The most frequent theme was conquest – the Conquest of Mexico and the struggle between Moors and Christians in the re-Conquest of Spain (see §3(ii) below). Carnival themes became common in the theatre in the 18th and 19th centuries with the introduction of masked balls; the public could watch these fêtes from balconies and thus learn the latest European vogues. But Carnival celebrations, first mentioned in Mexico about 1544, were always popular. They were characterized by people in disguise (to avoid being recognized) behaving with moral abandon, by men dressed as women and by processions in which the populace participated. Celebrations were numerous, as Carnival formerly extended from early January to Ash Wednesday.

2. Mestizo forms.

(i) The son. The generic term for peasant or rural music is *son*. The difference between this term and the Spanish *música* roughly parallels the distinction between the Spanish *danza* and *baile*, the former implying a rural dance form and the latter an urban or court form. The villancico (itself a generic type) was a common type of *son*, as also were many other dances at different periods. The *contradanza* (country dance) has been a common variant since the mid-18th century.

The most prominent trait of many *sones*, a form represented in music, song and dance, is SESQUIALTERA metre, an unequal triple rhythm based on patterns of six beats, which has been associated with the form since at least the beginning of the 17th century. Verses alternate with refrains, sometimes vocal and sometimes instrumental. Final cadences are often stereotyped. Instrumental ensembles vary regionally, as do most of the details of performance – dance steps, song texts, patterns of voice repetition, etc.; but the combinations seem to suggest origins before the mid-18th century. The harp, for instance, common in 20th-century and particularly in 19th-century ensembles, was seldom used in theatres and large churches after about 1720 in Latin America, apparently becoming an exclusively rural instrument. Instruments of the guitar family in these ensembles are normally played in the strumming style known as RASGUEADO.

Song texts are always in couplets, usually octosyllabic. Involving neither pathos nor sentimentality, they almost always deal, directly or indirectly, with women and love; the stereotyped woman is often called María (a Spanish saying has it that *toda mujer es María*: 'every woman is Mary'). In other characteristic texts the verses may be dedicated to spectators, women or important people in attendance or may extol the beauties of a town or region; imagery is drawn from nature (animals, trees, birds, fruit, colours etc.), and symbolism, characteristically involving women and love, from objects and colours. Final verses are often called *despedidas* ('leave-takings').

The *son* is danced by independent couples and is characterized by sections executed in *zapateado*, a rapid movement of the dancer's feet against the ground or a *tarima* (raised wooden platform), producing a percussive accompaniment to the music. The *zapateado* is normally performed during instrumental interludes so as not to drown the singing during the verses when melody instruments, such as the violin, are also inactive.

The most common *son* ensemble in urban centres is the *mariachi*, which originated in Western Mexico and generally comprises guitars, *guitarrón* (bass guitar), diatonic harp, violins and trumpet (*see* MARIACHI for further information on the history and development of

the ensemble). An important type of *son*, the Mexican *chilena*, occurs on the Pacific coast of Mexico in an area just south-east of the port of Acapulco extending to the town of Tututepec in the state of Oaxaca. Its name derives from that of the *cueca chilena* introduced into the region by Chilean sailors during the Californian gold rush in the mid-19th century. The form, however, became assimilated into the general *son* repertory, having lost its division into two parts (known as *primerita* and *segundita* in the Andean region of South America). The original ensemble for the *chilena* was apparently a violin, *jarana* and harp, a fourth musician frequently adding a percussive accompaniment on a wooden box or the soundboard of the harp with his hands. The harp is now rare, and the violin and *jarana* occur only in local Amerindian groups. When singing *chilenas* as serenades, Mestizos employ a guitar and a *requinto* (a smaller guitar tuned a 4th higher). When it is danced, the *chilena* is usually accompanied by an ensemble consisting mainly of wind and brass instruments with percussion and a string bass (fig.2); it is followed by a faster dance known locally as a *son*, reminiscent of the *fuga* section which concludes many Andean *sones*. Mexican *chilenas* often shift between minor and major, a characteristic feature of many *sones* of the Caribbean and Andean areas of Latin America and especially common at the beginning of the refrain.

The *huapango* (also known as *huasteco*) is both another type of *son*, and a widespread Mexican term for a type of *son* accompaniment pattern executed *rasgueado* on instruments of the guitar family in much of Latin America. The rhythm of this pattern has a number of variants and is normally heard in the bass. As a musical form the *huapango* is indigenous to the Huastec region, which extends from the Gulf Coast south of Tampico into the highlands. The word *huapango* itself derives from a Náhuatl word for the raised wooden platform on which the dance may be executed. The normal ensemble consists of one violin, a *jarana* and a *huapanguera* (large five-course guitar with eight or ten strings; fig.3). Ex.1 illustrates the lively style of violin playing reminiscent of fiddle playing in the southern USA, the singer's frequent use of falsetto, and the type of variation that occurs from verse to verse. The articulation above the middle staff is that of the *jarana*; that below the staff is for the *rasgeo* of the *huapanguera*. An asterisk indicates a prolonged *rasgeo* called 'abanico' ('fan', since the player's hand is extended in a fan-shape). The sign -- above or below a note indicates a prolongation of the duration of it; the sign (·) indicates a shortening (not a staccato). No attempt has been made to measure the intonation of the half-sharp with precision, but it is apparent that there are two intonations present for F sharp in this selection, at times appearing even simultaneously in the same harmony.

The *son jarocho* is found in the Jarocho region of Mexico, which centres on the port of Veracruz and extends southwards to the isthmus of Tehuantepec. This region and the music from it have a particular affinity with the Caribbean area, especially the coastal regions of Venezuela. The regional ensemble consists of a harp, a *jarana* (somewhat longer and thinner-bodied than elsewhere) and a *requinto* (also known as *guitarra de son*, a small four-course guitar with four strings). Both the harp and the *requinto* are melody instruments, the latter played with a pick in the PUNTEADO style with rapid scales and arpeggios. This *son* is thought to show considerable African influence.

2. *Ensemble of saxophones, trumpet, violin, percussion and string bass used to accompany the danced chilena, Pinotepa Nacional, Oaxaca*

3. Ensemble of violin, huapaguera (large five-course guitar) and jarana (small five-course guitar) used to accompany the huapango dance, Tamazunchale

The *jarana* is influenced by the *son*, rather than being a type of *son*, and is from the peninsula of Yucatán. It appears to have been common in the early 20th century, but is performed mostly by folkdance groups. The instrument called *jarana*, a member of the guitar family, may have been so named on account of its association with the *jarana*. *Zapateado*, apart from denoting one of the characteristic traits of the *son*, often refers to a specific *son* or type of *son*. Conversely, in the valley of the Río Balsas in central Guerrero, *son* denotes a piece danced entirely *zapateado* (i.e. not sung, as is also the case with the *son* that follows the orchestral version of the *chilena*), the remainder of the repertory being labelled *gusto*. *Zapateado* is also the generic name for many south Mexican *sones* performed on the marimba, of which some belong to a repertory of *sones istmeños* or *sones de marimba*. A *son* designated *zapateado* is danced entirely or mainly with a *zapateado* step. A considerable number of *son* forms are distinguished not by form, rhythm or choreography, but by textual content, and are called *cuando*, *gusto*, *malagueña indita*, *petenera* etc. according to which word occurs in their texts.

(ii) The jarabe. Although properly another *son* type, the *jarabe* is sufficiently atypical of the *son* repertory to justify separate treatment. It is mentioned as a *son de la tierra* in theatrical annals of the second half of the 18th century and seems to retain traces of its theatrical origins as it is still an exhibition dance. It consists of a series of musical sections, many of which have their own names, such as *la ploma*, *la diana* (the final section of most *jarabes*), *la iguana* (many have names of animals, which are mimicked in the accompanying dance) and *los machetes*; each has a contrasting characteristic rhythm. Each phrase of music is normally repeated once before proceeding to the next, but no whole section of music is repeated, except the sung sections which are performed while the dancers rest. The first two sung sections repeat the lines of one couplet so as to deploy it over two verses in the following way:

Al pie de un encino roble
me dio sueño y me dormí;
me dio sueño y me dormí
al pie de un encino roble.
Me despertó un gallito
cantando quiquiriquí
al pie de un encino roble
me dio sueño y me dormí.

The couple in the dance should be attired as *charro* (a Mexican cowboy with chaps and a wide-brimmed hat) and *china* (with a full, sequinned skirt of bright colours, and a hand-woven shawl), that is, in the national costume. Despite popular theories of 'Far Eastern' origin, the term 'china' (a household servant of the lower classes) in this context is probably derived from the same word in Quechua, the language of the Incas.

(iii) The corrido. In 20th-century Mexico the term 'corrido' means either a type of dance generally performed in two lines with a *corrido* dance step (in north-eastern Mexico) or, more commonly, a narrative ballad accompanied by one or more guitars. Ex.2 shows the first verse of the 12-verse ballad *El capitán de ladrones*, illustrating its strophic form and the simple rhythmic and chordal

Ex.1 *El Fandanguito, huapango* form, Veracruz; rec. and transcr. E. T. Stanford

accompaniment. The term 'corrido' in 17th- and 18th-century Spanish was used for a special kind of accompaniment for the *jácara* (a type of villancico), usually performed on the guitar and so-called for its light, running style. The *jácara* shares several traits with the 20th-century *corrido*: it is usually narrative, dealing with violent or unusual events, and often uses a variant of the stepwise ascending and descending melodic idea shown in ex.3 (which in the 16th century employed enharmonic alterations, according to whether ascending or descending). Further traits of the modern form are the simple duple-time *paso doble* type of accompaniment or the similar but more common triple-time accompaniment typified in ex.2, and the usual strophic ballad structure beginning with an instrumental statement of the strophe (this introduction is only occasionally musically unrelated), which is also interspersed through the *corrido* to give the singer an occasional rest. The instruments are usually either a single six-string guitar, or the guitar with a *requinto* which plays the melody in the interludes and doubles with the guitar during the verses. The *corrido* is sung and played by the characteristic ensemble of the *canción ranchera* (see §2(iv) below) when performed in mass entertainment media, and is sometimes sung by a female soloist with a masculine voice. This type of ensemble frequently performs a *corrido* which is atypical in that it has a refrain and is not narrative; its accompaniment, however, is of the *corrido* type.

The text of the *corrido* begins with a couplet (usually octosyllabic) setting the scene and frequently giving the time and place of the event to be narrated, and ends with a *despédida* which customarily identifies the singer or author or both. The *décima*, which was apparently the 19th-century literary antecedent of the *corrido*, almost

Ex.2 *El capitán de ladrones*, *corrido* ballad, Oaxaca; rec. and transcr. E. T. Stanford

always ended with a moral; early *corridos* in *décima* verse form retain this trait. The usual *corrido* contains a statement such as: 'he died like a *valiente*'. The word 'valiente' appears to have survived from the 17th-century *jácara*; and, like that form, the *corrido* sometimes deals with 'underworld' figures (bandits, revolutionaries etc.). The *corrido* and *jarabe* are found throughout Mexico because they are national forms associated with nationalist sentiments.

Ex.3 *Jácara* motif

(iv) The canción. The term 'canción' denotes a musical form not intended to be danced, with a text characterized by Romantic sentimentality and pathos, and which makes considerable use of rubato – traits which are rare in other types of Mexican popular music. The Caribbean connections of some types of canción are evident in the use (particularly prominent in the bolero) of maracas, which do not occur in any other Mexican forms. The *canción yucateca*, *canción habanera*, *bambuco* and bolero (the last three differentiated by distinctive rhythms) all have such links, the *bambuco* being the national dance of Colombia and the *habanera* (formerly also known as *danza*) having evolved in the port of Havana during the early 19th century.

The *canción ranchera* developed in the early 20th century and was associated with the Mexican Revolution of 1910. It is usually accompanied by a *mariachi* ensemble in *corrido* style, the musicians dressed like dancers of the *jarabe*. The song texts frequently deal with *soldaderas* (soldiers), the stereotyped man abandoned by his woman, and patriotic subjects. As in *son* texts the style is devoid of pathos, but the musical metre is often duple.

(v) 19th-century dance forms and música norteña. The *polca*, *mazurca*, *redova* (*redowa*), *vals* and *chotis*, with the *paso doble* and *corrido* (20th-century forms), are especially prominent in northern Mexico, where final settlements were established mostly in the 19th century. The characteristic instruments of this repertory, called *música norteña*, are the accordion and the *bajo sexto* (large 12-string guitar), which were widespread during the same period. Accompaniment patterns generally resemble those associated with the *canción ranchera* and *canciones revolucionarias*; the repertory overlaps to a large extent and is mostly differentiated by instrumental usage.

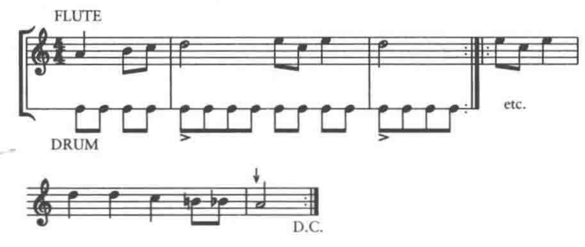
(vi) Bands and regional orchestras. These exist in many of the smaller towns throughout Mexico, and are famous in such larger cities as Oaxaca and Culiacán, Sinaloa. They are supposedly a heritage of the French Empire in Mexico (1863–7), but the fact that a large proportion of the earlier instruments still in use by these groups, although French, date from around 1850 suggests that they have earlier antecedents. These were possibly church ensembles, as traditional orchestras in a few isolated regions formerly played 18th-century church music, and as in colonial Mexico church and state were not separate. In the isthmus region the ensemble incorporates a marimba, and is called *marimbaorquesta*: such groups are widely popularized in Mexican tourist centres. In north-western Mexico, from Mazatlán northwards, the orchestras are called *tamboras*, because the large bass drum (*tambora*) is featured prominently. Both the *tambora* and the *marimbaorquesta* normally play *sones* and make constant use of *corrido* accompaniments. The instruments are frequenly municipal property, and musicians may be exempt from certain other civic responsibilities by virtue of their service in these groups. The *chile frito* of central Guerrero (south of Mexico City) is an indigenous ensemble which plays imitation band instruments made of assembled sections of gourds.

3. Indigenous forms. Scholars have debated extensively the ethnic identity of Amerindian music in Latin America, some maintaining that it is predominantly indigenous and others that it is fundamentally Hispanic. 20th-century Mexican ceremonial traditions are generally survivals from pre-Conquest times, transformed by the assimilation of similar Hispanic cultural traits. Mestizo and indigenous musical and ceremonial traditions are fairly close, and traditional bases for defining indigenous culture, such as language, dress or life style, are unsatisfactory. However, most of the distinctions between Amerindian and Mestizo musical institutions can be explained in terms of economies, since economic conditions are a major determinant of Amerindian patterns of culture.

The Amerindians' musical resources are restricted by the isolation of the areas in which they live and by their (largely) barter economy. Musical instruments are often inherited, obtained through barter, or home-made. Indigenous musical expression is extremely varied, being

determined by the different physical and economic conditions of each group.

(i) Ceremonial dances. Invention plays a large role in indigenous ceremonial. The task of the investigator is made more difficult by the fact that a popular tune becomes transformed almost beyond recognition when it has been adapted to a local flute and drum repertory, and it is often difficult to establish common elements between indigenous dances such as *los voladores*, the deer dance and *los matachines*.



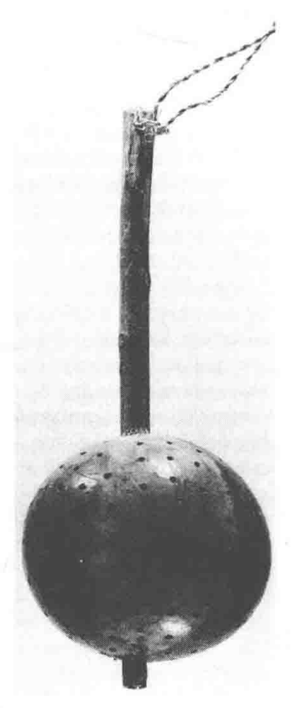
Virtually all Amerindian dance-dramas are supported by ceremonial organizations (some specifically dance societies) descended from colonial brotherhoods, unions and guilds (*gremios*). They are financially based on the *mayordomia*, headed by *mayordomos* (lay officials in a semi-religious organization) who, as part of their civic responsibility, pay for and organize certain church celebrations, dedicated at least ostensibly to a Christian saint. Dance groups within the *mayordomia* have a quasi military structure with *caporales* and *capitanes*. Dancers are usually life members of the organizations, often promised when children by their parents; commonly if a child has an apparently serious illness, its mother vows that when it recovers it will dance to the society's patron saint for life. Some members serve only for a limited number of years (as among the *concheros*) as a penance. These societies, as well as performing in church celebrations, attend their members on such occasions as baptism, marriage and burial. Their musicians are the closest equivalents to professionals in the Amerindian communities, though they are never salaried (they are compensated for time lost from their normal occupations with food and drink for them and their families for the duration of the celebrations in which they participate).

In nearly all indigenous dance-dramas, the dancing takes place during interludes. The usual dance formation is two parallel lines, either facing each other or in one direction. The most experienced dancers are in front, and the *capitán* (whether or not he is part of the formation) leads them; newcomers and children take positions at the end of the lines where they can watch and imitate the movements of the experienced. The groups rehearse for months before a celebration, and during all rehearsals the captain pays for food and drink.

The dances are usually called *contradanzas* or *cuadrillas*, *son* being their generic name. Amerindian informants usually describe them as *bailes*, Mestizos as *danzas*. Although the dancers are usually paired, the dances are not true couple dances except when some of the participants are dressed as women. The only common dances involving women are the *concheros*, songs of praise to the Virgin (*alabanzas*, *alabados*), and the *pastoras*, in which young virgins take flowers to the Virgin at the local church, dancing to the accompaniment of a violin. In all other contexts Amerindian communities disapprove of women who dance. Few dances, except for *los concheros*, involve any significant amount of singing.

The indigenous *son* generally consists of two short phrases of music, each repeated once before proceeding to the other (ex.4). The first phrase usually leads to the dominant, and the second back to the tonic. This short structure may be repeated strophically for half an hour or more. The usual instrumental ensemble is the flute and drum (or drums) or, more rarely, a violin with or without some type of guitar (or guitars) and occasionally a harp.

Ex.4 *Danza de la pluma, xililo*, Zaachila, Oaxaca; rec. and transcr. E.T. Stanford



The latter is apparently based on typical Mestizo *son* instrumentation. Regional Mestizo ensembles, such as orchestras and the violin, mandolin and *guitarra séptima* ensemble in southern Mexico, have become part of local Amerindian traditions. Tunes acquired from transistor radios or local mestizo groups are transformed as they are assimilated and so gain an indigenous quality.

(ii) Conquest dances. These have always depicted the 'pacification' of non-Christians, their repentance for godless behaviour and subsequent vows never to revert to their sinful ways. At a symbolic level they portray the victory of good over evil, which is viewed as inevitable. Nearly all Mexican Indian dances belong to this category; there are numerous variants, although certain elements recur continually. One Conquest dance, *los concheros*, is exceptional for its consistency over a relatively large geographical area in the central highlands, a result of the 'unionization' of the *conchero* brotherhoods (*cofradias*, *sindicatos*) which form its ceremonial base. This dance, however, is not strictly Amerindian, but rather a form of dance cultivated by the lower economic classes on the outskirts of large towns and in small rural communities. In the Aztec tradition it is nonetheless a dance for penitence.

In rural areas the most common type of Conquest dance depicts the recapture of Spain from the Moors. It involves at least two groups of dancers (*comparsas*), generally three: the Christians and non-Christians (Moors, Turks, Jews etc.) are invariable, but the third group, *los negros*, is the most popular. In earlier versions of the drama this third group apparently consisted of actors portraying Moorish slaves, but now it usually portrays local non-Christian Amerindians, before their conversion to Christianity. The blackening of faces, or the use of black masks, is no longer a sign of racial identity, but simply an indication that the dancers are not Christian. Fertility symbolism resulting from the association of the celebrations with the agricultural cycle is apparent in the mischievous behaviour of the *negritos*, full of sexual allusion. They sin, symbolically; hence, for all these dances, the groups must first obtain permission from the local authorities before appearing in the streets of town.

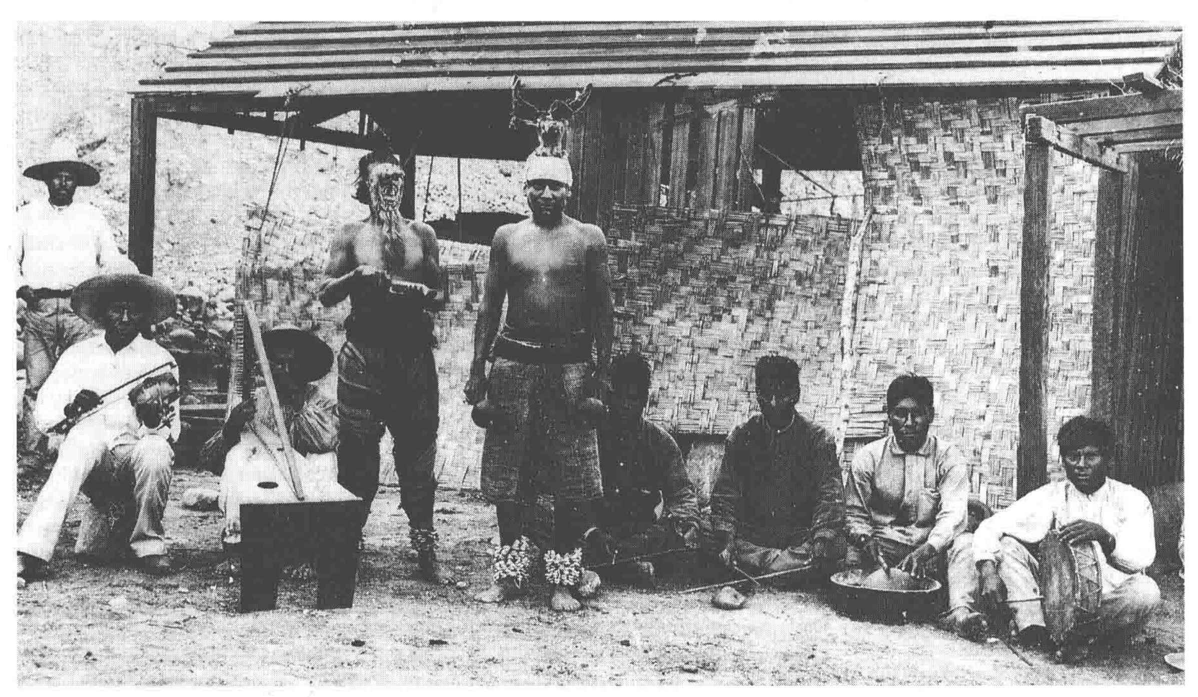
Where the *negros* are not part of the dance-drama, the Moors, Turks or Jews replace them, and the dance is reduced to a series of battles between Christians (kings) and non-Christians. Santiago, the patron saint of Spain, is the most popular Christian; he often has a kind of hobby horse. The dance called *los santiagueros* sometimes depicts only one episode, a battle between Santiago and his knights and the 'infidels'. Usually a Moor or a Turk is Pontius Pilate. Several other dances may also be considered Conquest dances, including *los matachines* (fig.4*a*), *los sonajeros* (so-called for an unusual rattle that the dancers

4. *(a) Yaqui Indians assembled for the 'los matachines' dance, holding sonajas (rattles), with the accompanying ensemble of two violins and guitar; (b) another form of sonaja (rattle)*

carry, made of metal discs in a wooden handle; fig.5 and dances involving the use of whips (identified with serpents and reminiscent of the pre-Columbian god Quetzalcoatl, the Plumed Serpent).

Another type of Conquest dance-drama depicts the Conquest of Mexico by Cortés. The large cast includes Cortés, Montezuma, *la reina Xochitl*, *la Malinche* (historically, Cortés's mistress, but here depicted as an Aztec monarch) and Cortés's captain Pedro de Alvarado. In all Conquest dramas, and here especially, the players and the public side with the non-Christians, to the extent that the final victory of the Christians seems unexpected. Most of the action centres round the non-Christian characters. The vessel in which Cortés sailed to Mexico is commonly represented by an oxcart with mast and sail.

Non-Christian Amerindians are identified with feathers in all these dances, for example in the *concheros* and the *danza de la pluma* (ex.4), which spread from the highlands of north Mexico City to the state of Oaxaca during the mid-20th century, apparently partly through folkdance educational programmes. The *concheros*, named after their large guitars made from armadillo shells, represent Chichimec Indians from the north-east on a pilgrimage to pay homage, most often to the Virgin of Guadalupe. They are usually represented as converts, and the dance is entirely pious.

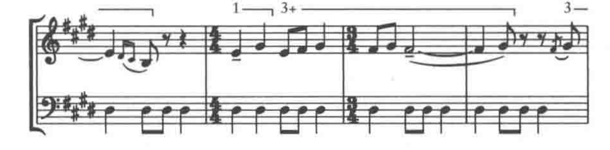


A final type of Conquest dance depicting the symbolic victory of good over evil associates good with a deer and evil with a tiger (*tigre*, *gato*, *jaguar*). The main examples are the deer dance of many of the Amerindian groups of north-western Mexico, especially the Yaquis (in which, atypically, the deer, symbolizing good, is killed; fig.6), and the tiger dance found among several Amerindian groups west and south of Mexico City in the states of Mexico, Guerrero and Oaxaca: in this dancers enact a tiger hunt, representing the hunter, the old fool (*el viejo loco*), dogs, domestic animals etc. The tiger is a precocious character, with many wives, much material wealth, and extremely mischievous. He is shot by the hunter at the conclusion of the dance. The jaguar was one of the forms of a principal Indian god before of Conquest.

(iii) Chirimía music and Holy Week processions. In many parts of Mexico processions are customary during Holy Week, enacting each event of the Passion. Christ, the disciples, and the other principals in the drama are sometimes represented by live actors and sometimes by images taken from church and chapel altars and carried in processions through the streets. The church bells are silenced, and drums replace them for the duration of Lent. In many parts of Mexico a *chirimía* (double-reed aerophone) is played from the church tower in alternation with strokes on a drum played in the atrium below; this also accompanies the Roman soldiers in the procession representing Christ's march to Calvary. The *chirimía* music is unique in that it retains elements of the microtonal structure of Arab music. *Chirimías* are no longer generally made in Mexico, and when existing instruments become unplayable, flutes or some sort of trumpet usually replace them, but the substitute instrument often retains the name 'chirimía' when employed in this context. Ex.5 shows part of a processional melody from Venustiano Carranza, in which six different motifs are introduced, repeated and extended in various ways.

(iv) Personal music. 'Personal' music here means all music performed by an individual member of an Amerindian society without official sanction. Ceremonial music performed out of its proper context is believed to be highly perilous, endangering crops, causing droughts or provoking retribution against offenders and the whole

5. Procession including (foreground) a group of sonajeros dancers with long wooden rattles, accompanied by pipes and tabors, Tuxpan, Jalisco



community. Virtually all members of Amerindian communities perform music for purely personal motives. Texts are improvised, often amorous, though sometimes devotional, and sung in a high-pitched, strained voice; accompanying instruments are high-pitched, such as the harmonica, concertina, *jarana* or, rarely, one of the larger guitars. Some groups sing unaccompanied (most Náhuatl-speaking groups, Amuzgos and Otomies); among the

6. Participants in the deer dance of the Yaqui Indians, with (right to left) drum, water-drum, two raspadores (scrapers), 'deer' man holding sonajas (rattles), 'tiger' man holding raspador (scraper), harp and violin; a flute would normally complete the ensemble

Ex.5 Passion music, processional melody, Venustiano Carranza, Chiapas; rec. and transcr. E.T. Stanford

Mayo and Yaqui unaccompanied duets, mostly in 3rds and 6ths, are common.

Melodic and/or harmonic formulae in this repertory are usually peculiar to each hamlet. Neither texts nor melodies are strictly metrical, and the number of notes in each phrase is determined by the number of syllables in the text. Generally, all the songs of a given community conform to a single formula, or at most two or three. In this context the concept of song is mainly textual, and each new text is considered as constituting an entirely new song. Possibly some melodic formulae carry verbal associations, established by analogy with the tonal patterns of the Amerindian and Spanish languages.

GERARD BÉHAGUE (I), E. THOMAS STANFORD/A. CHAMORRO (II, 1), E. THOMAS STANFORD/R (II, 2, 3)

Mexico City. Mexican capital city. In 2000 it had a population of over 20 million.

1. Before 1800. 2. 19th and 20th centuries.

1. BEFORE 1800. Tenochtitlán, the Aztec capital built where central Mexico City now stands, was founded, according to legend, in 1325 by a nomadic warrior tribe from the north. At the consecration ceremonies for the new great temple, erected at the centre of the city between 1482 and 1485 in honour of the heart-hungry deity Huitzilopochtli, 20,000 captives had their chests cut open by priests wielding sharp obsidian blades amid the din of *huehuetl* (an upright wooden cylinder drum covered with jaguar skin, beaten with bare hands), *teponaztli* (a two-keyed wooden slit-drum, beaten with rubber-tipped mallets) and other percussion instruments.

Among Spanish annalists of the final siege that preceded the fall of Tenochtitlán, Bernal Díaz del Castillo (*c*1492–*c*1581) best described the eerie throb of the *tlalpanhuehuetl* and other drums pounded during human sacrifices at this temple in July 1521. The Aztecs played no string instruments (none was known before the European invasion); instead, their highly trained musicians and priests played conch shell trumpets, metal trumpets, notched bone rasps, shrill clay whistles, vertical flutes, ocarinas, tortoise shells struck with antler prongs, rattles of different kinds, and especially the several varieties of *huehuetl* and *teponaztli*.

In the opinion of the invaders, Aztec music, whether heard during Montezuma's repasts or during sacrifices in the lofty terraced temples, faithfully mirrored the fierce and rigidly ritualistic Aztec religion. Drummers who missed a beat during their rituals were summarily withdrawn from their ensembles and executed. To sing from memory the lengthy hymns honouring their gods, young acolytes spent years in a special priests' seminary at Tenochtitlán (called *calmécac*). Every three-hour interval day and night had its own blood-letting ceremonies

accompanied by appropriate music. But with their onerous responsibilities the court and temple musicians also enjoyed considerable social prestige, exemption from tribute, and constant contact with the mighty.

After 1521 these musicians, who under Aztec law had enjoyed privileges because they preserved community lore and morale, passed easily into the service of the scores of churches that Franciscans, Dominicans and Augustinians began planting over the former Aztec realm. Because the Indian populace assimilated European music more readily than any other facet of imported culture, the cathedrals at Mexico City, Puebla and elsewhere could boast of music that rivalled the best in Spain only a half-century after the Conquest. As early as 1530 an Indian choir trained by Pedro de Gante (*c*1480–1572, a Franciscan from Ghent) sang every Sunday and feast day at Mexico City Cathedral (founded 1528). Only a year later Bishop Juan de Zumárraga (1468–1548) praised the skill of Indian polyphonic singers and in 1532 lauded the deft Indian copyists who transcribed European part music. In 1539, nine years after arriving in Mexico, Canon Juan Xuárez was appointed *maestro de capilla* of the cathedral and Antonio Ramos cathedral organist.

Lázaro del Álamo followed Xuárez in 1556, the year in which the first music book was published in the New World, an Augustinian 80-page *Ordinarium* printed at Mexico City by Giovanni Paoli (Juan Pablos), a native of Brescia, containing plainchant (copies in *GB-Lbl* and *US-NYp*). Within the next 33 years 12 more lavish liturgical music books were printed at Mexico City. A 354-page *Manuale sacramentorum* printed in 1560 was followed by a 660-page *Missale Romanum Ordinarium* in 1561 (copy at *US-SM*) that has been justly called the most handsome New World book of its century; the music is printed on 52 pages in black notes over a five-line red staff. The other books printed before 1600 include four graduals, two psalters, two antiphoners, a Passion-book, and a new edition of the 1560 manual to conform with revisions of the sacramentary authorized by the Council of Trent. In 1604 a Franciscan, Juan Navarro from Cádiz, published at Mexico City *Quatuor Passiones* (copies at *GB-Lbl*, *US-SM*, *BLl*), which in contrast with the previous imprints consists of 105 leaves entirely of music (for the four Passions, Lamentations, and the Prayer of Jeremiah). Nowhere in the colonial Americas was any similar succession of plainsong imprints published.

Polyphony continued to flourish in the Mexico City Cathedral under the direction of such distinguished *maestros de capilla* as Hernando Franco (1575–85), Juan Hernández (1586–1620), Antonio Rodríguez Mata (1625–43), Luis Coronado (1643–8), Fabián Pérez Ximeno (1648–54), Francisco López Capillas (1654–74), José de Loaysa y Agurto (1676–88), Antonio de Salazar (1688–1715) and Manuel de Zumaya (1715–39). They were all proficient composers with (except Hernández) an extant body of polyphony to prove their worth and also ran choir schools, superintended the purchase and care of large choral libraries, and conducted permanent paid choirs and professional instrumental ensembles that were equalled elsewhere in the New World only at Puebla, Lima and from time to time Bogotá, La Plata (now Sucre, Bolivia), Guatemala and Oaxaca.

Zumaya composed the music for the first North American opera, *La Partenope*, mounted in the palace vice-regal on 1 May 1711 (Silvio Stampiglia's libretto in Italian and Spanish on facing pages is in the Mexican National Library). After an interregnum the cathedral music was directed between 1749 and 1769 by the Italian-born Ignacio Jerusalem (*b* 3 June 1707; *d* 15 Dec 1769), who was concurrently director of the theatre orchestra at the imposing Coliseo Nuevo (inaugurated 23 December 1735; the old Teatro Coliseo built in 1670 burnt down on 19 January 1722). The cathedral orchestra in the 16th century consisted of brass and woodwinds supported by organs, in the 17th century of the same forces augmented by harps, and in the 18th century predominantly of strings. The large surviving output of Jerusalem and his successors Matheo Tollis de la Roca and especially Antonio de Juanas, the last colonial *maestros de capilla*, faithfully reflects the successive influences of the church music of Leo, Jommelli and Paisiello.

2. 19TH AND 20TH CENTURIES. During the 19th century Mexico City Cathedral music lost stature because of the curtailing of funds. The focus of musical life was the theatre until 1900 and then the concert hall. A typical season at the Coliseo Nuevo towards the end of the viceroyalty (1821) contained Cimarosa's *zarzuela bufa El Filósofo Burlado* (*Diario de México*, i, 100, 25 October 1805), and three theatre pieces by composers from nearby Puebla, Manuel Arenzana's *El extrangero* billed as a two-act comedy with music, his *Los dos ribales en amor* billed as a new duo (*Diario*, i, 236 and 264, 25 November and 2 December 1805), and a sung-and-danced *bailete Siana y Silvio* in which the two daughters of the guitar-playing composer Luis de Medina (1751–1806) took the parts of a shepherd and shepherdess driven into each other's arms by a sudden storm (*Diario*, i, 264, 2 December). The climax of the 1806 season at the Coliseo Nuevo was the première (4 December) of Paisiello's *Il barbiere di Siviglia* translated into Spanish and given as an 'opera bufa en cuatro actos'. The interludes between the four acts consisted of short Mexican dances ('bailes del país'). Five days later it was repeated, again with popular Mexican interludes ('sonecitos del país'). Native contributions to the Mexico City lyric stage were generally limited to the popular interludes in this way until well into the 19th century.

Between 1790 and 1810 the Coliseo orchestra was conducted by José Manuel Aldana, a native of Mexico City, who was, however, cynically urged in 1805 to change his name to something Italian. In 1813 the orchestra included strings, a flute, a bassoon, two trumpets and kettledrums. A singer's salary averaged three times that of an instrumentalist; star singers earned more than twice as much as less famous singers. However, it was only after independence that opera sung in Italian became a matter of course at Mexico City: Manuel García, fresh from New York triumphs, inaugurated the custom on 29 June 1827 with Rossini's *Il barbiere di Siviglia*. From 1831 the Teatro Principal, newly refurbished, housed a regular annual season of Italian opera, and even native-born composers, including Cenobio Paniagua y Vasques (1821–82) and Melesio Morales (1838–1908), had to compose their operas with Italian librettos to get them produced at Mexico City. Aniceto Ortega del Villar first broke this rule with his one-act opera *Guatimotzín* (13 Sept 1871), in which the princess's part was sung by the chief Mexican-born prima donna of the century, Angela Peralta (1845–83), and the last Aztec ruler's role by the celebrated Italian tenor Enrico Tamberlik. The Italian

opera company contracted for the 1852–3 season advertised as its star the *prima donna assoluta* Balbina Steffennone who gave the official première of the Mexican national anthem on 15 September 1854 in the Gran Teatro de S Anna (music by the Catalan Jaime Nunó (1824–1908)).

The Conservatorio Nacional de Música grew out of an earlier conservatory organized under the auspices of the Sociedad Filarmónica Mexicana; it opened in 1866 with 14 instructors directed by Agustín Caballero, whose private academy (founded 1838 in cooperation with Joaquín Beristaín (1817–39)) provided the nucleus of the new conservatory. In 1877 it was nationalized. It was at Calle de la Moneda 16 in central Mexico City until 1950, when it moved to an attractive site in the suburbs, Avenida Presidente Masaryk 582.

Construction of the Carrara marble Palacio de Bellas Artes was started in 1900 according to plans drawn by the Italian Boari, but after various intermissions and changes of plans was not finished until 1930, and so, like Mexico City Cathedral, it is in diverse styles. The concert hall (cap. 3500) houses annual seasons of opera, symphony, ballet and large recitals; chamber concerts are given in the small adjacent hall named after Manuel M. Ponce. As in all other Latin American capitals, visiting musical celebrities perform frequently at the cultural institutes subsidized by the large European nations.

The Instituto Nacional de Bellas Artes formerly located in upper floors of the Palace of Fine Arts was set up by President Miguel Alemán in 1946. In 1972 President Luis Echeverría decreed a new short-lived National Plan of Music Action headed by Carlos Chávez, the composer-conductor who founded the Orquesta Sinfónica Mexicana (later the Orquesta Sinfónica de México) in 1928. The composer Manuel Enríquez headed the Conservatorio Nacional from 1972 to August 1974, since when its directors have been the organist Victor Urbán (1974–7), the pianist-composer Armando Montiel Olvera (1978–82), Alberto Alba Rodríguez (1983–4), the cellist Leopoldo Téllez López (1984–8), the concert pianist María Teresa Rodríguez (the first woman director, 1988–9), Ana Marí Baez Saldaña (1991–2), Aurora Serratos Garibay (1992–4) and Ramón Romo Lizárraga, who took over on 23 March 1994. In 1993 the soprano Thusnelda Nieto became the 15th head of the Escuelo Nacional de Música, affiliated to the Universidad Nacional Autónoma de México.

The Musical Research Section of the National Institute of Fine Arts (INBA, founded by presidential decree in 1946 with Carlos Chávez as head), was superseded in 1977 by the Centro Nacional de Investigación, Documentación e Información Musical (commonly referred to as CENIDIM) with Manuel Enríquez as director. From 1985 to 1991 he headed the music section of INBA. The lustrous record of CENIDIM as standard bearer in all areas of musical research and scholarly publication places it in the forefront of government-sponsored investigative entities in the Spanish-speaking Americas. The Cambridge University alumnus and international prizewinner José Antonio Robles Cahero was named CENIDIM director in March 1994 and in 1996 became the editor of Mexico's leading musicological journal *Heterofonía* (founded in 1968 and directed until her death by the scholar-critic-performer Esperanza Pulido Silva (1900–91)). In 1982 the renowned composer Mario Lavista (*b* 1943) founded the pocket-sized quarterly *Pauta*, incorporating short articles of universal appeal, many translated or abbreviated from foreign sources.

Over 250 contemporary Mexican composers of concert music are anthologized in Eduardo Soto Millán's *Diccionario*, the great majority residing in Mexico City. The Foros Internacionales de Música Nueva, inaugurated in 1977 by Manuel Enríquez to promote native and international vanguard music of Darmstadt and Donaueschingen character, has seen performances of works by Enríquez himself, Federico Ibarra (*b* 1946) and Alicia Urreta, among a preponderance of non-Mexicans. In 1973, prior to the Foros, Urreta cooperated with Carlos Cruz de Castro in initiating the Festival Hispano-Mexicano de Música Contemporánea.

As early as 1948, Mexico City hosted four symphony orchestras. Mexican conductors known abroad who were born in Mexico City and remained active there include Luis Herrera de la Fuente (*b* 1916), Fernando Lozano (*b* 1940), Eduardo Mata (1942–95), Enrique Batiz (*b* 1942), Jorge Velazco (*b* 1942) and Enrique Arturo Diemercke (*b* 1955).

In the 1990s opera became the favoured genre for Mexico City composers. Under the aegis of Ricardo Miranda, the national director of concert music and opera, real attempts were made in the late 1990s to salvage Carlos Chávez's opera and to give young aspirants access to the Palacio de Bellas Artes. After 1980 the following operas were given their first performances in the Palacio: *La Güera Rodríguez* (26 Sept 1982) by Carlos Jiménez Mabarek (1916–94), *Orestes parte* (5 July 1987) and *Alicia* (9 July 1995) by Ibarra, and *Aura* in 1998 by Lavista. In February 1979 Daniel Catán (*b* 1949), a native of Mexico City, was awarded first prize by the Fundación Morales Esteves for his opera *Encuentro en el ocaso* (libretto by Carlos Montemayor). His *Florencia en el Amazonas* was first performed at Houston (25 Oct 1996), and also in Los Angeles (22 Jan 1997).

In the realm of popular music Consuelo Velázquez inherited the mantle of Agustin Lara (*d* 7 Nov 1970) with international successes such as *Bésame mucho*, recorded by the Beatles, *Qué seas feliz*, and other bestsellers. Leading the male popular music parade were Juan Gabriel (*b* 1950) and other platinum stars such as Marc Anthony, Alejandro Fernández, Enrique Iglesias and Luis Miguel.

ROBERT STEVENSON

Meyer, André(-Charles) (*b* Colombes, 5 July 1884; *d* Paris, 10 May 1974). French collector. Having taken the degree in English literature at the Sorbonne (1904), he became an industrialist. When he was 15 he began an eclectic collection of considerable musical interest. Its most unusual section consists of drawings and engravings relating to music and musicians; its most important part comprises printed scores from the 17th century to the 19th, especially 18th-century instrumental music, chiefly French. Meyer always opened his collection to interested students. He was treasurer of the Société Française de Musicologie from 1945 to his death.

There are two published catalogues of Meyer's collection. The first (1961), listing autograph manuscripts, printed and manuscript music, theoretical, historical and educational works, librettos, iconography and musical instruments, contains descriptions of the documents and about 300 illustrations; it was compiled by François Lesure and Nanie Bridgman. A supplement (1963) marks the acquisition of the sketches for *The Rite of Spring*. The second catalogue (1973), listing autograph manuscripts and iconography, consists of illustrations (251 plates) of the items described in the 1961 catalogue, and of later acquisitions. It was published under the direction of Fromrich-Bonéfant.

CHRISTIANE SPIETH-WEISSENBACHER

Meyer, Berta. *See* MORENA, BERTA.

Meyer, Christian (Henri) (*b* Strasbourg, 20 Sept 1952). French musicologist. He studied philosophy and musicology at the University of Strasbourg II (1971–5), gaining the doctorat de 3ème cycle in 1977 with a dissertation on Sebastian Virdung, whose treatise *Musica getutscht*, he has translated with a commentary (Paris, 1980), and the doctorat ès lettres in 1986 with a dissertation on sources of lute music in Germany. He became a researcher at the CNRS in Paris in 1979. From 1988 to 1991 he supervised, with Marc Honegger, the research team Musique et Société dans les Pays Germaniques à l'Aube des Temps modernes and in 1996 was appointed a member of the Institut de Recherche sur le Patrimoine Musicale en France.

Meyer has carried out research in three main areas. The first of these is music theory in the Middle Ages; he is the general editor of the volumes of RISM entitled *The Theory of Music: Manuscripts from the Carolingian Era up to c1500* (Series B/III/3–B/III/5). The second is musical practice in Germany at the time of the Reformation and the third is lute music. In 1991 he published with others the catalogue *Sources manuscrites en tablature: luth et théorbe (c1500–c1800)* (Baden-Baden, 1991–7). Meyer is also prominent in the publication of musicological research both in France and internationally. In 1986 he was appointed editor-in-chief of the *Revue de musicologie* and in 1994, with C.-H. Mahling, he initiated *Musical Life 1600–1900*, a programme of the European Science Foundation.

JEAN GRIBENSKI

Meyer, Daniel (*b* ?Göttingen, 1545–50; *d* Kassel, *c*1597). German organ builder. The earliest surviving records of his activities date from 1571; he may have been a pupil of the Göttingen organ builder Jost Pape. In 1595 he was appointed organ builder to the court of his patron Moritz, Landgrave of Hesse; Meyer was succeeded, after his death, by Jörg Weissland in 1597.

Meyer's instruments were usually claviorgans, combining a single-manual organ with a two-register harpsichord. None of these survives, however. The organs were characterized by predominantly wooden pipes, the juxtaposition of flutes and regals, the use of Vogelgesang stops, and façade pipes inlaid with ivory. He is known to have made claviorgans at Kassel (1574–5), Göttingen (1575), the chapel at Schloss Wilhelmsburg, Schmalkalden (1586), and the Schlosskirche, Rotenburg an der Fulda. He rebuilt the organ in the Jakobikirche, Göttingen (1591). The only extant Meyer instrument is the organ in Schloss Wilhelmsburg. It was restored in 1971, and is reputedly the oldest working organ in Thuringia.

FELIX FRIEDRICH

Meyer, Ernst Hermann [Baker, Peter] (*b* Berlin, 8 Dec 1905; *d* Berlin, 8 Oct 1988). German composer and musicologist. He began to study the violin at the age of seven, and took theory and piano lessons with Walter Hirschberg while still a Gymnasium pupil. After working for a short time at a bank (1924–6), he enrolled in Friedrich-Wilhelm University, Berlin, where he studied musicology with Johannes Wolf, Arnold Schering, Friedrich Blume, Erich M. von Hornbostel and Curt Sachs. In 1928 he transferred to Heidelberg University (PhD 1930), where his teachers included Besseler. He later made the acquaintance of Hanns Eisler. While a student he composed more than 45 songs, primarily settings of German romantic poetry, and some chamber pieces.

Having completed his formal studies with distinction, Meyer went into a world where fascism and antisemitism were rampant. After experiencing Bloody Sunday in Berlin firsthand (May 1929), he joined the communist opposition, writing for *Die rote Fahne*, publishing *Die Kampfmusik*, composing political songs such as *Krieg* and *Lied vom Junker Magerbauch* and conducting workers' choruses. Hitler's seizure of power meant months of work underground and eventual emigration to England in 1933, where he maintained his efforts towards the defeat of fascism. During the war years he continued to write propaganda songs, such as *Schlaflose Nächte* and *Song of the Refugees*, and conduct, also becoming active in the Free German League of Culture, an anti-Nazi organization of artists, scientists and writers. He supported himself during this period by composing incidental music and film scores, especially for documentaries. His experiments in the film idiom, such as the real-life noises imposed on to the soundtrack of *Roadways* (1937), met with considerable success. His Quintet for Clarinet and Strings (1944), the first version of the Symphony for Strings (1946–7) and the treatise *English Chamber Music* (London, 1946, 2/1951; Ger. trans., rev., Leipzig, 1958), which had a seminal influence on English musicology, were all written in London.

In 1948 Meyer returned to Germany to take up the post of professor of music sociology at Humboldt University, Berlin, an appointment he held until his retirement in 1970. From this position, he exerted considerable influence over musical life in the German Democratic Republic. He co-founded the German Academy of Arts in 1950 (vice-president, 1965–9) and the Union of German Composers and Musicologists in 1951 (president, 1968–82; honorary president, 1982–8), and served as president of the Music Council of the GDR (1965–71). Deeply convinced of the necessity for the artist to be an active agent in the reform of society and the propagation of humanist ideals, Meyer threw himself into the affairs of the newly formed state. His list of compositions rapidly lengthened according to the requirements of the time; he was awarded national prizes in 1950, 1952 and 1963.

Meyer's compositional output consists of more than 500 works (some published under the pseudonym Peter Baker), over half of which are propagandizing songs and choral pieces. In these works direct expression and clear text setting are prioritized. His solo songs, however, go beyond the usual creative boundaries of agit-prop, displaying a wide range of formal structures. Songs of the 1920s owe much to the 19th-century lieder tradition, and attest to the composer's strong lyricism, sophisticated understanding of form and refined musical craftsmanship. Later works are freely tonal, employing a subtle diversification of melodic ideas, and fusing vocal and accompanimental lines through poetic imagery. His 26 vocal-orchestral works are mostly concerned with socio-political events. *Mansfelder Oratorium* (1950) is a monument to socialist realism. In the symphonic choral works of the 1960s, such as *Dem Neugeborenen* (1967), the lyrical, contemplative element of Meyer's style grew

stronger, and melodic, harmonic and orchestral writing became less orientated towards folksong.

Programmatic ideas, cyclical structures and modifications of traditional formal patterns illustrate Meyer's debt to the symphonic tradition in such instrumental works as the Symphony for Strings (1947, rev. 1958), the Symphony in B♭ (1968) and *Kontraste-Konflikte* (1977). His typical manner of thematic development, which aimed to make motivic changes and transformations perceptible, remained an essential component of his style. Some of the orchestral works are based on poetry; the *Konzertante Sinfonie* (1961) for piano and orchestra and the Violin Concerto (1964), for example, are inspired by Louis Fürnberg texts. A marked awareness of compositional problems and a reflective mood characterize the late works.

WORKS
(*selective list*)

DRAMATIC

Reiter der Nacht (op, G. Deicke, after P. Abraham: *The Path of Thunder*), 1970–73, Berlin, Staatsoper, 1973; 44 film scores, 1937–71

CHORAL

VERA GRÜTZNER

Meyer, Johann David. *See* MAYER, JOHANN DAVID.

Meyer, Jürgen (*b* Brunswick, 16 March 1933). German acoustician. In 1957 he enrolled in the Technical University of Brunswick as a student of electronics and music, becoming a research scientist in the acoustics laboratory at the Physikalisch-Technische Bundesanstalt in Brunswick in 1958. In 1960 he was awarded the doctorate by the Technical University for a dissertation on the behaviour of organ flue pipes, supervised by Martin Grützmacher. Meyer was appointed head of the acoustics laboratory in 1971, and under his direction the laboratory established an international reputation in musical instrument acoustics, room acoustics and psychoacoustics. At the Musikhochschule in Detmold he became a lecturer (1968) and professor (1980); in 1985 he became head of the audio acoustics department at the Physikalisch-Technische Bundesanstalt in Brunswick, retiring in 1996.

A skilled violinist and conductor, his musical background has informed his research on the influence of acoustics on performance. Meyer has carried out definitive studies of the directional properties of instruments and the platform placing of orchestral groups. He has also given numerous public lectures involving acoustical demonstrations by live orchestras. President of the German Acoustical Society between 1995 and 1998, Meyer is a fellow of the Acoustical Society of America and of the Institute of Acoustics.

MURRAY CAMPBELL

Meyer, Kathi. *See* MEYER-BAER, KATHI.

Meyer, Kerstin (Margareta) (*b* Stockholm, 3 April 1928). Swedish mezzo-soprano. She studied in Stockholm, at the Salzburg Mozarteum, and in Siena, Rome and Vienna. She made her dêbut in 1952 as Azucena with the Swedish Royal Opera and became permanently associated with that company. She sang Carmen in Wieland Wagner's controversial 1959 production in Hamburg, where she also created Mrs Claiborne in Schuller's *The Visitation* (1966), Alice Arden in *Arden Must Die* (1967) and Gertrude in Searle's *Hamlet* (1968). In 1960 she sang Dido (*Les Troyens*) at Covent Garden, later appearing as Octavian and Clytemnestra. After her dêbut as Carolina in the first English-language performances of Henze's *Elegy for Young Lovers* (1961), she became a favourite at Glyndebourne; her roles there included Debussy's Geneviève, Monteverdi's Octavia, Clairon (*Capriccio*), Elisabeth in the première of Maw's *The Rising of the Moon* (1970) and Claire in the first British performance of Einem's *Der Besuch der alten Dame* (1973), a role she also sang in Stockholm (1976) in her own Swedish translation of the opera. At Salzburg she created Agave in *The Bassarids* (1966); she also appeared at the Metropolitan (1960–63) and Bayreuth (1962–5). She created Spermando (Amando) in Ligeti's *Le Grand Macabre* (1978, Stockholm). In recitals she often sang in duo with Elisabeth Söderström. Her voice, though not large, was used with skill and dramatic flair. Among her recordings are excerpts from her Orpheus and Octavian, as well as duets with Söderström.

HAROLD ROSENTHAL/R

Meyer, Krzysztof (*b* Kraków, 11 Aug 1943). Polish composer, pianist and writer on music. He studied composition with Wiechowicz and Penderecki at the academy in Kraków (1962–5), and took lessons with Boulanger in Paris. A teacher at the academy from 1965 to 1987, he was then appointed lecturer in composition at the Hochschule für Musik in Cologne. He was a member of the Polish contemporary music ensemble MW 2 (1965–7) and president of the Polish Composers' Union (1985–9). Awards he has received include first prize at the Prince Rainier of Monaco competition (1960, for *Cyberiada*) and the Szymanowski competition (1974, for Symphony no.4); the Herder Prize (1984), the Polish Composers' Union prize (1992) and the award of the New York Jurzykowski Foundation (1993). In 1981 he completed Shostakovich's opera *Igroki* ('The Gamblers'); the first performance was given in Wuppertal on 12 June 1984.

Meyer has contributed significantly to the genres of the symphony, concerto, quartet and sonata. His music is elegant, energetic and intense. While he showed a passing interest in Polish sonorism, as in the First Quartet, his style elsewhere draws on mainstream 20th-century music, particularly that of Hungary, Russia and Poland, and on 18th- and 19th-century forms. Contemporary pitch organization and textual concerns are tempered by a neoclassical sense of harmony and gesture, while the close association with Shostakovich is in evidence in his orchestral writing and use of expansive structures (particularly in works of the 1980s). His artful references to pre-existing music can be seriously symbolic, as in *Symfonia polska*, or humorous, as in *Caro Luigi*. His writing for string instruments is particularly lucid and contains a wide range of emotions.

WORKS
(*selective list*)

DRAMATIC AND ORCHESTRAL

Stage: Cyberiada (comic op, 3, K. Meyer, after S. Lem), 1967–70, Polish TV, 12 May 1971, rev. 1985, Wuppertal, 11 May 1986; Hrabina [The Countess] (ballet, 1), 1980, Poznań, 14 Nov 1981 [based on the op by Moniuszko]; Klonowi bracia [The Maple Brothers] (children's op, 2, K. Meyer, after E. Szwarc), 1989, Poznań, 3 March 1990; incid music

Syms.: no.1, 1964, rev. 1966; no.2 'Epitaphium Stanisław Wiechowicz in memoriam (J. Tuwim), chorus, orch, 1967; no.3 'Symphonie d'Orphée' (P. Valéry), chorus, orch, 1968; no.4, 1973; no.5, 15 str, 1979; no.6 'Symfonia Polska', 1982

Other orch: Conc. da camera no.1, fl, perc, str, 1964; Vn Conc., 1965; Conc. da camera no.2, ob, str, perc, 1972; Vc Conc. no.1, 1972; Tpt Conc., 1973; Fireballs, brass, str, perc, 1976; Sym. in D in the style of Mozart, 1977; Pf Conc., 1979, rev. 1989; Hommage à Johannes Brahms, 1982; Fl Conc., 1983; Canti Amadei, vc, chbr orch, 1984; Conc. da camera no.3, vc, hp, str, 1984; Musica incrostata, 1988; Caro Luigi, 4 vc, str, 1989; Conc., a sax, str, 1992; Carillon, 1993; Vc Conc. no.2, 1995; Farewell Music, 1997; film scores

VOCAL

Solo: Pieśni rezygnacji i zaprzeczenia [Songs of Resignation and Denial] (J. Szczeblowska), S, vn, pf, 1963; Quartettino (Tuwim), S, fl, vc, pf, 1966; 5 utworów kameralnych [5 Chbr Pieces], Mez, cl, vn, va, 1967; Śpiewy polskie [Polish Chants] (Tuwim), S, perc, str, 1974; Lyric Triptych (W.H. Auden), T, chbr orch, 1976

Choral: Mass, 1987; Wjelitczalnaja, 1988; TeD, 1995

Music for children

CHAMBER AND SOLO INSTRUMENTAL

ADRIAN THOMAS

Meyer, Leonard B. (*b* New York, 12 Jan 1918). American musicologist and writer on aesthetics. Meyer studied philosophy and music at Columbia University (MA in music, 1949) and the history of culture at the University of Chicago (PhD 1954), and studied composition privately with Stefan Wolpe and others. In 1946 he became a member of the department of music at the University of Chicago (professor and chairman, 1961–70; Phyllis Fay Horton professor in the humanities, 1972–5) and in 1975 was appointed Benjamin Franklin professor of music at the University of Pennsylvania. He was also visiting professor at a number of North American universities, including Harvard University and the Eastman School of Music. He became professor emeritus at Pennsylvania in 1988.

Meyer first became well known for the theory of musical meaning expounded in *Emotion and Meaning in Music* (1956). Here he develops a distinctive account of musical content by bringing together aspects of Gestalt psychology and American pragmatist thought following Charles S. Peirce. From the pragmatists John Dewey, George Herbert Mead and Charles Morris, Meyer took up Peirce's central pragmatic idea, that the 'meaning' of an event (X) could be found in the consequence (Y) to which it pointed. Peirce had argued that any automatic and habitual response to an event must embody an anticipation of its probable consequences (Y), showing that the person responding tacitly understood the event's meaning. Dewey suggested, further, that the failure of an habitual response would lead a person either to reason about an event's meaning or to respond emotionally, and it was this idea that formed Meyer's central position. Music's expressive content or meaning, he suggested, could be observed at those moments when an established pattern had given rise to an habitual response, but the pattern had then been interrupted in some way. Gestalt psychology provided an account of modes of perception that could be taken as 'naturally' ingrained habits. Complementing this with a recognition of style as a set of learned conventions, Meyer developed an account of musical expectancy as perceptually constrained and stylistically learned. His account of meaning and expressiveness in music was then carried through by attention to formal and stylistic patterns, as the content of listeners' expectancies. It was thus a combined formalist/expressivist position.

Meyer's early ideas developed in various ways in his later work. With the exception of his *Music, the Arts, and Ideas* (1967), largely concerned with 20th-century trends, his principal contributions have been to tonal theory. *Explaining Music* (1973) develops techniques for analysing melody based on the Gestalt ideas of pattern-completion and good continuity. His earlier emphasis on a listener's 'expectancies' is replaced with reference to musical 'implications' (a change in terminology taken up by Narmour, 1977). In the later 1970s and early 80s Meyer turned to the study of short recurrent patterns named 'archetypes' and later 'schemata' (with B.S. Rosner, 1982). The changing-note figure was one of these (1973, pp.191–6). Collaborative research with the psychologist Burton Rosner established that the pattern satisfied the function of a cognitive schema (1982; see also Gjerdingen, 1986). A study of how this figure evolved during the 18th and 19th centuries was, furthermore, an important turning-point for Meyer, convincing him of the influence of extra-musical factors on stylistic change (1980, p.180). This broader context is taken up in *Style and Music* (1989), when Meyer links compositional changes in the 19th century with an increasing social distaste for obvious convention. He interprets a Romantic preference for individuality in expression as the historical motivation for composers to obscure the presence of received tonal schemata in their sources. An aspect of his aesthetic thought thus becomes historically contextualized, in the suggestion that composers could turn a strategy of concealment to an expressive end, violating listeners' learnt expectancies.

Meyer has had a seminal influence in leading theorists of music to be responsive to advances in cognitive psychology. He has shown a rare ability to integrate systematic and historical studies, retaining a concern both with theoretical rigour and with the reality of historical change. This combination of interests has led him to repudiate postmodern scepticism about the possibility of creating general categories in theoretical work (1998).

F.E. SPARSHOTT/NAOMI CUMMING

Meyer, Marcelle (*b* Lille, 22 May 1897; *d* Paris, 18 Nov 1958). French pianist. She studied at the Paris Conservatoire first with Marguerite Long and then with Cortot, in whose class she received a *premier prix* in 1913. She later studied privately with Viñes. An ardent champion of the group Les Six, she performed and recorded with Poulenc, Auric and Milhaud. She played the first performances of many works, including Milhaud's *Scaramouche* and *L'automne*, Stravinsky's Serenade and *Les noces*, and Poulenc's first two *Novelettes*. In 1930 she played Richard Strauss's *Burleske*, one of her specialities, under the composer's direction in Budapest. She also appeared frequently with German orchestras, including the Berlin Chamber Orchestra in Paris during the Occupation. Her numerous post-war recordings, especially of works by Rameau, Scarlatti and Stravinsky, reveal her exceptional virtuosity and flair for sharply contrasting timbres and insouciant rhythms.

CHARLES TIMBRELL

Meyer [Meier, Mayer, Maier], **Peter** [Pieter] (*fl* 1640–78). German musician and composer. It may be assumed from his career that he was born and died in Hamburg. From 1640 he probably studied at Rostock University. Around 1650 he lived in Hamburg and fraternized with poets such as Johann Rist and Philipp von Zesen, and about five years later he moved to Amsterdam, where Zesen also lived from 1656. His Amsterdam publications are dedicated to wealthy merchants, whom he may have taught. From 1661 to 1672 he worked as a musician at the court of Christian August II, Count Palatine of Sulzbach. His move to Sulzbach may be connected with the simultaneous move there of several German ministers who had studied at Rostock and had held temporary posts in the Dutch Republic around 1660. After 1672 he returned to Hamburg, where he was still living in 1678. He suffered from partial deafness.

Meyer's compositions fall into genres typical of mid-17th-century North Germany. He contributed a fairly large number of continuo songs to sacred and secular collections issued in Hamburg around 1650, with texts by poets such as Johann Rist and Philipp von Zesen. He edited and published the first edition of Rist's *Des edlen Dafnis aus Cimbrien besungene Florabella*, in which the majority of the 50 song settings are his. During his Amsterdam period he published three volumes of dance music, including variations (*'t Konstigh speeltooneel*). The surviving fragments show a virtuoso style of variation not unlike that of Johann Schop (i) and other 17th-century North German composers for the violin. He also wrote some small-scale sacred concertos: the *Collectanea* is a collection of nine, dedicated to important people (Emperor Leopold I, Count Palatine Christian August) or to well-known Hamburg people (e.g. the musicians Gerstenbüttel, Reincken, Dietrich Becker and Christoph Hartwich).

WORKS

Songs, 1v, bc: 50 in J. Rist: Des edlen Daphnis aus Cimbrien besungene Florabella (Hamburg, 1651); 3 in Rist: Neuer himlischer Lieder sonderbahres Buch (Lüneberg, 1651); 2 in 1651[5]; 7 in 1653[5]; 4 in J.B. Schupp: Morgen und Abendlieder (Hamburg, 1655); 3 in Schupp: Passions und Buss, auch Trost-Bitt und Danck Lieder (Hamburg, 1655); 1 in P. von Zesen: Salomonis des ebreischen Königes geistliche Wohl-lust, oder Hohes Lied (Amsterdam, 1657); 2 in 1670[6]
Christliche musikalische Klag und Trost Sprüche (3 sacred concs.), 3–4vv, bc (Hamburg, 1651), lost, mentioned in J. Moller, *Cimbria literata*, i (Copenhagen, 1744), p.402
Collectanea auff hoher und fürnehmer Herren (9 sacred concs.), 1v, bc (1 for 4vv, bc) (Hamburg, 1676–7)
Ich will den Herren loben, 8vv, *A-Wgm*

't Konstigh speeltooneel, vn, bc (Amsterdam, 1658–60), in 3 vols., inc., frags. of vols. 2 and 3 survive; 13 pieces ed. T. Wind (Amsterdam, 1993)

RUDOLPH A. RASCH

Meyer, Philippe-Jacques [Philipp Jakob; Philip James] (*b* Strasbourg, 1737; *d* London, 1819). Alsatian harpist and composer who worked in Paris and London. He originally

studied theology but soon devoted himself to the harp. He became a pupil of Christian Hochbrucker in Paris, then the centre of harp playing; his first solo appearance at the Concert Spirituel was in 1761 and he performed there for three more years, often playing his own compositions. He established himself as a teacher and published a harp method in 1763 (*Essai sur la vraie manière de jouer de la harpe* op.1). After marrying in his homeland he was again active in Paris after 1765 as a teacher and composer. He introduced the new pedal harp to England during his first visit there in 1772. For the next eight years he travelled between London, Paris and Strasbourg until he settled in London in 1784.

Meyer's harp method is important as the first historical survey of harps and as one of the earliest specialist tutors. In it he discussed both the old hook harp and the new pedal harp, gave the correct tuning of both, dealt with the positioning of the hands, elaborated on *agréments* and recommended the arpeggio; the wording is expressly for beginners and laymen. He published many works for solo harp and harp with other instruments in Paris and London. The setting of *Apollon et Daphné*, 1782, attributed to him by Sainsbury, is by the Bohemian stage composer Anton Mayer (*b* Libicz, *c*1750; *d* after 1793).

Meyer's sons, Philippe-Jacques Meyer jr (*d* London, 1841) and Frédéric-Charles Meyer, were harpists, teachers and composers in England. Each published light music for the harp such as lessons, arrangements of songs, variations, divertimentos and sonatas; Frédéric-Charles also wrote a harp method (*A New Treatise on the Art of Playing upon the Double Movement Harp*, *c*1825). It is doubtful whether the harpists Johann Bernhard Meyer and Johann Baptist Meyer were related to Philippe-Jacques Meyer, although both were active in Paris and London and both published harp compositions and methods.

WORKS

(*only those extant*)

Pedagogical: Essai sur la vraie manière de jouer de la harpe, avec une méthode de l'accorder, op.1 (Paris, 1763, 2/1772); Nouvelle méthode pour aprendre à jouer de la harpe avec la manière de l'accorder, op.9 (Paris, 1774)

Solo harp: 6 sonate, op.3 (Paris, 1768); 6 sonates, op.4 (Paris, 1770); 4 Original Lessons, i–ii (London, n.d.); Favorite Lesson (Dublin, n.d.)

Other inst: 6 divertimenti, hp, vn, op.2 (Paris, 1767); 8 divertissements, hp, vn, b, op.6 (Paris, 1771); 6 sonate, hp, vn ad lib, op.7 (Paris, 1773); Divertissement (2 hps)/(hp, pf/hpd), vn, fl (Kehl, 1782); 6 divertimentis, pf/hp, vn, fl (London, n.d.); 2 Sonatas, hp, pf/(2 vn, va, vc) (London, n.d.); A Sonata, hp/pf, vn (London, n.d.); 2 Duets, hp, pf/hpd (London, n.d.); 2 Duets, 2 hp/hp, pf, 2nd Set (London, n.d.); An Original Theme and a Favourite Scotch Air with Variations, hp, pf/fl ad lib (London, n.d.)

Many arrs. of songs and variations for hp/kbd pubd in London and Paris

HANS J. ZINGEL

Meyer-Baer [née Meyer], **Kathi** (*b* Berlin, 27 July 1892). American musicologist and librarian of German birth. She studied musicology at Berlin under Kretzschmar, Riemann and Johannes Wolf, and obtained the PhD in 1916. She had a varied and distinguished career as a scholar, music librarian and critic. From 1922 she worked mainly as assistant to Paul Hirsch in his music library at Frankfurt for nearly 14 years, during which period she was also research librarian at the Berlin State Library (1928), and worked on the organization of the music department in the city library at Frankfurt (1927–9). She supervised various important exhibitions, including the international music exhibition at Frankfurt in 1927, the 'Goethe and Music' exhibition of 1932 and the Wagner Memorial Exhibition of 1933. From 1923 to 1932 she was a music critic on the *Frankfurter Zeitung* and, for a shorter period, on the *Neue Musik-Zeitung* of Stuttgart. After emigrating to the USA in 1939 she became a member of the editorial board of Schirmer in 1941 and joined the music department of the New York Public Library (1942–3).

Meyer-Baer undertook research on the aesthetic aspects of music, liturgical music, musical iconography, musical bibliography and music printing. In the last of these areas, her long research culminated in *Liturgical Music Incunabula* (1962) which was the first thorough study of the subject. This, though an invaluable book, should be used with caution because of certain basic inadequacies in identifying printers and presses. Her other outstanding achievement was the four volumes of the Hirsch Library catalogue (1928–36) which she compiled in conjunction with Paul Hirsch. Her studies in musical iconography were the product of keen observation and fine critical judgment, and like so much of her work reflect a wide-ranging and thoughtful mind.

Meyerbeer [Beer], **Giacomo** [Jakob Liebmann Meyer] (*b* Vogelsdorf, nr Berlin, 5 Sept 1791; *d* Paris, 2 May 1864). German composer. The most frequently performed opera composer during the 19th century, linking Mozart and Wagner.

1. Early years and education. 2. The Italian operas. 3. Meyerbeer's discourse: the grand historical operas. 4. Last years. 5. Reception and research.

1. EARLY YEARS AND EDUCATION. Meyerbeer was descended from distinguished families in the Jewish society of Berlin. His father Jakob (Juda) Herz Beer (1769–1825) was an industrialist and contractor to the Prussian army, and his mother Amalia (1767–1854) was the daughter of the banker Liebmann Meyer Wulff, whose family can be traced back to Jost Liebmann, a Jew at the court of the Great Elector. Amalia Beer received the finest minds of Prussia in her salon, including the future King Friedrich Wilhelm IV, the poet A.W. Iffland and Alexander von Humboldt, with whom Meyerbeer maintained a close lifelong friendship. At an early age he took piano lessons from Franz Lauska, and by the time he was 11 he was a successful prodigy, although he encountered hostile anti-Semitism in his childhood.

After taking early lessons in composition from Zelter (1805–7) and Bernhard Anselm Weber (1807–10), he left the family home in 1810 to continue his studies with Abbé Vogler in Darmstadt. It was then that he began combining his maternal family name Meyer with his paternal surname Beer. He formed lifelong friendships with Vogler's pupils Carl Maria von Weber, Gänsbacher, Gottfried Weber and Alexander Dusch; they founded a 'Harmonischer Verein' to support each other in the press. Meyerbeer made great progress in his piano lessons with Vogler and composed his first works, the most important of which is the opera *Jephthas Gelübde*, produced in Munich on 23 December 1812 though with minimal success. Meyerbeer attended the performance and in 1813 went to Vienna for the production of another youthful work, *Wirth und Gast*, originally written for Stuttgart and revised for Vienna as *Die beiden Kalifen*. At this period Meyerbeer was best known as an outstanding pianist; Moscheles thought his playing 'incomparable' and Weber described him in 1815 as 'one of the best pianists, if not *the* best pianist of our time' (*Sämtliche Schriften*, Berlin, 1908, p.308). Throughout Meyerbeer's life his example was Mozart, whose piano concertos he frequently performed. In November 1814 he went to Paris, which he regarded as 'the principal and most important place for my education in music drama' (*Briefwechsel*, i, 248). He was overwhelmed by the metropolis, its art treasures and its theatrical life, and already entertained thoughts of making his début as a composer there. In December 1815 he visited London to hear the outstanding piano virtuosos of the time, who included Cramer, Kalkbrenner and Ries.

1. Giacomo Meyerbeer: portrait by Friedrich Georg Weitsch, 1802 (Musikinstrumenten-Museum, Berlin); the public exhibition of this picture at the Berlin Akademie der Künste offended anti-Semites

2. THE ITALIAN OPERAS. Meyerbeer visited Italy for the first time in 1816, on a study tour that was, with short interruptions, to last nine years. It was here that he truly became a composer of opera, and in gratitude to the country to which he owed his career he began to use the Italian form of his first name, Giacomo. He was to return to Italy regularly throughout his life, visiting many cities to hear the current repertory and above all the best singers. He was given his first contract in Padua, in 1817, to set a libretto by the famous librettist Gaetano Rossi, with whom he always remained friends. This work, *Romilda e Costanza* (19 July 1817), is in the tradition of rescue operas popular at the time, and as his début opera in Italy it brought Meyerbeer local success. In its melodies and instrumentation it owes more to Mozart than Rossini. At this stage, if not earlier, Meyerbeer began tailoring his parts for certain singers, taking their vocal and histrionic abilities into careful consideration. The title role of his next opera, *Semiramide riconosciuta*, was designed for the contralto Carolina Bassi Manna, a famous singer of the time, who excelled in the part at the work's première in Turin on 3 February 1819. However, Bassi Manna made little use of her rights of exclusive performance, and this hindered the work's wider circulation.

The success of Meyerbeer's first commission in Venice, *Emma di Resburgo*, was thus all the more important to him. Rossi's libretto skilfully transformed the fashionable Ossianism of the time into a sentimental domestic drama.

This genre, incorporating a melodramatic child's role, had been particularly popular ever since such works as Paer's *Camilla* (1799). The Scottish local colour and romantic topoi of the settings (a castle, a knightly hall, a graveyard) gave Meyerbeer his first opportunity to show his skill in depicting character and scenic background. Critics immediately recognized the opera's individuality, and the première, on 26 June 1819, was Meyerbeer's first major success. There were further Italian productions, and the opera was staged internationally: in 1820 Weber produced his friend's work in Dresden, and in 1820 and 1821 it was also performed in Berlin, Vienna, Budapest, Brno and Warsaw.

Romani's adaptation of the popular melodrama *Marguerite d'Anjou*, by Guilbert de Pixérécourt (1810), was Meyerbeer's first encounter with modern French drama. The action, set in 1462, depicts an episode in the wars between England and France. The army commander Lavarenne represents the type of the 'irresolute hero', unable to choose between two women, and there is a new note of comedy in the character of the cunning doctor Michele Gaumotte. Meyerbeer created distinctively pastoral, Scottish and martial atmospheres in the manner already familiar from *Emma di Resburgo*, and drew musical and dramatic capital from the contrasting depiction of the two nations. He also employed a spatial dimension, positioning a band behind the stage to signal the decisive shifts in the confrontation in the introduction and the first finale. *Margherita d'Anjou* was Meyerbeer's first opera for La Scala, Milan, where an Italian composer's international success was usually decided. It lived up to Meyerbeer's expectations, with scenery by the distinguished Italian stage designer Sanquirico, and a brilliant cast, including (as Carlo) Nicolas Levasseur, for whom Meyerbeer was to write his most important bass roles, Bertram and Marcel. Soon after its triumphant première on 14 November 1820 it was produced on the stages of many European capitals.

After the relatively unsuccessful *L'esule di Granata* (12 March 1822, Milan), Meyerbeer surpassed even the success of *Margherita* with *Il crociato in Egitto* (7 March 1824, Venice). This work has a unique place in operatic history, for while it adheres to the contemporary Italian style of domestic drama, with the addition of an 'irresolute hero' and a colourful historical background, the leading part, written for Velluti, is one of the last castrato roles. He makes a virtue of this anomaly by skilfully incorporating many neo-Baroque references and other archaisms into the score, while developing the illustrative techniques that had proved successful in *Margherita*. The introductory scene now becomes a monumental tableau, and national confrontation is expressed in the opposition of two bands of musicians (no.11, *finale primo*), intercutting with each other in the stretta and combining with the chorus and orchestra. The exotic subject, an encounter between Egyptians and Crusaders, inspired Meyerbeer to instrumentation of a new kind to depict character: the Egyptians' janissary music employs percussion and five clarinets in C, supported in the upper register by the piercing timbre of a piccolo flute and a piccolo clarinet in F, and in the lower register by a *serpentone*, a trombone and two bassoons. The reminiscence motif of the *romanza* 'Giovinetto Cavalier' in the central recognition scene (Act 1, *terzetto*, no.9) is introduced with a similarly new effect. The *romanza* is a kind of parable relating to the action, telling the tale of an unfaithful knight, as all three characters, the two women and the hero, recall the melody torn between them, they recognize each other.

With *Il crociato* Meyerbeer became the leading Italian operatic composer after Rossini. His status is illustrated by the fact that Goethe envisaged someone 'like Meyerbeer' setting his *Faust* (see J.P. Eckermann: *Gespräche mit Goethe in den letzten Jahren seines Lebens*, Leipzig, 1837–48/*R*). Writing on 12 February 1829, he saw Meyerbeer as Mozart's only true successor: 'Mozart would have been bound to compose *Faust*. Meyerbeer might be capable of it, but will not embark on such a venture'.

As early as 1823 the director of the Paris Opéra had approached Meyerbeer, through Levasseur, to enquire about his interest in the French stage. In September 1825 Rossini, as director of the Théâtre Italien in Paris, produced *Il crociato*, with a brilliant performance by Giuditta Pasta in the leading role. It was followed by a production of *Margherita* with French dialogue at the Théâtre de l'Odéon. Meyerbeer was now planning several French projects, but they were deferred in 1826 when Pixérécourt commissioned him to write a three-act *opéra comique*. He began working on *Robert le diable* with Scribe on 1 January 1827; the first reading of the libretto with the director took place on 24 February. However, when Pixérécourt resigned as director of the Opéra-Comique in the summer of 1827, Meyerbeer interrupted his work on the composition, and did not begin to revise it for the Opéra until some time later: he signed his first contract with the world's leading opera house on 29 December 1829.

Before this, however, family duties recalled him to Berlin. After his father's unexpected death on 27 October 1825, Meyerbeer, as the eldest son, was expected to found a family of his own, and he married his cousin Minna Mosson on 25 May 1826. There were five children of this marriage, but only the three daughters survived childhood. Plans for the couple to move to Paris were never realized because of Minna's frail health, and for the same reason she seldom accompanied Meyerbeer on his frequent professional tours. However, they often took a cure together at such popular spas of the time as Bad Ems, Baden-Baden, Ischl and Spa, or in Italy. Although Meyerbeer could be a tough negotiator on artistic issues, he was personally anxious and vulnerable, and his family provided essential support in the real and imagined crises of his life. This strong family feeling sprang from his profound Jewish faith. He had a particularly close relationship with his mother, whose blessing he asked on every important occasion, and he was also very close to his brother Michael Beer, a gifted dramatist, whose premature death in 1833 deeply affected Meyerbeer, as did the early loss of his friend Weber in 1826.

3. Meyerbeer's discourse: the grand historical operas. At the time when Meyerbeer came to Paris with his first French projects, Joseph d'Ortigue, the leading representative of a school of music criticism orientated towards philosophy and history, was calling for fundamental reform of French opera. The aim was to combine German instrumental music, as exemplified by Beethoven, and the operatic *bel canto* of Rossini into a comprehensive *Gesamtkunstwerk*. This 'art of the future' would be expressive of modern society, whose technical and industrial foundations must undergo radical change.

D'Ortigue regarded Rossini's last French opera, *Guillaume Tell* (1829), as a stepping stone, and a little later he announced that his vision of the modern work of art was realized in Meyerbeer's first grand opera, *Robert le diable* (1831): 'The union that the author of this article prides himself on having proclaimed is now realized: that of the vocal genre created by Rossini and the instrumental genre developed by Beethoven and applied by Weber to dramatic music' (D'Ortigue, 122–3).

When Meyerbeer died suddenly 33 years later, during rehearsals of his last opera *L'Africaine*, the character of opera as an art was established beyond dispute. The style of grand opera developed by Meyerbeer was the recognized international model for music drama for almost a century. There were many consequences of this aesthetic reassessment: the setting of a libretto, which once took merely a few weeks, became an intellectual collaboration between composers and librettists that might last years, even decades. New compositional techniques were devised for each work and adapted to the opera's individual dramatic structure. Premières were staged after intensive historical and technical research by a whole staff of specialists, and the results of their labours were meticulously documented in a *livret de mise en scène*, or production manual. Above all, opera became a platform for the expression of metaphysical and philosophical ideas. Meyerbeer's four main works may be seen as phases in a conceptual operatic discourse: *Robert le diable* shows humanity torn between entanglement in evil and metaphysical redemption. *Les Huguenots* sets a sceptical historical viewpoint against the contemporary eschatological philosophy of history. *Le prophète* shows the individual involved in the historical emergence of the modern European world, and *L'Africaine* relates the same theme to the history of colonization, this time on a global scale. Meyerbeer's attitude is basically conservative and founded in his deep sense of religion. His historical operas are not simply based on historical subjects but take the historical process itself as their subject.

The fundamental modernity of Meyerbeer's concept of opera was clear to his contemporaries. In discussing the première of *Robert*, Fétis described the work as 'une production remarquable dans l'histoire de l'art' (*Revue musicale*, 26 November 1831). Even in 1891 Hanslick could write of *Robert* and *Les Huguenots* that he found 'the dazzlingly new and entirely unique impression they made unforgettable' (*Aus dem Tagebuch eines Musikers*, Berlin, 1892/*R*, p.105). For Verdi, writing in 1852, *Le prophète* was a model for his own work: 'I need a grandiose subject, impassioned, original; an imposing, dazzling *mise en scène*. I always have several in front of me ... among others the coronation scene from *Le prophète*! In this scene no other composer could have done better than Meyerbeer' (letter to Scribe of 26 July 1852; see Gerhard, 1992). However, Meyerbeer's contemporaries did not perceive the consistent nature of his philosophical discourse of history, particularly its metaphysical foundations in *Robert le diable*; perhaps the historical experiences of the 20th century have been a spur to its full recognition. Nor can there be any doubt that the extreme modernity of his musical and dramatic methods of representation, and the novelty of countless individual effects, obscured the intellectual conception of the works. Meyerbeer's operas define the beginning of the modern age: they are shaped by the perspectives of a mass urban society. Not only have their musical and theatrical techniques continued to influence music drama of the 20th century, for instance in the works of Schreker, Berg and B.A. Zimmermann; in their use of cutting and cross-cutting effects they point the way forward to film and other modern media.

Meyerbeer's first collaboration with Scribe, the most famous librettist of the century, was in 1827. *Robert le diable* had originally been planned for the Opéra-Comique, with spoken dialogue. The later through-composed version, given its première at the Opéra on 21 November 1831 (fig.2), shows clear traces of the original concept. The libretto is an example of Scribe's *pièce bien faite*: each act presents a self-contained episode of the plot, and its resolution paves the way for the conflict of the next episode. The action is constructed on a single theme and a central *quid pro quo*: Bertram must win Robert's soul for hell by midnight, and Robert does not know that Bertram is his father. Bertram's efforts at temptation are motivated by paternal love, since he does not want to lose his son for all eternity. At the culmination of the plot in a *scène à faire*, Robert must decide between his father and his mother – the temptation of hell and the voice of heaven. The dramatic and musical structure, however, goes beyond the standard *pièce bien faite*: the opera makes the passage of time a central theme of the action by presenting the course of the day in ever shorter sections. The ambivalence of evil in the figure of Bertram certainly belongs to a literary tradition found in many variants from Cazotte's *Diable amoureux* onwards, but on the operatic stage it created an entirely novel effect; Balzac, analyzing the work in his novella *Gambara*, saw Mozart's Don Giovanni as the only comparable example. Finally, the hero's *scène à faire* is unconventionally constructed: Robert is the modern type of the 'irresolute

2. Final trio from Act 5 of Meyerbeer's 'Robert le diable', with Nicolas Levasseur (Bertram), Adolphe Nourrit (Robert) and Cornélie Falcon (Alice): painting by François-Gabriel Lépaulle (Conservatoire National Supérieur de Musique et de Danse, Paris); Falcon took on the role of Alice during 1832

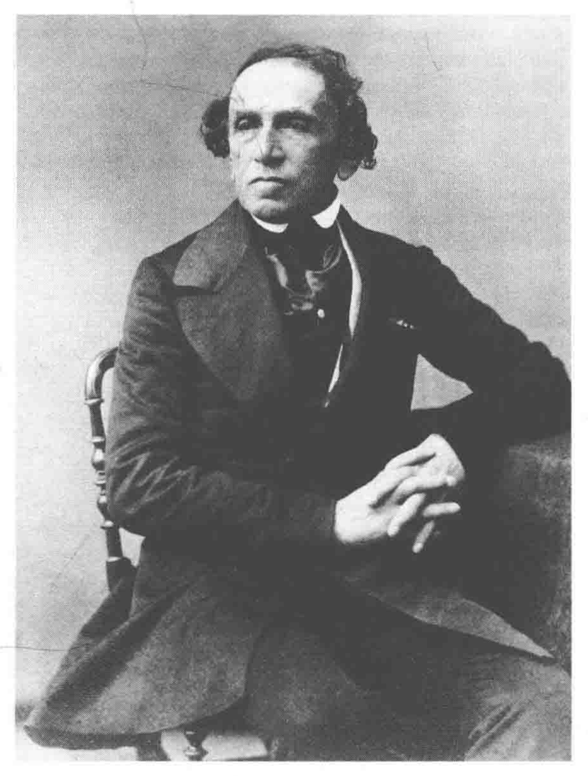
hero' *in extremis*, unable to decide between the mythic powers contending for his soul. Only the fact that time is finally running out saves him and seals the fate of his demonic tempter.

Like the general plan of the *pièce bien faite*, the exposition of preceding events in the form of a ballad is part of the formal repertory of *opéra comique*. The return of the ballad motif at central moments in the opera is also very typical of the genre. However, the dramatic function of such references is novel. They create an independent level of meaning, with the ballad motif identifying Bertram as a satanic figure (Act 1, no.2, recitative, and Act 5, no.21, recitative). In this respect, Raimbaud's ballad (Act 1) can be seen as a model for Senta's ballad in Wagner's *Der fliegende Holländer*. The Prince of Grenada's motif (Act 2, no.8) also returns at key moments in the third and fourth acts. Its 'surreal' instrumentation, with four solo timpani used as melodic instruments, defines the figure's phantasmagorical nature. Another innovation was the replacement of the traditional overture by a programmatic prelude, an idea also adopted by Wagner. Besides setting out the theme of the central 'Evocation des nonnes' (Act 3, no.15a), it introduces the demonic orchestral sonority that dominates the opera.

Meyerbeer developed the instrumentation, as well as the significance of the thematic motifs, into an independent strand of the drama. The libretto contrasts three spheres: the chivalrous world of courtiers and knights, the demonic world of Bertram, and the world of the heavenly powers opposing him. In response to the demand for 'local colour', as popularized by the works of Walter Scott, Meyerbeer raised the instrumental characterization of these dramatic spheres to the status of a fundamental structural principle. He gave each of the three spheres certain characteristic sonorities which permeate the entire opera. For instance, he employs timpani, with bassoons and brass in the lower register, to illustrate the demonic sphere. The confrontation of various facets of 'local colour' leads to instrumental distancing and stylization, with many new orchestral effects, such as the use of horns and solo bassoons in their pale middle register, frequently mentioned in works on instrumentation from Berlioz onwards ('Evocation des nonnes: procession', Act 3, no.15a), and the offstage demonic chorus singing through megaphones (Act 3, no.10). There are also dramatic reasons for the first use of an organ in the theatre (Act 5, nos.20 and 21), and the positioning of two trumpets below the prompter's box to suggest the 'voice from the grave' of Robert's dead mother (Act 5, terzet, no.23). Meyerbeer's contemporaries saw the Wolf's Glen scene in Weber's *Der Freischütz* as the model for this advanced orchestral technique, and consequently regarded Meyerbeer's own development of instrumentation to define character as specifically German. However, Meyerbeer also proved himself Rossini's heir in his structuring of the singing parts, consistently putting vocal virtuosity to the service of the drama. In the aria in which Isabelle begs for mercy (Act 4, no.18c), the dramatic effect of coloratura is exploited, setting off the crucial moment of peripeteia: Robert is moved by the singing of his intended victim and abjures the demonic power at his command.

The modern concept of moving pictures, also found in the diorama of the period, is another factor determining the construction of the individual acts. The introductory tableau of the first act places the exposition – with Raimbaud's ballad, Alice's entrance and the identification of Bertram – in the epic context of an evocation of chivalric life in the 13th century. Consequently, the conventional Italian formal repertory is abandoned for musical structures of a more individual kind. The Opéra's director, Louis Véron, wanted the action to be intelligible in pantomime, and here again Meyerbeer's response was determined by the aesthetics of the tableau. A particularly good example occurs in the nuns' scene in Act 3 (*see* GRAND OPERA, fig.4, and BALLET, fig.17), where the central temptation episode is illustrated in ballet pantomime. The ballet, emancipated from its traditional status as a mere operatic divertissement, becomes an independent component of the drama. The entire plot is presented as a series of contrasting pictures, alternating between settings using the front of the stage and settings using its entire depth. New lighting techniques and special effects reinforced the visual impression. The pale, bluish light of the nuns' tableau was a novelty in the era of gas lighting. At the end of the first act, and during the course of the fourth act, the authors also incorporated a *tableau vivant* into the action, presenting viewers with a static scene in the manner of the contemporary panorama.

This principle of visualization on stage called for new dramatic functions in the music. The composer approaches the tableau like a stage director, commenting on the action with relevant motifs and instrumental characterization. Details are picked out of the tableau, and musical light is cast on them. The stage itself is extended, as it were, by means of distant choruses and incidental music. Cutting and montage techniques allow simultaneous cross-cutting between the various musical strata. The beginning of Act 5 (nos.20 and 21) provides an example. The distant choruses of the faithful at prayer and the offstage organ are cross-cut with the dialogue, and they participate interactively: Robert is prevented from signing a pact with the Devil by the musical evocation of the heavenly sphere. The following terzet (no.23) is of historical importance because this was the first time Meyerbeer introduced into a score the technique for heightening tension described by Charles Asselineau as 'tenir l'esprit en suspens', and often known as the 'suspense effect' in 20th-century cinematic thrillers. At the moment when a decision must be made, the action suddenly freezes. Robert is held spellbound, unable to decide between the opposing metaphysical powers. As the allotted span runs out, time itself is felt as the sole force of dramatic momentum. In contrast, the real climax of the action, Bertram's fall into hell, is of very short duration; because of the work's metaphysical structure, Meyerbeer required another closing image for the final apotheosis of the victorious heavenly power. In his next two operas, the 'suspense effect' is introduced with increasing dramatic force into the final climax.



On 28 February 1831 Véron had been appointed the first private director of the Opéra, although he still had access to considerable state subsidies. No expense was spared to make his first première as director an outstanding theatrical event. He had the services of leading experts in Edmond Duponchel (theatrical director), Pierre Ciceri (stage designer), Filippo Taglioni (choreographer) and François-Antoine Habeneck (conductor). The leading roles were created by Adolphe Nourrit (Robert), Nicolas Prosper Levasseur (Bertram), Laure Cinti-Damoreau (Isabelle) and Julie Dorus-Gras (Alice), with the prima

ballerina Marie Taglioni (Hélène). Its success was unparalleled in operatic history: by 1893 *Robert* had been performed 756 times at the Opéra alone, and it was very soon being produced in all the leading opera houses of the world, as well as in countless provincial theatres.

The revolutions of 1789 and 1830 in France made it possible for the first time to see history as a dynamic process determined by social groups rather than individual rulers. The revival movements of the 1820s and 30s reacted by formulating new philosophical concepts of history. The neo-Catholic philosophy of Félicité Robert de Lammenais, and the Saint-Simonians with their concepts of a social utopia, propounded the notion of a self-perfecting human history to replace Christian ideas of redemption. The Opéra had a long tradition of concerning itself with historical events. Revolutionary incidents had already been reflected in Auber's *La muette de Portici* (1828) and Rossini's *Guillaume Tell* (1829); the dangerous nature of collective mass hysteria was also a theme of the choral pogrom scenes in Halévy's *La Juive* (1835). It was not surprising, therefore, that after considering and rejecting various projects Meyerbeer came to an agreement with Scribe and Véron, on 23 October 1832, for an opera centred on the bloody events of the Massacre of St Bartholomew's Day in 1572. However, difficulties soon arose. Meyerbeer thought that Scribe's outline lacked the 'colour of the chosen period' (*Briefwechsel*, ii, 232), and stopped work on the opera. He broke his contract with Véron, paying the stipulated penalty of 30,000 francs, which was repaid to him when the contract was reinstated on 29 September 1834. Meanwhile, he had been revising the concept of the opera with his Italian librettist Rossi. The character of Marcel, in particular, was reassessed so as to make him an advocate of the ideas behind the plot, and in this context Meyerbeer sought an authentic traditional melody to provide Protestant colour. He studied the Huguenot Psalter but eventually decided on Luther's chorale 'Ein feste Burg ist unser Gott'. Rossi's revisions were translated into French by Emile Deschamps, who also provided all the other alterations made necessary by objections from the censor. In addition, Meyerbeer developed ideas suggested by the director Duponchel and the tenor Nourrit, for whom he rewrote the duet in Act 4 (no.24).

This was the complex genesis of the first opera to present a modern concept of history. Traditionally, opera had represented history essentially as intrigue between rulers; *Les Huguenots* shows history following a dynamic of its own, largely conveyed by anonymous massed choruses. In a genre that depended on dramatic conflict between soloists, this approach called for the creation of an entirely new kind of drama. Scribe's libretto offered the usual treatment of soloists that was typical of the genre: a tragic love story between two people belonging to hostile groups, the Protestant Raoul and the Catholic Valentine. The idea that had already proved its worth in *Robert*, of letting the action spring from a failed intrigue, was skilfully combined with the historical background in the failure of Queen Marguerite's attempt to reconcile Catholics and Protestants through arranged marriages. However, two new techniques were necessary to make it clear that this private intrigue had been wrecked by the independent dynamic of the historical situation: the musical and dramatic flow of time had to be given its own momentum and a final 'shock effect' was required.

Meyerbeer constructed the first three acts of the work as historical tableaux, richly varied in themselves and mutually contrasted, but intentionally thin in conventional plot elements. The composer's art consisted instead in illustrating the growth of the underlying tension between the two groups, a tension apparently no longer capable of control by individuals, however high their rank. The resultant failure unfolds in a new kind of dramatic dynamic – one that will finally bring all involved, without distinction, to ruin. This is clear as early as the first act, when Marcel, servant to the Huguenot knight Raoul, tries to provoke Raoul's Catholic hosts by singing the Lutheran chorale. Although he then strikes up a Huguenot war-song, Marcel's provocation has no effect on the plot. Nonetheless, the principle of the 'idyll disturbed' as a central dramatic element in the first act is already present here – and the topos of interrupted festivities was subsequently taken up again and again, from Verdi's *Rigoletto* to Schreker's *Der ferne Klang*. In this first act of *Les Huguenots*, the idyllic atmosphere is particularly well realized in the page's aria (no.6b). Its coquettish profusion of coloratura and rocking rhythm display the refined courtly colour that is evoked in Act 2 against the setting of the château of Chenonceaux. On the occasion of her own marriage, arranged to bring peace, Queen Marguerite wishes to marry her lady-in-waiting Valentine to Raoul. So far the audience is presented with an entirely traditional attempt to depict politics as a matter of private intrigue on the part of rulers. The failure of this attempt is shown on stage in a reversal of fortune deriving from the *quid pro quo* of the action: Raoul wrongly believes Valentine to be the mistress of the Catholic nobleman Nevers. At this point the queen has difficulty in preventing this twist of the plot from

3. Giacomo Meyerbeer

leading to open battle between the parties. The fragility of the courtly idyll arises from the way in which private misunderstandings caused by the opposition of hostile groups immediately assume political significance.

This state of affairs is displayed in Act 3 in a kind of sociological panorama involving all classes of society. The perspective of the urban masses dominates the act (see Gerhard, 1992). As the soloists retreat into the background, the depiction of collective confrontation comes to the fore, twice rising to a climax which is prevented only at the last moment from turning to bloody slaughter. On the first occasion the entrance of a troupe of gypsies momentarily distract the crowds; here again the ballet is incorporated into the action. The second threatened clash between the hostile parties is prevented by the queen, who appears by chance. In terms of music drama, Meyerbeer builds up this group confrontation by contrasting the simultaneous sounds of a Huguenot soldiers' chorus and a litany sung by Catholic maidens, and by accelerating the distribution of phrases in the four sections of the 'Choeur de la dispute' (no.20). The construction of the first three acts transforms the dynamic of dramatic suspense, from provocation with no result (Act 1), to the failure of a courtly scheme (Act 2) and so to double confrontations (Act 3). The Consecration of the Swords scene (Act 4, no.23) intensifies mass hysteria to the point of ritual fanaticism. The mediant modulations of this scene are regarded as a fine example of advanced 19th-century harmonies. Meyerbeer enhances the harmonic effect by extreme dynamic contrasts and the louring combination of horn, bassoon and trombones. The final suspense scene before the dramatic catharsis is underpinned psychologically: Valentine lets slip the confession of her love for Raoul at a moment of the utmost danger (duet, no.24). Meyerbeer reacts to this extreme situation with a freely through-composed structure determined by the psychological situation in the dialogue. The central section, 'Tu l'as dit', has been analysed as the paradigm of a self-contained melodic period, representing a specific 'musical culture' (Dahlhaus, 1980, p.10). In its dramatic context, it signals the psychological parting of the characters at the moment of greatest peril: Raoul must leave at once to warn the Huguenots. As in the terzet in *Robert*, the passage of time becomes dramatically crucial. With time running out, a utopian scene emerges from this moment of extreme tension: a tragic love that can never be realized is conjured up as a dream of happiness in a moment of fulfilment.

The constant energizing of the musical passage of time culminates in the closing catastrophe, which dramatizes the historical core of the action, the Massacre of St Bartholomew's Day (Act 5, no.27). In the foreground Valentine and Raoul are united by Marcel in an impromptu wedding. Meyerbeer used the newly invented bass clarinet for the first time to accompany this plane of the action. At the back of the stage, the Huguenot women and children have taken refuge in a chapel and are singing the Lutheran chorale as fanatical bands of Catholic murderers enter the chapel. The final moment of drama grows from Meyerbeer's ingenious idea of introducing the chorale at key moments throughout the scene at a progressively accelerated tempo. The tune is taken up by the protagonists just as the murderers reach them. The final stage of acceleration ends with the melody disintegrating into fragments, together with the chorus of murderers. The principle of progressive quickening determines the spatial and temporal construction of the entire scene, and the various stages of acceleration correspond to precise stage directions: the gradual spread of the massacre is expressed simultaneously in terms of space (as the murderers approach), drama (the interaction between the murderers and the protagonists) and music (the disintegration of the chorale melody). Meyerbeer emphasizes the fact that this structural concept embodies the work's central philosophical statement by introducing the sequence described above in the opera's orchestral prelude: the dynamics of the historical process become perceptible in the acceleration of the chorale melody.

The inclusion of the murderers' chorus in the disintegration of the chorale indicates that the perpetrators as well as the victims of the massacre are being overrun by the unleashed forces of the historical process. This is confirmed in the stage action of the final scene: Valentine, who alone has survived the massacre unharmed, is shot by her father, and in a last silent entrance the queen is confronted by the body of her favourite lady-in-waiting, riddled with bullets. With the theatrical means available in the 19th century, the negation of any heroic concept of history could not have been more shockingly staged. The historical pessimism evident in this work undoubtedly also has its roots in Meyerbeer's own history. As a devout Jew, and often enough the subject of anti-Semitic attacks himself, he was well aware of the ever-present danger of new pogroms. Fear of mob hysteria, however, was something that all his contemporaries could imagine: the bloody scenes of the July Revolution had taken place just six years before the opera had its première, and those of the French Revolution were only 40 years in the past. The radical nature of the opera's historical and philosophical dimensions, however, was not evident to Meyerbeer's contemporaries, who usually understood it to be identifying with the Protestants, the victims of the story.

In his instrumentation, Meyerbeer had broken with the Italian layout of the orchestra and created the Franco-Italian synthesis often erroneously attributed to Wagner. Fétis mentions the fact in his discussion of the première: 'The novelty of the instrumentation gives the ensemble a character of creation' (Coudroy, 153). Meyerbeer's writing for wind developed into an independent stratum that could no longer be reduced to the four-part framework of the setting for strings. Novel sonorities appear with increasing frequency; for instance, an english horn is used instead of oboes between the flutes and clarinets in the orchestral prelude. There is an extreme contrast of register in the 'Chanson Huguenote' (no.4) between a piccolo and bassoon, double bass, bass drum and cymbals, emphasizing the frenetic character of the song.

In spite of its success with the public, the première of *Les Huguenots* on 29 February 1836 initially baffled the critics. They could see that the work was basically innovatory, but it was thought by many to present an unfortunate contrast between the poverty of action at the beginning of the opera, and the extremely rapid progress of the plot in the two closing acts. Subsequent performances, however, established its success, and it was received with increasing enthusiasm at every performance. The leading roles were taken by Dorus-Gras (Marguerite), Cornélie Falcon (Valentine), Nourrit (Raoul) and Levasseur (Marcel), with Habeneck as conductor. Nourrit was also responsible for the stage direction and this time the

settings were painted by four different designers. The work became the most successful opera of the 19th century; it was the first to have over 1000 performances at the Opéra, a record that to this day has been broken only by Gounod's *Faust*. Its dissemination through the rest of the world was delayed particularly in Catholic countries by censorship, but it eventually had an international success to match that of *Robert*.

Meyerbeer was aware that with the epic dramatic writing of *Les Huguenots* he had reached the utmost limits of what was possible within the genre's conventions in the 19th century: in the printed score of the Paris production, not even the heroine Valentine has an aria to herself. Soon after the première he determined to base his 'dramatic system on indestructible pillars with a third work' (letter of 20 May 1836, *Briefwechsel*, ii, 527). However, he encountered significant difficulties. Although he considered a number of subjects, he finally settled on two possible projects: *L'Africaine* and *Le prophète*. The genesis of these works is closely interwoven. Meyerbeer began work first on *L'Africaine*, but abandoned it on 1 August 1838 when Falcon, for whom he had intended the title role, had lost her voice. A first version of *Le prophète* was deposited with a Parisian notary on 25 March 1841. Difficulties in the casting, however, delayed production. Meyerbeer had intended the exalted, missionary character of the title role for the leading tenor, Duprez, who sang with full chest voice in the upper register. In December 1843, when it transpired that Duprez was no longer up to the demands of the part, Meyerbeer deferred composition, and over the next four years he conducted fruitless negotiations with the Opéra over alternative singers, coming to an agreement only when Roqueplan and Duponchel took over the directorship on 1 July 1847. When he heard Pauline Viardot, Meyerbeer revised his ideas of the part of Fidès; it is a unique role, one of the great parts of the century, demanding the vocal range of mezzo-soprano and soprano in its dramatic coloratura. In contrast, the tenor part was simplified for Gustave Roger, and as a result the entire original dramatic concept was revised. During rehearsals, Meyerbeer made more cuts, and the opera had its première in this form on 16 April 1849.

Between 1851 and 1853 Meyerbeer resumed work on the first version of *L'Africaine*, the 'vecchia Africana', which he had abandoned in 1843. He made basic revisions to Acts 1 and 2, and transferred the action of Acts 4 and 5 from Central Africa to India. After a brief period of work on the score in 1857, he again let it lie until 1860. Despite another interruption as a result of Scribe's death on 20 February 1861, Meyerbeer completed his rehearsal score on 29 November 1863. However, he was unable to put his own finishing touches to the work since he died a few weeks after rehearsals began. Fétis made a performance version from the extensive score material, and the opera had its première on 28 April 1865.

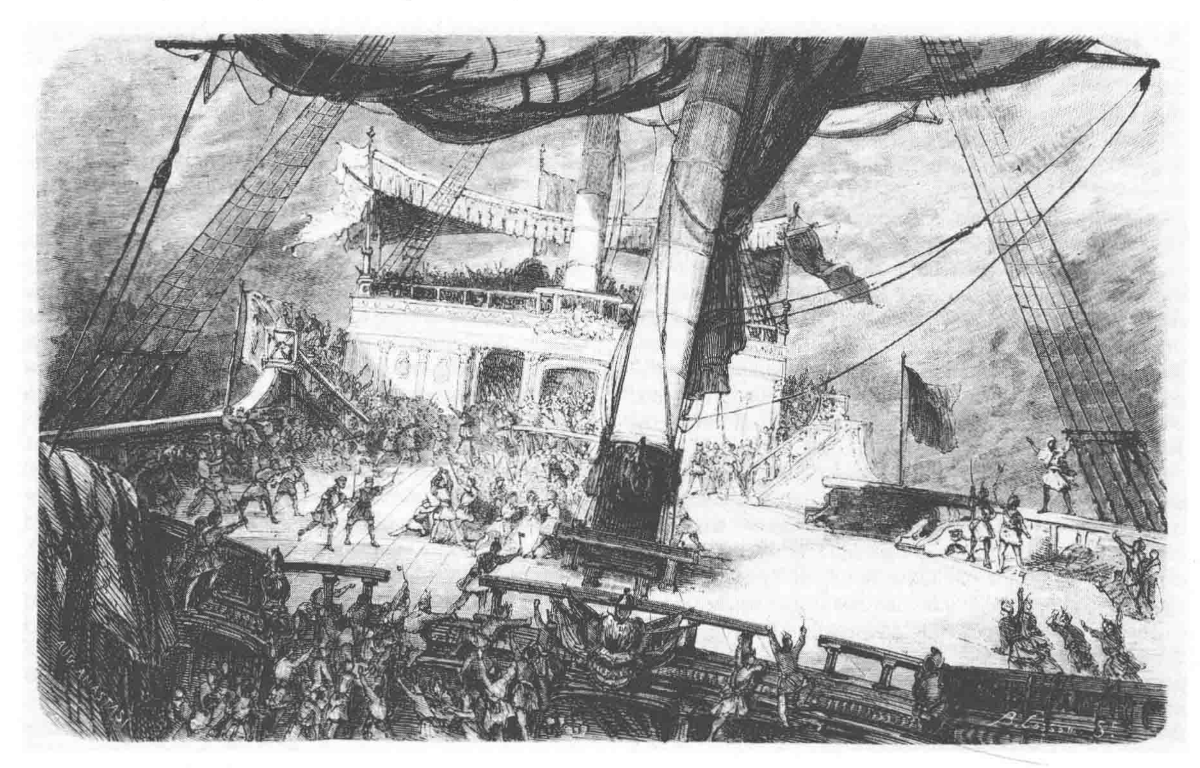
The dramatic parallels between the operas are obvious: in both, the historical action is presented from the viewpoint of a paradigmatic individual. There is a charismatic leader at the centre of each: Jean de Leide (John of Leiden), leader of the Anabaptist movement of the Reformation period, and the seafarer Vasco da Gama. Like Robert before them, the protagonists seem to be motivated by metaphysical powers, as is evident from the fact that their respective missions are revealed in dream scenes. In *Le prophète*, Meyerbeer was the first composer to use the leitmotif as an indication of what lies ahead, a function described later by Wagner as *Ahnung* or premonition: the themes of the coronation scene in Act 4 have already been introduced in instrumental form, and distanced. In both operas, the moment of peripeteia is marked by a spectacular stage effect: in *Le prophète* it was the first successful use in any theatre of an electric spotlight, which Meyerbeer had specially made by the physicist Léon Foucault. Meyerbeer's multi-media conception caused him to reject older notions of tone-painting at this point. His contemporaries felt they were blinded by a 'real sun'. Technologically, the sunrise effect resulted from the most developed technology of the time, and the work itself became a synonym for a new age; the prophet was seen, as Wagner put it, as the 'prophet of a new world'.

L'Africaine featured the first completely revolving stage set, on which the ship of Vasco da Gama's rival could be shown changing course. Both these stage effects marked crucial moments in the action: Jean's final guilty involvement in the historical process, and the premature failure of Vasco's mission of colonization. The change of fortune also forms part of analogous scenes: Sélika saves Vasco by forcing Nélusko to testify, falsely, that she and Vasco are married, while conversely, in the coronation scene, John forces his mother to disown him. Meyerbeer realized this dramatic climax of the opera on a variety of scenic and musical levels: the themes of the stretta of the aria, a ritual Anabaptist chorus and the contrasting chorus of the people are interwoven phrase by phrase (no.24d). There are also similarities in the protagonists' respective opponents. Nélusko, as the embodiment of specific ideas, is most closely comparable to Marcel in *Les Huguenots*. He stands for the unconditional rescue of his people from colonization and is thus opposed to Vasco's metaphysically based mission. Similarly, Jean's mother Fidès is the opponent of his mission as prophet of the Anabaptists: she symbolizes divine providence and forces him to give up his blasphemous ambition. The instrumentation of the two operas is also comparable. Differentiation of the woodwind in tutti is now the rule. In the autograph score of *Le prophète*, Meyerbeer usually began by setting the middle registers (horns, clarinets) very densely and did not thin the writing out until later. The coronation scene (Act 4, nos.23–4) calls for a children's chorus (with soloists), two mixed choruses, a complete saxhorn family and an organ for four hands. In *L'Africaine*, Meyerbeer adds only a few exotic touches connected with the subject of the opera. The *grand air* (Act 4, no.15) brings in a saxophone, which Meyerbeer had already planned to use in *Le prophète*. There is also three-part writing for strings combined with three flutes (Act 5, finale, no.22).

However, the specific concepts in the dramaturgy of the two operas are very different. *Le prophète* combines the philosophical view of history seen in *Les Huguenots* with the metaphysical image of humanity in *Robert*. To provide the historical colour of the Anabaptist revolts, Meyerbeer composed the chorale 'Ad nos, ad salutarem undam', repeated many times over in the course of the opera, like the chorale of *Les Huguenots*. The sacred colour becomes unctuously grotesque when the chorale is given to the trio of Anabaptist preachers.

The idyllic strand of *Les Huguenots* is also continued. Meyerbeer found the contrasting colour of the idyll in the

realm of the pastoral, evoked by the dialogue between two clarinets at the beginning of the opening tableau. The thematic structure of the score is considerably more dense than in *Les Huguenots*, however, owing to the function of pastoral themes in the discourse. The 'idyll disturbed' becomes not merely an external dramatic pattern, as in the first act, but provides metaphysical motivation for the protagonist. Directly after his dream vision, evoking his vocation to become a prophet, John describes the dream of idyllic private happiness with his bride Berthe in his *pastorale* (Act 2, no.8), as a counterbalance to the Anabaptists. This idyll symbolizes the second of the metaphysical forces between which John is torn, like Robert before him. For a time Meyerbeer even thought of repeating the melody of the *pastorale* as a leitmotif whenever the action of the opera referred to Berthe or Jean's mother Fidès, who embodies the power of heaven (*Briefwechsel*, iii, 539). Consequently the *pastorale* is quoted in the army camp scene in Act 3 (*scène*, after no.16), when John, longing for his mother, wishes he could give up his prophetic calling. The reference to the closing terzet (Act 5, no.28) was originally to be played on an E♭ saxophone, both here and in the suicide scene. The theme of the pastoral passage in the final trio is derived from an inversion of the leitmotif. When the three principals – for the first and only time in the opera – meet in happy circumstances, the pastoral passage symbolizes the utopia of an idyllic simple life.



Here the dramatic treatment of suspense arises not from the passage of time, as in the analogous passages of Meyerbeer's earlier works, but from the extreme instability of the situation. At any moment Berthe will discover that her lover and the hated prophet are one and the same; in the event the revelation is made quite casually by a minor character. The action of *Le prophète* culminates in an extreme example of the final drama of the 'shock effect', previously encountered in *Les Huguenots*: Berthe, having set out to kill the prophet, stabs herself in horror. Extensive cuts were made to this strand of the plot during rehearsals and a version of Berthe's dying monologue, which at one time Meyerbeer had intended to be accompanied by the saxophone, was also cut, with the consequent abandonment of saxophone instrumentation for the leitmotif in the third act.

Despite these cuts, Berthe is far more clearly drawn as an active female principal than her predecessor Valentine. Her character develops from a simple country girl to a figure of avenging authority. If Fidès incarnates the principle of divine forgiveness, Berthe is driven by a positively Biblical anger that eventually becomes self-destructive. In the eponymous heroine of *L'Africaine*, who is the determining figure throughout the action, Meyerbeer created a synthesis of these two types of female character. In the closing tableau of *Le prophète*, the topos of 'festivities disturbed' grows to apocalyptic dimensions. The music constantly presents the idea of bacchanalian festivities, and the bacchanal itself (no.29a) was reduced to its essential elements only just before the première. John's drinking song ('Couplets bachiques', no.29b) functions as a symbol of the catastrophe, and light is cast on the metaphysical motivation of his downfall when the pastoral theme of the terzet is heard in its orchestral introduction: John's ruin is shown to be the outcome of sin against the divine power, symbolized by the pastoral colour. The spectacular explosion of the palace is realized in purely scenic terms, while the text of the drinking song, still heard, identifies this apocalypse as purgatory. As in *Les Huguenots*, both parties to the historical event, the Anabaptists and the army of the legitimate emperor, are destroyed. This philosophical dimension is not suited to the closing scene of *L'Africaine*. Sélika's *Liebestod* under the manchineel tree remains a private tragedy with no meaning outside itself, and of no significance for Vasco's mission. Of the two operas, it is *L'Africaine* that points the way forward more clearly; the *drame lyrique* of the second half of the century can be sensed in the dramatic writing of the closing scene. Like Wagner's music dramas, *L'Africaine* concentrates exclusively on the action of the principals. The media art and video clips that shape our viewing habits in the early 21st century seem like an aesthetic step backwards from the mature Meyerbeer's multi-media projects.

The première of *Le prophète* was a triumph of theatrical history, and its success was undoubtedly heightened by its unintentional political topicality following the 1848 revolutions. The main roles were sung by Viardot (Fidès), Roger (Jean) and Jeanne Anaïs Castellan (Berthe); Eugène Scribe directed the production, and the orchestra was conducted by Girard. Like Meyerbeer's other grand operas, *Le prophète* retained its place in the repertories of all the major international opera houses for decades, and was in the repertory of the Paris Opéra until 1912. The spectacular Paris première of *L'Africaine* was created by Marie Sasse (Sélika), Marie Battu (Inès), Emilio Naudin (Vasco) and Jean-Baptiste Faure (Nélusko), in a production directed by Alexis Colleville and conducted by Georges-François Hainl (fig.4). Being so clearly conceived as a work for soloists, it was the most frequently performed of Meyerbeer's operas in the 20th century, and has been produced wherever adequate interpreters could be found, although most such performances have embodied disfiguring cuts.

4. Last years. Meyerbeer's undisputed leading position in international musical life brought him many honours and many requests for help. On 11 June 1842, after the change of government in Prussia had brought the enlightened monarch Friedrich Wilhelm IV to the throne in 1840, Meyerbeer was appointed Generalmusikdirektor of Prussia through the offices of Alexander von Humboldt. However, he took permanent leave of absence in 1846 because of constant disputes with the intendant, Küstner, and on 26 November 1848 he resigned the post although he remained director of the Royal Court Music. The works he conducted most frequently were those of Gluck and Mozart; among his contemporaries, Spohr occupied a prominent place in his concerts. He also conducted many performances of his own works on his numerous tours.

Meyerbeer wrote several occasional works for the Prussian court; the most important is the patriotic festival Singspiel *Ein Feldlager in Schlesien*, written for the re-opening of the Berlin opera house on 7 December 1844 after a fire. The author of the libretto was named as the Berlin music critic Ludwig Rellstab, but in fact Rellstab merely translated and versified Scribe's outline. The opera tells the story of an incident from the life of Frederick the Great, and the Swedish soprano Jenny Lind, whom Meyerbeer had discovered in Paris in 1843, excelled in the leading role of the gypsy Vielka. A revised version tailor-made for the same singer was performed in Vienna

4. Finale of Act 3 of 'L'Africaine', Paris Opéra, 1865: engraving by B. Cosson after Auguste-Paul-Charles Anastasi from 'L'illustration' (6 May 1865); the sinking of Don Pédro's ship on stage caused a sensation

in 1847 under the title of *Vielka*. Meyerbeer later used six numbers from this opera in *L'étoile du nord*, one of his two operas written for the Opéra-Comique in the long interval between *Le prophète* and *L'Africaine*. It had a new libretto by Scribe, and the première was on 16 February 1854. On 4 April 1859 it was followed by *Le pardon de Ploërmel* (also known as *Dinorah*). This time the libretto was not by Scribe but by Jules Paul Barbier and Michel Florentin Carré. Both operas employ the procedure that had proved its worth in *Le prophète*, combining various motifs within the mad scene typical of the genre: in *L'étoile* (Act 3, finale) this links quotations from the preceding acts as 'fragments of memory' (*PEM*). Vielka's famous virtuoso flute aria is cleverly used to bring about a cure, a theme which had been favoured subject matter in *semiseria* opera since Paer's *Agnese*. Dinorah's central mad scene (Act 2, no.11) unites analogous dramatic themes to create an extensive scenic complex: in the aria in which the heroine dances with her shadow, her mental disturbance is signalled by excessive virtuosity. The ensuing melodrama is a montage of themes setting out the psychological motivation of her madness. Both works became central to the repertory of the Opéra-Comique in following decades. Outside France, versions were performed with recitative composed by Meyerbeer to replace the spoken dialogue.

Among his many other minor and occasional works, Meyerbeer's lieder deserve special mention. He developed the French salon *romance* into a small-scale drama. Many settings of German texts, such as Heine's *Die Rose, die Lilie, die Taube* and Müller's *Der Garten des Herzens*, may be ranked with the works of the great German lieder composers. Fétis commented that the *romance* was 'a product of Germanic genius . . . as it alone has these forms, these details, these hints, which complete a thought and give it an air of creation' (*Revue et gazette musicale*, 1841).

Meyerbeer was regarded as the only composer to have united the national schools of Europe. In his grand operas he created the prototype of a synthetic and synaesthetic work in which different arts merge to create new perspectives. The cosmopolitan nature of his conception has never been in dispute; however, it is this very aspect that nationalistic criticism was bound to see as a flaw. He was the first composer to be given a funeral cortège worthy of a state funeral, on both sides of the Rhine, which his body crossed for the last time in a special train on the night of 6 May 1864.

5. Reception and research. The frequent attacks on Meyerbeer in his native land of Germany always distressed him. The nationalistic and sometimes anti-Semitic background to these attacks, however, is usually obvious. Robert Schumann descended to the level of such criticism in his review of *Les Huguenots*, which left the famous Viennese music critic Hanslick uttterly baffled. Hanslick – usually a champion of pure instrumental music – could explain Schumann's condemnation only through Schumann's own obvious lack of talent for opera: 'A composer who, after close and honest study of *Les Huguenots*, is unable to discover even a single merit in its music, who has not a good word to say for it, may safely be assumed to be no composer of opera himself' (Hanslick, 1875). Schumann's criticism, he added, therefore represented only 'a memorable contribution to our knowledge of Schumann, but not of Meyerbeer'. Other reviewers had clearer motives: Heine, for instance, did not hesitate to

use his pen to blackmail the vulnerable but wealthy composer.

The ambiguous relationship of Richard Wagner to Meyerbeer, however, cannot be explained in any such way; it can be accounted for only as a case of psychological patricide. Wagner took the opportunity to approach Meyerbeer on 20 August 1839, in Boulogne, to ask for financial support and help in promoting his plans for French operas. Meyerbeer was always ready to help his fellow countrymen, and was moreover convinced of the young composer's gifts. He therefore not only gave Wagner money but recommended his work in Paris, Berlin and Dresden. Without his active support neither *Rienzi* nor *Der fliegende Holländer* would have been performed so soon. In Paris, Wagner reacted with some remarkable and excitable letters, signing off with such phrases as 'your property', 'your most humble slave', somewhat to Meyerbeer's surprise (*Briefwechsel*, iii, 262, 285), but he continued his support for Wagner. However, in November 1846 he refused a request for another 1200 thalers (*Briefwechsel*, iv, 147). At this time Wagner was well provided for by his appointment as Hofkapellmeister to the King of Saxony.

After the failure of the 1848 revolution, Wagner saw his own career greatly endangered. Meyerbeer's latest work sent him into a state of enthusiastic euphoria: 'At this time I also saw the "Prophet" for the first time – the prophet of the new world: I felt happy and exalted' (letter of 13 March 1850). A few months later, he wrote an anti-Semitic pamphlet attacking Meyerbeer ('Das Judenthum in der Musik', *NZM*, 6 September 1850). It is as extravagant in tone as were his earlier articles in Meyerbeer's praise. At the time of the *Tannhäuser* scandal in Paris, Wagner believed that Meyerbeer was his secret enemy, a wholly mistaken idea. Even after Wagner's anti-Semitic pamphlet, Meyerbeer had followed his development with interest, and on hearing of the fiasco of the production of Wagner's opera, wrote in his diary: 'It seems to me that to find fault in so unusual a way with what is, after all, a very noteworthy and talented opera must be the work of cabals, not of genuine judgment, and in my view it may even be useful to the opera in subsequent performances' (Becker, 1980. p.128). The experienced composer was right in his assessment, for leading men of letters such as Baudelaire now began to speak up for Wagner. However, Wagner withdrew the opera of his own accord.

Wagner's behaviour cannot really be explained by the anti-Semitism endemic to his time. He could not admit to himself that – like all other operatic composers – he owed much to Meyerbeer's ideas. His early works are very close, even in their details, to Meyerbeer's style of grand opera. Hanslick himself noticed the connection: 'Richard Wagner, whose *Rienzi*, *Tannhäuser* and *Holländer* cannot be imagined without the example of Meyerbeer, judges Meyerbeer not as an artist but as a criminal is judged' (1875). Even the Wagnerian idea of a *Gesamtkunstwerk* is unimaginable without the synaesthetic and conceptual features of grand opera.

Such attacks wounded Meyerbeer deeply, since they came almost exclusively from his native land. For the same reason, however, they could not affect the international dissemination of his works. Even the growing nationalism of the late 19th century did no serious damage to the reception of Meyerbeer's operas: only the eventual international trend towards a return to the simplicity and classicism of the 17th and 18th centuries could significantly affect his popularity. That trend began in the 1920s, under the influence of the *Neue Sachlichkeit* ('new objectivity') opposed to Meyerbeer's metaphysically based and theatrically demanding concept of opera. In Germany, the National Socialist ban on performances of Meyerbeer was disastrous.

After World War II, the great singers of the century were responsible for the revival of his works, including Sutherland, Horne, Price, Gedda, Domingo and others. At the same time unprejudiced musicologists began studying the available sources. The great pioneer of German operatic research, Heinz Becker, and his wife Gudrun, edited the letters and diaries. This edition set standards for scholarship of the 20th century, and the Beckers' work is being continued by Sabine Henze-Döhring. A new interpretation of Meyerbeer's historical role was also necessary. Becker's arguments in his many studies were predominantly defensive, designed to prove the injustice of nationalistic prejudice. Since then, there has been a wide measure of agreement among younger specialists that Meyerbeer should be ranked among the great composers. It is impossible to imagine the musical history of Europe without him. The most important task that still remains is to produce a critical edition of the works, and this has been made possible, in particular, by the rediscovery of the autograph scores in Kraków, and the examination of important items in the Bibliothèque Nationale in Paris and large quantities of material relating to the premières of the operas, now at the Bibliothèque de l'Opéra.

MATTHIAS BRZOSKA

Meyerovich, Mikhail Aleksandrovich (*b* Kiev, 26 Feb 1920; *d* Moscow, 12 July 1993). Russian composer and pianist.

He graduated from the Moscow Conservatory (1943–4) where he studied composition with Anatoly Aleksandrov, Glière and Litinsky and the piano with Yakov Zak. He was a member of the Union of Composers and worked in a variety of genres including opera and ballet; he wrote numerous symphonic and chamber works in addition to music for children and cartoon films (for which he received a State Prize). His individuality is most striking in his children's music, with its vivid imagery, bold thematism and subtly-styled, fascinating intrigue. His treatment of 'instrumentalism' – with theatrical elements, original approaches to formal problems and instrumental goupings – is notable in his concertos and chamber works. His often lyrical creative character is marked by his optimistic perception of life and humorous inclination, both admirably displayed in the Second Chamber Symphony and the music for the cartoons *Yozhik v tumanye* ('The Hedgehog in the Fog') and *Lisa i zayats* ('The Fox and the Hare').

WORKS
(selective list)

Stage: Printsessa Kaguya (ballet, after Jap. tale), 1977; Trilogiya (ballet, after V. Mayakovsky); Kukla Nadya [Nadya the Doll] (children's musical comedy), 1980; O chyom rasskazali volshebniki [What the Magicians Told of] (children's musical comedy), 1980; Zhizn' i priklyucheniya Kotofeyeva/Kontsert dlya treugol'nika s orkestrom [The Life and Adventures of Kotofeyev/Conc. for Triangle and Orch] (op, after tales by M. Zoshchenko), 1981; 7 Robinzonov [7 Robinsons] (operetta), 1985

Mandelstam), Bar, cl, va, 1980; Semeynïy kontsert [Family Concerto], 1v, vn, pf 4 hands, 1980; Vesyolïye pesni [Cheerful Songs] (E. Lear), 1v, pf, 1980

Arrs. of Belorussian and Jewish songs, 1v, pf, 1942–3; also music for films and cartoons

ALLA VLADIMIROVNA GRIGOR'YEVA

Meyerowitz, Jan (*b* Breslau [now Wrocław, Poland], 23 April 1913; *d* Colmar, 15 Dec 1998). American composer of German birth. He studied at the Hochschule für Musik, Berlin, with Walther Gmeindl and Zemlinsky; in 1933 he left Germany and went to Rome, where he was a pupil of Respighi and Casella (composition) and Bernardino Molinari (conducting) at the Accademia di S Cecilia. In 1946 he married the French singer Marguerite Fricker and emigrated to the USA; he became an American citizen in 1951. A strong believer in the role of music in education, he held teaching positions at the opera department of the Berkshire Music Center (1948–51) and at Brooklyn (1954–61) and City (1962–80) colleges, CUNY. He lectured frequently for German radio services and wrote a monograph on Schoenberg (1967). He also appeared as a pianist and conductor, mainly in Italy. His awards include two Guggenheim fellowships (1956, 1958) and an NEA grant (1977). On his retirement from CUNY in 1980 he settled in France.

As a composer, Meyerowitz has adhered to tonality and attempted to build his own style on Classic-Romantic traditions. Occasionally his music betrays the influences of Schoenberg and Berg. Meyerowitz considers Italian neo-classicism to have been the principal influence of his formative years, while the lyric expressionism of his operas testifies to 19th-century ideals (Meyerbeer, Verdi, Ponchielli). Without abandoning the European substance of his style, he utilized typically American idioms in his operas on American topics. *The Barrier*, on a libretto by Langston Hughes dealing with the racial problems in the South, was performed on Broadway (1950) and revived by the Teatro S Carlo, Naples (1971).

WORKS
only those composed after 1944

Ops: Simoon (P. Stephens, after A. Strindberg), 1948; The Barrier (2, L. Hughes), 1950; Eastward in Eden (5 scenes, D. Gardner), 1951, renamed Emily Dickinson; Bad Boys in School (Meyerowitz, after J. Nestroy), 1953; Esther (3, Hughes), 1957; Port Town (1, Hughes), 1960; Godfather Death (3, Stephens), 1961; Winterballade (3, after G. Hauptmann), 1967

SIEGMUND LEVARIE

Meyer-Siat, Pie (*b* Ribeauvillé, Haut-Rhin, 15 Oct 1913; *d* Schiltigheim, Bas-Rhin, 4 April 1989). French musicologist. At the University of Strasbourg he took a degree in philosophy (1937), the agrégation in German (1948) and, with a dissertation on the Callinets, the doctorate in musicology (1962). From 1948 he taught German at the Lycée Kléber in Strasbourg. He devoted his research to the study of organ building in Alsace, in particular organ building at the end of the classical period which, in Alsace, extended into the mid-19th century. At first he was interested in the Callinets; the best-preserved organ by Joseph Callinet is in Mollau, a village in the Haut-Rhin at the bottom of the Thur valley where Meyer-Siat's father was a schoolteacher. He extended his research to other 19th-century Alsatian builders, and produced an exhaustive work on the most important of them, the Stiehr-Mockers. His articles in *Les cahiers de la Société d'histoire de Saverne* are concerned with lesser builders (the Sauers, N.A. Lété, the Moellers, Pierre Rivinach, Ludwig Geib, Sébastien Krämer, Nicolas Hellé, Johann Gottlob Sachse, Antoine and Aloïse Meyer, Jacques Henn, J.N. Hesse, Jacques and Jean Erckmann and Georg Wegmann).

Meyer-Siat's work is characterized by its pioneering approach (the Callinets, now a familiar subject, were scarcely known when he became interested in them) and its soundness, the product of limitless dedication, a rigorous method of investigation and perfect knowledge of the subject.

CHRISTIANE SPIETH-WEISSENBACHER

Meyer von Schauensee, Franz Joseph Leonti (*b* Lucerne, 10 Aug 1720; *d* Lucerne, 2 Jan 1789). Swiss organist and composer. He was a member of an aristocratic Lucerne family, the son of Joseph Leonti and his wife Cäcilia (née Rusconi). He was taught the organ, cello and violin (the last by Galimberti in Milan 1740–42). In 1738 he entered the Cistercian monastery of St Urban but left after a year. In 1742–4 he served in a mercenary regiment in Sardinia and on his return, in keeping with his aristocratic background, worked in public life in Lucerne (1744–1752), while also following his musical interests. Having already taken minor orders, he became organist at the collegiate church of St Leodegar und Mauritius in Lucerne (1752), and rose to become successively titular chaplain (1760), minor canon (1764) and prebendary (1765). In 1760 he established a public college of music, and in 1768 founded the Helvetische Konkordiagesellschaft, remaining its president until 1783. In his last years he was active as an organist.

Meyer von Schauensee was one of the first Swiss musicians to become known beyond the boundaries of his own country. According to Koller his works show him to be a representative of a late Neapolitan style, revealing many points of contact with Hasse, Sammartini and Pergolesi, as well as Handel's influence.

Meyfred, (Jean) Joseph (Pierre) Emile. *See* MEIFRED, (JEAN) JOSEPH (PIERRE) ÉMILE.

Meylan, Pierre (*b* Lucens, Vaud, 22 Oct 1908; *d* Morges, 7 May 1974). Swiss musicologist and critic. After studies in Lausanne, Halle and Leipzig, where he took a degree in social sciences and literature, he taught at Vevey and Lausanne (1940–70). In 1954 he became editor of the *Revue musicale de Suisse romande* (formerly *Feuilles musicales*) and director of the Editions du Cervin at Morges; he was one of the authors of the *Schweizer Musiker Lexikon*. As a musicologist he was interested essentially in the relationship between music and literature, and in the musical history of the Suisse Romande. He wrote opera librettos for Sutermeister, Schibler and

Kelterborn. (*SML* [incl. complete list of writings up to 1964])

Meytus, Yuly Serhiyovych (*b* Yelizavetgrad, 15/28 Jan 1903; *d* Kiev, 2 April 1997). Ukrainian composer. The thriving cultural life of his native city proved important for the young Meytus. His first teacher was Gustav Neuhaus; Meytus later continued his studies with the latter's son Heinrich. He then studied composition with S.S Bogatïryov at the Khar'kiv Institute of Music and Drama (1923–31) and it was while Meytus was still a student that the influential stage director Les Kurbas invited him to compose music for his innovative productions of plays by M. Kulish, *Narodnyi malakhiy* and *Myna Mazailo*. The highly refined and startling productions of Kurbas's Berezil company made a profound impact on Meytus and developed his taste for dramatic art. During the same period he became, along with V. Kostenko, a founding member of the Association of Revolutionary Composers of Ukraine which was active until its dissolution in 1932. During the later 1920s he started making arrangements of folk music from Ukraine, Russia and elsewhere; some of these arrangements won praise from Bartók and Meytus soon incorporated folk elements into his own works. In 1927 he composed his first orchestral suite based on Ukrainian song styles, but it was with his second orchestral suite, *Na Dniprel'stani* ('On the Dnepr Dam') of 1929, that Meytus won international recognition. With its pre-minimalist rhythmic ostinatos and vast percussion section, the work reflected the current captivation with industry and is in many senses a quasi-futurist hommage to machine power. In the late 1930s he began working in the field that would undeniably become for him the most important genre, opera. His first two operatic endeavours were written in collaboration with two other composers – V.P. Rybalchenko and Tits. While living in Alma-Ata and Ashkabad during World War II, he developed an intense interest in Turkmen music and worked with Kuliyev on the opera *Abadan*, the first such work to deal with the subject of the ongoing war. Returning to Kiev in 1944, Meytus independently wrote *Moloda Hvardia* (1947), and it was with this work that he gained his first operatic success. He wrote ten additional operas between 1951 and 1997; in between composing these works he wrote occasional instrumental works and a series of stylistically refined song cycles in which he managed to condense his operatic sensibilities into miniature dramatic scenes. Although he began his career as a composer with experimental leanings and eclectic interests, his operas are profoundly conservative and display heartfelt national colouring (*Ukradene shchastia* ('Stolen Happiness'), is still in repertory in post-Soviet Ukraine). He was never able to shake off the stylistic fingerprint of socialist realism, but in his best works he created passages of elegant beauty and subtle, psychological characterization.

Mezza voce. *See* MEZZO, MEZZA.

Mezzetti, Enrico (*b* Iaşi, 17 Nov 1870; *d* Iaşi, 25 May 1930). Romanian composer of Italian descent. He was the son of the composer Pietro Mezzetti (1826–94). After studying with Musicescu (harmony), Constantin Ionescu-Gros (piano) and his father (singing) at the Iaşi Conservatory (1879–87), he continued his studies with Martucci and Gustavo Tofano (piano), Cesare Dal'Olio (counterpoint) and Alessandro Bussi (singing and composition) at the Liceo Musicale in Bologna (1888–93). On his return to Iaşi, Mezzetti devoted himself to education. At the Conservatory he taught the piano and singing, and held the directorship three times (1905–7, 1912–14, 1921–3). He also conducted orchestras, taught at several schools, and worked as a critic on the journals *Evenimentul* and *Opinia*. A composer primarily of theatrical and vocal-orchestral works, his compositional career developed around his pedagogical activities.

OCTAVIAN COSMA

Mezzo, mezza (It.: 'half', 'medium'). A word used in several different musical contexts, one of the commonest of which is the MEZZO-SOPRANO voice. In current Italian *mezza manica* means the half-position in string playing, *mezza cadenza* a half-cadence or half-close and *mezzotono* a semitone. In addition the following universally used technical meanings appear.

(1) *Mezza voce*, *mezzavoce* ('*half-voice*'). A direction in both vocal and instrumental music to produce a quiet, restrained tone, found as early as Tosi's *Opinioni* (1723, pp.20–21), where it is recommended that ascending appoggiaturas, especially those involving chromatic intervals, be performed *mezza voce*. This very specific direction is most often found in operatic scores of the 19th century: in the second act of Verdi's *Otello*, for example, Iago's narration of Cassio's dream ('Era la notte, Cassio dormiva') is marked *mezza voce*; and the opening scene of *Simon Boccanegra* is marked 'tutta questa scena a mezzavoce'. It appears also in instrumental music, for example in the slow movements of Beethoven's opp.106, 109, 125 and 131; in very similar circumstances Beethoven also used *sotto voce* (*see* SOTTO). The French equivalent in the 18th century, *à demi* or *à demi voix*, also applied to both vocal and instrumental music. *Mezza voce* is entirely different from MESSA DI VOCE.

(2) *Mezzo carattere*. A term sometimes applied in operatic parlance to a character part-serious, part-comic, as for example Elvira in *Don Giovanni*.

(3) *Mezzo-forte*, *mezzo-piano* (*mf*, *mp*). Dynamic indications implying moderation. Thus *mezzo-forte* is less loud than *forte*; and *mezzo-piano* is less soft, therefore louder, than *piano*. So vague are these directions, however, that a leading conductor has referred to *mezzo-piano* as 'the worst dynamic marking in the world'.

See also TEMPO AND EXPRESSION MARKS.

(4) *Mezzo-legato*, *mezzo-staccato* (and *legato-staccato*). Articulations normally designated by a slur with staccato dots beneath it.

□

Mezzo, Pietro de. *See* DEMEZZO, PIETRO.

Mezzo-contralto (It.). A term first used in the 19th century to describe a voice with affinities to both the mezzo-soprano and the contralto. Singers to whom it has been applied include Maria Malibran and Rosine Stoltz. The term is little used today, but it could usefully be applied to the voices of such mezzo-sopranos as Marilyn Horne or Cecilia Bartoli to distinguish them from the lighter and higher MEZZO-SOPRANO.

See also CONTRALTO.

ELLEN T. HARRIS

Mezzogorri [Mezzogori], **Giovanni Nicolò** (*b* Comacchio, late 16th century; *d* ?Comacchio, after 1622). Italian composer. He was a pupil of Girolamo Belli at nearby Argenta. He was a beneficed priest and was *maestro di cappella* at Comacchio Cathedral in 1611; he was still there in 1623. He must have been on good terms with the town authorities, for in 1614 (according to the title-page of his *Cantilene ecclesiastiche*) Lorenzo Ferrucci, the governor of Comacchio, defended him against wrongful accusations, ordering that all 'foolish rumours' should cease. Mezzogorri probably spent his entire life in modest surroundings in his native town. He may have had connections with nearby Ravenna, for his *La celeste sposa* is dedicated to the Archbishop of Ravenna. His output consists almost entirely of sacred music for two to four voices; in the four-voice works he favoured low voice-groupings, making particular use of combining one alto, two tenors and a bass.

JUDITH NAGLEY

Mezzo-soprano [mezzo] (It.: 'medium soprano'; Fr. *mezzo-soprano*, *bas-dessus*, *second dessus*; Ger. *Mezzosopran*, *tiefer Sopran*). A voice, intermediate in pitch between contralto and soprano. It is usually written for in the range *a* to *f*♯″ and may be extended at either end, particularly in solo writing. Non-vocal uses of the term derive from a similar use of range; for example, the C-clef identified as mezzo-soprano, with *c*′ on the second line up, defines a staff whose range is *a* to *b*′. In regard to voices, the term may apply historically both to women and men (castratos or countertenors), although more commonly it refers only to women. The distinction between soprano and mezzo-soprano (or 'mezzo') became common only towards the end of the 18th century.

1. Before 1800. 2. 19th century. 3. 20th century.

1. BEFORE 1800. In the 17th century most music for 'soprano' had a range *c*′ to *g*″, which by later criteria would be deemed appropriate for a mezzo-soprano. During the first half of the 18th century, however, composers of operas and cantatas began writing soprano

parts that not only extended the upper range slightly, frequently reaching *a″*, but also demanded lengthy *fioriture* in the range *g′* to *g″*. Along with this trend towards higher and lighter parts for the soprano voice came an awareness of the somewhat weightier mezzo-soprano voice, which was unsuited to the new soprano roles. J.J. Quantz, in his autobiography in Marpurg's *Historisch-kritische Beyträge zur Aufnahme der Musik* (i, 1754–5, pp. 213, 240–41), carefully distinguishes contralto, mezzo-soprano and soprano. The castrato Senesino, 'who was always regarded in England as a contralto' (Burney, *History*, iv, 1789, p.275), was described by Quantz as having 'a penetrating, clear, even, and pleasant deep soprano voice (mezzo soprano)' which he rarely used above *f″*. In comparing the soprano Cuzzoni (whose range was *c′* to *c‴*) with Faustina Bordoni, Quantz (quoted in Burney, iv, 318ff) similarly reported that the latter had 'a less clear than penetrating mezzosoprano voice' with the range *b* to *g″*. However, Quantz's use of the term mezzo-soprano was not generally accepted into practice until after 1800. Even then, operatic roles, other vocal music (both solo and choral) and voices themselves can often be identified as mezzo-soprano only by association with what is deemed mezzo-soprano today, for, as implied in Quantz's prescient use of the term, the mezzo-soprano partakes of both soprano and contralto qualities.

The leading male roles in Handel's operas were generally taken by alto castratos who sang in the range *a* to *e″*; foremost among these was Senesino (Francesco Bernardi). Although the *primo uomo* part was for castrato, the *secondo uomo* part was frequently written for a woman in the same range. Handel unusually composed the *primo uomo* part in *Radamisto* for Margherita Durastante; it was taken over by Senesino (with compositional changes) on his arrival. Handel did not again compose a *primo uomo* part for a woman until 1748 when he wrote Solomon for the mezzo-soprano Caterina Galli.

Handel wrote leading female roles in the soprano range, but rarely went above *a″*. A somewhat lower range was used for older female roles, such as the widow Cornelia, played by Anastasia Robinson, in *Giulio Cesare*, and the wives of Hercules (Dejanira) and Jephtha (Storgè), both sung by Galli. Robinson began her career as a soprano, but her voice deepened. That she is today referred to as a contralto, while Galli is termed a mezzo and Bordoni a soprano, illustrates the problem of identifying a female mezzo-soprano before 1800.

In theatre music, women singers typically sang in the mezzo-soprano range. Susanna Cibber, an outstanding singing actress sang the alto solos in the *Messiah* première and performed a number of male roles in revivals of Handel's oratorios: David (*Saul*), Micah (*Samson*) and Lichas (*Hercules*). In Lutheran church music, alto choral parts and solos would have been sung by boys, but in Anglican services often by countertenors. Handel reserved the countertenor voice in his dramatic music for young men. The countertenor Daniel Sullivan sang Athamas (*Semele*), Micah (*Samson*), David (*Saul*) and the title role of *Joseph*, all mezzo-soprano parts by range and early examples of the tendency to compose young men's parts in this register (Cherubino, Oktavian). Castratos sang only rarely in oratorios, but in the 1750s the alto castrato Gaetano Guadagni performed in many Handel oratorio revivals, singing parts originally composed for Cibber.

In France, the importance of a higher and lower soprano voice in solo and choral ensembles created a more consistent terminology: DESSUS for the soprano voice and BAS-DESSUS for the mezzo-soprano. Rousseau (*Dictionnaire*, 1768) commented that the solo mezzo-soprano voice was more esteemed in Italy than in France, but referred to the acclaim for a certain Mlle Gondré, 'a very fine *bas-dessus*'. Mozart's use of the treble voices in his serious operas remained similar to his Baroque predecessors. He wrote young, heroic male roles for castrato (Idamantes in *Idomeneo* and Sextus in *La clemenza di Tito*); his female roles are all for soprano, but some fall into the mezzo range including Cherubino (a breeches role), Dorabella and, in *La clemenza di Tito*, Annius (another breeches role) and arguably Vitellia.

2. 19TH CENTURY. The extension of the upper soprano range in the early 19th century caused many singers who would previously have been simply 'soprano' to take the classification of mezzo-soprano. The disappearance of the castrato, who generally occupied a similar pitch range, gave further impetus to the development of the place of the mezzo-soprano in opera, and indeed many of the important mezzo parts in the first decades of the 19th century are heroic, travesty roles (*see* TRAVESTY). Benedetta Pisaroni, who began her career as a soprano, took many male roles, creating Malcolm in Rossini's *La donna del lago* (1819) and performing both Arsace in *Semiramide* and the title role of *Tancredi*. Karoline Unger, whose range extended from *a* to *d‴*, is sometimes referred to as a contralto, but her roles and her range seem to belie it. Maria Malibran, a fiery and exciting singer, is now categorized as a mezzo-soprano although her greatest rival was the soprano Henriette Sontag; they performed many of the same roles, including Norma. Her range was allegedly *g* to *e‴*, but Bellini lowered the role of Elvira in *I puritani* for her (she never sang that version, which was not heard until the 1980s). Some roles today associated specifically with the mezzo-soprano were written for soprano, such as Adalgisa in Bellini's *Norma* (written for the soprano Giulia Grisi).

It is not always possible to be specific in establishing distinctions between voice types in the mezzo range: there are singers who are described sometimes as soprano and other times as mezzo, and others variously described as contralto and mezzo. The term MEZZO-CONTRALTO has also been used, for example for Malibran and for Rosine Stolz, for whom Donizetti wrote two rewarding parts when he was writing for the Paris Opéra, Léonor (*La favorite*, 1840) and Zayda (*Dom Sébastien*, 1843). Stoltz also created Ascanio in *Benvenuto Cellini* (1838); Halévy also wrote roles for her.

Beginning with Azucena in *Il trovatore* (1853), Verdi composed a long series of magnificent mezzo parts. Maddalena (*Rigoletto*) and Ulrica (*Un ballo in maschera*), originally intended for contralto, have usually been sung by mezzo-sopranos. Princess Eboli in *Don Carlos*, perhaps Verdi's finest mezzo role, was first sung in Paris by Pauline Guéymard-Lauters (1867), whose wide compass and powerful upper register also enabled her to sing soprano roles. At the Italian première of *Don Carlos*, Eboli was sung by Giuseppina Pasqua, whose strength lay more in her middle register; later she created Mistress Quickly in *Falstaff* (1893). Sofia Scalchi, whose large, imposing voice had a range of *f* to *b″*, sang Azucena, Amneris and other Verdi mezzo roles and was Siébel at the performance of

Gounod's *Faust* at the opening of the New York Metropolitan Opera.

In Germany the three categories of female voice are even more difficult to distinguish. Eglantine, the villainess of Weber's *Euryanthe*, was written for a mezzo but created by the soprano Therese Grünbaum (1823). Adriano (*Rienzi*, 1842) and Venus (*Tannhäuser*, 1845) were first sung by a soprano, Wilhelmine Schröder-Devrient. These three roles and Ortrud (*Lohengrin*), Magdalene (*Die Meistersinger*) and Brangäne (*Tristan und Isolde*) were all introduced to the Metropolitan by Marianne Brandt, a contralto whose range allowed her to sing any part from the coloratura role of Astaroth (Goldmark's *Die Königin von Saba*) to Kundry (*Parsifal*). The mezzo role of Fricka (*Das Rheingold*) was created in Munich by a soprano, Sophie Stehle (1869–70); it again fell to a soprano, Friederike Grün, at Bayreuth in the first complete *Ring* cycle. Later the Liverpool-born mezzo Marie Brema, who made her début as Lola in the London première of *Cavalleria rusticana*, was much praised as Fricka; she also sang Ortrud and Kundry at Bayreuth. In the first London *Ring*, Fricka was sung by Hedwig Reicher-Kindermann, another mezzo with an extraordinary compass who sang Erda in the first cycle at Bayreuth and was later a magnificent Brünnhilde.

3. 20TH CENTURY. The difficulty of categorizing mezzo-sopranos did not abate in the 20th century and if anything grew more acute with a continuing decline in the use of the term 'contralto' for a particularly rich female voice with an extended lower register; there are therefore 'high' and 'low' mezzo-sopranos. In addition, a distinction in vocal timbre can be drawn between lyric mezzos and dramatic mezzos, which categories are not tied directly to range (and parallel the lyric and dramatic soprano). Further, coloratura mezzos are not identified by an upper extension of the voice (as sometimes with sopranos) but rather by extraordinary agility, which may be found in mezzos of all combinations of range and timbre.

Lucy Arbell, the inspiration of Massenet's last years, first sang in one of his works at the Opéra in 1906 (as Persephone in *Ariane*). Massenet then wrote *Thérèse* (1907) for her, the title role of which was perfectly suited to her strong, vibrant mezzo-contralto and vivacious personality. She created Queen Amahelli in *Bacchus* (1909, the sequel to *Ariane*); then, in his last unequivocal success, *Don Quichotte* (1910), Massenet provided her with another tailor-made role, Dulcinée. She sang two more Massenet premières, as Postumia in *Roma* (1912) and, after the composer's death, as Colombe in *Panurge* (1913). Arbell was also renowned for her interpretation of Charlotte in *Werther*. Delilah, a role seized upon by mezzos and contraltos alike, figured largely in the repertory of Louise Kirkby Lunn, the English mezzo, who was equally at home in French, Italian and German opera; a notable Ortrud, Fricka and Brangäne, she sang Kundry in the first production of *Parsifal* in English, at Boston in 1904. She was also greatly admired as Gluck's Orpheus.

Puccini's mezzo roles are generally minor, but in the early 20th century Strauss wrote several superb mezzo roles. Most are older women: Herodias in *Salome* and Clytemnestra in *Elektra* are the obvious examples (though the latter role was created by a contralto, Ernestine Schumann-Heink). Two sympathetic travesty roles in operas by Strauss, Oktavian in *Der Rosenkavalier* and the Composer in *Ariadne auf Naxos*, both written for a soprano, are now usually sung by mezzos. The finest Oktavian in the post-World War II period, mezzo-soprano Christa Ludwig, was also a particularly fine interpreter of Mahler's *Das Lied von der Erde* and of lieder; Ludwig's compass was remarkable, spanning such soprano roles as Leonore (*Fidelio*) and the Marschallin on the one hand and Brahms's *Alto Rhapsody* on the other. Shirley Verrett, like Malibran a century before, had a range that allowed her to take on both soprano and mezzo-soprano roles; she was the first to perform both Dido and Cassandra in the same performance of Berlioz's *Les Troyens* in 1973 – Josephina Veasey (a noted Fricka) had alternated in these roles at Covent Garden in 1972–3 – and the first of the 20th century to sing both Adalgisa and Norma (as Giulia Grisi had in the 19th century). The German mezzo Brigitte Fassbaender was particularly admired in such travesty roles as Sextus (*La clemenza di Tito*), Cherubino, Hänsel and Nicklausse (*Les contes d'Hoffmann*), but especially Oktavian; her other roles include Dorabella, Carmen and Eboli. Anne Sophie von Otter has also excelled in trouser roles across a wide range, from Mozart's Cherubino and Sextus to Oktavian and Composer, as well as the dramatic coloratura role of Rossini's Tancredi.

In the mid-1930s, the Spanish mezzo Conchita Supervia initiated a renewal of interest in the comic operas of Rossini by singing the title roles of *La Cenerentola* and *L'italiana in Algeri* at Covent Garden (Rosina in *Il barbiere* was still being sung in a transposed soprano version). Her successor Teresa Berganza was also especially admired as Carmen, in Rossini's comic operas and in the Spanish song repertory. After 1970, Frederica von Stade excelled in much the same coloratura mezzo repertory, as well as in the roles of Charlotte and Oktavian and in 17th- and 18th-century opera. Cecilia Bartoli has risen to stardom in such roles as Cinderella and Dorabella.

After the *bel canto* revival of the 1940s and 50s, mezzos once again began to tackle the leading male roles in Rossini's serious operas. The leader here was Marilyn Horne, who displayed amazing virtuosity and style as Arsace (*Semiramide*), Malcolm (*La donna del lago*) and Tancredi. Although Horne describes her own voice as a 'Rossini contralto' (Ellison, 1997), she also has the upper range for Adalgisa (*Norma*), and has sung 18th-century opera, notably the title roles in Handel's *Rinaldo* and Gluck's *Orfeo*. Mezzos who have followed Horne in the Rossini dramatic coloratura repertory include von Otter, Jennifer Larmore, Vesselina Kasarova and Sonia Ganassi.

As with the soprano repertory, the revival of early 19th-century mezzo-soprano coloratura roles encouraged an interest as well in 18th-century and earlier opera. Horne was again prominent, as was Janet Baker, who sang the title role in Handel's *Giulio Cesare* and recorded a particularly moving Dido (Purcell) as well as Rameau's Phaedra (*Hippolyte et Aricie*) and Handel's Ariodante. This earlier repertory has also attracted younger singers trained in early music vocal techniques, calling for a reduction or elimination of vibrato and the distinctive use of head and chest voice so that higher notes are ringing but not loud or forced and lower notes are full and rich. Lorraine Hunt Lieberson's voice seems particularly suited to Handel's operas and oratorios; she has sung such title roles as Xerxes, Ariodante and the soprano parts of Susanna and Theodora.

Composers have continued to write new roles and to adapt old ones: Britten composed Kate in *Owen Wingrave*

for Baker, for whose mezzo Walton altered the soprano role of Cressida. Baker also enjoyed success in *Maria Stuarda* and excelled as Dido in *Les Troyens*. Tatiana Troyanos made her debut as Hippolyta in the New York première of Britten's *A Midsummer Night's Dream* and created Jeanne in Penderecki's *The Devils of Loudun* (1969); her other roles included Carmen, Charlotte, Adalgisa and Ariodante. Yvonne Minton, in addition to many other operatic roles, created Thea in Tippett's *The Knot Garden* and sang Helen in his *King Priam*. Jan De Gaetani specialized in avant-garde repertory, singing, among many premières, the first performance of Crumb's *Ancient Voices of Children* and Maxwell Davies's *A Stone Litany*; she also recorded *Pierrot lunaire* and sang and recorded much early music, including the medieval *Play of Herod*.

The mezzo-soprano in opera has frequently been cast as nurse or confidante (Brangäne in *Tristan und Isolde*, Magdalena in *Die Meistersinger*, Emilia in *Otello* and Suzuki in *Madama Butterfly*) or the mature married woman (Herodias in Strauss's *Salome*, Adelaide in *Arabella* and Kate Pinkerton in *Madama Butterfly*). The same is true of operetta, where the works of Gilbert and Sullivan provide multiple examples, and musical theatre. Gertrude Lawrence, a featured soloist and actress in works by Gershwin, Noel Coward and Moss Hart, made her last stage appearance as the widowed schoolteacher Anna in the Rogers and Hammerstein musical *The King and I*. Other such roles in musical theatre include the title roles of *Annie get your Gun* (Ethel Merman, renowned for her belting style), *Hello Dolly* (the husky-voiced Carol Channing, also sung in revival by Merman) and *Evita* (Patti LuPone, but sung in the film version by pop star Madonna). Whereas the lower female voice often has been considered unromantic by operatic composers, conjuring up the dowager duchess or elderly aunt (Carmen and Dalila are striking exceptions), it has been considered especially sensual and sultry in popular music, jazz and cabaret, where the upper extension of the soprano voice has largely been avoided. Doris Day, Edith Piaf and Judy Garland are among the actresses whose voices are of mezzo-soprano pitch. Blues and jazz singers, such as Sippie Wallace and Billy Holiday, have also cultivated this range.

Miami. American city in Florida. A diffused urban area made up of a string of population centres, it is the musical centre of the state, both in number and variety of performing groups. Although Florida is a southern state, it is culturally closer to the north-eastern USA and to the Caribbean area than to the Deep South. It has an active art music life; its popular and folk music is heavily Latin American. Until the late 19th century it was a small town, isolated except by water travel. During the first decade of the 20th century, Flagler's coastal railroad connected Miami with the rest of the East Coast, and the town began to grow. Within 20 years Miami was famous as a beach resort and as a refuge from winter cold.

1. Art music. 2. Popular and traditional music.

1. ART MUSIC. There is a wealth of professional, semi-professional and amateur music-making in Miami, and a great emphasis on community involvement and performance. There are six main academic institutions that have performing ensembles and departments of music: Barry University (founded 1940), Florida International University (1972), Florida Memorial College (1879, moving to Miami in 1968), Miami-Dade Community College (1960), New World School of the Arts (1987) and the University of Miami (1925).

The city's regional professional orchestra, the Florida PO, originally founded in 1965 as the Greater Miami SO, is now the largest cultural institution in the state, serving the five-county south Florida area. The New World SO (1986) is directed by Michael Tilson Thomas and a variety of guest conductors as 'America's Orchestral Academy', preparing graduates of leading music schools for professional careers around the world. Other orchestras include the Miami Chamber Symphony (1981), the Miami SO (1989), the Hallandale SO and the North Miami Beach SO (1953). There are two community concert bands, Greater Miami Symphonic Band (1979) and the North Miami Concert Band (1976).

The Concert Association of Florida and Festival Miami, produced by the University of Miami, are the major presenting organizations in the area. Other groups, churches and temples also have concert series. Major organizations primarily devoted to the works of particular composers are the Miami Bach Society (1984), the Chopin Foundation (1977) and the Mozart Festival, based in Coral Gables. The Murray Dranoff International Two Piano Competition (1987) is an important event in the community arts calendar. The Florida Grand Opera (formerly the Opera Guild of Greater Miami, founded 1941) presents five major productions annually. The main community choral groups are the Civic Chorale of Greater Miami, the Florida PO Chorus, the Miami Master Chorale and the Miami Choral Society Children's Chorus. The Miami City Ballet (1986), directed by Edward Villella, leads the city's dance scene. Dance ensembles range in style from classical ballet to jazz ballet and dance theatre. The University of Miami and New World School of the Arts also have dance programmes.

2. Popular and traditional music. Latin jazz is the most important form of popular music in Miami, with groups from the various islands and regions of the pan-Caribbean and Latin America playing their countries' particular styles, including Cuban dance genres, Haitian compas, Jamaican reggae, Trinidadian calypso, Dominican merengue and Colombian currulao. Black American rap has influenced the Latin music of South Florida. Bands change and exchange membership frequently; this fluidity, as well as the high rate of new composition, contributes to a dynamic, creative environment similar to that of jazz performers in Kansas City and Chicago earlier in the 20th century. There are a number of festivals of traditional and popular music in Miami, including the Calle Ocho Festival (1978), which highlights Cuban music and the culture of Miami's 'Little Havana' area, the Hispanic Heritage Month (1973), which focusses on Latin arts of all kinds, and others ranging from jazz, Latin music and reggae to bluegrass. Less evident to the public are the continuing folk traditions of many Latin groups, as well as those of other ethnic groups including Mexican migrant workers, black Americans, the Seminole and Miccosukee Amerindians (whose reservations are close to Miami) and the Jewish community. Afro-Caribbean cult religions such as Cuban Santeria and Haitian Vodou have adherents in Miami, their rituals involving drum music and songs to summon the 'saints'. In late July the Miccosukee Tribe of Indians of Florida holds an outdoor music festival on its lands along the Tamiami Trail just west of Miami. The sizable community of black Americans in Miami nurtures its traditions of spirituals and gospel music. The large Jewish population continues its musical traditions; the Cuban-Jewish community, mixing both traditions in what is called 'Juban' music, is a strong presence in Miami. Leading figures in Miami popular music include Gloria Estefan and the Miami Sound Machine, the Bee Gees, KC & the Sunshine Band and the jazz artists Arturo Sandoval and Nestor Torres.

DORIS J. DYEN/DONALD OGLESBY

Míča [Micza, Mischa, Mitscha], **František Adam** [Jan Adam František de Paula] (*b* Jaroměřice nad Rokytnou, Moravia, 11 Jan 1746; *d* Lemberg [now L′viv], 19 March 1811). Czech composer. He was the nephew of František Antonín Míča. He studied music probably with his father Karel Antonín Míča (1699–1784), a Kammerdiener (valet) and musician of Count Questenberg at Jaroměřice, later a door-keeper and musician to the imperial court at Vienna. After law studies at Vienna (completed 1767), he became a government official there, and later in Styria (*c*1786–96) as well as in the Austrian provinces of Poland (from May 1796). He devoted himself to music as an amateur, mostly while in Vienna (to December 1785). He played several instruments, and his compositions enjoyed considerable esteem, notably with W.A. Mozart and Emperor Joseph II. His symphonies (of which the earliest manuscript is dated 1771) and string quartets (manuscripts dated 1786) use the general expressive techniques of the period. They consist of three or four movements, the first two sometimes being reversed (slow–fast); the movements in sonata form usually have two contrasting themes. A manuscript biography of Míča, including a detailed though incomplete list of his works, is in the library of the Gesellschaft der Musikfreunde in Vienna, and was partly published in Veselý (1968).

MILAN POŠTOLKA

Míča [Micza, Mitscha], **František Antonín (Václav)** (*b* Třebíč, 5 Sept 1694; *d* Jaroměřice nad Rokytnou, 15 Feb 1744). Czech composer and conductor. He was the son of Mikuláš Ondřej Míča (1659–1729) and was taken as a child to Jaroměřice, where his father had been appointed organist to Count Questenberg. After studying music as the count's page in Vienna (1711), he was Kammerdiener (valet) and Kapellmeister of the count's orchestra from about 1722. He conducted performances of operatic works by Caldara, F.B. Conti, I.M. Conti, D.N. Sarro, Vinci, Leo, Hasse and others, occasionally with insertions and adaptations of his own, and frequently sang the tenor parts.

Míča's compositions date from about 1723 to 1738. They are in a late Baroque operatic idiom close to that of

Caldara. The overtures (sinfonias) of his secular cantatas and of his only extant opera belong to the Italian type, with a tripartite fast–slow–fast order, the first allegros including elements of the pre-Classical sonata form. His authorship of a Sinfonia in D (Prague, 1946) is refuted by stylistic factors; it is now ascribed to his nephew František Adam Míča, but on slim evidence.

WORKS

Complete list in Helfert (1916), 158ff; first performed at Jaroměřice, unless otherwise stated

DRAMATIC

L'origine di Jaromeriz in Moravia (op, 2, It. text N. Blinoni; Cz., A.F. Dubravius; 3, Ger., H. Rademin), with 2 ints (Bonlini), Dec 1730; score, *A-Wn*; 1 recit and aria, ed. in DČHP (1958), no.122

Other ints, arias, ops (some Cz.), ballets, 1723–38, lost

OTHER VOCAL

Cants., solo vv, chorus, insts: Bellezza e decoro (D. Blinoni), 17 Jan 1729, score, *Wgm*; Nel giorno natalizio, 1732, score, *Wgm*; Der glorreiche Nahmen Adami (J. Želivský), 24 Dec 1734, score, *CZ-Pu*, pt.2 ed. H. Krupka as Quatuor elementa (Prague, 1960, 2/1966); Operosa terni colossi moles (Želivský), 23 or 24 Dec 1735, score, *A-Wgm*

Easter orats (sepolcri), solo vv, chorus, insts, some also perf. Brno, Olomouc, music lost (under otherwise stated), pubd libs extant: Abgesungene Betrachtungen, 11 April 1727, score *Wn*; Krátké rozjímání (Dubravius), 26 March 1728; Obviněná nevinnost (Dubravius), 15 April 1729; Öfterer Anstoss (Dubravius), 7 April 1730; Die heilige Helena, 1733

MILAN POŠTOLKA

Michael. German family of composers and musicians. (1) Rogier Michael was a notable late representative of the Dutch school; (2) Tobias Michael was also a notable composer and, as Kantor of the Thomaskirche, Leipzig, between Schein and Knüpfer, held one of the principal musical posts in Germany.

(1) Rogier Michael (*b* Mons or Bergen op Zoom, *c*1552; *d* Dresden, after 25 Jan 1619). Composer and singer of Dutch birth. His father was a tenor in the Vienna Hofkapelle, where Rogier became a choirboy. In 1564 he was transferred to the Graz Hofkapelle of Archduke Karl II, where the Kapellmeister was first Johannes de Cleve and then Annibale Padovano and where the boys were taught from 1567 by Jacob de Brouck. In 1569 he was given a three-year scholarship and may have studied in Italy. He was a tenor in the Hofkapelle of Margrave Georg Friedrich von Brandenburg-Ansbach at Ansbach from 1572 to 1574, when he went to the Dresden Hofkapelle as singer and musician. He remained there until his death, serving four electors during this 45-year period. From 12 December 1587 he was Hofkapellmeister, but because of increasing infirmity he was assisted from 1613 by Michael Praetorius and later by Schütz, who was appointed his successor in 1619. As well as his sons (2) Tobias, (3) Christian and (4) Samuel Michael, his pupils included Schein (from 1599 to 1603).

The basically late Dutch style of his music was doubtless modified to some extent by contact with more recent Italian music through his teachers in Vienna and Graz, his residence at Dresden and, if he went there, his experiences in Italy. Italian influences appear clearly in *Introitus dominicorum dierum ac praecipuorum festorum* (1603), a collection of 52 five-part motets, 49 of his own composition and one each by Andrea Gabrieli, Lassus and Padovano. None of the motets is based on a cantus firmus, and motet-like writing is fused with madrigalian elements, producing simple melodies and a good deal of homophony. In historical terms Michael's volume of chorale settings (1593) is more significant. Placing the melody in the descant, as Lucas Osiander did in his collection of 1586, he tried to combine a feeling for a type of melody appropriate to a prominent top part with the polyphonic style of the older type of chorale setting of Luther's day as represented by the work of Johann Walter (i). More important still are his two sacred histories of 1602, *Die Empfängnis unseres Herrn Jesu Christi* and *Die Geburt unseres Herrn Jesu Christi*. They are similar in layout: the recitation tone of the Evangelist is unaccompanied (in the former it is based on the *Canticum Mariae*, in the latter on the *Canticum Simeonis*), the turbae and the parts of the individual characters are for two to four voices, and the works are framed by an exordium and conclusion for six voices, and a *Magnificat* and *Nunc dimittis* for four and five voices respectively, with the psalm tones used as cantus firmi in the descant. The two works are interesting links in the tradition of sacred histories at Dresden between those by Michael's predecessors, Matthaeus Le Maistre and Antonio Scandello, and those by his successor Schütz. What was probably his last work, the five-part psalm in *Angst der Hellen und Friede der Seelen* (RISM 1623[14]), shows that he remained faithful to the traditions of the *prima prattica* and shunned up-to-date styles and techniques.

WORKS

Der ander Theil: die gebräuchlichsten und vornembsten Gesenge D. Mart. Luther und anderer frommen Christen: itzo auffs neue mit fleis componieret und den Choral durchauss in Discant geführet, 4vv (Dresden, 1593) [pt ii of Dresden Gesangbuch]

6vv, 1602, *Bsb*; both ed. in *Handbuch der deutschen evangelischen Kirchenmusik*, i/3–4 (Göttingen, 1933); Die Geburt . . . Jesu Christi, ed. H. Osthoff (Kassel, 1937)
Ger. mass, 6vv, 2 Passions, lost (cited in Kade)
Madrigal, 5vv, 1589[15]

(2) Tobias Michael (*b* Dresden, 13 June 1592; *d* Leipzig, 26 June 1657). Composer, second son of (1) Rogier Michael. He was a pupil of his father. In 1601 he became a treble in the Dresden Hofkapelle and was thus also taught by Andreas Petermann, *Präzeptor* to the choirboys. On 8 May 1609 he was admitted to Schulpforta, the electoral school near Naumburg that specialized in music and the humanities, and at about the same time, together with his brother Christian, he matriculated at the University of Leipzig. From 1613 to 1618 he studied theology and philosophy at the University of Wittenberg and shortly before he left he founded a collegium musicum practicum. In 1619 he was appointed Kapellmeister of the Neue Kirche at Sondershausen, Thuringia, by the Counts of Schwarzburg and Hohenstein. When fire destroyed both the castle and the church he remained at Sondershausen for a few years as an official in the government offices. After the death of Schein on 19 November 1630, he applied to succeed him as Kantor of the Thomaskirche, Leipzig. He was chosen on 29 December, his appointment was confirmed as from 26 April 1631, and he took it up on 2 June. A letter from him to the Leipzig city council in 1633 (printed in La Mara) reveals something about his duties as a teacher at the Thomasschule and about the difficulties he encountered in trying to maintain the high standards of the choir during the Thirty Years War. He supported Marco Scacchi in his dispute with Paul Siefert, and a letter from him to this effect was printed by Scacchi in his *Judicium cribri musici* (*c*1649). He enjoyed friendly relations with several other musicians and scholars, including Scheidt, and wrote a number of occasional works for civic and university personalities in Leipzig; they included three works in 1650 celebrating the official ending of the war. At his funeral on 30 June 1657, Martin Geyer, professor of theology at the University of Leipzig and preacher at the Thomaskirche, delivered the oration, and the service also included a work Michael had written shortly before, *Christliche Gedanken* (*In Angst und Noth*).

Michael's principal achievements as a composer are the two volumes of *Musicalische Seelenlust* (1634–7), which were influenced by Italianate models. The first volume comprises 30 motets for five voices and continuo to German biblical texts, which in their 'singularly delightful madrigalian manner' are clearly reminiscent of the pieces in Schein's *Israelis Brünlein* (1623). The second volume contains 50 Italianate sacred concertos of various kinds: the first 12 comprise three solo concertos each for soprano, alto, tenor and bass, the next 12 comprise three duet concertos each for sopranos, altos, tenors and basses, and the last 26 are concertos for various solo voices with obbligato instruments, some with symphonies and ritornellos. The preface to the second volume includes useful information on performing practice, especially the embellishment of the voice parts: in this regard Michael stated that as far as possible he had followed Kapsberger's method. He added separate decorated parts which the singer could use or take as models. The style and techniques in his concertos derive to some extent from Michael Praetorius, for example in the contrast between solo and choral voices and in the use of contrasted tempo and dynamic markings.

Other works, formerly at *D-Bsb*, *NAUw* (12 pr. works, 15 others, all 5–8vv, bc, see Werner), Wrocław

(3) Christian Michael (*b* Dresden, *c*1593; *d* Leipzig, 29 Aug 1637). Composer and organist, son of (1) Rogier Michael. Together with his brother (2) Tobias he matriculated at the University of Leipzig in 1609. In 1613 he was given a scholarship by the Saxon Elector Johann Georg I. In 1633, after the death of his brother (4) Samuel, he succeeded him as organist of the Nicolaikirche, Leipzig, and held this position until his death. His *Tabulatura, darinnen etzliche Praeludia, Toccaten und Couranten uff das Clavier instrument gesetzt* (Brunswick, 1639, 2/1645; 14 preludes and toccatas ed. P. Rubardt, Leipzig, 1940), published posthumously, is among the last printed German organ tablatures. It contains nine three-part and nine four-part preludes (arranged, as the preface points

out, according to the circle of 5ths), six four-part toccatas and ten courantes. Three manuscript vocal concertos by Christian Michael, two for five voices, the other for eight and 16 voices, seem now not to be extant. Like his father and his brother Tobias, he had a psalm published in *Angst der Hellen und Friede der Seelen* (RISM 1623[14]); it is in three sections and is for three and five voices. Daniel Michael, who is represented in the same volume by a similar work, seems to have been Christian's twin brother. Apart from the fact that he matriculated with Samuel Michael at Leipzig University in the summer of 1613, nothing is known about him.

(4) **Samuel Michael** (*b* Dresden, *c*1597; *d* Leipzig, between 14 and 17 Aug 1632). Composer and organist, son of (1) Rogier Michael. He matriculated at the University of Leipzig in 1613. From 1617 to 1621 he held a scholarship from the Saxon Elector Johann Georg I similar to that held from 1613 by his brother Christian. He was organist of the Nicolaikirche, Leipzig, from 1628 until his death. He died of the plague, and Paul Fleming commemorated him in a Latin elegy. Three collections by him were published: *Neue Paduanen, Intraden, Balletten, Allemanden, Auffzüge, Galliarden, Volten, Couranten und Schertzi* (Leipzig, 1627; inc.), *Ander Theil Newer Paduanen* (Leipzig, 1630; known only from fragments, see Braun), for three to five instruments and organ continuo, and *Psalmodia regia, das ist Ausserlesene Sprüche aus den ersten 25. Psalmen*, i (Leipzig, 1632), for two to five voices and continuo, which can also be performed on instruments. He also published several funeral motets, of which only one survives, the five-part *Christliches Trost-Lied* (*Die mit Thränen seen*) . . . *über den Hintritt . . . der Frauen Catharinen . . . Hans Behrs* (Leipzig, 1632). There are also four pieces by him in the *Cantionale sacrum* (Gotha, 1646–7).

BERND BASELT/DOROTHEA SCHRÖDER

Michael, Daniel. German musician, brother of Christian Michael. *See* MICHAEL, (3).

Michael, David Moritz (*b* Keinhausen, nr Erfurt, 21 Oct 1751; *d* Neuwied, Germany, 26 Feb 1827). German composer. He was educated at the Erfurt Gymnasium, then in the mid-1770s joined the Hessian troops at Ülzen and Hameln as a musician. In 1781 he became a member of the Moravian Church, working at Barby and Niesky, Saxony, in clerical and teaching posts. He was sent to the USA in 1795 to teach at the Moravian boys' school in Nazareth, Pennsylvania, where he instituted a weekly (later biweekly) series of concerts, the contents of which are recorded in *Verzeichniss derer Musicalien welche in Concert sind gemacht worden, Nazareth den 14t Octbr 1796 zum 30 Janry 1845* (in *US-BETm*). In 1804 he became superintendent of the unmarried brethren in Nazareth, and from 1808 occupied that post in Bethlehem. In 1815 he retired from active church service and returned to Germany, where he settled in Neuwied.

Michael, a fine violinist and clarinettist, is reputed to have been the most versatile musician in the American Moravian communities. His compositions consist of 14 woodwind *Parthien* and two 'Water-music' suites (mostly for two clarinets, two horns, and two bassoons), some 20 anthems for chorus or solo voice and instruments, and a setting of Psalm ciii for soloists, chorus and orchestra. Most of his manuscripts are preserved in the Archives of the Moravian Church in Bethlehem, and a few in the Moravian Music Foundation at Winston-Salem, North Carolina. Michael's style is pragmatically Classical, with emphasis on clarity and balance.

KARL KROEGER/NOLA REED KNOUSE

Michael, George [Panagiotou, Georgios Kyriakos] (*b* London, 25 June 1963). English singer and songwriter. From a Cypriot emigrant family, he came to prominence with his school friend Andrew Ridgeley as the pop duo Wham!, a favourite of teenage audiences in the early 1980s. Their hit recordings included *Young Guns (Go for it)* (Innervision, 1982), *Bad Boys* (Innervision, 1983) and *Freedom* (Epic, 1985). He began a solo career with the global hit *Careless Whisper* (Epic, 1984) before separating from Ridgeley in 1986. He became the most commercially successful British pop musician of his generation, inheriting the 'blue eyed soul' mantle from such predecessors as Rod Stewart and Joe Cocker. His first album as a soloist, *Faith* (Epic, 1987), was a global best-seller and produced four hit singles including 'I want your sex' and 'Father Figure'. The glossy, erotic videos made for the songs contributed to their popularity. A duet with Aretha Franklin, 'I knew you were waiting (for me)', won a Grammy award in 1988. Subsequently, Michael stated his intention to be regarded seriously as a songwriter, releasing the album *Listen Without Prejudice Vol.1* (Epic, 1990), but his recording career was then interrupted by a lengthy dispute with his record company, Sony. His next album, *Older*, was issued in 1996 by Dreamworks in North America and Virgin elsewhere.

DAVE LAING

Michaele, Antoninus de. *See* DI MICHELI, ANTONINO.

Michaelides, Solon (*b* Nicosia, 12 Nov 1905; *d* Athens, 9 Sept 1979). Greek composer. He studied at Trinity College, London (1927–30), where he was made an honorary fellow in 1952. In Paris he was a pupil of Boulanger (harmony, counterpoint and fugue) and of Maize and Cortot (piano) at the Ecole Normale de Musique (1930–34) and of Lioncourt (composition) and Labey (conducting) at the Schola Cantorum. He then took a leading part in promoting musical life and music education in Cyprus and Thessaloniki. He was director of the Limassol Conservatory (1934–56) and professor of music at the Lanitis Communal High School in that city (1941–56). On moving to Thessaloniki he was appointed director of the state conservatory (1957–70) and director-general and principal conductor of the state orchestra. He also appeared as a guest conductor in Europe and the USA, and lectured on Greek music for the BBC (1946–8) and at American universities (1963). A composer of the national school, he made use of modal cantilena and folk or Byzantine elements, soberly harmonized in a manner slightly suggestive of Franck, Fauré or Vaughan Williams. His orchestration includes Impressionist touches.

GEORGE LEOTSAKOS

Michaelis, Zanetto de. *See* ZANETTO DA MONTICHIARO.

Michael Scotus (*b* ?Scotland, ?1175; *d* 1235). Theorist, possibly Scottish. He probably studied at Oxford and Paris, and he worked at Toledo and Bologna. From 1220 he was in Sicily at the imperial court of Frederick II. Music is discussed in two chapters of his principal work, the *Liber introductorius*, which is a compendium of astronomy for the use of students. One chapter deals with the relationships between music and astronomy, and expounds the traditional theory of the harmony of the spheres. The other chapter comprises musical definitions and the classification of music, the division of the monochord and rules for the liturgical chant. Of particular interest are the analogies he drew between the elements of astronomy and those of music (sun and moon correspond respectively to the red and yellow lines of Guidonian notation, and the firmament corresponds to the cantus firmus), and the references to contemporary musical practice in Italy (*cantus fractus* and organum).

F. ALBERTO GALLO

Michaels-Moore, Anthony [Moore, Anthony Michael Frederick] (*b* Grays, Essex, 8 April 1957). English baritone. He grew up in a musical household (his father, John, is a noted amateur choral conductor) and studied at Newcastle University (1975–8) and at the Royal Scottish Academy of Music and Drama (1984–5). In 1985

he was joint winner of the Pavarotti Competition in Philadelphia, which led to his US opera début there (Guglielmo, 1988). After roles with Scottish Opera-Go-Round and Opera North (including the Messenger in *Oedipus rex* and Escamillo), in 1987 he joined Covent Garden, where he sang a wide range of lyric baritone roles. As his warm-toned voice gained in size, dramatic intensity and focus he made impressive figures of such Verdi parts as Stankar (*Stiffelio*) and Egberto (*Aroldo*), and Macbeth and Simon Boccanegra in the first versions of both operas. Playing romantically charged characters such as Enrico Ashton (*Lucia di Lammermoor*), Posa, Onegin, Thomas' Hamlet and Giordano's Gérard (in which he made his 1996 Colón début), he invests both notes and words with unforced eloquence which, combined with his natural stage command, lends his performances rare distinction. Among many international appearances Michaels-Moore has sung at La Scala (Licinius in *La vestale*, 1993, a role he has also recorded), in Madrid (Don Fernando in the first Spanish stage performances of Roberto Gerhard's *The Duenna*, 1992) and at the Metropolitan and San Francisco. He is also a noted concert singer in works such as *The Dream of Gerontius*, *The Kingdom* and *Elijah*. (R Milnes: 'Anthony Michaels-Moore', *Opera*, xlvi (1995), 1029–35)

MAX LOPPERT

Michałowski, Aleksander (*b* Kamieniec Podolski, 5 May 1851; *d* Warsaw, 17 Oct 1938). Polish pianist, composer and teacher. He studied with Reinecke and Moscheles at the Leipzig Conservatory and with Tausig in Berlin. He made his début in Leipzig in 1869 and lived in Warsaw from 1874, giving concerts mainly in Poland and Russia. Though possessing a vast repertory, he concentrated on Chopin and was notable for his delicacy of touch. Between 1891 and 1917 he held piano classes at the Warsaw Music Institute and then at the school of the Warsaw Music Society, establishing a school of his own in the Polish piano tradition. His pupils included Wanda Landowska. Michałowski composed a few dozen piano miniatures; they are influenced by Chopin and not unlike works by Moszkowski and Anton Rubinstein. He also made some virtuoso arrangements of works by Chopin, and prepared for publication a collected edition of Chopin's works; the études, waltzes, ballades and impromptus were published by the firm of Gebethner & Wolff, Warsaw.

ZOFIA CHECHLIŃSKA

Michałowski, Kornel (*b* Poznań, 23 Feb 1923; *d* Poznań, 27 March 1998). Polish musical bibliographer and librarian. He studied musicology under Adolf Chybiński at the University of Poznań (1947–51). He worked at the University Library in Poznań (1945–86), becoming head of the music section (1950–81) and deputy director (1981–4). He also taught music bibliography and documentation at the University of Poznań (1972–87). Michałowski wrote and compiled many of the basic Polish music bibliographies. He was also the author of the Szymanowski thematic catalogue, which was the first publication of this type in Poland. In it he applied a new methodological approach which went beyond schemes usually employed in such works.

ZYGMUNT M. SZWEYKOWSKI

Micheau, Janine (*b* Toulouse, 17 April 1914; *d* Paris, 18 Oct 1976). French soprano. She studied in Toulouse and at the Paris Conservatoire, and made her début in 1933 at the Opéra-Comique as the Newspaper Girl in *Louise*. In 1935 in Amsterdam she sang Mélisande, which she later repeated elsewhere in Europe and in San Francisco. Her French roles at the Paris Opéra-Comique (1933–56) included Mireille, Olympia and Bizet's Leïla; she was also an acclaimed Zerbinetta and was the first French Anne Trulove in 1953. At the Opéra (1940–56) she sang Juliet, Gilda, Violetta, Pamina, Sophie (*Der Rosenkavalier*) and Creusa in Milhaud's *Médée*, and created the role of Manuela in his *Bolivar* (1950). She made her Covent Garden début as Micaëla in 1937 and sang Violetta and Micaëla in Chicago in 1946. She retired in 1968. In all her roles Micheau was admired for the care, skill and taste with which she used a characteristically French voice, light and flexible with a wide range and conspicuously even production. Her voice and style are best displayed in her recordings of Juliet, Leïla and Micaëla.

MARTIN COOPER/R

Michel. *See* MICHL family.

Michel, Arthur. *See* SAINT-LÉON, ARTHUR.

Michel, Catherine (Marie Céleste Elvire) (*b* Amiens, 25 June 1948). French harpist. A student of Pierre Jamet, she entered his Paris Conservatoire harp class at the age of

13, obtaining a *premier prix* in 1964. She won a *second prix* at the Israel contest (1970) and a gold medal at the Marcel Tournier competition (1971), and was solo harpist of the Orchestre National de France from 1970 to 1977. In 1978 she was appointed solo harpist at the Paris Opéra. Strongly committed to pedagogy, she has taught at academic institutions in Hamburg (1977–80), Detmold (1996–2000) and Zürich (from 1999), as well as at the Ecole Normale de Musique in Paris (from 1981). Michel is visiting professor at the RCM and has published an important bibliography of harp music. Her significant recording career has been boosted by the popular success of her prizewinning 1995 collaboration with Michel Legrand on the CD *Musique et Cinéma*.

WRITINGS

with F. Lesure: *Répertoire de la musique pour harpe publiée du XVIIe au début du XIXe siècle* (Paris, 1990)

ANN GRIFFITHS

Michel, Guillaume (*fl* Paris, 1636–56). French composer. He was a popular composer of dance chansons at the French court in the mid-17th century and composed four collections of them. The first (Paris, 1636) includes duets as well as solo songs. The remainder (Paris, 1641, 1647, 1656) are all for solo voice; the second also contains a few drinking-songs. He modelled his *chansons pour danser* on those of François de Chancy (to whom he dedicated the first book). They are all strophic and in duple metre and move almost exclusively in syllabic crotchets. Nearly all consist of eight bars followed by a repeated four-bar refrain. Only seldom is there rhythmic variety, such as the hemiolas at the end of *Robin est d'humeur gentille*, or thematic development, as in *A vos pieds je viens*. The overriding simplicity of these songs was no doubt the secret of their success among the pleasure-loving amateurs for whom they were written. A wider popularity is indicated by the reprinting of all four books in 1699, by the appearance of six of them translated into German and arranged for three voices by the leading German song composer of the time, Heinrich Albert, in his *Arien*, vii (Königsberg, 1648; ed. in DDT, xiii, 1904/*R*), and by the survival of one chanson in a *Recueil d'airs sérieux et à boire* (Paris, 1720). One *air* appeared as a sacred contrafactum in *La Philomèle séraphique* (RISM 1640^5).

JOHN H. BARON

Michel, Joseph (*b* *c*1688; *d* Dijon, 4 Nov 1736). French composer. He was a student at the Collège des Godrans, Dijon, in 1698, and at some point before 1709 he was appointed *maître de musique* at St Etienne there. He was canon and *maître de musique du roi* at the Ste Chapelle, Dijon, from 28 December 1709 until his death. The municipal archives reveal that he was paid 300 livres for having conducted more than 60 voices and instruments in a requiem mass (see Doussot). Most of the music he composed for the Ste Chapelle is lost. Although the title-page of his *Dominus regnavit exultet* (Paris, 1735) states that this *grand motet* 'will be followed by several others', only two others survive: *Domine in virtute tua* and *Quid retribuam* (in manuscript copies in *F-Pn*). Michel composed these three *grands motets* for five-part chorus and orchestra entirely in the tradition of the Versailles motet. Much more original is the music for the tenebrae lessons in his *Recueil de XX leçons de Jérémie à une, deux, et trois voix* (Paris, 1735). Unlike Charpentier, Lalande and Gilles, Michel composed two or three optional versions for each lesson 'in a singular manner and for the greatest use of different voices' (dedication to Monseigneur de Vauréal, Bishop of Rennes). Each version contains chains of short airs intermingled with recitatives, the whole being prefaced by the long melismas traditionally reserved for the Hebrew letters. All the airs are French to the core. They display effective use of expressive vocal ornamentation, such as *coulés*, *ports de voix* and *accents* (e.g. *O vos omnes*, no.7). Strophic basses underlie some of the airs. Six of the lessons use from one to three obbligato instruments (flutes or violins 'that one may leave out if he wishes'). No.13 has two independent bass lines for cello and bassoon. Most versions are for solo voice, but two are duos and two are trios. Bound together with the 20 lessons is a *Miserere* for soprano with violin or flute obbligato. Like the lessons, this is made up of chains of airs, two of which are in da capo form.

JAMES R. ANTHONY

Michel, Paul-Baudouin (*b* Haine-Saint-Pierre, nr Mons, 7 Sept 1930). Belgian composer. He studied at the Mons Conservatoire Royal and at the Chappelle Musicale Reine Elisabeth, with Jean Absil. From 1963 he followed the Darmstadt summer courses in new music, attending the classes in analysis taken by Maderna, Messiaen, Boulez and Ligeti. It was these encounters which interested him in serial and aleatory music. He was director of the Académie de Woluwé-Saint-Lambert in Brussels, and until 1995 taught composition at the Mons and Brussels conservatories. He won several international prizes, including the Prix Espla of Alicante in 1970 and the composition prize for set works at the Queen Elisabeth Competition in 1967 and 1972, the Geneva Prix Spécial for *Orphée abymé* in 1991, and third prize in the 1994 Ernst Bloch Competition, for *Résurgence*. With his constantly enquiring mind, Michel has explored all musical genres from opera (notably with *Jeanne la folle*) to chamber music, taking in orchestral and electronic music on the way. Always seeking a balance between sensitivity and rigorous formal construction, he does not disown the philosophical, social and spiritual content of his music, relating it to his formal research into mobility and aleatory composition.

ERIC DE VISSCHER

Arturo Benedetti Michelangeli

Michelangeli, Arturo Benedetti (*b* Brescia, 5 Jan 1920; *d* Lugano, 12 June 1995). Italian pianist. He entered the Milan Conservatory at the age of ten, studying with Giovanni Anfossi, and graduated with honours at 14. After a brief period as a medical student he returned to music, and in 1939 he won first prize in the inaugural International Piano Competition in Geneva. The jury included Cortot and Paderewski, and his admirers described him as 'a new Liszt'. In 1940 he made his Rome début, where the crystalline perfection of his playing caused a sensation. After service in the Italian air force during the war, Michelangeli continued his concert appearances; he visited London for the first time to play in the Royal Albert Hall in 1946 and made his US début in 1948, performing the Schumann Concerto with Mitropoulos and giving a Carnegie Hall recital. He then turned to teaching, forming his own International Pianists' Academy which was based in various Italian locations, including Brescia, Arezzo, Bolzano and Bologna. In the 1960s he again returned to the concert platform with tours of South America and the USSR and a recital in Paris. In 1966 he made a coast-to-coast tour of the USA and in 1973 began to teach at a summer school at the Villa Schifanoia near Florence. He had a serious heart attack during a recital in Bordeaux in 1988, but was able to continue his career the following year.

A capricious perfectionist (he cancelled nearly as many concerts as he performed), Michelangeli surrounded himself in an aura of mystique, from which he emerged to give dazzling, teasingly enigmatic performances. His EMI recordings of the Ravel G major Concerto and, even more, Rachmaninoff's Fourth Concerto would assure him a place in the pantheon of great pianists, while earlier EMI recordings dating from 1939 to 1942 of such Michelangeli classics as the Bach-Busoni Chaconne, Beethoven's C major Sonata op.2 no.3 and his own idiosyncratic reordering of Brahms's Paganini Variations offer pianism of a rare order, distinguished by an immaculate control of colour and counterpoint. His performances of Chopin's B♭ minor Sonata and Ravel's *Gaspard de la nuit* had a unique frisson, while a Testament CD of his 1957 Royal Festival Hall recital captures him 'on the wing' in brilliant, charismatic performances of Schumann, Chopin, Debussy and Mompou.

BRYCE MORRISON

Michel Angelo del Violino. *See* ROSSI, MICHELANGELO.

Michel de Toulouse [Toulouze] (*fl* Paris, 1496–1505). French printer. He was presumably from Toulouse, and may have been the first to print mensural music using movable type; his *L'art et instruction de bien dancer* uses type and is earlier than Petrucci, though in many respects rather crude. His edition of Guerson's *Utilissime musices regule*, which may predate *L'art*, uses the same music type. Michel was not the earliest music printer in Paris, though his predecessors had printed only liturgical volumes. He was living there in 1496, close to Guillaume Guerson, who also printed and sold music. They seem to have collaborated, for Michel also used some of Guerson's type. He is mentioned in Guerson's will of 1503, and was last referred to in 1505.

None of Michel's four musical books is dated, although 1488 has been added by hand to *L'art*. This is certainly too early: it was probably printed about 1496. All Michel's other known publications (nearly 20) date from after this. *L'art et instruction de bien dancer* is an important collection of melodies for the basse danse, with instructions; it is closely related to a Brussels manuscript of dance tenors (*B-Br* 9085).

STANLEY BOORMAN

Micheletti, Gaston (*b* Tavaco, 5 Jan 1892; *d* Ajaccio, 21 May 1959). Corsican tenor. He studied at the Paris Conservatoire, made his début at Reims as Faust (1922) and three years later joined the Opéra-Comique, where he remained until his retirement in 1946. During this period he sang a large repertory of lyric-dramatic roles, appearing on such occasions in the company's history as the 500th performance of *Les contes d'Hoffmann* (1927) and the 1000th of *Carmen* (1930). Among world premières in which he took a leading part were those of Raoul Laparra's *Le joueur de viole* (1925) and Camille Fournier's *Le chevalier de Mauleon* (1927). He also appeared in Brussels, Nice and Monte Carlo. On records he is most widely remembered in excerpts from *Carmen* with Conchita Supervia, whom he partnered on stage in 1930; but his worth as a fine singer on his own account is well attested by solo recordings, many of which are as pleasing for their stylistic qualities as for the resonance of his full-bodied, securely placed voice.

J.B. STEANE

Micheletti, Gioseffo [Giuseppe] (*fl* 1683–92). Italian music publisher. He was active in Bologna, keeping his printing establishment on the Pavaglione. He published sacred music by Cazzati (op.19, 1687), Cavanni (op.1, 1689) and Albergati (op.7, 1691), chamber cantatas by G.F. Tosi (op.2, 1688) and instrumental music by G.B. Degli Antoni (opp.1 and 3–6, 1687–90), Giuseppe Torelli (opp.1–3 and 5, 1686–92), Gaspardini (op.1, 1683), Clemente Monari (op.1, 1686), C.A. Mazzolini (op.1, 1687), G.B. Berri (op.1, 1688), Elia Vannini (op.1, 1691) and F.C. Belisi (op.1, 1691). Micheletti's publications are characterized by neatness and elegance; his typographical mark is an angel with a cornucopia filled with flowers, a crown or a noble coat-of-arms.

Micheli, Antonino di. *See* DI MICHELI, ANTONINO.

Micheli, Benedetto (*b* Rome, ?*c*1700; *d* after 15 Sept 1784). Italian composer, poet and painter. The principal source of biographical information is his own preface to an unpublished epic poem (reproduced by Narducci). There he said that he studied painting 'under excellent masters' from the age of eight until he was 15; then his attention turned to music, where it remained until at least 1739. As a young man he appears to have enjoyed the patronage of Cardinal Alvaro Cienfuegos, who between 1722 and 1734 ordered five *Componimenti* to celebrate the name-day of the Empress Elisabetta Cristina; during that period Micheli also wrote a few serious operas, which, however, cannot have been greatly successful, for no further commissions ensued. His main interest to music history derives from his activities during the period 1736–8. By his own recollection early in 1736 he was requested to compose a *farsetta* 'ad uso d'Intermezzi ... in una Tragicomedia' for the Teatro Valle, which met with such applause that two more were commissioned for the autumn season, and another pair, now to his own librettos, for Carnival 1737. Similar work followed for the Teatro Argentina; there he introduced characters speaking Roman dialect, a novelty that captured the local fancy. Thereafter, he said, he worked for some time in the Roman theatres, writing other such intermezzos and adapting *opere buffe* by such composers as Gaetano Latilla, Rinaldo di Capua, Pietro Auletta and Nicola Conforto to meet the new taste (Narducci suggested that the Roman production of Latilla's popular *La finta cameriera*, Teatro Valle, spring 1738, may have been one of these). This represents the northern adaptation of a comic device which, though it continued for many years to have a following in Naples, had already passed its peak of popularity there.

Micheli was 'organista e maestro' of the Congregazione dei Musici di S Cecilia from about 1740. He first appeared at the meetings of the Congregazione on 5 September 1741 and on 1 June 1742 he was appointed *consigliere*. Meanwhile, he had maintained relationships with the world of art and composed several occasional pieces for the Festa del Concorso of the Accademia del Disegno di S Luca (later to become the Rome Accademia di Belle Arti), and conducted others; at the 1732 Concorso he performed the solo part of a flute concerto. By 1749 misfortune had overtaken him (the suggestion is of some chronic illness); no further music is known from him; and he became a pensioner of the Congregazione dei Musici di S Cecilia, from 4 June of that year receiving several payments per year of two scudi from a fund established for distressed musicians. During that period he turned his hand to literature and in 1756 produced the curiosity of a 12-canto epic poem in Roman dialect, dealing with Rome's early history, *La libbertà romana* (*D-WRtl*). The last disbursement to him from S Cecilia was on 15 September 1784 (the last receipted one, 25 January 1783); presumably he died shortly thereafter.

JAMES L. JACKMAN/ENRICO CARERI

Micheli, Domenico (*b* Bologna, *c*1540; *d* ?Bologna, *c*1590). Italian composer. He received his early musical training at S Petronio in his native city. In 1564 he signed the dedication of his first book of madrigals from Bologna; he succeeded Gabriele Martinengo as *maestro di cappella* at Udine Cathedral in April 1567, but resigned in September. In 1577 he was in the service of the Malvasia family at Cesena; from there he applied unsuccessfully for the then vacant post of *maestro di cappella* at S Petronio. In 1580 he applied for a similar position at Padua Cathedral, but was turned down in favour of G.B. Mosto. By 1581 he had moved to Ravenna, where he was employed as a private musician in the household of Innocenzo Malvasia. He was appointed singing master at the cathedral of S Pietro, Bologna, in 1588, and in 1589 assumed full duties there as *maestro di cappella*.

Although Micheli was a priest, his secular output considerably exceeds his sacred. In general he set poems of a serious nature, and was one of the few 16th-century composers to set a passage from Dante (*Quivi sospiri*, from *Inferno*, iii.22). Exceptional is the one *giustiniana* which survives in Giuseppe Policreto's *Secondo libro delle giustiniane* (RISM 1575[14]). Micheli was especially skilful at handling large vocal compositions of many parts; his dialogue madrigals for ten voices (1569) and 12 voices (1567) are the earliest examples for these numbers of parts to appear in print.

DAVID NUTTER

Micheli, Romano (*b* Rome, *c*1575; *d* Rome, after 1659). Italian composer and music polemicist. He learnt the art of counterpoint from Soriano and G.M. Nanino. He visited various Italian cities including Venice, Naples (where he was in the service of Gesualdo from about 1596 to 1598), Ferrara, Bologna and Milan. He became *maestro di cappella* of Tivoli Cathedral in June 1609 but left under duress in January 1610. He held similar posts at the cathedral of Concordia Sagittaria in 1616 and at Aquileia Cathedral from 1618 to 1621. Returning to Rome, he was favoured for the position of *maestro di cappella* at the Gesù but his appointment was blocked, probably at the instigation of the papal singers who had been antagonized by his polemics. He responded with a published challenge, the *Virtuoso manifesto* of 1624. In March 1625 he became *maestro* of S Luigi dei Francesi, thanks to the intervention of the ambassador of the Duke of Savoy. In July of that year he made his peace with the papal singers, without whose cooperation he could not organize large-scale music at S Luigi or elsewhere, presenting them with a copy of his latest music (presumably the *Dialogus annuntiationis* of that year). During 1625 he received a considerable sum of money for organizing music at an immense Good Friday procession of pilgrims and members, put on by the Confraternita della SS Trinità dei Pellegrini. He left S Luigi in 1627 and in 1636 received a canonicate in Naples where he remained for several years. By 1644 he had returned to Rome, where he attempted, unsuccessfully, to regain his former position at S Luigi. He responded by publishing a further series of polemical discourses. In his later works he designated himself simply 'prete sacerdote' or 'musico di Roma'.

As a composer Micheli devoted himself to the writing of various types of canon thereby contributing to a flourishing of the art of canonic composition in 17th-century Rome. Although his works include examples of enigma and polymorphous canons, as well as canons with basso continuo, he prided himself particularly on the writing of canons according to *obblighi* (pre-compositional restrictions) and canons *sopra le vocali di più parole* ('on the vowels of several words') – a type he claimed to have invented. One such canon, to the text 'LUDOVICUS, Rex defensor omnium Christianorum', for 36 voices in nine choirs, was given the text 'Sanctus' and shown in the frontispiece of *Musurgia universalis* (Rome, 1650) by ATHANASIUS KIRCHER. The distinction that Kircher thus accorded this canon and its composer was instrumental in establishing Micheli's reputation in the later 17th century.

Throughout his career Micheli was active as a polemicist, challenging others to compositional tests and boasting of his own prowess and that of other Roman composers. His conduct alienated him from many of his contemporaries and embroiled him in several disputes, most notably in that between Marco Scacchi, Paul Siefert and Kaspar Förster (i). Responding to Siefert's claim that Italians could write nothing but 'comedie, ariette, canzonette' and similar trifles, Micheli sent copies of his *Canoni musicali* (1645) to the three parties to the dispute. Förster replied in February 1647 with a complimentary letter and Siefert remained silent, but Scacchi launched a vigorous attack on Micheli, accusing him of not inventing *canoni sopra le vocali di più parole* and criticizing his relentless pursuit of canonic artifice. Undaunted, Micheli rebuffed him in his *Avviso inviato da me* (1650) and defiantly continued to proclaim himself the inventor of *canoni sopra le vocali di più parole*.

WORKS

Psalmi ad officium Vesperarum, 3vv, org, libro I (Rome, 1610)
Musica vaga et artificiosa (Venice, 1615)
Salmi per i Vesperi, 3vv, bc, libro II, op.3 (Venice, 1615)

Michelson, Robert. *See* MYCHELSON, ?ROBERT.

Michi [Mihi; Dell'Arpa; Michi dell'Arpa], **Orazio** [Horatio] (*b* Alife, nr Caserta, 1594–5; *d* Rome, 26 Oct 1641). Italian composer and harpist. He was probably trained in Naples, but the earliest document of his life comes from Rome, where in February 1613 he joined the household of Cardinal Montalto, whom he served until the cardinal's death in 1623. In February 1614 Michi played the harp in performances of the pastiche opera *Amor pudico*, which celebrated the second marriage of Cardinal Montalto's brother, Michele. By 1620 Michi was the most highly paid of Montalto's many famous musicians. In 1622 the cardinal established an annual pension of 300 scudi for him, made up of income from two of the cardinal's abbeys, and in his testament Montalto left Michi an additional pension of 2000 golden scudi a year, an income worthy of a cardinal.

After Montalto's death Michi passed into the household of Cardinal Maurizio of Savoy, whom he served until February 1630, possibly returning briefly from 1636 to 1638. He received additional patronage from Cardinals Pallotta, Bernardino Spada and Antonio Barberini. In 1639 André Maugars estimated Michi's income at 5000–6000 silver scudi. In his testament Michi disposed of a carriage with horses, an organ, a harpsichord, a theorbo, a harp, a large library, a ruby that once belonged to Cardinal Montalto's mother and 858 scudi in cash. His principal beneficiaries were the fathers of the *scuole pie* and the Oratorio di S Filippo Neri, for which he composed many sacred arias and cantatas during the last two decades of his life.

Michi was praised as a player of the double harp by Vincenzo Giustiniani in 1628, André Maugars in 1639, Pietro della Valle in 1640 and Severo Bonini in about 1650. His extant works number almost 100; most of these are in two Roman libraries (*I-Rc* and *Rn*) and a smaller number elsewhere in Rome (*I-Rvat*), Bologna (*I-Bc*) and Prague (*CZ-Pnm*). Five were published by Vincenzo Bianchi in Rome (RISM 1640[2]). Like several other composers in Montalto's household, Michi wrote works in which distinct sections of aria and recitative styles are set in opposition. There are in all 21 of these, 13 of which set canzonetta texts, often using only one strophe. One such is of Francesco Balducci's *Perdan quest'occhi il sole*, which contains several different patterns of verse, each of which Michi sets in a contrasting style. Similar contrasts correspond to changes between *versi sciolti* and metrical verses in Michi's setting of the anonymous *Empio cor, core ingrato*. These and other similar works are among the earliest that can be called cantatas according to the strictest modern definitions of the term. Of a high artistic calibre, they became important models for Luigi Rossi and other cantata composers in the Barberini household after Michi's death.

JOHN WALTER HILL

Michigan, University of, School of Music. School of music in the state university at Ann Arbor, Michigan, USA. The university was established in 1837 the Ann Arbor School of Music, founded in 1880 and from 1892 called the University School of Music, was at first administered by the University Musical Society and directed by Calvin B. Cady. From 1929 to 1940 it was run jointly by the society and the university's regents, and in 1940 it became an integral unit of the university. In the 1990s it enrolled about 800 students, including over 250 graduate students. The faculty numbers 105 full-time instructors. BM, BA, BFA, BMA, MM, MA and MFA degrees are offered, as well as the DMA in composition and performance and the PhD in musicology and music education. The National Music Camp (established 1942) is run by the university at Interlochen, Michigan, in the summer.

The school has a very wide range of facilities, including the Stearns Collection of Musical Instruments (1899), the Charles Baird Carillon (1935), an electronic studio (1965) and a Javanese gamelan (1966). The university's orchestra and chamber choir have toured successfully in the USA and abroad, as has its symphony band (the US State Department sponsored its 1961 tour of the USSR); its marching band is one of the most famous in the USA. The music library holds almost 90,000 books and scores, over 20,000 sound recordings and videos, and over 1900 periodical titles, and includes the Stellfeld Collection, much American sheet music and the Eva Jessye Afro-American Music Collection. The university's Clements Library of Early Americana contains many musical items including the papers of Andrew Law.

The University Musical Society also founded the annual Ann Arbor May Festival in 1894. Participants include leading composers and orchestras and international soloists as well as the University Choral Union; they have included the Boston Festival Orchestra conducted by Mollenhauer (1894–1904), the Chicago SO conducted by Stock (1905–35) and the Philadelphia Orchestra conducted by Stokowski in 1936 and by Ormandy from 1937. Copland, Enescu, Holst and Stravinsky have been guest conductors at the festival.

100 Years of Music at the University of Michigan 1880–1980 (Ann Arbor, 1979)

BRUCE CARR

Michl [Michel]. German family of musicians.

(1) **Johann Joseph Ildefons Michl** (*b* Neumarkt, Upper Palatinate, 1708; *d* Regensburg, 1770). Composer, son of the choirmaster and organist Anton Michl. He studied for four years with Wagenseil in Vienna, then became Kapellmeister at Sulzbach during the brief reign of Duke Johann Christian Joseph (1732–3). After the duke's death Michl worked in Regensburg as, among other things, a composer for the embassies; in 1738 he became Kapellmeister at the cathedral. He composed some music (now lost) for sacred dramas, including a Lenten meditation for the Congregatio Latina Major in Munich (1739) and others for the Jesuits in Ingolstadt. Apart from six masses printed in Augsburg (op.1, 1744) his many liturgical works remained in manuscript and are now lost (see Mettenleiter).

(2) **Ferdinand Michl** (*b* Neumarkt, 1723; *d* Munich, 23 March 1754). Organist and composer, brother of (1) Johann Joseph Ildefons Michl. He was educated at the electoral Gymnasium in Munich. In 1740–41 he was organist at the Jesuit church of St Michael, and in 1745, through the influence of Duke Clemens Franz of Bavaria, he also became the organist for vocal music at the electoral court. In 1748, while retaining both posts as organist, he was named deputy Konzertmeister for court instrumental music. Between 1740 and 1754 Michl composed 16 Lenten meditations for the Congregatio Latina Major in Munich and numerous school comedies for the Gymnasium in Munich and Ingolstadt (all lost). The organ part of his *XII symphoniae* op.1 (Augsburg, 1740) survives (*A-Gmi*); his only complete extant works are two sinfonias (*D-Bsb, DS*), a doubtful sinfonia (*IN*), and the aria *Dignare me laudare* (*DO*). There are also two organ preludes attributed to a composer of this surname (in *D-Mbs*).

(3) **Melchior Virgil Michl** (*b* Munich, *c*1735; *d* Munich, 8 Sept 1795). Cellist and singer, son of (2) Ferdinand Michl. By 1764 at the latest he was a supernumerary cellist in the Munich court orchestra, where in January 1765 he was fully installed. At times he was also principal of a German theatrical troupe which played in Salzburg (winter 1778) and, newly organized, in the Faberbräutheater, Munich (1785). No works by him, not even the lost opera *Marcio Coriolano* (Munich, 1786) sometimes attributed to him, have been fully authenticated.

(4) **Joseph (Christian) Willibald Michl** [Michelini] (*b* Neumarkt, 9 July 1745; *d* Neumarkt, 1 Aug 1816). Double bass player, publisher and composer, son of Johann Anton Leonhard Michl (1716–1781), choirmaster and organist in Neumarkt, and brother of (1) Johann Joseph Ildefons Michl and (2) Ferdinand Michl. He studied at the electoral Gymnasium and Lyceum in Munich, and was an accomplished double bass player in the Jesuit church of St Michael until about 1767. In the 1760s Elector Maximilian III Joseph sent him to Freising to study for two years under Placidus von Camerloher. By the beginning of 1771 at the latest Michl was named a composer to the electoral chamber. His opera buffa *Il barone di Torre* (1772) was remarkably successful, and in 1774 he travelled to Italy at the elector's expense. In 1776 he wrote within four weeks (in place of the ill Josef Mysliveček) the Carnival opera *Il trionfo di Clelia* for the Munich court. With the succession of the new elector, Carl Theodor, in January 1778 Michl was dismissed with a pension of 125 florins (which he did not receive until 1780), raised to 240 florins in 1790. In July 1779 he was granted a privilege to publish music in manuscript; he seems however to have restricted this activity to his own works. From about 1784 to 1 September 1803 he lived with his brother-in-law, Johann Baptist Moser, a judge at the Augustinian prebendary institute at Weyarn, and wrote sacred works as well as symphonies and school dramas for the monastery. In 1786 he also taught composition at the Benedictine abbey at Tegernsee.

Michl was a talented composer, known particularly for his sacred works. These include numerous extant liturgical works as well as six Lenten meditations, performed at the Congregatio Latina Major in Munich between 1768 and 1772, which are now lost. Also lost are numerous works for school theatres, though several larger stage and vocal works remain, some of which were possibly composed by

Johann Michael Michl, the musical director of F.J. Moser's theatrical troupe. Michl's instrumental output includes a wide range of orchestral and chamber works, and his abilities as a composer are attested by Burney, who, having heard a quintet performed in Munich (1772), wrote that few works showed more genius and invention or demanded more skill in performance.

WORKS

Stage (first perf. Munich unless otherwise stated): Il barone di Torre Forte (ob, 2), Salvator, 23 March 1772, *D-Rtt*; L'amante deluso (ob), 27 Nov 1773, lost; Milton und Elmire (Spl, 1, H. Spaur), Frankfurt, Schauspielhaus im Junghofe, 1773, *F*, Munich, 6 June 1785; Il trionfo di Clelia (os, 3, P. Metastasio), Hof, 8 Jan 1776, *Mbs*; Johann Faust (Spl, 5, P. Weidmann), Salvator, 16 May 1776, lost; Der König und der Pächter, Munich, 1777, lost; Das Urtheil des Paris (ballet, C. Le Grand and P. Constant), after 1777, lost; Fremor und Meline (Spl, 3, Spaur), Mainz, An der grossen Bleichen, Jan 1778; Die reisenden Komödianten (Spl, 3, G.W. Burmann), 1778; Der Jahrmarkt (Spl, 2, F.W. Gotter), Mannheim, National, 13 Feb 1780, with music by G. Benda; L'isola disabitata (azione teatrale, 1, Metastasio), 1780, lost; Regulus, der Patriot (os), Weyarn, 3 Sept 1781, frag. *Bsb*, *WEY*; Der König auf der Jagd (Spl), 8 Aug 1785, lost

Cants.: Zephiro et Flora, Munich, 1776, lost; Il trionfo della gloria, Munich, before 1778, *Dl*; Wohin krochst du, *WEY*; Il re alla caccia, Il cacciatore deluso, mentioned in *LipowskyB*

Sacred vocal (mostly *BB*, *Mbs*, *WEY*, some autograph): more than 22 masses; Gioas, re di Giuda (orat), Munich, Lent 1772, *Rtt*; Ich warne dich (orat), ?Munich, *Mbs*; 3 Requiem; vespers; lits; many shorter works

Inst: 6 syms., *WEY*; 5 syms., *Rtt*; 1 sym., *Bsb*; 1 sym., *Mbs*; 1 sym., *US-BEm*; 8 serenades, *D-Rtt*; Cl Conc., *CH-E*; Bn Conc., *D-Bsb*; 3 concs., pf, *Bsb*; 5 divertimentos, *CH-Bu*, *D-BE*, *Mbs*; 6 qts, *US-BEm*; 6 qts, 2 vn, bn obbl, vc, *A-KR*; qt, 2 vn, bn obbl, vc, *D-Bsb*; 6 sonatas, pf, vn, bn, *Bsb*; others, listed in Breitkopf catalogues (1773–87)

ROBERT MÜNSTER

Michna z Otradovic, Adam Václav (*b* ?Jindřichův Hradec, *c*1600; *d* Jindřichův Hradec, 2 Nov 1676). Czech composer and poet. Michna's father Michal was 'Burggraf' of the castle at Jindřichův Hradec and reputedly town organist and leader of the castle trumpeters. Adam probably received his early musical training from his father. In 1611–12, and again in 1615–17, he studied at the town's Jesuit Gymnasium. The Jesuits were the leading musical force in the Czech lands in the 17th and 18th centuries and Michna seems to have become one of their favoured composers, a fact attested to by the number of his compositions printed, mostly by the Jesuit Academic Press in Prague. Among friends made during his school years was the bishop's supreme steward at Kroměříž, Johann Nikolaus Reiter von Hornberg (*d* 1669), to whom Michna dedicated his most important concertato collection, *Sacra et litaniae*. In about 1633 Michna became town organist of Jindřichův Hradec, his only official musical appointment. A licensed wine vault and an advantageous marriage to Zuzana Zimmermannová brought him considerable revenue; he was a substantial property owner and prominent in local affairs. In 1673 he established an endowment for three talented young musicians in his area. He was twice married but there are no records of any children.

It is estimated that only about a third of Michna's compositions survive. They are all for the church and are of two distinct types: simple vernacular hymns and elaborate Latin concertato works. The hymns are clearly influenced by the strong and long-established tradition of congregational singing in the Czech lands, but nothing discoverable in his background fully accounts for the marked, and contemporary, Italian influence in his Latin church music. His two hymnals, *Česká mariánská muzika* ('Czech Marian music') and *Svatoroční muzika* ('Music for the liturgical year'), were specifically compiled for the use of churches with limited musical resources. They contain simple four and five-part homophonic settings of his own religious poetry, and the melodies have a decided folk character. Each hymn can be accompanied by a simple continuo part. Several of the pieces from these two books have remained in popular use in Czechoslovakia to this day, and Michna's sacred texts are regarded as a high point in Czech Baroque poetry. He also wrote the words for *Loutna česká* ('The Czech lute'), which is also technically a hymnbook but which, in musical style, provides a bridge between his two extremes of composition. The hymns are set as arias for two solo voices with accompanying strings and organ, the instruments providing short ritornellos. *The Czech lute* and *Obsequium Marianum* (his earliest surviving concertato music) are now incomplete.

Of Michna's works in the concertato style, the most notable are those in *Sacra et litaniae* (1654). They employ between four and six solo voices with chorus, and sometimes two choirs. The instrumentation is varied but relies on permutations of violins, violas, trombones and cornetts with organ continuo. Even in such elaborate music there is still a strong folk admixture, partly through the modality of the harmony and partly through the brief melodic motifs on which his counterpoint is built. In the second mass of *Sacra et litaniae* Michna actually used the opening of a Czech Christmas carol, which recurs as a linking motif. In the third mass he created an extended passacaglia, the whole mass consisting of variations over an eight-bar bass. Michna's music is notable for its colour and its attractive melodic qualities. He was the outstanding composer in the Czech lands during the 17th century, dominating his contemporaries.

WORKS

Edition: *Adam Michna z Otradovic: Compositions*, ed. J. Sehnal (Prague, 1984–) [C i–iii]

Obsequium Marianum, 5vv, 3 insts (Vienna, 1642), inc.

ADRIENNE SIMPSON/JIŘÍ SEHNAL

Michot, Andreas (*fl* 1513–22). French singer and composer. A native of the diocese of Le Mans, he was a prominent member of the papal chapel under Leo X. His extant works (all ed. in CMM, xcv/1, 1982) comprise a *Missa de Beata Virgine*, a *Missa de feria*, a setting of the Ash Wednesday tract *Domine, non secundum peccata nostra* and possibly an anonymously preserved *Regina caeli*. Michot's *Missa de Beata Virgine* is partly modelled on Josquin's, most notably in the opening sections of the first Kyrie and the second Osanna as well as in important sections of the troped Gloria. The quasi-isorhythmic treatment of the Credo recalls 15th-century examples. The first Kyrie of Michot's *Missa de feria* seems to have influenced the nearly contemporaneous setting by Bonnevin, which in turn was parodied by Palestrina. Michot's music is distinguished by its freely imitative textures (often with varied interval structures in the answers) and by the way in which plainchant melodies paraphrased in the counterpoint have been simplified, foreshadowing the Vatican chant reforms of the late 16th century.

NORS S. JOSEPHSON

Miciezes [Micieces, Miçiezes, Micieres], **Tomás.** The name of two Spanish composers, father and son. The elder Tomás Miciezes (*b* Villaescusa de Ecla, Palencia, bap. 22 Dec 1624; *d* Madrid, 1667) was a choirboy at Palencia Cathedral and became choir chaplain and deputy *maestro* there on 14 May 1646. On 19 December that year he was appointed *maestro de capilla* at Léon Cathedral, and on 16 September 1650 *maestro de capilla* at Toledo Cathedral. Several difficulties encountered at Toledo – including the birth of his illegitimate son Tomás – forced him to relinquish the post for a similar one at the Descalzas Reales convent in Madrid on 19 July 1662; he remained there until his death in early 1667. He was among the finest and most prestigious Spanish composers of the mid-17th century; his pupils included (in addition to his own son) Pedro Ardanaz, Miguel de Irizar and Alonso Xuares.

His son Tomás Miciezes (*b* Toledo, 4 Dec 1655; *d* Salamanca, 17 May 1718) may have been a choirboy at Pamplona Cathedral. In 1672 he moved to Madrid, probably as a protégé of Cristóbal Galán, and in 1679 was appointed *maestro de capilla* at the collegiate church of Castellar de Santiesteban, Jaén. He retained this appointment when he returned to Madrid in 1682 and later held the post of *maestro de capilla* successively at cathedrals in El Burgo de Osma (from 1684), Zaragoza (La Seo, from 1692) and Salamanca (from 1694). From 1699 he was also professor of music at Salamanca University in succession to Diego Verdugo.

It is difficult to distinguish between the works of the two composers, most of which survive in manuscripts in Segovia and Salamanca. Those in Segovia are probably by the father, most of those in Salamanca by the son.

WORKS

5 masses; 2 Mag; 23 pss; 20 motets (incl. Christus factus est, ed. in Pérez Prieto, 1995); 13 other liturgical works: *E-SA*

2 masses; 2 Mag; 4 pss; 1 motet: *SE*

2 Lamentations, *CU*, *CO-B*; 5 other liturgical works, *E-CU*, *GRc*, Jérez de la Frontera, Colegiata, *PAL*

345 villancicos, *D-Mbs*, *E-Bc*, *SA* (incl. Entre muchas sabandijas, Gallegos bailarines, ed. in MME, xlii, 1982; ¿Qué habra en esta nave?, 1707, ed. in Pérez Prieto, 1995, and Torrente, 1997; ¡Ay, tan dulce reir!, ed. in Torrente, 1997), *SE*; *V*, *Zac*

13 solos and tonadas, *SA* (incl. A la sagrada nieve, *c*1710, ed. in Torrente, 1997); 3 jácaras, *SA*; 2 cants., *SA* (incl. ¿Hasta cuando, oh sol?, *c*1710, ed. in Torrente, 1997)

ÁLVARO TORRENTE

Mico [Micoe, Micho, Meco, Myco], **Richard** (*b* Taunton, *c*1590; *d* London, bur. 10 April 1661). English composer. His family, originally named Micault, came from northern France some time before 1509; several of his near relations were merchants, including his cousin Sir Samuel Mico, an alderman of London. In 1608 Richard Mico was appointed resident musician at Thorndon Hall, Essex, the seat of John, first Lord Petre, whose son Sir William Petre was Mico's employer. His wages, £10 a year, were above average for the period, suggesting that he was already regarded as a musician of promise. Although his principal responsibility seems to have been the musical education of the family's children, he was probably expected to compose for the household's instruments. An inventory made on his arrival lists five viols (two trebles, two tenors

and a bass), a lute, virginal and organ, together with printed music, mainly by William Byrd, and manuscript partbooks. At this time, Byrd lived nearby and was closely associated with the Petre family; another inventory lists 'Mr Birds chamber'. During this period Mico converted to Catholicism, his employers' faith. This presumably had some significance in his appointment in 1630 as organist to Queen Henrietta Maria, succeeding Richard Dering, a post he held until the queen's flight to Holland in 1642. After this, evidence of his life is sporadic, but he was certainly living in London in 1651 and receiving a life annuity of £20 from the Petre family in 1658. He was buried at St Paul's, Covent Garden, on 10 April 1661.

It is likely that Mico's extant music dates from before 1630. Most of the sources can be dated to some time between the 1620s and the early 1640s, and two of them (*GB-Lcm* 1197, containing all the four-part works, and *IRL-Dm* Z.3.4.7–12, which contains the three-part music and, elsewhere in the manuscript, the five-part pavans) are headed with Mico's signature. His music is conservative for its time, being stylistically closest to that of Alfonso Ferrabosco (ii) and Thomas Tomkins. He wrote nothing except fantasias and pavans and seems to have had no interest in the lighter dance forms; he certainly made no forays into the fantasia-suite, which was rapidly growing in popularity. Triple-time metres are notably absent, and homophonic textures appear infrequently. Of the stylistic fingerprints that can be seen throughout his output, the most obvious is a predilection for augumented triads, usually in first position and on the approach to a cadence. Slightly less widespread, but nevertheless noticeable, are leaps onto the 7th of a chord.

In his three-part fantasias Mico did show signs of being influenced by modern trends in his use of the organ, which was becoming more independent in consort music. Although it is generally nothing more than a short score, the organ part increasingly fills out the harmony and acts as an accompaniment to viol solo and duet passages. Possibly the most interesting of his compositions is the five-part *Latral*, the title of which is derived from the text of the second part of Monteverdi's madrigal *Vattene pur, crudel, con quella pace* (*La tra'l sangu'e le morti*). It is divided into two sections: the first an arrangement of the second part of the madrigal, and the second Mico's 'response', in which he mirrors Monteverdi's descending chromaticism with an equivalent ascending passage. Mico's music was widely circulated in his lifetime, suggesting that he was a highly regarded composer. At its best it displays deep feeling coupled with lyrical freshness. Both Simpson (1665) and Roger North (1728) ranked him among leading composers of consort music.

WORKS

Micronesia. Conventional geographic and cultural division of the North Pacific Ocean comprising *c*2500 islands. With Melanesia and Polynesia they make up the Pacific Islands.

I. Introduction. II. Caroline Islands. III. Kiribati (Gilbert Islands). IV. Mariana Islands. V. Marshall Islands. VI. Nauru.

I. Introduction

1. General. 2. Music and musical instruments. 3. Dance.

1. General. Micronesia (Gk. *mikro*: 'small'; *nēsos*: 'island') is the name given by Europeans in the 1830s to the islands that lie east of island South-east Asia, north of Melanesia (and mostly north of the equator) and west of northern Polynesia (for map *see* Polynesia, fig.1). It comprises more than 2000 small islands with a total land area of about 2800 km² dispersed in an ocean area of about 7·7 million km². Topographically, the islands are classified as 'high' islands (mostly of volcanic origin) or 'low' islands (mostly coral atolls). Geographically, Micronesia includes the Caroline Islands (in a broad east–west arc that spans more than 3500 km); the Mariana Islands (Guam and the smaller islands north of it that lie north of the Carolines); the Marshall Islands (two parallel north-west to south-east chains east of the Carolines); the Gilbert Islands (south-east of the Marshalls); and Nauru and Banaba (separate islands south of the Marshalls). 'Micronesia' is incorporated into the name chosen by the peoples of a large part of the Caroline Islands as the name of their country: the Federated States of Micronesia (abbreviated both as FSM and as the single word Micronesia). In this introduction, 'Micronesia' refers to the whole geographic region; in the entries on the Caroline Islands below, it refers to the country.

Beginning more than 3000 years ago, ancestors of the peoples of the western rim of Micronesia moved north from some islands of what are now known as the Philippines and Indonesia and began to settle on the high islands of Palau and Yap (in the western Carolines) and Guam. Beginning more than 2000 years ago, ancestors of the peoples of central and eastern Micronesia moved north from some islands of Melanesia in what is now known as Vanuatu and began to settle the high islands of Kosrae, Pohnpei and Chuuk (in the eastern Carolines) and some low islands in the Marshalls and Gilberts. Later, people from (or passing through) Chuuk moved westwards and settled on coral atolls of the central Carolines. Following another route, the Polynesians settled on

Kapingamarangi and Nukuoro atolls in the south-eastern Carolines (*see* POLYNESIA, §1, 1).

At the time of first European contact, the people of individual high islands (or high-island clusters) who were supported by land and near-shore marine resources differed significantly from other high-island populations in social organization, lifestyle, music and and dance. In contrast, the people of the low islands, who had to rely on lagoons and on long, open-ocean canoe voyages for resources unavailable on the tiny lands, and for shelter assistance when drought or typhoon devastated the islands, shared more aspects of life with peoples of even distant atolls. The Micronesian peoples speak 12 (or, as sometimes listed, 15) languages and many dialects. In addition, they use English as the lingua franca and on some islands both English and Japanese for international communication.

From the mid-17th century, various parts of Micronesia were claimed by foreign powers: by Spain, Germany, England, Japan and the USA (for the United Nations). Not all of their administrative boundaries conformed to those of the indigenous cultures. The Mariana Islands (home of the Chamorro people) were divided into Guam and the Northern Marianas, which until after World War II were administered by different foreign powers. The Gilbert Islands (now part of Kiribati), inhabited by Micronesians, were adminstered jointly with the Ellice Islands (now Tuvalu; *see* POLYNESIA, §III, 5), inhabited by Polynesians, and for several decades also with Nauru and Banaba. The low-island peoples of the Carolines were administered from district centres on high islands with whose people they had less in common culturally than with those of low islands in other districts. Effects of these administrative areas is apparent in the post-contact music and dance of these peoples.

The end of colonial rule in Micronesia began in 1968 with independence for Nauru, followed by that for Kiribati (which encompasses the Gilbert Islands, Banaba and the geographically Polynesian Phoenix and Line Islands). As of the turn of the 21st century, the Northern Marianas were a commonwealth and Guam a territory; the Federated States of Micronesia and the republics of the Marshall Islands and Palau were self-governing in free association with the USA.

Several large population relocations are significant to the regional distribution of Micronesian music and dance. In early historic times, peoples from typhoon devastated low islands of the Carolines were permitted to settle permanently on Saipan in the Northern Marianas. In the 20th century, almost the entire population of Banaba was resettled on Rabi Island in Fiji (*see* MELANESIA, §VII). Some Gilbertese relocated to the the Line Islands and others to an enclave on Guadalcanal in the Solomon Islands. From the late 1980s many young people from the Carolines and Marshalls moved to Guam, Hawaii and the continental United States for educational and economic advancement. In their new homes these people have maintained their identity in part through their traditional music and dance.

The earliest information about Micronesia comes mostly from the observations of explorers, missionaries and, beginning in the early 20th century, ethnological studies, a few of which included sound recordings. Some Micronesian musics have been the focus of comprehensive ethnomusicological study, but others, including those of Chuuk and Nauru, have not. No comprehensive study of a Micronesian musical tradition has yet been published by an indigenous scholar; however, a few are now learning and studying the repertory of their own heritage through both indigenous and Western approaches. Principal collections of music of the Pacific Islands, including Micronesia, are the Bernice P. Bishop Museum, Honolulu, and the Archive of Maori and Pacific Music, University of Auckland (includes a territorial survey of Oceanic music).
